24,406. Do you mean to say that it makes a difference of a month?—I can give you an instance I think of the last cargo that came in. A firm here imports on an average about three boat-loads of rum in a year; their warehouses are all under the Excise, and every cask (there are about 600 casks used in every cargo) must be tested for obscuration before they can do anything with them. In the meantime the casks may be moved off the quay by permission of the collector, but they must be kept in the warehouse for the re-examination by the Excise before they can be put away and stowed. If there were only one system, the whole cargo of rum, 600 casks, might be easily moved from the quay in two weeks. But under the present system it takes more than double that time.

24,407. (*Mr. Hanbury.*) Then how is the extra fortnight occupied; in correspondence?—In getting the obscuration done.

24,408. The obscuration must be taken?—Yes; but I say there is no reason why the liquor should not be taken out of the Excise bond for obscuration, instead of at the quay.

24,409–10. Then if this testing for obscuration took place in the warehouse, would not that time be lost?—It would, because they would not do the obscuration in a day or two; it takes a long time.

24,411. It has to be done?—Yes, it has, but it could be done after the cask was in the warehouse as well as on the quay.

24,412. That is your point?—Yes. That is the point. I say that the casks could easily be taken away and warehoused, and the liquor taken out and sampled, and the obscuration done after they were warehoused, and not keep them on the quay. If they were under the Excise it all could be done in that way, or if they were under the Customs it all could be done in that way.

24,413. (*Mr. Lawson.*) What is the average time a cask would be kept on the quay in that manner?—There is one instance ——

24,414. The average time?—I do not know about that; I could not tell you about that.

24,415. (*Mr. Harvey.*) The first examination is done by the Customs, is not it?—By the Customs, yes.

24,416. The second examination is done by the Excise?—Yes.

24,417. Is not there an advantage to the public in that?—In what way?

24,418. That is what I want to know; whether in your opinion there is any advantage to the public?—I do not think there is any advantage to the public in that, because we would take any of the ways that they would do it. We are quite agreeable to take it by obscuration or to take it by gauging.

24,419. (*Chairman.*) What is the great objection to the casks remaining on the quay?—Quay rents. There was 18*l.* 10*s.* of quay rent in one case.

24,420. Are quay rents more expensive than warehouse rents?—Certainly. The quay rent of this one particular lot was 18*l.* 10*s.*, whereas there would be none if we got it into our own warehouse.

24,421. Then your complaints in that respect, and those of the trade, would be satisfied if the cargo could be taken straight from the ship and put into the warehouse, under proper guard?—Yes.

24,422. And then one test applied for the strength of the spirits in the warehouse?—You must have two; you must have one at the ship and one at the warehouse.

24,423. I do not quite see why you should have one at the ship and one at the warehouse?—There might be a loss of strength.

24,424. Supposing they were under the charge of Custom House officers?—There might be a loss to the revenue in transit if the strengths were not what they were at the ship. The strengths must be all tried at the ship for this reason: it would not do to put a cask of rum out and not know the strength, because there might be a loss between the quay and the warehouse.

24,425. (*Mr. Hanbury.*) By the ship you meant on the quay?—Yes.

24,426. Then it would have to be on the quay for a certain time in order to go through that first test?—Yes, for a day or two, but not for a month; there is the difference.

24,427. How long would it be, about a fortnight?—Yes, about a fortnight. I think we would save a fortnight's time if it was under the Excise. Certainly there would require to be two testings: a testing on the quay and a testing at the warehouse again; we could never get over that.

24,428. I know, but as I understood you the delay on the quay occurs from the long time it takes to make this first test?—That is so.

24,429. Then I want to know from you under what system it would take only a fortnight to make that first test instead of the month, which you say it takes now?—I will show you. When the goods would be taken out the officer would gauge them all, say, 20 or 30 casks a day. At that rate he would get over the whole lot, and then we could remove them after he had gauged them there without taking away the liquor for obscuration; he would take no sample at all, merely gauge them and try the strengths and send them to an Excise warehouse; then take the sample for obscuration. Take a month if you like in testing the obscuration, but let us take the stuff to the warehouse and not have to keep it on the quay.

24,430. Is there any reason why that should not be done now?—No reason at all. The reason is that there is no law. They will not allow the Excise to touch it until they get the Custom House despatch, and that takes the time. There is no reason whatever.

24,431. But that is a thing that might be altered without amalgamation of the Boards, might not it?—Certainly, it could be altered without amalgamation of the Boards.

24,432. (*Mr. Lawson.*) That, of course, presupposes that there were a disposition on the part of both departments to fit in their arrangements with one another?—Yes, there is a little jealousy, but I do not think there should be practically.

24,433. So far as your experience goes, there has not been that readiness in the past?—No.

24,434. Is there any reason to expect it in the future?—I think so. I think they are a good deal better than they were.

24,435. (*Mr. Hanbury.*) If that were done it would remove your principle grievance?—Yes, it would, if they were all agreeable.

24,436. (*Chairman.*) If there was a thoroughly harmonious working between the two Boards and between the two sets of officers, would you see the same force in recommending amalgamation that you do now?—Except for economy, I think we should get far more. I think we should save the country more.

24,437. You think you would get more work out of the same officers?—Yes.

24,438. (*Mr. Lawson.*) And even from the point of view of harmony, you think the best means of attaining it would be by amalgamation?—I think so.

24,439. (*Mr. Hanbury.*) From this point of getting more work out of the officers, do you think the Excise officers would do more work under an amalgamated Board than they do at present?—No, but they would do more work if you had better rules. If there was not so much expected from a supervisor he could see that the officers would do more work.

24,440. I know, but that Board can deal with its own officers now, and alter these rules. You do not want an amalgamation of the two Boards to alter the duties

of the supervisors?—No, but you want economy for the country all through, do not you, or should do?

24,441. That is exactly what we want to get at. I want to know how an amalgamated Board would distribute the work of the supervisors better than it is distributed now?—I do not know that an amalgamated Board might bring about that, but I say, from my own knowledge, that I think more work could be got out of the officers in both departments. Certainly there is a good deal of double work that would only require to be done once.

24,442. That is exactly what we want to get at, if you can tell us that?—All this obscuration is not done by itself. The Custom House officers have to do it, and the Excise officers have to do it, there is double work.

24,443. But still there would always have to be these tests, as I understand?—Not necessarily.

24,444. I think you said just now that it was necessary?—Not for obscuration.

24,445. (*Chairman.*) Not for obscuration?—No. It is only done once.

24,446. (*Mr. Lawson.*) Are there two tests for obscuration now?—No, I think not; I think there is only one test for obscuration with the Customs.

24,447. I mean two tests at the Customs and at the Inland Revenue?—No, I think not. I do not think the Inland Revenue test it by obscuration. They can do it, but I do not think they do.

24,448. (*Mr. Hanbury.*) As I understand you, there are two tests now, and, in your opinion, both those tests are necessary?—No.

24,449. I meant gauging and obscuration. I will not call it testing?—They first gauge them, and then they take a sample down for obscuration at the quay. I think gauging at the quay would do quite well, and then they could take a sample for the next test, the obscuration, at the warehouse.

24,450. (*Chairman.*) Gauge on the quay side, take the goods under proper charge from the quay side to the warehouse, and then take your samples for obscuration when the goods are warehoused; is that your point?—Yes, that would save a good deal of work.

24,451. (*Mr. Lawson.*) With regard to the Supervisor of Excise, and what you have said as to his duties, I suppose you contend that he has too many details to look after?—Yes, he has to go over the officers work too much, I think.

24,452. (*Mr. Hanbury.*) I should like to make this quite clear with reference to the duplication of work at the present moment. Where is it that the work is done twice over?—It is not, I suppose, done twice over, but there is some of it that could be saved.

24,453. Will you tell me some that could be saved?—I could not exactly point it out to you. I do not know the regulations of the Excise so well as that, to tell you.

24,454. From your point of view as a trader, do you from your knowledge as a trader see where work could be saved in either department?—Yes, I will tell you one instance. If we ship 200 or 300 cases of whiskey, one set of papers could do quite well to go down and send the ship away, but there is another set of officers required at the Custom House to do the same thing.

24,455. To do the same thing?—The self same thing; clear the work out, clear the cases.

24,456. Tell me exactly what you mean by clearing the cases?—The forms we have to go through. I cannot tell you exactly what they are, because my clerks do it, I never did one myself; they pass entries in the Excise, and then they have to go down to the Custom House, and pass entries in the Custom House.

24,457. For exactly the same thing?—For exactly the same thing.

24,458. (*Mr. Lawson.*) That is a duplication of work pure and simple?—Yes.

24,459. (*Mr. Hanbury.*) Is it exactly the same work that is done at the warehouse and at the ship's side?—That is a different thing. This is exporting I mean now.

24,460. And you say it is owing to the fact that there are two departments that you have these two different sets of papers?—Yes, and the same thing coming in. It has to come through the Custom House. The officers must do their work in the Custom House, whereas if it was coming direct to the warehouse it would be all done in the warehouse. I cannot tell you the exact papers we have to pass, but such is the case. We have to pass these papers.

24,461. You have yourself said there is a danger of a loss to the Revenue between the ship and the warehouse. Is it not, therefore, necessary to have these two sets of papers?—It is not necessary to have the work done at the Custom House after it has been done at the Excise warehouse, employing extra officers down there to pass a few papers.

24,462. (*Mr. Lawson.*) What I understand is that the guarantee to the Revenue is just as good when the first set of papers are taken out as when the second are?—Yes, that is it.

24,463. (*Mr. Hanbury.*) You think as long as you have two separate Boards you will have those two sets of papers?—I think so. You cannot help it unless you make it all one.

24,464. (*Chairman.*) Is there any other point that you wish to bring before us?—No, there is no other point. Of course it is only my opinion that I am giving.

24,465. (*Mr. Hanbury.*) Is that the only instance of this doubling of work that you can give?—No, there are plenty more, but I did not think of bringing you instances of that up.

24,466. I meant to say that they are not so serious that they have impressed themselves on your mind so that you can tell us at once?—Oh, dear, no; I have no grievance at all.

24,467. (*Mr. Lawson.*) I understand that before coming here you have consulted a great many other traders like yourself, and that they are of one opinion with you on this matter, is that so?—Yes, that is so, and there is an instance in the letter I read. Still, of course, some say, We are under the Customs; we are doing well enough; and so they are quite content.

24,468. What is the opinion of the majority?—I think Excise.

24,469. I am not asking whether they are in favour of Excise or of Customs, but whether they are in favour of amalgamation?—In favour of amalgamation.

24,470. (*Chairman.*) Are you a member of the Warehousekeepers' Association in Glasgow?—I am not.

24,471. That association, as you probably know, has declared against amalgamation?—Have they?

24,472. As a matter of fact, there was a meeting called in favour of amalgamation and they decided against it so far as the bonded warehousekeepers are concerned; therefore, apparently, they would not quite agree with you?—That would appear to be so.

24,473. They would, no doubt, have their own motives and reasons?—It would depend from what point of view they looked at it. I have no earthly interest in the matter, except that I know a good deal about the Excise, and I think that all along they would work it better. I fancy they would work it better.

The witness withdrew.

Adjourned till to-morrow at 12.

SEVENTY-FIRST DAY.

7, Whitehall Place, S.W., Thursday, February 28, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

RIGHT HON H. H. FOWLER, M.P.
SIR C. E. LEWIS, BART,, M.P.
MR. A. B. FREEMAN-MITFORD, C.B.
MR. R. W. HANBURY, M.P.
MR. H. L. W. LAWSON, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

MR. CHARLES GOLDING BARRETT called and examined.

Mr. C. G. Barrett.

28 Feb. 1889.

24,474. (*Chairman.*) Are you a collector of Inland Revenue?—Yes, at King's Lynn.

24,475. What staff have you in the district of King's Lynn that you are responsible for?—I have what is called a "Collection" in which I have a staff of about 30 officers of different ranks, but that is extending over a very wide district of country, including portions of about eight counties.

24,476. But the centre of the district is King's Lynn?—King's Lynn is the headquarters.

24,477. That is the centre of the district?—Yes.

24,478. In those numbers you have given do you include the Surveyors of Taxes?—No.

24,479. The staff you have given are those directly under your control—Inland Revenue officers proper?—Yes, I can give you the exact numbers. I have not reckoned them up, but they are about 30. There are four supervisors, 21 officers, and several officiating officers, young officers.

24,480. As you know we are now inquiring into the amalgamation of the Boards of Inland Revenue and Customs?—Yes, so I understand.

24,481. We should be anxious to learn from your knowledge of the district of King's Lynn how far there is any duplication of work or how far there could be any economy effected by bringing under one Board of Revenue, the Customs and Inland Revenue work at King's Lynn. Are you familiar at all with the business of the Customs?—I have made it my business to ascertain it as far as I could without any unpleasant or offensive inquiry. I know the staff at King's Lynn. There is a Collector, who is an official occupying the same position as myself (I am called a Collector) and he has in the office two clerks. One of those acts as the examining officer for the warehouses, the warehouses being those places in which the duty is charged upon spirits and wine.

24,482. Are all the warehouses in King's Lynn Customs warehouses?—Yes there are four.

24,483. Are there any Inland Revenue bonded warehouses?—Not at King's Lynn.

24,484. The Customs are responsible for all the warehouse business?—They are. In addition to that the Collector has an examining officer and another out door officer under him, and of course sufficient boatmen to examine the vessels that come in and to search for customable goods and do the general business of the port. Then he has several creeks or ports under him, the most important of which is Boston, which really is now a more important port than King's Lynn. I think that at Boston there are some very small amounts of duty actually collected as Customs duty on imported articles which is not the case at King's Lynn.

24,485. Are there no imports at King's Lynn?—There are no duty paying imports.

24,486. But still all imports have to be searched to see whether they are dutiable?—Yes, certainly, the prevention of smuggling is a most important duty. At Boston that is not quite the sole duty that they have to perform, and I believe they have a larger staff. I have not the opportunity of knowing what at Boston—but the number of the whole staff is no doubt given in the estimates. There are three smaller ports, Wisbech is one; to Wisbech some grain is brought and some timber, but nothing customable.

24,487. We shall get that from the Collector of Customs, who is coming?—Yes. There are one or two very much smaller ports, that is all.

24,488. I only ask you whether you, being tolerably familiar with the amount of Customs work there, see any advantage, and, if so, what, that would be obtained by amalgamation?—It appears to me unquestionable that a certain amount of advantage must be obtained by amalgamation in a case like this in which officers are crossing one another constantly, are going over precisely the same ground, and are doing duties of a similar nature with which both are or might be made familiar.

24,489. Will you give us an instance of where the duties cross, and where the officers of the respective departments go over the same ground?—My officer at King's Lynn surveys, for instance, a brewery where a large amount of duty is charged on one side of the street. On the opposite side of the same street, within a stone's throw, there is a duty free warehouse where the Customs House officer, who is also a clerk, charges the duties on spirits. They are actually within a stone's throw of one another, and must constantly meet and pass one another. They are not doing precisely the same duties, but it amounts to the same in effect. They are merely charging revenue on the different forms of intoxicating liquor.

24,490. Do you mean to say that if there was an amalgamation, one of those officers could be dispensed with altogether. Would there be a reduction of staff in that direction?—Yes, I think so. As I have already stated, the work of the Customs charging duty is not the whole work of one man. It is only a portion of the work of one of the in-door clerks. They actually, themselves, are not devoting one man to it. Now I have a number of officers; their work is always fluctuating, and their work is of such a nature that they must be in attendance at certain times of the day, but they are not equally busy at all times, and my own private opinion is that my officers, by a rearrangement of their work, could so take over those duty free warehouses that they could do the entire business there with the present staff, except perhaps in the busiest times, when I might be obliged to put in an officiator. I can give that opinion. I cannot, not really having gone through the work of the warehouses, do more than give you an opinion, but I will give you a reason for it. The amount of money that I collect very considerably exceeds 200,000*l.* a year; the amount of money collected by the Customs does not amount to 12,000*l.* a year. Now I think that that small amount of additional revenue could be collected without any great additional expense by our department while we should, of course, dispense with that portion of the Customs Department which does it.

24,491. That portion of the Customs Department certainly, that is to say, as a very large per-centage of the customs duties are collected of course in warehouses, if the warehouses were under the control of one Board instead of being as now, under the control of both,

although under one code of regulations, to that extent you would be able easily to work it?—Yes.

24,492. But what do you say with reference to the other Customs duties which are altogether outside the warehouses and which, though they do not appear to be very important, so far as regards the amount of money collected, yet from the point of view of the protection of the revenue are surely worth considering?—Undoubtedly they are most important.

24,493. With reference to those duties, do you think, considering what the work is, that the head officer, or other officers of the Revenue at King's Lynn would be able to take both sides of the revenue duty?—The duties that are performed are performed by officers exactly such as we have ourselves, that is to say, the higher portion of the work. They are admitted by similar examinations, they are men of similar qualifications, men who could perfectly easily learn whichever side they had to learn in the period which we allow for instruction. A considerable amount of the work of which you are speaking is actually performed by men of what I might, I think, call a lower grade than that. The men who do the actual rummaging, which no doubt is very important work, are merely men who probably would have a sufficient acuteness and knowledge of stowage, and knowledge of the tricks that might be played by those who are stowing, to enable them to find out what was doing, but you know that is not very high intellectual work.

24,494. Of course there is a class of men in the Customs, and must be a class of men in the Customs, of lower rank and lower qualifications than those in the Inland Revenue?—There must be, because there must be boatmen.

24,495. And those men must always exist?—Yes.

24,496. Do you think that in King's Lynn—I rather think that it does seem to be your opinion—there can be a consolidation of the two sides of the revenue?—I do not wish to be selfish in my opinion, but I am compelled to say that it is my opinion that the work that has to be done on the other side, with a certain amount of study and instruction, could be done by one collector controlling the whole staff.

24,497. Do you know at all what the opinion of the traders is?—The traders make no complaint. I find no complaints in Lynn.

24,498. Do you find any difficulty from any differences of opinion that may exist between you and the Customs with regard to the interpretation of the code?—I have no opportunity of finding any difficulty because the Customs hold all the warehouses in Lynn, and all other warehouses that I had in other places have by recent rearrangements been removed to another collection, so that now I only collect what we call Inland Revenue duties.

24,499. In fact you do not come into contact with the Customs at all?—Not in any way on doubtful points or in the way of collision. We have very slight communications with them now and again. Sometimes a matter will turn up in which the Customs think that there has been some little smuggling going on in tobacco or something of that kind sent inland, and on one or two occasions they have communicated with me so that my officers who form a sort of net work all over the country might co-operate with them in searching for these articles. I have always given them every possible assistance in that way.

24,500. And you and the Customs work perfectly harmoniously in that respect?—Perfectly.

24,501. But you think that there could be an economy in a reduction of staff by bringing it all under one head?—Yes.

24,502. (*Mr. Freeman-Mitford.*) Are your men fully occupied?—Yes.

24,503. How many hours do they work a day?—We do not restrict them to any hours. We require them to do all the work that has to be done in their stations at whatever time of the day or night it may come on.

24,504. Their time is fully taken up with the duties of the Inland Revenue, is it?—It is so far fully taken up that I could not allot it out in such a way that it could be done by any less number of men. If you will allow me I will explain. The way in which we charge one of our largest duties is by observing the operations of the brewers. You are aware that the duty is large now upon beer, but the officers are not all day long at the breweries; they must attend at certain operations, and take the accounts at these operations in order to enable us to charge the duty. They would possibly have time in between that—in fact they have—in which to discharge very many other duties. I am of opinion, as I said before, that I could so arrange their work by allotting away from one to another, and passing work on, that I could bring in this small additional amount of work which is not one man's work in the day, and probably not half a day, among them; that is all.

24,505. Then you could not reduce your actual staff and yet carry on your actual work efficiently?—No, I could not.

24,506. And yet you could throw further work upon your actual staff?—Certainly a small amount.

24,507. Is the Customs work at Lynn a small amount of work?—It is what I said. I am speaking now of the revenue work. I hope you will fully understand me—that I do not refer to anything but the revenue work.

24,508. When you say you could undertake this extra work the natural question which suggests itself to my mind is are your men fully occupied now, and could not you reduce your staff?—I consider that, as far as the work of the Customs outside the actual collection of the revenue is concerned, in all probability it would be necessary to continue the out-door staff that is doing it, because it does not appear to me possible to allot that duty to my officers; but the work that I was speaking of just now in which the duty is collected in a few, I think it is four, small duty free warehouses, a small amount of duty amounting to about 11,000*l.* a year, which I assure you is a very small amount of duty to charge upon spirits, I think could be allotted among my officers without increasing my staff. I should not think it my duty to recommend to the Board any addition to the staff for the sake of that small amount of work. I think they could amply do the extra amount of collection; but I think it might be my duty to employ an officiator at the busiest times. We always have young officers who are officiators; they are always on hand to take the business of the officers who are ill.

24,509. Then, as a matter of fact, you could abolish the whole of the Customs staff and yet do the Customs work?—When you speak of the Customs staff you are referring I think to the staff that has the collection of the duty.

24,510. We have to consider the whole subject—we have not to consider any portion of the staff—we must not split hairs. Can you or can you not effect such a reduction as will enable you to do away with a considerable portion of the Customs staff, no matter how they are employed at present?—I think that I could make arrangements which would enable you to do away with a portion of the staff—the controlling one, the collector and the two clerks in the office, one of whom does this work of the duty free warehouses; but I am not sure that I could, because it is impossible for me to know what statistical work they have.

24,511. Then in fact you are not certain whether you can effect a reduction?—I am certain I could effect a reduction; but I am not certain that I could effect so much reduction as I spoke of.

24,512. (*Mr. Hanbury.*) What is the number of the people employed in the two offices?—I have three clerks in my office.

24,513. I mean to say in your establishment in the Inland Revenue Department with which you are connected—31 are not there?—Taking all through the country—the collection I have running into eight counties—I have about 30 or nearly 30. There are four supervisors, three clerks in my own office, 21 officers and a variable number of assistants, now I have three.

24,514. So far as the Inland revenue is concerned, you are talking of the whole of that area; but so far as the Customs is concerned you are only giving evidence as to Lynn, I understand?—It certainly causes an amount of confusion. I do not wish to cause any. I can only state to you with regard to the revenue that is brought in, that is the most important point to me. I say that the collection of the revenue that is brought in at Lynn is what we could take over without adding to our staff; but I have already stated that the out-door work such as rummaging ships and the work of statistics which is now being done and filling up the

Mr. C. G. Barrett.

28 Feb. 1889.

time of a man entirely in each case must still be done—a man's work is always a man's work.

24,515. You say that your department could to a certain extent take over the work of the Customs at Lynn?—Yes.

24,516. I want to know how many Inland Revenue officers there are at Lynn, and how many Custom House officers there are at Lynn?—Besides myself, there are three Inland Revenue officers at Lynn, in the town, and besides the Collector of Customs there are two clerks, one of whom acts also as officer.

24,517. That is seven is it, what have you?—I have, as I have said, three clerks. You see the Customs have mixed the duties of their clerk and their officer together, which we do not do.

24,518. I do not care about their duties, I want to know their actual numbers at Lynn?—The actual number of official persons belonging to my department in Lynn is six, and that for the Customs is three, besides the out-door officers. I cannot tell you about the out-door department. You see that extends right down the port and to the creeks or sub-ports.

24,519. If the two departments were amalgamated, how many would be wanted then, according to your view?—I think eight.

24,520. That is a saving of one?—That is a saving of two, is it not? I think there would be a saving of two—that is my impression.

24,521. Do you mean one of these two saved would be the collector himself?—Certainly.

24,522. You suggest that there should be one collector?—Certainly. The whole thing hinges upon that question. It would be the collector, undoubtedly, and I think one of his clerks, who could be saved.

24,523. Do you think the collector, if he had double duties, would want increased pay?—I am the collector.

24,524. Should you want increased pay?—For that small addition I do not think I should.

24,525. Then you say you would want extra assistance occasionally, and you would have to call in an officiator to help you?—Yes, someone to do the extra work, undoubtedly, but then I have the officiators always. They are young men upon a low rate of salary, who only receive full salary when they are officiating.

24,526. What do officiators do?—When an officer is ill, they take his place.

24,527. When that officer is not ill, what do they do?—I am sorry to say they sometimes have to do nothing.

24,528. Is that so?—Yes.

24,529. And these are the men that you would call in to do the extra work?—Yes.

24,530. And they would do that work, I suppose, without any extra salary?—Certainly not; they would get their full salary then—2*s.* or 3*s.* additional a day, according to the work they were doing.

24,531. I understood you to say they draw a salary whether they do work or not?—Yes, a small salary. They draw a salary of 50*l.* a year, whether they do any work or not.

24,532. And if they have this extra work to do, would you still have to pay them in addition?—We should have to give them 2*s.* a day more.

24,533. (*Mr. Freeman-Mitford.*) Is there any correspondence between the two departments?—As far as Lynn is concerned, are you asking?

24,534. I am not talking to you about anything else but Lynn, of course?—No.

24,535. You have no correspondence together?—No.

24,536. You never write a letter to the Customs, or the Customs to you?—No, I have never done so since I have been there. I have never had occasion to.

24,537. (*Chairman.*) Have you much correspondence with your Board in London?—Certainly, very much indeed.

24,538. (*Mr Hanbury.*) And you know of no complaints from the trade in your district?—No, I think not; I do not remember any.

24,539. Has your experience been a long one now?—I have only been 2½ years in Lynn, but I am an officer of 30 years experience, and more.

24,540. (*Chairman.*) Does any other point occur to you upon this question which you might usefully bring before us?—There is a very small point that I did not mention just now. I think I had not exactly an opportunity of doing so. It is this: this small amount of revenue that is collected in Lynn by the Customs is actually upon spirits that have been received inland, and no doubt a very large portion of it, spirits actually distilled in this country, manufactured in this country, and what you might say were not customable goods at all, purely inland goods, none whatever has been received from the port.

24,541. You mean that there are no foreign spirits imported into the King's Lynn district—not in Boston even?—No, they are not imported through the port. You must understand that they may keep them in stock, but those foreign spirits would come from the inland portions of the country or from some other port.

24,542. Then the Customs duty in the King's Lynn district appears to be principally confined to examining all sorts of other goods, mostly duty free, which are landed in the district which would have of course to be examined?—That is, I should judge, exactly the case.

24,543. Therefore the work which the Customs have to do there and in similar districts can hardly fairly be measured by the actual revenue received?—No.

24,544. Because the point of view of protection must not be forgotton?—I fully agree with you there, it is so undoubtedly. I have got here particulars of the actual imports at King's Lynn, but they would be, perhaps, of no particular interest to you. If you wish it I could mention them.

24,545. Perhaps you might give them shortly. Are you taking now the whole district?—Yes. I think that they would be similar at Boston—grain, timber, oilcake, seeds for making cake, sulphur-ore, bone ash, and nitrate of soda for the manufacture of manure.

24,546. What is the total amount in value?—I have no idea. I have no means of knowing that.

24,547. All these goods have to be examined to see whether there are any smuggled goods among them?—Yes.

24,548. And with reference to all of them returns have to be sent to the Statistical Department in order that the Board of Trade may issue its tabulated return of the imports of the country?—So I understand.

24,549. That work is of course done by the Customs?—Yes.

24,550. Although none of these goods pay duty?—No. Then there is a number of different materials brought in by the Hamburg steamers—flour, sugar, eggs, vinegar, starch, treacle, leather, cases of glass, earthenware, toys, and similar articles.

24,551. Speaking generally, would it be fair to say that they are a very general class of articles which are imported into the district?—Yes.

24,552. (*Mr. Hanbury.*) How many officiators have you got in your district?—Three, now.

The witness withdrew.

Mr. Andrew Riddell called and examined.

Mr. A. Riddell.

24,553. (*Chairman.*) Are you the Collector of Customs at King's Lynn?—I am; of King's Lynn and the Wash district.

24,554. But King's Lynn is your headquarters?—It is the head port.

24,555. It is the name by which your collection is known?—It is. I am also Receiver of Wreck for the district, and I am also the Superintendent of Mercantile Marine for the district, and also Registrar for the Royal Naval Reserve for the district.

24,556. They are all the different duties which are undertaken by Customs officers, are they not?—The three latter ones are all under the Board of Trade and are taken by Custom house officers.

24,557. You are responsible for sending up statistics of trade to the Board of Trade?—Yes.

24,558. (*Mr. Hanbury.*) Are these attached to your duties as Customs officer?—Yes, the three latter appointments are under the Board of Trade; they are exclusive of the Customs, but I have to do the duties for my salary as Collector of Customs.

24,559. (*Chairman.*) The extra duties which you have just enumerated, I do not know whether you have exhaustively enumerated them or not?—No.

24,560. These extra duties are performed by you as Collector of the Customs, and your successor—I understand you are now leaving?—I am.

24,561. Will equally fulfil those duties without any pay beyond that which he receives as Collector of Customs?—Exactly.

24,562. Do those duties take up very much of your time?—A considerable portion of my time.

24,563. How many officers have you in your district?—Twenty.

24,564. In these 20 do you include boatmen?—I include the whole establishment of the district.

24,565. The whole of the establishment that you work the district with?—Yes, the whole district.

24,566. Had you experience of similar districts in any other parts of England before you went there?—Not of districts, but of ports. I have been all over the Kingdom nearly. I have been to Ireland and South Wales.

24,567. Then your experience has been a wide one. We are anxious to have your opinion upon this question of the proposed amalgamation of the two departments, not the merging of them in either one or the other, not from that point of view, but the suggestion that one Revenue Department might do all the collection of revenue. What is your experience, and what is your view upon that?—The collection of revenue and warehouse is the only thing that is similar to the Excise, that is so far as the collection of revenue proper, but then there is a Preventive Service, which is a portion of what you may call the collection of revenue, being for the protection of revenue. There is nothing similar to that in the Excise that I am aware of.

24,568. (*Mr. Freeman-Mitford.*) Is not that done by naval officers?—No. The coast is protected for revenue purposes by the coastguard, but we take charge of all ships arriving from foreign parts, and the landing of free and dutiable goods and such as come under the Merchandise Marks Act, and with all these we have to be exceedingly careful.

24,569. (*Chairman.*) What are your distinct relations with the coastguard now?—We have no other relations whatever, with the exception of their collecting light dues, and receiving coast documents at out stations where there are no Customs officers.

24,570. Have you no official relations with the coastguard?—None, with the exception that I have power to appoint them at different stations as deputy receivers of wreck, and as previously stated.

24,571. Is that a distinctly Board of Trade business, not a Customs business?—Distinctly Board of Trade, but it comes to me in my official capacity as Collector of Customs. It is not Customs work. We are, so to say, at small ports amalgamated in some degree with the Board of Trade.

24,572. Then again, to ask you generally what is your view, looking at it from the point of view of administration, of the possibility of affecting administrative economies. Do you think that the suggestion can be worked out with advantage to the public service?—I do not think so, not an entire amalgamation.

24,573. To what extent would you be in favour of amalgamation?—The only thing possible as being in common with the Customs and the Excise is the warehousing.

24,574. Take the concrete instance of King's Lynn, where all the warehouses are under the charge of the Customs, I believe?—Yes.

24,575. Therefore that question of the amalgamation of the warehouses hardly arises there; there is no difficulty as to the interpretation of the code in that place?—None whatever.

24,576. Because it is all interpreted by yourselves?—Yes.

24,577. But with reference to the other work, do you think that at King's Lynn any administrative economy could be effected by there being one collector who should assume your duties and the duties which are performed by your colleague of the Inland Revenue at the same time?—I do not think there could, because the warehouses only cost us about 100*l.* a year if we take the duties that are given towards the warehouses from our salaries.

Mr. A. Riddell.

28 Feb. 1889.

24,578. Leaving out the warehouses altogether, do you think that a gentleman in the position of yourself, or a gentleman in the position of your colleague at the Inland Revenue, the collector at King's Lynn, either of you, not talking of the individuals, but regarding him as an ideal collector, could do all of the Government revenue work in the present district?—Not with the present staff.

24,579. Then do you think that would be an administrative economy to move in that direction?—It is very doubtful, because the Collector of Customs ought to be within call continually. First of all, I have no official hours, I am always on duty. As Receiver of Wreck, I do not know at what hour of the day or night I might have a telegram that a ship is on shore on the coast and asking for instructions or whatever it may be. In the same way as Collector of Customs, in the capacity of Surveyor, I am expected to attend the quays, to superintend the landing of cargoes, and to see that the out-door officers and examining officers do their duty at all hours of the night as well as by day.

24,580. Are those duties which you perform of value to the Revenue?—They are of great value to the Revenue so far as the protection of the Revenue is concerned.

24,581. Then if you were called away from those duties to be sitting at the receipt of Inland Revenue, would it be an interference with your present work, do you think?—Of course there would have to be another inspector as it were. To give you an idea—suppose that a cargo of free goods arrived in packages from Hamburg we will say, which is one of our principal ports now, and rather a dangerous port, contraband goods could be enclosed in these packages. We have to examine one package in five of every mark. We have to examine every single mark. Suppose there were 100 boxes and they were all singly marked, we should have to examine the 100 boxes, not only to find that there was nothing in them except free goods, but also for the purposes of the Merchandise Marks Act, and if the goods had any marks contrary to the Act we should have to stop those goods, and in all this I, as surveyor, have to exercise very frequent supervision.

24,582. Then I may take it that your staff and yourself are fully employed?—Fully employed, what with superintending the district and visiting the out stations. Boston is an important port and a rising port. We do not receive a very large amount of duties there—about 500*l.* a year, upon beer principally—but we have a large staff there for the protection of the Revenue. We have eight men there altogether.

24,583. I understand you to say that supposing the supreme control of the Revenue in that district, both Inland Revenue proper and Customs proper were put under one administrative head, one controller, or whatever he might be called, if there was not an increase at all events there would not be a diminution of the staff?—Decidedly not.

24,584. That is to say there would have to be some one responsible for those duties, and a more responsible officer than your immediate subordinate is now, somebody of higher rank than he is?—Yes. The Excise, as you are aware, have inspectors. The supervisors do the duty of Surveyor of Customs, that is they inspect the different breweries and so forth, so that the collector has not to do that duty I believe, but a collector of Customs in small ports as I am is both collector and surveyor, or what you may term collector and supervisor.

24,585. You unite the offices of collector and surveyor?—Yes.

24,586. Do you know whether the collector of Inland Revenue is an officer of higher pay than yourself?—He is a higher salaried man than I am.

24,587. How do the salaries of your subordinates correspond with those paid to officers doing similar work in the Inland Revenue, so far as you are aware?—So far as I am aware I think they are about similar,

Mr. A. Riddell.

28 Feb. 1889.

but then there is a difference in our subordinates; the Excise have no boatmen, for instance.

24,588. They are a class of men that do not come into consideration in the Inland Revenue at all; they are a lower class of officers?—They are a lower class of officers. Then there are outdoor officers, the next class above the boatmen; they do not come into consideration in the Inland Revenue I believe.

24,589. Take the supervisors and collectors; would they come in?—They would come in about the same, that is, the supervisors' work in some degree corresponds with that of the collectors at small ports.

24,590. Are the men in the two services pretty much the same sort of men as regards standing and education?—I am not prepared to say that. The people in the Inland Revenue all commence in the same position; we do not do so.

24,591. Do you see any difficulty, in the event of amalgamation being brought about, in arranging the respective positions and salaries of the officers in these departments?—I cannot answer that question. The only difficulty that I can see is this: I cannot see that a Customs officer could be an Excise officer one day and a Customs officer the next day, because I think that it is necessary that all Customs men—that is, the examining officers, the tide waiters, and the boatmen—should have a practical knowledge of shipping, because it is a very responsible office that they hold. They have to board ships, and the out-door officers, under the supervision of the examining officers, have to rummage these ships very minutely and very often; and they ought to know all about the internal construction of ships, and they ought (to use a nautical phrase) to have their sea legs, because sometimes we have to go on board ships in very rough weather.

24,592. Clearly in any scheme of amalgamation, the special duties of a class of men doing the work which you have just been stating to us would have to be kept separate and would in fact constitute a special class?—That is my opinion.

24,593. But if you take the higher class of men in the Customs in your district, how far do you think their duties would be interchangeable with those of the Inland Revenue?—The clerks may be able to do the Inland Revenue duties.

24,594. I take it for granted that with the clerks and the warehouses there is no difference between the Inland Revenue and the Customs work?—There is none whatever, they are exactly similar as regards the warehouses, but the clerks in the Customs have to assist in administering the Merchant Shipping, Fishing Boats, and other Acts under Board of Trade management.

24,595. Have you had any statement from traders with reference to this question?—None whatever.

24,596. So far as you are aware in your district and in any other districts, that you have had anything to do with, have you had any representation made to you upon this question?—None whatever.

24,597. So far as you know is there any call on the part of the traders for this proposed amalgamation?—At Boston for instance, the warehouses were with the Customs; then they were transferred to the Excise, but I suppose the staff under the Excise is not quite large enough for them to be always on the spot when traders require goods out of bond, as I have been told that sometimes the traders are inconvenienced by having to wait till an officer is found. We on the other hand are always on the spot. The gentleman who does warehousing duty at Lynn is a clerk and an examining officer, and he does the whole warehousing duty as well as clerical duty in the office.

24,598. Are there warehouses at Boston belonging to the Customs?—None belonging to the Customs.

24,599. They are all Inland Revenue at Boston and all Customs at King's Lynn?—All Customs at King's Lynn and all Inland Revenue at Boston.

24,600. Can you say which system works best?—Both systems so far as the warehouses are concerned, are the same.

24,601. I mean the system of being controlled by different departments?—There is no difference so far as the warehouses are concerned—none—only that the warehouses are controlled by the supervisor and not by the collector, I believe, in the Excise. The warehouses in the Customs are controlled by the collector who for the time being becomes what we call a surveyor, except at large ports where there are surveyors as well as collectors.

24,602. I suppose a question of the interpretation of the warehouse code arising at Boston would be submitted to the collector of Inland Revenue at King's Lynn, would it not—is not he responsible?—No; he is not the collector for Boston—it is the collector at Lincoln, I think.

24,603. At all events it would go to an Inland Revenue collector?—Yes; any question that might arise with reference to warehousing goods would I think be submitted to the collector of Inland Revenue, but I am not quite sure whether the supervisor reports direct to the Board of Inland Revenue or not.

24,604. From your experience and knowledge of Boston and of those warehouses which are under the management of the Inland Revenue there, can you say whether any questions have arisen as to difficulties, owing to the different interpretation of the code affecting warehouses?—Not that I am aware of. We could almost do the warehousing work as well as the work that we at present do.

24,605. Do you mean at Boston?—Yes, at Boston with the same staff.

24,606. Clearly you are in favour of the warehouses being administered by one department, at all events, in each place?—Yes.

24,607. (*Mr. Hanbury.*) And there would be no practical inconvenience in doing that, you think?—None whatever that I am aware of.

24,608. (*Mr. Lawson.*) I take it there would be a great practical gain?—It might be a practical gain.

24,609. (*Chairman.*) In your experience, has there been any rivalry between the departments in order to keep traders where there is a double set of warehouses, or is that quite outside your experience?—That is quite outside my experience.

24,610. In none of the places you have been in has there been this possible rivalry between the departments?—I am not aware of it—I know but very little of the Excise. We do not mix together as officials in any way, so that I am not able to answer that question.

24,611. (*Mr. Lawson.*) Would you explain that a little further; you say you do not mix together, and you hold no communication?—We do not associate,—that is, socially. We simply bow to each other in the street; I do not know the Collector of Inland Revenue as a personal friend, though we live in the same town.

24,612. You know his name?—Yes, and I know him personally so far as I have had official communication with him; but we do not visit each other.

24,613. Would you say that your relations were of a cordial character?—They are of a cordial character, so far as we are officially concerned; but I mean we do not associate, so that I do not know what his feeling in the matter may be.

24,614. Supposing a difficulty arises, would it be possible for you to have an informal conference with him?—Immediately, if occasion arises. If I heard of any smuggling or anything of that kind I would immediately have an interview.

24,615. I am thinking more of this, supposing a point of difficulty arises regarding the interpretation of the code, is it your custom to write an official communication to him, or to have an informal talk over the matter?—No, I do not think I should do that, I should telegraph to our own Board immediately if there was any difficulty or report the case.

24,616. Have you never known a question of difficulty arise?—No, I do not see how a difficulty could arise at a small port, the code is so distinct and so plain. We have never had any difficulty whatever.

24,617. Have you never had difficulties in the interpretation of the code?—None whatever, so far as I am concerned.

24,618. Have you had many complaints from traders on questions with reference to the code which required settlement from your Board?—No, none. I may explain, probably, because we have not very large operations in bond, such as vattings, rackings, blendings, and fortifying wines. We have not those operations going on as they have in very large ports.

24,619. Are there any operations going on at all in your warehouses, in King's Lynn particularly?—We have to rack occasionally, and re-pack for ships' stores.

24,620. (*Mr. Freeman-Mitford.*) I think we may gather from you that it is your opinion that an officer in your position in the Customs must have had a certain amount of technical training in regard to shipping?—Yes.

24,621. It would therefore be necessary, if there were any amalgamation between the two services, that those officers which should be selected under the united Board for the position which you occupy should have had that training?—It is my opinion.

24,622. Moreover, you told us that they would have had to have a considerable experience in the rummaging of ships?—Exactly so.

24,623. And even you went a step beyond that, and said that they must really be men who are capable of going on board ship in rough weather?—We have to pull boats in very rough weather, and one duty of an examining officer is to know how to manage them.

24,624. Have you been on board yourself?—I do not go there now, but I have been in that capacity.

24,625. You have worked your way up in the various grades, so you know what the various duties of each man in the Customs are?—I have gone through all those duties with the exception of those of out-door officer and boatman.

24,626. And you consider that the man who has had simply Inland Revenue training could not be capable of taking over those duties?—You may imagine putting a landsman in a boat in rough weather, without bring trained, what a state he would be in.

24,627. You perform a great number of cognate duties, if I may say so, connected with shipping which are not actually Custom House duties?—Yes.

24,628. The due performance of those duties, I suppose, also involves a certain amount of technical knowledge in connexion with shipping, does it not?—Yes, it does.

24,629. And that is work which could not by any possibility, I imagine, if you have described it properly, be taken over by what you called just now a mere landsman?—The superintendent's duty might, because it is clerical work, the shipping and discharging of crews, the issue of money orders and the paying of money orders, and the deposit of money in the Seamen's Savings Bank, the receiving and examining wages and effects of deceased seamen; all those come in as part of my duty.

24,630. But there are some of those duties that you described just now which are strictly technical, are they not. I mean those outside duties beyond the Customs?—The wreck work is outside, and I think it is necessary that a man should have some technical knowledge of shipping.

24,631. Do you mean constructive knowledge, that is, knowledge of the construction of ships?—No. I mean knowing what to do. A ship may come ashore perhaps without anyone on board. When you get there you must take charge of her and decide what is best to be done for the protection of property and all concerned, till you find the owner or Lloyd's agent or somebody else who may turn up. Those are things that we very often have to do.

24,632. Then in fact you, I take it, are of opinion that it would not be a very wise or expedient measure to amalgamate the two departments?—I do not see that they really can be thoroughly amalgamated, that is, that an officer of the Customs cannot be very well one day an officer of the Customs and then transferred to do Inland Revenue work; but it is far easier, I think, for an officer of the Customs to do Inland Revenue work than for an Inland Revenue officer to do Customs work, for the very things that I have just mentioned, that he has to go on board ships in rough weather, and to do boating, &c., and rummaging.

24,633. (*Mr. Lawson.*) Whilst you are of that opinion I suppose you would admit that there is a greater distinction between some of the work done in the Inland Revenue office as between stamps and taxes and excise, than there is between work done jointly in the two departments of Inland Revenue and Customs in respect of warehousing?—I suppose so; but I do not know anything of the Inland Revenue work.

24,634. Would not you say that there was less difference between the warehousing duty which in some parts is done both by Inland Revenue and Customs than there is between work done in respect of stamps and excise?—There is no difference in warehousing at all.

24,635. Therefore you are in favour of consolidating at least the warehousing of the two departments?—They are virtually consolidated now.

24,636. In your own port but not everywhere?—I meant as to the way the duties are performed. The duties in warehouses whether they are under the Excise or under the Customs are performed under exactly the same code.

24,637. I am not dealing with that. They are performed under the same code, but they are not performed of course under the same department?—No, not under the same department.

24,638. There are two sets of officers, are there, engaged in warehousing work?—Yes.

24,639. Do not you think it would be a great advantage if, as in your own case, it were generally provided that only one set of officers should do the warehousing work?—I do not see any advantage in it.

24,640. Do not you think it has been an advantage in your own case or would you like two departments to do the work in your own case?—We do the whole, and the warehouses are really with us, so that we do not clash with any other department.

24,641. (*Mr. Hanbury.*) As I understand, within your area at the present moment, there are two sets of officers dealing with warehouses; at Boston solely Inland Revenue officers, and at Lynn solely Custom House officers?—Exactly.

24,642. (*Mr. Lawson.*) That I understood. I was asking whether from your experience in your own district you think it would be a wise thing to carry that out generally?—It would not benefit anyone in any way in my opinion.

24,643. Do you think it is a very good thing then, though not in your own district, that the warehousing duty in big ports should be in the hands of two sets of officers belonging to two departments?—I am not prepared to give an answer to that question.

24,644. I imagine that an officer of your rank in the service does not do much of the work on board ship?—Not on board ship, but on the quay we do.

24,645. As a matter of fact you do not board the ship, do you?—I do go on board sometimes. I do not rummage, but I merely go there to see that my officers have been there, and that they do their duty properly.

24,646. Of course the greatest part of your work is that of supervision?—It is nearly all supervision. I keep some of the cash books and I do clerical work as well.

24,647. Do you think, as a matter of fact, at the present time you are doing clerical work that might be done by a subordinate?—It could not be done by a subordinate, because I should have to superintend it, or someone else would.

24,648. You say you do clerical work yourself?—I keep cash books.

24,649. Do we understand that your own time is fully occupied?—Fully occupied.

24,650. And that of all your officers?—All the officers. In the Customs it is rather difficult. Not every day, but probably we might have a rush. For instance, in my own port, I think a month ago we had quite a rush of ships. The public required that they should work all night, for three nights; our staff is not a large one.

24,651. That is not usual?—Not usual, but it sometimes occurs. Once a week we are generally up one night, when the Hamburg boat arrives. They never stop, they continually work; our officers then have to give attendance. Of course they are paid overtime for it, and I have to pay a visit two hours before midnight, and if they work well on into the night I have also to pay a visit two hours after midnight.

24,652. They are paid overtime for this work you say?—They are.

24,653. At the same time I daresay on other days they are not occupied to a very large extent?—It is quite impossible to say, because contrary winds may keep ships back, and then you have a rush of ships.

24,654. If they are paid overtime for this particular work, it is not looked upon as making up for the leisure

Mr. A. Riddell.

28 Feb. 1889

that they have had?—No, it is because the public demand dispatch.

24,655. Then you are of opinion that they could not possibly do any larger amount of duty than they do at the present time?—They could not. I forgot to mention that our Hamburg trade has rather declined. They are now trying to re-establish it, and if they do not do so, there is a proposal now before the Board to reduce the staff still further.

24,656. How long has that proposal been before the Board?—It has been before the Board about two or three months but now there is a company formed and they are connected with an influential London company who are trying to re-establish the trade and they at present run one boat a week.

24,657. What is the total number of your staff at Lynn?—Seven at Lynn.

24,658. Do you think it could be reduced?—If the Hamburg trade does not increase I have proposed to the Board that it may be reduced.

24,659. Surely that is a little contradictory to the answer you gave me just now, that the time of your men is fully taken up?—In the outdoor department I meant. It is a clerk that would go.

24,660. Is your clerical staff fully occupied at present?—Yes.

24,661. If you can reduce it, that can hardly be?—They are fully occupied, but then I should have to take a little more clerical work; a book or two, or something of that kind.

24,662. If you can dispense with the service of a clerk, or reduce your establishment in any way, it is evident by that fact that it is in excess of the proper standard?—That is simply because the trade has recently fallen through.

24,663. I understand that perfectly?—It is quite impossible to send a man away the following day, because there is the probability of the trade reviving again.

24,664. Supposing this depression is permanent, and your establishment is reduced, your work of supervision will become proportionately less?—No; my work of supervision will be the same, because I have to go round the docks; the only difference that it will make will be that I shall not have quite so much night work to perform.

24,665. Then you think that, no matter how lasting the depression, it will not be possible for your officers to give any more time to the State?—Not in the outdoor department; please distinctly to understand that. There is a difference between the indoor and the outdoor. There are two clerks who have nothing whatever to do with the outdoor department, except the warehouses, and we have a very small outdoor staff; only one examining officer, two boatmen, and one outdoor officer.

24,666. With your experience, do not you think there is a very great advantage in your own case, in your own district, in having the establishment, at Lynn, under one department, and not under two, and in the same way in having the establishment at Boston under the other?—I think that probably there would be an advantage if the warehouses were transferred back to the Customs at Boston, as we have a staff there which would be almost able to do the duties.

24,667. You would not then object to absorption of the Inland Revenue work in the Customs, so far as it is concerned with warehousing?—Not at Boston.

24,668. (*Mr. Hanbury*) You have mentioned a great number of multifarious duties which are done by you as collector outside the ordinary Customs work?—Yes.

24,669. Is it usual for gentlemen in your position in other districts to do all those duties?—At all small ports where there is not a mercantile marine office established under the Board of Trade.

24,670. They do the whole of the duties which you have described with regard to wrecks and seamen, and other work of that kind?—Yes.

24,671. Supposing the Inland Revenue, we will say, were to absorb the Customs, could the collector of Inland Revenue, one collector, do all the work which is now done by the collector of Inland Revenue in addition to the work of the Customs and this other outside work?—He could not possibly do the whole without an increase of staff.

24,672. Could one collector do it, I mean?—No, it would be quite impossible, if he had also to do outdoor duty as I have to do.

24,673. He would want an increase of staff you say?—Decidedly he would, because he could not go outside continually, and be also at the receipt of revenue.

24,674. Let us take a concrete instance. Take your own district. What is the salary of the Inland Revenue collector?—475*l.*, rising to 500*l.* a year I believe.

24,675. What is yours?—300*l.*

24,676. Supposing the collector of Inland Revenue were to take over both departments (of course you cannot answer for him), do you think that he would do the whole of the work for the same salary?—I cannot answer that question.

24,677. You do not think that is very likely?—I cannot answer that question. If he was told to do so, he would have to do so.

24,678. If you were abolished someone else would have to take your place you say?—Yes.

24,679. What sort of officer?—I should say in that case the collector of Inland Revenue would have two supervisors added to the staff.

24,680. Supposing there were one collector instead of two, and you were the collector who was abolished, who would have to do your work?—The supervisor would.

24,681. Do you think one supervisor would do it?—No, it would be quite impossible for one to take the whole district.

24,682. What is the salary of a supervisor?—I think he rises to 300*l.* I am not quite sure. He is about the same standing as myself, as far as salary is concerned.

24,683. Is it your opinion that there would be any saving in point of salaries by such an amalgamation?—I doubt it very much, but I am not prepared to give a decisive answer.

24,684. How long have you been at Lynn?—Three years.

24,685. As you are retiring I suppose you have reached the maximum salary?—I am not retiring, I am sorry to say.

24,686. I thought you were?—No. I have been promoted to another port—to the Isle of Man.

24,687. (*Chairman.*) Is there any other point which occurs to you which you would like to mention upon this subject?—I do not know of any other point. Only that I should like you to distinctly understand that I am not simply a collector of Customs, in the receipt of Customs, but it is all these multifarious duties that I have to perform which fully occupy my time.

24,688. (*Mr. Hanbury.*) Your salary all comes from the Customs, does it not?—It all comes from the Customs, with the exception of an allowance that is made by the Board of Trade for Royal Naval Reserve work.

24,689. (*Mr. Freeman-Mitford.*) What amount is that?—I think 45*l.* was received last year.

24,690. (*Mr. Hanbury.*) How is that paid; I mean to say on what principle?—Upon the number of men that are enrolled, and the number of retainers paid, and the number of men that are sent to drill, and the general interest taken in the Reserve.

24,691. Do you get so much a head?—I do not know how they manage. We have to send returns of all documents issued, and then the Board of Trade allow a certain amount of money, the amount they awarded to me was 45*l.*, which I have to share between the officers doing a portion of the clerical duty in the district.

24,692. What proportion of these multifarious duties is really Customs work proper?—The collection and protection of the revenue and general supervision of the district.

24,693. How much of your time is occupied on Customs work proper; half of it, or two-thirds, or what, do you suppose?—It is most difficult to apportion it, because you are doing both works, sometimes, together. You are probably doing surveyors' work and probably may want to inquire about some man or other who is required on behalf of the Board of Trade. There is another thing that we have to do. When an investigation takes place in a case of wreck we detain witnesses. We take all their statements, which we send up to the solicitor, and it is from those statements that he prepares his brief when these examinations

take place before the Wreck Commissioner, so that a collector of Customs in a small port like Lynn, and all up to, I think, 400*l.*, is everything. He is continually at work at different duties.

24,694. If the collector of Customs did not undertake these outside duties, is there any other Government officer who could do the work so well?—I am not prepared to say.

24,695. At Lynn, within your own knowledge?—There is no other Government officer there except the Excise officers.

24,696. There are only those two to choose from?—Yes.

24,697. (*Mr. Freeman-Mitford.*) Then if the two departments were amalgamated, would not the Excise officer naturally have to do it?—I am not sure. I do not know what arrangements would be come to by the Board of Trade

24,698. (*Mr. Hanbury.*) But there is no other Government officer there who could do it?—There is no other Government officer there. If the collector of Excise were to do the whole work there would be a departmental arrangement how the work was to be performed.

Mr. A. Riddell.

28 Feb. 1889.

24,699. My point is this: This outside work, connected neither with the Customs nor with the Excise, has to be done by some officer of the Government?—Yes.

24,700. And there is no officer of the Government to whom this work could be given except the Customs officer or the Excise officer?—Just so.

24,701. Do I understand you to say this, that there is so much connected with the sea, requiring a man who has, as I think you said, got his sea legs, that an Excise officer probably would not be able to do that work?—He would not immediately; it would be necessary that he should be trained to it, because there is another duty that we have to do that I quite omitted, and which is an important one,—quarantine duty; which is part of our duties as officers of Customs.

The witness withdrew.

Mr. JOHN MOLINEUX, C.B., called and examined.

24,702. (*Chairman.*) I think you are the chief inspector of Excise at the headquarters here in London?—Yes.

24,703. I may take it that you have had a varied experience of the office?—I have had a long experience at the office.

24,704. Have you always been in London at headquarters?—No. I have been about 25 years there.

24,705. You are entirely concerned with the Excise in London?—Entirely with the Excise throughout the United Kingdom.

24,706. You do not deal with taxes at all?—No.

24,707. There is a chief inspector of taxes?—There is, Mr. Smiles.

24,708. And your work is purely confined to Excise?—Precisely.

24,709. I suppose you have formed an opinion upon the question of the suggested amalgamation of the Department with the Customs, or rather the formation of one Revenue Department, and possibly also you may know what Sir Algernon West's views are upon the subject?—Yes, I am familar with his views.

24,710. Possibly you are familiar also with the evidence that he has given before this Commission?—Yes.

24,711. Perhaps the best way is for me to ask you what your view is upon the subject?—In the first place I should look at it from two points of view; first, is amalgamation practicable? It was my duty in connexion with a sub-committee on which I was appointed to travel all round the kingdom and to examine the work at almost every port in the kingdom with the Customs officials. The result of my observations is that I believe it to be perfectly practicable for the officers of either department to do the work of the other.

24,712. Would you apply that remark to all the grades of officers or would you distinguish?—To all the grades of the outdoor service in both departments except the lowest grade, such as boatmen.

24,713. What would you say of the kind of work more especially connected with shipping which is done by Customs officers at some of the ports or districts, at all events, on behalf of the Board of Trade, in connexion with wrecks, the Naval Reserve, and questions of that kind?—I am not fully acquainted with the work. There are many duties to be performed by the Customs of a very important nature no doubt, partly for statistical purposes and partly on the ground of health—quarantine, the landing of cattle, the registry of ships, and other work in connexion with the Board of Trade statistics, which is all very important work, but all simple in its character, so that any Revenue clerk or officer with a comparatively short experience would be able to do it. There is nothing very intricate or difficult about it, so far as I am able to judge.

24,714. Are there not some of the duties which rather pre-suppose a knowledge of shipping. Take for instance questions connected with the light dues and wrecks?—The light dues are easily calculated. I believe they are all tabulated, and the officers have to calculate the dues from the tonnage of the ship, and from the lights passed in making the voyage. It does not appear to me that there is any great difficulty in the work.

Mr. J. Molineux, C.B.

24,715. What do you say as to wrecks for example?—In the case of wrecks the Customs officers have to inquire certainly into the circumstances of the wreck and to take possession of anything saved from the wreck, but in that respect especially I think the Inland Revenue officers would be very useful because many of them are stationed along the coast at very considerable distances from a Customs port, and there appears to me to be nothing in the nature of the work in taking the depositions of the sailors and other persons of so difficult a character that anybody of average intelligence could not undertake it.

24,716. Then your opinion is generally that you think from what you have seen and known, that it is quite practicable to amalgamate all the work of the Customs and Inland Revenue all round the coast?—Yes. I think so most distinctly, and I say emphatically, that that is my opinion.

24,717. Therefore you say it is practicable?—Yes, I think so.

24,718. What is your next point; whether it is desirable I suppose, or whether it is economical: take it in your own way?—I think it is very desirable that this amalgamation should take place from several points of view. In the first place it would be economical. There are 54 Collectors of Customs at the ports in the kingdom, and in 23 of those places we have Collectors of Inland Revenue. It appears to me that for all purposes of collecting the revenue in most of those 23 places two collectors are quite unnecessary.

24,719. In most of those places?—Yes, most of those 23 places. I would not say, for example, in places like Liverpool and Glasgow, until some experience had been gained in the management of an amalgamated department, whether it would not be necessary to maintain the two collectors for a time.

24,720. But in a place like King's Lynn, from which we happened to have had the collectors on both sides this morning?—There could not be the smallest reason for the maintenance of the two collectors at the same place.

24,721. (*Mr. Hanbury.*) You limit that to the purposes of collecting the Revenue?—Collecting the Revenue.

24,722. You are not taking into consideration the other duties that the collectors of Customs have to perform?—I am not for the moment taking that into consideration. But in many places the collectors act as surveyors, and the duties of the surveyor of Customs, so far as relates to the warehouses and taking accounts for duties, are precisely the duties which the supervisors of Excise discharge.

24,723. I was referring to the other outside duties under the Board of Trade, and other offices which the collectors of Customs do?—Quite so. I do not see any reason why the collector of Inland Revenue could not undertake such duties.

24,724. (*Chairman.*) Do you see any difficulty that might arise from the want of personal attendance and attention on the part of a superior officer, which from any of these duties may be naturally looked for by

Mr. J. Molineux, C.B.

28 Feb. 1889.

traders and other people at those ports?—I think it would probably be necessary in the event of an amalgamation, and putting the duties in any port now under a collector of Inland Revenue and a collector of Customs, under one, to re-arrange the Excise collections so as to retain the collector in the port as much as possible. At present our collectors have distant districts to visit, and though they do not travel on circuit of collection as they did formerly when they had to go twice every quarter to collect the revenue in the various market towns within the limits of their collection, still they have occasionally to visit for purposes of discipline distant districts in their collections. It may be necessary to re-arrange the Excise collection so as much as possible to retain the collectors in the port, but all that would be a matter of re-arrangement. It would appear to me to be not attended with any great difficulty.

24,725. Then, I understand you to say that it would be economical in the first place because there are many places (I think 23) in which there are collectors of Inland Revenue as well as Customs, where you might be able to do with one collector?—I think in many of them one collector would be sufficient.

24,726. Would it be a difference more than in name?—Yes, very much more than in name.

24,727. Do you think it would really be a substantial reduction in staff?—That is my opinion, that it would be a substantial amalgamation in respect of the collector's duties.

24,728. By which you mean the duties now done by a collector, on whichever side he may be?—Quite so.

24,729. All the work?—Yes, I think so.

24,730. One Government Revenue officer of a superior character at these different places, in your view, would be able to do the joint duty?—That is my view, distinctly.

24,731. Being so strongly in favour of amalgamation, to what extent do you think you could carry it out? Have you worked it out at all?—I did not prepare any scheme. I did not deem it prudent to do that. I thought it would perhaps be rather presuming on my part to prepare any scheme; but in the first place, on the question of economy, about which we are just now speaking, it appears to me that there would be an economy of from 12,000*l.* to 15,000*l.* almost immediately.

24,732. Where would that be, at headquarters or at the ports?—That would be partly at headquarters; perhaps we might say from 5,000*l.* to 7,000*l.* at headquarters. At present you have two chairmen at a salary of 2,000*l.* each. Of course you would dispense with one of these. You have two Accountants and Controllers General. You would not want two in the case of amalgamation. You have two solicitors at 2,000*l.* each, and there are other officers in high positions and with very large salaries (some secretaries for instance) you would not require. At present there are two secretaries in the Inland Revenue, and one in the Customs, besides assistant secretaries. I think it would be perfectly practicable to reduce the number of chief secretaries to two in the case of amalgamation instead of three as at present; there would be a saving of 1,200*l.* in salary there.

24,733. Are you giving now not only your own opinions, but the opinions of others. Are you authorised at all in any way to say that that is the view of the Commissioners for instance?—I might say that I have conversed with Commissioners and with others, and I know that that is their view. I think that view has been put forward, in fact, by the Customs Department.

24,734. (*Mr. Freeman-Mitford.*) By the Customs Department?—I think so. I think in the statement made by the Customs which I saw, it was stated that they could save 4,000*l.* or 5,000*l.* at the head office.

24,735. (*Chairman.*) What do you say with reference to the members of the Inland Revenue Board itself. Are you prepared to express an opinion as to their views?—I should not like to say. There are three Commissioners, a chairman, and a deputy chairman—five altogether. At present there are three Commissioners at the Custom House including the chairman and the deputy chairman.

24,736. Are you prepared to say whether a controller and deputy controller in both cases would not be sufficient?—A controller to manage the whole department? I should be afraid to give an opinion as to that.

24,737. I quite appreciate that it may not be a question which you would like to answer?—No, it is rather difficult for me to give an opinion upon it; but supposing one of those gentlemen were ill, it would be an enormous department to be managed by one man having the supreme control.

24,738. The Inland Revenue?—The amalgamated department.

24,739. I am not talking of the amalgamated department?—So far as the Inland Revenue is concerned.

24,740. I am talking now of the Inland Revenue Board?—I think that the Board as it is now constituted is better from many points of view than a controller and a deputy controller would be, or a president or whatever you like to call him. I think it would give more satisfaction outside; a board would have greater authority in the minds of the people.

24,741. (*Mr. Fowler.*) The people?—Yes.

24,742. How do you define the people?—The taxpayers.

24,743. You do not mean the traders?—Yes, I mean the traders. The correspondence of the traders with the Board of Inland Revenue is very large, and if the thing was altogether in the hands of one man I think he would not command that confidence in the minds of those traders that a board does. That is my opinion. I did not expect to be asked questions upon that subject, but that is my view.

24,744. (*Mr. Hanbury.*) Would you apply that to other departments? Would you like to see boards at the head of the Home Office and the Foreign Office?—I think that there is a very considerable difference in the functions of a Revenue department from those of the Home Office and the Foreign Office. The Revenue Department has to correspond with an enormous number of persons all over the kingdom, traders of various kinds coming up for indulgence and for information on various matters.

24,745. (*Chairman.*) Then, I understand your view to be that you would desire to see a complete fusion of the two boards upon terms of equality?—Precisely.

24,746. That there should be Commissioners of Revenue equally responsible for the Inland Revenue on one side and for Customs on the other?—Quite so; that is my view.

24,747. You have told us what economies you think would follow at headquarters, have you not?—Yes. Then I think with respect to the collectors that there would be considerable economy in placing each outport in the hands of one collector instead of two. I jotted down roughly what I thought the several savings would come to at starting, and it appeared to me that from 12,000*l.* to 14,000*l.* would be certain to be realised as a saving almost immediately upon starting.

24,748. Is it your opinion that that would be attained without any complaint on behalf of traders?—Certainly, I think so, without any complaint on behalf of traders.

24,749. You think there would be no inconvenience caused to the public?—I do not think there would be the slightest inconvenience to the traders. Then there are other economies which would be certain to be realised hereafter. I spoke a little while ago about our officers being placed all round the coast. The fact is you cannot go into any town scarcely in the country where you do not find an Excise officer; but in many places there are principal coast officers and other officers of Customs placed at a considerable distance from their chief port, where their time, I think, cannot be fully employed; but they must be there as long as the present state of things exists, and as we have officers very near to these places, or living in them, it appears to me that there would be a very considerable economy in placing all the duties now performed by two sets of officers in the hands of one set. I think a good deal of economy would be effected in that way. There are many places again in large towns, such as Glasgow, where we have nine supervisors; and I do not know how many surveyors they have in the Customs; but I am quite sure there would be an economy in amalgamating surveyors of Customs with the supervisors of Excise, because in respect of the warehouses, where all the revenue is collected, they do precisely the same duties. There is no difference whatever in what they do in warehouses—the supervisor of Excise and the surveyor of Customs.

24,750. (*Mr. Hanbury.*) We have had it in evidence that those supervisors, I think in Glasgow itself, have got more work to do already than they are well capable of doing. Do you think that is so?—I am not aware that they have; in fact I could undertake to say (for I have lately examined the Glasgow work) that I am not able to support that view at all. We have nine supervisors, and I can say here confidently that they have not too much work to do. I believe that they are fully occupied, but in the case of amalgamation there might be arrangements by which some part of the work they do might be devolved upon other officers. I may perhaps mention as an illustration of that view that in the Customs they have two classes of examining officers. The first class of examining officers have salaries equal to some of our supervisors and I think some of the examination work which the supervisors of Excise do to a greater extent than the Customs surveyors might be devolved upon some of those men, so that by a rearrangement of the work and devolving some of the less important work upon the inferior officers I believe that there would be a considerable saving.

24,751. (*Chairman.*) To what further extent do you think you would carry your amalgamation?—So far as relates to economy I do not think I could say anything more definite at present, because I think it would have to be worked out by some considerable experience. I do not think that there would be very great economies beyond what I mentioned in the first instance, until after perhaps two or three years, because of course if you were to reduce the number of officers of any grade considerably, you would throw a burden upon the superannuation, and it would not be any real saving. The men are always dying or retiring from old age, and one thing or other; and as these retirements fall in, I believe that there would be rearrangements of the business, and work to be done which would lead to great economy.

24,752. Do you think there would be any difficulty, or do you know anything on that subject from the different salaries for corresponding work in the two departments?—I should like to speak with some reserve, with regard to the exact kind of work that is done by the officers of Customs, but the surveyors of Customs have much higher salaries than the supervisors of the Inland Revenue.

24,753. Do you think it would be possible to bring the surveyor of Customs down? Supposing that amalgamation was brought about, would the inevitable result be that, rightly or wrongly, there would be an expectation of levelling up rather than levelling down?—In regard to levelling up I am not quite sure from which side you look at it. The average salaries in the Customs would be about 206*l.* per annum.

24,754. Are you including the boatmen?—I am not including them. I am not including even the out-door officers. I will tell you my reason for excluding outdoor officers. They do not take all the duties that the charging officers, the examining officers, take. Out-door officers do not take account for revenue.

24,755. You exclude them?—Yes. If I come to compare officers that are doing analogous work I should say that the average salary in the Customs is 206*l.* per annum, whilst the average salary in the Inland Revenue for officers doing analogous work is 176*l.*

24,756. It is very difficult of course to compare them?—It is very difficult: that could not, of course, be stated with absolute accuracy.

24,757. I think those are the figures which Sir Algernon West gave us?—It is very likely he did, because he would probably look at it from the same point of view.

24,758. If you take a case like Glasgow, to which I think you referred, where you have nine supervisors, and where the Customs have surveyors also, practically, in your opinion, would amalgamation work out there?—Of course I will assume that at first, supposing amalgamation were determined, the first thing would be to amalgamate the Boards, the Commissioners; that would be the first thing. Then they would set to work and amalgamate their indoor staff very likely,; then they would go down into the country and amalgamate the outdoor officers, the rank and file. That would take some experience, but I should think it might be stated with certainty that the work of the surveyors of Customs, and that of the supervisors of Inland Revenue might be perfectly amalgamated, and that, in amalgamating their work, in a large place like Glasgow, I think there would be a saving in regard to the number of persons employed.

24,759. Will you take your next point?—The next point would be the convenience of merchants and traders. It appears to me that the present system leads to a good deal of delay in the transaction of business, and a good deal of inconvenience to traders who have to do business with two departments instead of one. Sometimes a merchant has goods stowed away in a Customs warehouse as well as in an Excise warehouse. In a very large city, they might be in warehouses at considerable distances apart. He would have to place himself in communication with two sets of officers to get his goods delivered. He would have to go to the Custom house to pay the duty for goods stowed in the Customs warehouse, and he would have to go to the Inland Revenue office—perhaps it might be a considerable distance from the Custom house—to pay the duty for goods in the Excise warehouse. It appears to me that that is an unnecessary labour, and inconvenience to trade. If he had to go to one office it would be much better.

24,760. (*Mr. Fowler.*) If they felt that inconvenience, do not you think they would complain of it?—Many persons have told me. I could not give names, but many gentlemen have told me that it is an absurd arrangement to have to deal with two departments. I do not remember ever to have spoken to a man in business during an experience of a good many years who has not stated to me that he thought it was a very bad arrangement to have two departments to manage work of a similar character. Surely in paying revenue duties, it should be sufficient to go to one office to pay in one town. That opinion has been expressed many times to me by persons who are engaged very largely in the spirit trade. Then that is not all. There is a good deal of dissatisfaction felt in the minds of traders at what they suppose to be discrepancy of practice in the two departments. It would be difficult for me to express fully the extent of that dissatisfaction, but it very often happens that traders complain that they can have certain privileges in the Customs which they cannot get in the Excise warehouse, and then we are told on the other hand that they go to the Customs House and say that they have privileges in the Inland Revenue bonds which they cannot get in the Customs.

24,761. Can you give us any instance of that?—Yes. Some time ago there came up a complaint to the Board that the Customs kept their warehouses open later than the Excise, and I believe there was a similar complaint made to the Customs that the Excise warehouses were kept open later than those under the Customs Board. Now, it is a matter often of very great importance to a trader to be able to get on with his work; instead of closing at four o'clock, he would very likely wish to remain there till six to arrange his casks, and to get ready for the next day's work, and, if one department say, "No, you must close punctually at four" and another says to the trader, "Well, it does not matter; you can keep open till six," it very much affects the trader's profits.

24,762. (*Chairman.*) We have not had any such case brought before us, and we are anxious to know whether, really as a practical matter, there has been any such case?—I think perhaps I can furnish you with one case at least, that occurred recently at Glasgow, in which there was a complaint made to the Board of Customs, that there were greater facilities given in the Inland Revenue warehouses, and the Customs Board communicated with the Board of Inland Revenue to know whether this was true or not. It turned out in the result that the case had been overstated by the merchants, and that the discrepancy in the times of closing was not anything like so great as had been represented, but that occasionally the officers had not been very strict in saying, "Now I must lock up and you must go."

24,763. At all events that is a matter of administrative detail?—Yes.

24,764. Which can be easily settled whether there were amalgamation or not. It would be very easy to make a general rule that all Government bonded warehouses should be closed at a certain hour, would not it?—There is a general rule that they close at four o'clock; that they open at eight and close at four in the summer, and open at nine in the winter and close at four; but in a widely scattered department like the Inland Revenue, and like that of the Customs, the officers are very much left to their own volition in the matter. The rule is to close at four o'clock.

Mr. J. Mouneux, C.B.

28 Feb. 1889.

24,765. You may take it from me, that we have had no statements from the traders so far, that they at all events complain. Will you take some other point?—Then this dissatisfaction is often expressed to the officers, and there is at the same time, I am bound to say, a spirit of rivalry between the two departments, which I think acts very unfavourably, and possibly prejudicially, to the interests of the revenue.

24,766. Could you give us an instance of that?—I am afraid I could scarcely quote a case at the present time, but I speak from a long experience—from actual observation—and I know that traders tell officers that they can get much better terms in the Customs; that they are more liberally treated. I do not say that they are; I do not wish it to be so understood. I believe that the Customs do their work well. I believe that each department does its work faithfully and truly, but it is stated so to the officers, and that acting upon the spirit of rivalry between the officers of the two departments, is to say the least very trying to them, and I think it does sometimes act prejudicially to the revenue. You saw, I think, on your visit to a warehouse the process of taking an account. We have to use the hydrometer to ascertain the strength of the spirit. The hydrometer is a very delicate instrument, and is very sensitive, and the accuracy of the account depends upon the accuracy of reading the hydrometer. If the indications of the hydrometer are not clearly and truly ascertained, you either charge too much duty or too little. If a trader said to an officer when he is taking account of spirits, "Now, do not be too hard; we get much more liberal treatment in the Customs," one can easily imagine that a weak officer might yield in some measure to the trader's representation, and be willing to give him good measure, as he would say. You might fancy that there is not very much in that, but, if you consider what an enormous revenue is collected from spirit, and that that revenue depends entirely upon taking the quantity and the strength accurately, you can see that any deviation from the truth in such very large quantities would effect the revenue considerably.

24,767. You have no reason to believe that such a state of things really has prevailed to any considerable extent, have you?—Not to a considerable extent. I believe that the officers on both sides may be relied upon for integrity and honesty, but at the same time I know what has been said. I knew what was said to myself many years ago when I was younger in the service, and in a station. In weighing spirits I have often been told that I was extremely rigid—too tight in weighing. A pound in the turn of a scale would make a difference of a gallon.

24,768. You think, if there was not another department, there would not be the same temptation to make things pleasant?—I think there is something in that. I am inclined to think that the rivalry between the two departments—the desire on the part of the officers of each department to maintain its ground, and to conciliate the traders that they work with, and to be popular, might act prejudicially to the revenue. I am inclined to think it does to some extent.

24,769. To go beyond that, will you take another point?—Then there is another point in regard to administration. There has been a good deal of discontent in the Inland Revenue on account of the terms and the conditions, of their service. They think that they have not been paid sufficient salaries for the work that they do.

24,770. Is that confined to the Inland Revenue?—No, I would not say it is; but the Inland Revenue officers complain that their salaries are not equal to the salaries of the Customs.

24,771. (*Mr. Lawson*). All the Inland Revenue officers?—The general body.

24,772. I mean from the highest to the lowest?—I could not say that. I am speaking now of the out-door service, the men who have to do with warehouses, and charge the duties. They are constantly comparing themselves with the officers of the other department, and representing that they are not serving on equal conditions and equal terms with the other officers. For instance the supervisors compare themselves with the surveyors of Customs, and this comparison is very frequently brought before the Board, and it does create a certain amount of discontent. All that would be done away with in the case of amalgamation.

24,773. (*Chairman.*) Are you aware whether the same statements, or similar statement, are not made by the Customs House officers to the effect that their salaries are not up to the standard of the Inland Revenue?—I am not aware of that, because that would not be in accordance with the facts of the case.

24,774. I think there is another view of the case possibly; but, at all events, your view is not only in the matters which you describe with reference to convenience of traders, but also as regards salaries; one department is in rivalry with another?—Yes, there is a good deal of that—a good deal of discontent engendered by the different rates of pay in the different grades of the two departments, and it makes administration very much more difficult, that is to maintain the relations in contentment on the part of the officers.

24,775. Can you say whether there are any such feelings now at the present moment?—Yes, I am sure there are such feelings.

24,776. More than the natural desire of every officer to get higher pay?—I have no doubt representations will be made to you: I understand that they are going to be made to that effect by some of the officers in our department.

24,777. And in your opinion the difficulty of dealing with such questions is increased by the fact that officers doing similar duty in the Customs are, as you say, higher paid?—I am quite certain it is. It is constantly referred to. I never visit the provinces in any of the distant stations without hearing that all they want is equality; that is what our people say: "All we want is equality."

24,778. (*Mr. Lawson.*) I suppose you count the supervisors in your service as being of the same class as the Surveyors of Customs?—Those are the two grades that our officers compare, and, without saying that the Surveyors of Customs have not some functions which our people have not, I should not like to undertake to estimate exactly what the functions of the Surveyors of Customs are, but I believe they do not differ very greatly from those of the supervisors, and the supervisors at any rate class themselves in their estimation with the Surveyors of Customs, and complain bitterly sometimes that they are not treated on equal terms. I think it would be much easier to deal with questions of that kind when all are under one Board.

24,779. Are you afraid of the levelling-up process going on under those changed circumstances?—No, I do not think so. I do not see where the levelling up is, if you speak of the Inland Revenue. The Inland Revenue officers themselves would consider the levelling up came from their side.

24,780. (*Chairman*) Would not your people want to have the same pay as the people on the other side in fact?—I think they would if the same pay would be maintained on the other side. I think it is probable there would be a re-arrangement of the work, and a re-classification that would perhaps benefit the one side a little.

24,781. (*Mr. Lawson.*) Let us take a supervisor in a first class district under the Inland Revenue. You see that he has a salary with a minimum of 300*l.*, and a maximum of 350*l.* If you turn to the Surveyor of Customs, you will find that the salary of a surveyor of the first class is a minimum of 490*l.* and a maximum of 550*l.*?—Yes: it is extremely difficult to justify that difference to the minds of our officers.

24,782. Therefore you think that the present inequality probably leads to greater complaint and possibly may induce the department to raise salaries to a greater degree than would be the case under an amalgamated Board?—I think we should be able to meet them better when one Board had to decide the merits of all our officers, to estimate the value of their work and settle it, I think all those comparisons would cease.

24,783. (*Chairman.*) That is a difficulty of administration I think, which you have pointed out to us?—Yes. Then again if there were an amalgamated Board there would be so much less delay in dealing with applications from merchants and tradesmen throughout the kingdom. With an assimilated code, with an identical code like ours, we cannot stir hand or foot scarcely now; if any applications come from the country for any deviations from the code we have to consider in the first place whether we can answer them without consulting the Customs first, and that very often leads to a considerable delay in the correspondence.

24,784. (*Mr. Fowler.*) Just give us a concrete illustration of that?—Suppose a merchant in Glasgow com-

plained that he was prevented from racking his spirits from smaller casks into larger casks, and the officers of Inland Revenue said We cannot allow you to do this, and he appealed to the Board of Inland Revenue whether he should not be allowed to do it, the Board of Inland Revenue before they could make any order upon the subject would have to go to the Customs to see whether they would agree to it. Now if there were one Board there would be no reference; there would be no delay, An application coming up for any alteration in the provisions of the code would be dealt with at once off hand. The paper would be referred to the principal practical officers, and on their report the Board would act according to its own judgement without reference to any other body,

24,785. (*Chairman.*) Do such cases as that happen frequently?—They happen frequently I might say applications come up and we say, "We cannot do this without consulting the Customs." The fact is according to the theory there cannot be any deviation from the conditions of the code without the consent of both parties. That is the principle.

24,786. (*Mr. Lawson.*) I suppose this involves a good deal of correspondence?—It does, when you consider that there are about 630 paragraphs in that code.

24,787. And consequently a good deal of clerical labour?—Yes.

24,788. Therefore you are of opinion that amalgamation would enable you to reduce the clerical establishment of a joint board?—I should think to some extent; I could not say how far it would affect the number of letters so as to reduce the clerical staff from that point of view only.

24,789. But you would not have this correspondence going on between the two departments?—You would not have that.

24,790. If a question arose it could be settled in the office by personal conference or by interchange of notes?—Quite so. The letters are not very numerous. I do not wish to overstate the case at all, and I hope I do not do so.

24,791. Give us some idea?—Perhaps there are 150 letters in the course of a year.

24,792. Altogether?—Yes, on either side.

24,793. Does that include the letters which are rendered necessary by the applications from the outports in consequence of the difference of interpretation?—No. In some cases it would be necessary to refer for further reports from the local officers, and that very likely would lead to a correspondence on both sides if it was for any material alteration.

24,794. You do not include that in your figure?—No. Then consider there are about 630 paragraphs in the code which has been in existence now for three years, and we have had to issue about I think 27 general orders modifying the code, and there have been several joint committees formed for considering modifications and alterations.

24,795. That is what you have to say upon the subject of these trade questions, What is the next point?—These are the main points. I think that amalgamation is practicable from my experience of many years during which I have examined into the question in every part of the kingdom both in the Inland Revenue and the Customs. I think, secondly, that it is highly desirable as tending to economy; to greater convenience of merchants and traders, to greater security for the Revenue and for the avoidance of discontent and rivalry between the two departments.

24,796. With respect to the point of commercial convenience you say you have consulted merchants upon that subject?—I have often spoken to them about it, I do not mean to say in a formal way, but incidentally, when I have been travelling, and I have invariably received from them the expression of an opinion favourable to placing the revenue departments under one Board. I have repeatedly received that expression of opinion.

24,797. (*Chairman.*) At the same time you may take it from me that we have not had any representations to us to the extent that we should have expected if that was the case?—I am only speaking of my experience.

24,798. If it is fair to ask you, do you see any objections to amalgamation. Do you see any difficulty, or are you entirely in favour of it?—I am entirely and strongly in favour of amalgamation. Of course I have no personal interest to serve in it in any way. I shall not be there very long to see anything done and carried out, but I am very strongly of opinion that it would work in the interests of the revenue, and for the convenience of trade. There are some difficulties in the way doubtless. In the time of transition there will be difficulties from want of experience in dealing with the work to which men have not been accustomed; but we take in perhaps from 70 to 100 new men every year, and I suppose the Customs take in probably pretty nearly an equal number, and as these young men enter the service they would gradually be introduced to the new work until they acquired familiarity with the work to be done all through. It appears to me that there is no difficulty in doing that. I cannot see that it can be any more difficult to rummage a ship than to examine a large distillery or brewery. An officer in a distillery has to make himself familiar with every part of it and all the utensils in it, and I do not think there is anything more difficult in the rummaging of a ship than there can be in that work. But in the event of amalgamation it would of course be necessary, for the avoidance of inconvenience and loss of efficiency, to carry out the changes gradually and with judgment.

24,799. (*Mr. Lawson.*) And as a matter of fact the rummaging of a ship is done in the Customs by officers of comparatively low grade?—Yes.

24,800. I mean a surveyor does not go on board a ship?—I think he does sometimes, but I do not think he undertakes the rummaging.

24,801. With regard to the warehousing part of the work of the two departments there would be of course no difficulty in at once consolidating it so far as the performance of duty goes, would there?—Not the slightest, because they are the same precisely.

24,802. The only sphere where you anticipate there might be some little inconvenience at first would be the water-guard duty?—Yes, and the work done for the Board of Trade, if there is any difficulty.

24,803. In any case you would not be in favour of getting rid of all the expert labour of the Customs?—No, certainly not. I have not said anything to minimise the importance of the work done by the Customs for the other departments. I think it is very important work; but at the same time I say that it is not work of such a difficult character that any Excise officer of proper standing and of average intelligence could not undertake it.

24,804. So far as the collection of statistical returns goes, there would be nothing new to the Excise officers in being the agents for that purpose, would there?—Our officers have to do work for other departments as well as the Customs. We collect all the agricultural returns; we collect the average corn returns, and lately the Board have consented to our officers undertaking some duty for the Land Commission in Ireland. They are going to collect the statistics, the prices of agricultural produce, and other things. Our officers find no difficulty in undertaking any kind of work that is placed before them. Many changes have taken place within my experience in the department in which work has been added to our office from other departments. For instance, all the assessed taxes were placed from the taxes to the Excise Department.

24,805. And I understand that you wish to make this point very clear to the Commission: that at the present time there is an agitation going on among the officers in your department for a rise of salary in consequence of a comparison of their own position with that of officers of a similar grade under the Customs?—Yes, certainly.

24,806. They say that as there is a correspondence of duty there ought to be some correspondence of pay, do they not?—Yes.

24,807. And that would be dangerous if not checked?—I would not say dangerous; but it is inconvenient to deal with.

24,808. And you think that the amalgamation would be a means of rectifying that without increasing the cost to the State?—Without increasing the total cost, certainly.

24,809. Do you think it would lead to a reduction instead of an increase?—I have no doubt it would. We have had several amalgamations. There was an amalgamation in 1835 of two Boards; the Stamp Board and the Taxes Board. That resulted in a very considerable saving—I do not know how much it was—some-

Mr. J. Molineux, C.B.
28 Feb. 1889.

where about 20,000*l.* I think. Then in 1848 there was an amalgamation of the Stamps and Taxes Board with the Excise Board. That led, I believe, to a very considerable saving; I do not know exactly how much, but a very large sum. The Excise collectors at that time took over the collection of all the duties of the taxes, and they collect all the taxes now. The amalgamation that took place in 1848 has been represented in some quarters as a failure; that is to say, it has been represented that it was no real amalgamation, that whilst it was under one Board that is all the amalgamation almost that took place, and that the departments are quite as distinct as ever. That statement is not strictly accurate, because it should be remembered that our old Excise collectors are now collectors of Inland Revenue to receive every kind of duty under the Board of Inland Revenue, taxes and stamps, and Excise, receiving the whole; so that the amount of revenue received by the Excise collector now amounts to a very enormous sum.

24,810. For all that there has been no complete amalgamation in the lower ranks between Excise and stamps and taxes has there?—The surveyors of taxes are perfectly distinct from other officers in the Inland Revenue. They do not do any Excise duty absolutely, nor do the Excise officers interfere with the surveyor in his proper functions. Nevertheless the one department very greatly assists the other. The surveyor of taxes assists the Excise very much in the assessment of licence duty which depends upon the valuation of houses. The surveyors of taxes are acquainted with all the valuations and by their help we are very often able to realise better revenue than we should do if it were not for their assistance.

24,811. And there has been a saving of course in the work of supervision?—In the inspection?

24,812. I mean by that amalgamation there has been a real saving in the highest grades of all?—Yes. There were officers called receiving inspectors formerly, tax officers. All those officers have been done away with. All that work is done by the collectors of Inland Revenue. Not only so, but there is a change going on in the collection of the taxes, and has been for some time, by which the collectors of Inland Revenue receive the taxes direct from the tax payers instead of the taxes being paid through the local parochial collectors. Wherever that system prevails (and it is being extended continually over the kingdom), the collector of Inland Revenue is the collector for taxes as well; but he always has associated with him an Excise officer, or two or three Excise officers, according to the circumstances, and these officers collect all the arrears. So that there is a very great deal of service rendered by the Excise officers to the Tax Department, and there is considerable assistance given by the surveyors of taxes in the assessment of licence duties. Then again the surveyors get a good deal of assistance from our men in regard to the amount of business done by persons in the spirit trade. The officers furnish returns to the surveyors of taxes, showing what quantity of spirits have been received by the different Excise traders; so that it assists the surveyors again in making their assessments.

24,813. (*Chairman.*) I think you quoted just now the amalgamation of 1834–5 as producing a large saving; but is it not a fact that within 13 or 14 years afterwards the amalgamated service cost 15,000*l.* or 16,000*l.* more than it did before?—I was not aware of that fact.

24,814. Is not it the fact that the two branches cost before amalgamation 123,000*l.*, and that there was an immediate saving of 18,000*l.* Whereas in 13 or 14 years later the cost had risen to 147,000*l.*, no doubt owing partly to an increase of work it is admitted?—I have a memorandum here which states that when the Boards of Stamps and Taxes were consolidated in 1834, instead of 712 persons with salaries amounting to 123,354*l.* in the separate establishments, the combined establishment contained only 662 persons, costing 105,012*l.*, showing a saving of 17,170*l.*

24,815. Then have you got the cost 13 years afterwards. That is the figure I have to show that in 13 or 14 years the cost had risen to 147,000*l.*?—I should like to inform myself of the exact conditions under which that increase occurred.

24,816. I only name that because it does not follow that an immediate saving is always an economy?—Yes. Again, when the Boards of Stamps and Taxes were consolidated with the Excise in 1849, similar reductions of expense were found practicable, and the saving in salaries was 30,925*l.*

24,817. My question is only directed to this: in order that the consideration may not be left out that after all amalgamations must be undertaken with caution; not more than that?—Yes, certainly.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

SEVENTY-SECOND DAY.

7, Whitehall Place, S.W., Thursday, March 7, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.
LORD BASING.
MR. J. CLEGHORN.
MR. A. S. HARVEY.
MR. H. L. W. LAWSON, M.P.
MR. J. W. MACLURE, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

Mr. WILLIAM HENRY WILLS called and examined.

Mr. W. H. Wills.
7 Mar. 1889.

24,818. (*Chairman.*) You are, as we know, largely interested in the tobacco trade, and we understand that you are willing to give us your opinion upon the question of whether the Inland Revenue and Customs Boards should be amalgamated from the point of view of convenience to the trade?—Yes.

24,819. Perhaps I should ask you, in the first instance, have you prepared any notes or any points on the subject?—I have made a memorandum.

24,820. Would you be kind enough to give it to the Commission in your own way?—My firm are engaged in the tobacco trade, both in Bristol and in London; and I think we are the only firm in the United Kingdom that are working both under the Customs and under the Excise. We have two factories in Bristol and one in London. One factory in Bristol is a bonded factory, controlled by the Custom House; we have two Custom House officers always on the premises. The other factory is just as absolutely under the control of the Excise.

24,821. Are they both bonded factories that you have at Bristol?—One is bonded, and the other is a

free factory. The bonded factory is under the Customs, and the other factory is under the Excise for home trade.

24,822. Then you do not carry on the same kind of work in both?—No; I will explain that to you afterwards. Unmanufactured tobacco, when it comes into this country, is invariably taken charge of by the Customs, and it is deposited in the Queen's warehouse (that is, in the Customs warehouse,) in case of all ports that are tobacco ports, such as Liverpool, Bristol, Southampton, Hull, Leith, and Glasgow. But if it goes inland to places like Manchester, Leeds, or Bradford, it would go, not into a Customs' warehouse but into an Excise warehouse, and would at once pass into the control of the Inland Revenue. When it is cleared for manufacture the duty would be paid, in the case of seaports, to the Customs, and in the case of inland towns to the Excise, because they are the ostensible owners of the warehouse from which it has been taken. The raw material, when cleared for consumption, is taken into factories where its manufacture is entirely supervised by the Excise, in order to protect the revenue against fraud by adulteration, that is, the addition of foreign material; and also, since Mr. Goschen's last alteration of the duty, against fraud by excess of moisture over 35 per cent. That disposes of raw tobacco. Imported manufactured tobacco is controlled by the Customs, whose duty it is to see that none passes into consumption containing any ingredients which by the Excise laws are prohibited from use in this country by manufacturers. You know, under the Excise, we are allowed to use nothing except water, and that is limited now by the Chancellor of the Exchequer.

24,823. (*Mr. Lawson.*) To 35 per cent.?—To 35 per cent. Tobacco manufactured in New York that comes over here, and which contains nothing but tobacco and water, is allowed to pass into consumption after it has paid a duty of 4*s.* per pound; but if that tobacco contains, as in the case of Cavendish and other kinds of hard tobacco, sweetening matter, the Customs deal with it in a different way. They first of all charge it with a higher duty of 4*s.* 6*d.* per pound, and then they only admit it for sale here in packets bearing a Customs-label. Under the Customs laws tobacco may also be manufactured in bond in England. There are, I believe, only two bonded factories in England, one of which belongs to my firm, and the other to a joint stock company called the Richmond Cavendish Company, in Liverpool. In these bonded factories we may put any sweetening matter we like into the tobacco, provided it is not injurious to health; and then, when it is manufactured, we have to pay the duty of 4*s.* per pound on the net weight, and it is only admitted by the Customs for home consumption when labelled with the wrappers which we can only obtain from the Customs. The Excise are supposed to see that no sweetened tobacco passes into the hands of licensed dealers unlabelled, and that sweetened tobacco, all over the country, whether imported or manufactured in Customs bond in this country, is contained in packets at the dealers and enclosed in the wrappers issued by the Customs authorities. The Customs are charged with the duty of protecting the revenue against smuggling, but they are limited in their operations to the water side. I have had an experience of something like 25 years as one of the magistrates of the Bristol Police Court. Of course you remember one cannot sit on a Customs or Inland Revenue case if one is a manufacturer of tobacco, but the Customs have very frequently sought my opinion in cases where tobacco has been seized. I know enough to say this: that there is a certain want of concerted action between the Customs and the Inland Revenue. The Customs take charge of the quays and the docks; but supposing sailors land, as they frequently do in Bristol, after a long voyage, and they can manage to take tobacco inland to the other side of the city, or into Gloucestershire or Somersetshire, it is no part of the Customs duty to look after them, and the Inland Revenue I do not think practically do very much. Theoretically, I suppose, they would say it was their duty to do what they could.

24,824. (*Chairman.*) Do you mean that it is their duty to search these men?—I mean to keep an eye on them. Tobacco smuggled by sailors in small quantities is generally bartered away, either at small dealers' shops or at public-houses; but there is no question that what you may call "homœopathic" smuggling goes on to an enormous extent in places like Hull and Bristol, and Southampton; the men manage to bring a good deal ashore.

24,825. (*Mr. Lawson.*) Homœopathic smuggling—would you kindly explain that?—I mean retail smuggling as distinguished from smuggling three or four thousand cigars in a log of mahogany, which has been carefully excavated for the purpose, and that kind of thing.

Mr. W. H. Wills. 7 Mar. 1889.

24,826. (*Mr. Cleghorn.*) You mean that those small quantities escape the rummaging staff?—Yes, there is no doubt there is a great deal of it.

24,827. Concealed about the person or somewhere?—Yes.

24,828. (*Mr. Lawson.*) You would include among the places you referred to, Dover also?—Yes. Dover is a bad place, but Hull is about the worst place in all England. We know, as a fact, that a large amount of smuggling is successfully carried on over the east coast of England and Scotland, and there is no doubt that if the officers all belonged to one department there would be a better chance of successfully coping with offenders, as there would be concerted action between the officers in charge of the shipping and the quays, and those located in the interior of seaports and inland. To my mind there is an obvious disadvantage when dealing with any dutiable article, like tobacco, in having a division of revenue labour. The work cannot be done with the same efficiency and economy as if the officers were under one head, and belonged to one department, especially in a place like Bristol where we have two gentlemen, one at the head of the Inland Revenue, and the other at the head of the Customs, with offices as near as the opposite side of the street to each other, who have chief clerks, and assistant clerks, and so on, in their departments, and anyone who is familiar with the work in Bristol can tell in a moment that the whole work might be equally well done by one staff. There would be a great economy in all our large ports.

24,829. (*Lord Lingen.*) By one of the staffs instead of two, do you mean?—Yes. I do not mean to say that you would not require a good many more clerks to do the joint work than is required either in the Inland Revenue or in the Customs, but I am speaking more especially as regards the heads of departments. It is very much like the amalgamation of two railways, you do not reduce your porters, and your booking clerks, but you have one secretary, and one general manager, and one engineer, and so a very considerable amount of expense is saved.

24,830. (*Mr. Lawson.*) You imagine also, there would be a saving in the clerical staff by combining the two separate departments?—Yes; if the business was properly worked together in the two departments. There is another thing which I only know from hearsay. I understand that the code of revenue law, or the regulations of the two departments, are by no means identical, and it seems to me a point which might well be considered by the Commissioners, whether the code of revenue law for the guidance of Custom House officers and Inland Revenue officers might not be consolidated.

24,831. (*Chairman.*) I may tell you that it is at the present moment identically the same code with reference to the warehouses?—I am speaking of outside the warehouses; that is to say, the statute under which you get conviction for the Customs is not the same as the statute under which you get a conviction for an Inland Revenue case.

24,832. (*Lord Lingen.*) Even in the same article like tobacco?—No; you would find, I think, that there is a perceptible difference.

24,833. (*Chairman.*) But take your own case, Bristol. You say that you think the heads could be amalgamated, that is to say, that one collector, one responsible officer of revenue, could superintend and control all the collection of revenue, whether Inland Revenue or Customs, at Bristol?—Yes.

24,834. That would make him a very powerful officer, would it not?—It would increase his responsibility, and probably he would have to be paid a somewhat higher salary than either officer is paid now.

24,835. Would he require a deputy, in your opinion?—He would want a good chief clerk. I do not know that he would want a deputy. Probably he would require someone to act for him and to sign for him in case of being on a holiday or incapacitated by illness, but the united duties would not require a higher class of man than you have got already.

24,836. Do you think that a man who had charge of both those branches of revenue there would have the

Mr. W. H. Wills.

7 Mar. 1889.

same opportunity of knowing all the details of both services as a single man does in each case now?—I think there would be a great simplification of the work if it was all under one department.

24,837. Supposing that it is desirable that the collector either of Customs or of Inland Revenue should have an intimate knowledge of the working of the establishment from the lowest point to the top, which, as a rule, I suppose, is in the possession of most collectors, do you think that practically, if there was one collector, he would have the same or an adequate knowledge?—You see, as long as you have two separate branches, the Inland Revenue and the Customs, a man cannot be trained in both, and, therefore, probably there would be a little difficulty at first, but as soon as you get the two branches of the revenue collection united you would also get a mixture of men from both departments in the same office, and what A did not know B probably would be able to supplement.

24,838. Could you form an idea as to what would be the view that traders generally would take of the alteration from this point of view, namely, that presomably it is very often desirable for traders to consult the responsible head in a large port like Bristol whether Inland Revenue or Excise. I think it has been said before us that traders would prefer to have a head of Customs and a head of Excise with whom to transact their business?—Speaking for my own firm, it would be a great convenience to us to have the absolute power and direction resting on one pair of shoulders.

24,839. You prefer to have one head?—Decidedly yes. You see we have got two masters. We have got the Customs ruling us in one factory, and the Excise ruling us in the other. When we pay our duty, the Customs allow us to have the tobacco into our factory. The moment it comes in the papers belonging to it are collected by the Excise, and the Excise look after us all through the process of manufacture. In fact, their powers are so excessive that no authority exercised by the Austrian police in Lombardy years ago could exceed the powers that the Inland Revenue possess if they choose to annoy us, because they can come in at any hour and take away samples, or they can stop us; they can lay an embargo on us; and considering that we have to do with the two departments, the whole matter would be simplified by a union of the power in the hands of either one officer or the other.

24,840. (*Lord Lingen.*) Do I understand from you that certain manufactories where sweetened tobacco is used are conducted under the supervision of the Customs?—Yes; that is so. There are only two such factories in the United Kingdom.

24,841. One is yours?—Yes; and the other belongs to the Richmond Cavendish Company in Liverpool.

24,842. (*Mr. Maclure.*) Is not there one in Belfast?—I am not sure. I ought to have said in England.

24,843. You said in the United Kingdom?—Yes, I did. I have an impression that there is a small one there. I am not sure.

24,844. I rather fancy I went to one where I saw the process?—Yes, I think there is one.

24,845. (*Lord Lingen.*) Does the introduction of sweetening matter make the process of manufacture different from unsweetened tobacco?—Yes; you see when leaf tobacco is imported into this country, and the duty is paid at 3*s.* 2*d.* a pound to the Customs, then the Excise take care that we put nothing but water to it, and that the water does not exceed 35 per cent. But the conditions under which we manufacture in bond are totally different. We may put in rum, sugar, and liqueur, anything in fact we like that is not prejudicial to health.

24,846. And if you introduce these ingredients, then, you manufacture in bond under Customs supervision?—Yes, and we pay the duty on the net weight of the manufactured article, so there is no inducement to us to add anything to increase the weight. When you pay the duty on the dry tobacco, and have power to add water up to 35 per cent., of course there is an object in getting as much weight as you can out of 100 lbs. of dry tobacco.

24,847. The object I had in my question was this: if different officers, officers of different departments, superintend the manufacture of the same article, then you can bring to book any difference in their practice, but if the article is itself different, and the process of manufacture is different, then the officers who come from separate departments may differ in their practice without any inconsistency, may they not?—Except that you have got two branches of a particular business under the direction of two different departments. The officers of the Inland Revenue are supposed to be pretty good chemists, or at all events they have a very efficient chemist in Bristol, Mr. West, in connexion with their department. The Customs are not required to know anything about chemistry or analysis, so far as a bonded tobacco factory is concerned.

24,848. Would an Excise officer, taken at once from an Excise tobacco manufactory and put into a Customs manufactory, be perfectly capable of dealing with any difference that existed between the two?—Certainly, because the Customs really have no responsibility in our bonded works, except that, acting as a sort of Cerberus, they see that no tobacco goes out of the bonded factory except such as has paid duty, and they have the power of searching everybody who goes out.

24,849. But I understood you to say that their supervision extended to this, that no ingredients were put into this tobacco under their supervision which would be objected to under the Excise regulations for the manufacture?—No; I think that is a misunderstanding on your part. I did not mean to say so. I am not aware that I did.

24,850. (*Chairman.*) They are simply responsible, are they not, for the weight?—That is it. The Customs are only responsible for the weight. The Excise are more highly trained, because they have to be responsible for the purity, and not for the weight of tobacco.

24,851. (*Lord Lingen.*) But there is nothing in a Customs manufactory which an Excise officer at once could not undertake to superintend?—There is nothing in a Customs manufactory of tobacco which any policeman taken out of the street could not do perfectly well. But a man to be an Excise officer in a tobacco factory ought, at all events, to have a fair elementary knowledge of chemistry.

24,852. Then it comes to this, that the manufactory is not so efficiently superintended even for revenue purposes in a Customs manufactory as it is in an Excise manufactory?—Yes; it is quite as efficiently superintended, because the only thing that the Customs have to do is to see that no tobacco gets out of the factory for consumption till it has paid the duty.

24,853. How are they to check adulteration if they have got no chemical knowledge?—The word "adulteration" is not known in a bonded factory, because the duty is not paid till the article is manufactured, and the fact of its having sweetening matter in it renders it liable to a higher duty than if it were manufactured in an Excise factory.

24,854. But may there not be other than sweetening matter which would cause adulteration of tobacco?—The Customs do not take account of adulteration at all in a bonded factory.

24,855. Then if they do not take account of that at all, how do they check adulteration to the same extent that the Inland Revenue checks it?—The Inland Revenue checks adulteration, because it is not allowed to put anything except water with your tobacco, and if they find that alkaline salts or salicylic acid or anything of that kind has been added, they detect it by analysis at once, and then the manufacturer finds himself in trouble.

24,856. The interest of the revenue is just as great against adulteration in a Customs manufactory?—No, excuse me; the Customs do not recognise anything as adulteration in a bonded factory.

24,857. I do not think you understand my question, if you will forgive me for saying so. Unless it is impossible to adulterate tobacco in a Customs warehouse, why is the inferior officer who superintends that manufactory as good for revenue purposes as the superior officer who superintends a tobacco manufactory for Excise purposes?—I think I must revert to my former observation that the Customs, *qua* adulteration, do not trouble themselves. I do not know whether I have made myself clear.

24,858. I think that answer is quite clear that the Customs do not trouble themselves with adulteration in the manufacture of tobacco?—In bond they do not.

24,859. (*Mr. Harvey.*) In the interests of the revenue ought they not to?—No; because the duty on the tobacco manufactured in bond is paid on the net weight of the manufactured article; therefore it does not

matter if you choose to put in we will say a quantity of sugar.

24,860. With the Cavendish?—Yes. I mean to say if you add a very large quantity of sugar it does not matter, you pay the 4*s.* duty on it.

24,861. (*Lord Lingen.*) I do not think it is worth while going much further into this question, but it surely matters in this way: that the Excise officers themselves exercise to the utmost possible degree of vigilance, in order to see that nothing but tobacco is used, and if other articles are used which do not cost as much as tobacco, it keeps the tobacco out of the market?—Yes; but then there is no inducement to adulterate in a bonded factory, because if you use sugar, we will say, you will pay precisely the same duty on your sugar that you do on your tobacco.

24,862. (*Mr. Lawson.*) You pay on the whole weight?—We pay on the whole weight, so that nobody has the slightest inducement to put more flavouring in than is absolutely required to make the tobacco keep a definite time in a hot climate.

24,863. (*Mr. Maclure.*) We will take "pigtail" tobacco. That is a thing that undergoes a certain amount of adulteration?—When you say "pigtail" tobacco you mean rolled like a cord.

24,864. Yes; that is mixed with treacle or something?—No; I should say in the home trade there is no adulteration in the way of treacle; occasionally some firms have got into trouble for using a little glycerine.

24,865. Well, take glycerine?—It is very trifling.

24,866. You are allowed 35 per cent. of water?—Yes.

24,867. Do you pay a duty on the 35 per cent.?—No, we do not.

24,868. Then it is deducted; then suppose you dry that tobacco, and get rid of 35 per cent. of water out of it and put in glycerine, you do not increase the weight?—No, but you could not do that. If you have a sample of tobacco leaf as imported, and you ask, for instance, Dr. Bell at Somerset House, he will tell you that that contains in natural moisture something like at least 13½ per cent. originally, so that it only leaves the manufacturer something like 20 or 22 per cent. to add. That is the margin of profit. I should like to make myself clear to Lord Lingen if I could. You see, if in a factory that is under the Excise we were to put in anything besides water, we should materially increase the weight of the tobacco, and as the duty is paid in an Excise factory upon the raw material, and the 20 per cent. or so that we are able to put in of water is our margin of profit, there is an inducement for the manufacturer to get in as much moisture as he can under the 35 per cent. limit; but in a bonded factory it does not make the slightest difference, because you do not pay on the dry leaf tobacco, you pay on the manufactured tobacco after it has had a sugar flavouring added to it.

24,869. (*Lord Lingen.*) Is this a correct statement? In all manufacture of sweetened tobacco in bond the duty is not paid until the article comes out of bond for consumption?—That is so.

24,870. But in the other manufacture it is paid before it goes into the manufactory?—It is so.

24,871. I understood in the tobacco manufactory that we went over in London that the Inland Revenue look very sharp after this. I think there was a material that was named coca that there was a great temptation to use instead of tobacco. Of course cabbage leaf would be still cheaper, and we also understood that the Inland Revenue concerned themselves very much to see that in the process of manufacture a cheaper raw material than tobacco was not used?—Yes, certainly.

24,872. To see that tobacco, and tobacco only, was used in the manufacture?—Yes.

24,873. For that purpose, I suppose, a certain amount of chemical skill, and at any rate expertness and experience are required, but, as I understand you, in a Customs bonded tobacco warehouse the only test that is applied for the duty is weight, and, therefore, as Mr. Harvey suggested, in a Customs' warehouse it might be all cabbage leaf?—There would be no inducement.

24,874. He would pay a great deal less for the raw material?—It would answer no end. If you made up an article from cabbage leaf and put the rum and molasses into it in a bonded factory it would not be worth a snap of the fingers, nobody would do it.

24,875. Surely there are two elements in cost price, the price of the raw material and the duty?—In fact, excuse my interrupting you, it would cost a good deal more to prepare the cabbage leaves than it does to prepare the tobacco.

24,876. Take any other material that might be used. Is tobacco the cheapest leaf which could be prepared for smoking?—Tobacco in bond may be had from 1*d.* a pound up to 1*s.* 6*d.* or 1*s.* 9*d.*, but it does not matter, you know, for a bonded factory whether tobacco is moist or not. A great deal of tobacco comes to this country so charged with moisture that it does not answer the purposes of manufacturers to buy it, for duty paid; it would contain, perhaps, 18 to 22 per cent. of moisture originally. There is thus little margin left, and nobody would pay any price for a tobacco containing 20 per cent. of moisture when for a slightly higher price he could get tobacco which contained only 13 or 15 per cent.

24,877. Then in this state of matters the only adulteration in tobacco or fraud against the revenue is effected by water?—Yes, in excess of 35 per cent. moisture.

24,878. There is no other adulteration that matters for revenue purposes?—No, in an Excise factory, practically, there is no other.

24,879. (*Chairman.*) Supposing that the two bonded factories of which you speak were put in charge of the Excise officers instead of the Customs officers, would not their duties be exactly identical with those that now pertain to the Customs?—Quite so.

24,880. Would not their practice necessarily be the same?—It would necessarily be the same. All that they would have to do would be to take care that no tobacco went out of those factories till the manufactured duty of 4*s.* per lb. was paid.

24,881. (*Mr. Harvey.*) Only when this commodity has left a Customs House there is no absolute proof from anything the Customs' officers have done that there is any tobacco at all; does not it come to that? I am speaking simply as an inexpert in the matter. If they do not look after anything more than the weight when this commodity has left a Customs' warehouse, does it come to this, that it may be tobacco or it may be hemp?—If any hemp came into this country it would never be allowed by the Customs to go into a tobacco manufactory. Directly a vessel arrives in England laden with tobacco that tobacco is taken charge of by the Customs, and, if it is to go into my bonded factory, it is followed from the Queen's warehouse at Bristol by Customs' officers into my bonded factory, and there, other Customs' officers receive it from their colleagues.

24,882. (*Mr. Lawson.*) But you said the Customs' officer performs no duty that the ordinary policeman in the street could not do if he were put in his place. The policeman in the street, excuse me, would not be able to detect the difference between hemp and tobacco?—What I meant was after it gets into the factory.

24,883. (*Mr. Cleghorn.*) And in that case nothing could go out of your factory but tobacco?—Nothing can come out, because nothing can go in but tobacco.

24,884. (*Mr. Lawson.*) Supposing the Customs believe it to be tobacco; they have no chemical or technical knowledge, they are unable to tell the difference; they are in the same position as an ordinary policeman in the street?—What I meant when I spoke of the ordinary policeman in the street was this, that they simply have to keep a sharp look-out over the property in the bonded factory, and to see that that does not go out except after the duty has been paid on it.

24,885. I perfectly understand that, but at the same time these officers have no expert knowledge upon the subject, and they are no fitter to judge than an ordinary citizen who has had no special training?—Excuse me, they are really, because, being Customs House officers, they are accustomed to deal with foreign manufactured and sweetened tobacco, and they could tell you in a moment whether a piece of tobacco was manufactured in an Excise factory or in a bonded factory.

24,886. You have told us that they have no chemical knowledge?—I say they have not necessarily any chemical knowledge to do what is required of them in a bonded factory.

24,887. I thought you said more than that?—When I said they have no chemical knowledge, I meant their duties in the bonded factory did not require any

Mr. W. H. Wills.

7 Mar. 1889.

chemical knowledge. Of course a Customs' officer, who is rummaging a ship, can tell foreign tobaccos nearly as well as an analyst of the Inland Revenue.

24,888. (*Mr. Cleghorn.*) Is it a possible thing for a Customs' officer to allow tobacco so called to pass from the ship to your warehouse while it is not really tobacco?—No, it is quite a mistake to suppose that material which is not tobacco is smuggled into this country as tobacco; it would not pay, there is no object to be gained by it.

24,889. It is not a possibility?—It is not a possibility at all, and it could not occur.

24,890. (*Mr. Lawson.*) It is a possibility, but not a probability I should say?—Well, not a probability.

24,891. (*Mr. Cleghorn.*) Would a Custom House officer be so blind as to pass, as Mr. Harvey has suggested, hemp under the name of tobacco?—No, why should he? There is no duty on hemp, and if the hemp was entered as tobacco he would have to pay 3*s.* 2*d.* a pound for it.

24,892. So that it would be an absurdity?—An absurdity.

24,893. You refer to the union of the two departments, and you are in favour of the union of the two departments?—Yes.

24,894. Speaking about the question from a purely revenue point of view, would such a union be at all an improvement to the revenue of the country?—I think it would economise the expenditure of the Civil Service.

24,895. I am not speaking of it from an expenditure point of view, but from a receipt point of view, would the Government receive more revenue, assuming the two departments were amalgamated, than they do now?—Really, I could not offer an opinion upon that point, I should think they would receive the same.

24,896. (*Mr. Lawson.*) That would depend upon the fiscal policy of the Government for the time being, would it not?—Of course.

24,897. (*Mr. Cleghorn.*) They would not receive any more from the union of the two departments?—I have no doubt, as I said just now, that the supervision over smuggling and adulteration would be much better if there was only one department charged to deal with it, instead of the responsibility being divided between two.

24,898. (*Mr. Lawson.*) What I understood you to say in that connexion was that there was not any facility of communication and reference as between the two departments in smuggling cases?—There is always a friction between two departments.

24,899. (*Mr. Cleghorn.*) May there not be an advantage in that?—I do not see it.

24,900. You refer to there being no concerted action between the Customs and the Excise with regard to following up smuggled tobacco; could not that be remedied by instructions from headquarters?—My experience in business has always taught me that if you have got two people whose duties seem to clash, you will always get a certain amount of friction. I find it repeatedly. Divided responsibility means inefficient work as compared with the union of two branches perhaps under the same head.

24,901. As I understood you, you would only carry the union so far as the heads of the departments—the collectors and their staffs?—Yes.

24,902. All under would have to remain as they are?—All the duties of a gauger must always remain, whether the departments are united or not, such as they are at present. The duties of a landing waiter of Customs will always be the same, therefore the lower you get down in the scale the more distinct the two services would naturally be, but still the union and direction of the whole system under one authority would be a very great gain in many ways.

24,903. But the duties of those under officers could not be united or interchanged, could they?—I am not prepared to say. I should think there are a great many duties which might be discharged by one or other. There are a great many matters connected with the Inland Revenue, the duties of which might be efficiently discharged by a Custom House officer, and *vice versâ*.

24,904. Do you mean to say that a gauger could do a great deal of work connected with the other department?—Yes, a gauger could do a great many things; the gaugers are very intelligent.

24,905. By that means there would possibly be a reduction in the staff?—That is so. I think in a place like Bristol you would probably do with an appreciable reduction of the staff.

24,906. (*Mr. Lawson.*) Unlike Mr. Cleghorn, I did not quite understand you to say that you thought the saving would be limited to the heads of the two departments, to the principal staff. I thought that you conceived it to be probable that in the whole of the clerical staff both at headquarters and in the different districts there would be a considerable economy?—Well, I think there would be. I think there would be a saving all through. You would save in the heads, you would save in the clerical staff who do the work in the office, and I think that you would probably save something in the out-door department, because some of the officers are not occupied the whole of their time, but upon that I should like to speak with reserve.

24,907. There are some small outports where the scale of business is very different from what it is at Bristol, and where the consolidation might lead to even greater economy in proportion to the numbers employed?—Yes.

24,908. (*Mr. Cleghorn.*) You, of course, only speak from Bristol?—I speak from Bristol to some extent, and from London also, because we have a factory here.

24,909. I mean you do not speak from any of the smaller country ports?—There I think you would save a great deal more. In a case like Bridgwater I think you will save a great deal more.

24,910. (*Mr. Lawson.*) Your life-long experience in business has given you a great deal of knowledge of the working of the two departments all over the country, has not it?—I have been for 30 years coming almost daily in contact with the two departments, and during that time I have formed an opinion.

24,911. And for many years, as a member of Parliament, I believe you had an opportunity of reviewing estimates, and so forth?—Yes; and my firm has been consulted on various occasions by the Chancellor of the Exchequer and the Inland Revenue as to matters connected with the tobacco trade.

24,912. (*Mr. Cleghorn.*) Does the one department in your view and in your experience do its business any better than the other?—We have had great courtesy and great assistance from both.

24,913. Then you have no complaints to make?—Sometimes we find a bit of red tape down in Thames Street, and we have found years ago, a little, at Somerset House, but from my own personal experience we have had every assistance from both the Customs and the Inland Revenue.

24,914. Then you have really no complaint to make on that head?—None whatever.

24,915. (*Mr. Lawson.*) Therefore you take an impartial view, and you are merely speaking for the general convenience of the trade with which you are well acquainted, and from considerations connected with the Government and administration?—Yes, and in the interest of the British taxpayer. I think that he would save a little in the estimates.

24,916. The question was put to you as to whether the collector at Bristol would not have to provide himself with a deputy if the duties of the two departments were amalgamated in that place. I suppose at the present time the collector of Customs when he is absent on leave has to provide himself with some substitute during his term of absence?—Yes.

24,917. There would be no greater difficulty for the collector of the joint departments than there is for the collector of each of the two separate departments?—No.

24,918. (*Chairman.*) When I asked that question what I was pointing to was this, really not desiring to get an answer one way or the other, but to get at what the facts are, whether in your opinion there was or was not such an amount of responsible work in the hands of both, that practically if you amalgamate the two collectorships there would be such an amount of responsible work thrown upon one office that you would be obliged to have a second man in a superior position to any subordinate at present?—That really is a comparative detail, because it would be merely a question of perhaps 50*l.* or 100*l.* a year rise to the second man; there would be no difficulty in that.

24,919. (*Mr. Lawson.*) I want to ask how it came about that the bonded factories came under the jurisdiction of the Customs? Why are they Customs and not Excise?—I think you must address that question to Mr. Gladstone. The bonded tobacco factories were allowed, because till we had the facility for making sweetened tobacco (which we could not in an Excise factory) we could not compete with New York, or with Richmond, or with New Orleans for the foreign trade or for ships' stores.

24,920. But the point is why were they placed under the Customs? You say, ask the Chancellor of the Exchequer for the time being, but do you know whether there was any reason?—Because the Customs had to do with foreign manufactured tobacco, and therefore sweetened tobacco manufactured at home naturally came under their supervision, and as it was mainly intended for export the Customs took charge of it, and in fact the bulk of it went abroad.

24,921. (*Mr. Maclure.*) Because of the rebate?—There is no rebate, or drawback as it is commonly termed.

24,922. If you manufacture for abroad they give you a portion of rebate, do not they?—No; it is in bond.

24,923. I was thinking you paid in the first instance, and that you had a rebate?—No, we do not pay anything in the first instance.

24,924. (*Mr. Lawson.*) I suppose there would be a very much greater simplicity in your business if these warehouses were all under one department?—In working it would, because we should only have one body to go to.

24,925. Have you in some instances to duplicate the sets of papers on account of the present arrangement?—No; but we have papers that are made out by our clerks at the Customs, and they come back to us with the hogsheads from the Queen's warehouse, and then they are handed over and the account of the weight is taken by the Excise; so you have got two separate establishments dealing, one with the discharge of the tobacco from the Queen's warehouse, and the other with the responsibility for the same tobacco at our works. It would be much simpler if the papers were taken back again to the Customs and there was only one set of entries kept.

24,926. Have you known any delay prejudicial to trade arising from the difficulty of communication between the two departments as at present when you have had to refer to headquarters on some disputed point?—No; we have had very little difficulty in working our own business. We have rarely had occasion to refer to them, that is to say, to stop any process.

24,927. What is the case with the trade in general, leaving out of consideration your own firm?—I do not think that any delay has occurred from the separation of the two.

24,928. (*Mr. Maclure.*) You have said there was hardly any material which was worth mixing with tobacco for adulteration purposes which was as cheap as common tobacco itself?—That is so.

24,929. Therefore there would be no necessity in that way for much supervision. Do you make snuff?—Yes.

24,930. In making snuff, do they watch that for adulteration?—Yes.

24,931. That requires scientific knowledge, does not it?—Yes; that snuff is tested by the chemist of the Inland Revenue.

24,932. That is purely scientific?—Purely scientific.

24,933. And whether it was an amalgamated body or a separate body, the manufacture of snuff would have to be watched by a scientist?—Yes.

24,934. In that there may be a large amount of adulteration?—Yes.

24,935. With cheap articles?—The adulteration of snuff is mainly derived from the excess of alkaline salt put into it.

24,936. (*Mr. Harvey.*) You are in favour of amalgamation on the ground of the general convenience to the merchants, are you not?—Yes. I am in favour of the amalgamation on the same grounds that I was when the Great Western system stopped at Bristol and the old Bristol and Exeter line was in existence running down towards Plymouth. I entertained the opinion then that the line would be much more cheaply worked and the public better served if the whole distance was in the hands of one company.

24,937. Still, I understood you to say, in reply to Mr. Lawson, that you have not suffered, at any rate, you hardly went to the length of saying that you have suffered, from the fact that there are two services instead of one?—No, we have not suffered.

24,938. Would you go the length of saying that there is a general feeling among the mercantile community at Bristol in favour of the amalgamation?—I think there is. I am quite sure there would be among the houses connected with the tobacco trade.

24,939. Have they ever thought of making any representations to the Government upon it at any time?—I am not sure whether the matter has not been discussed some time or other by the Chamber of Commerce; but I do not think anybody has felt it to be their particular duty to make any representations on the subject.

24,940. (*Mr. Lawson.*) In an earlier answer to me, I think you said that the existence of the two departments encouraged smuggling which was prejudicial to the trade?—I said that there was a divided authority in looking after the smugglers; I was referring to small smuggling. There is hardly a steamer that comes into Bristol, or into Hull, from the Continent that does not bring a very considerable quantity of tobacco, sometimes in the bedplate of the engine. There was a case in the Bristol Police Court some time ago where a man was charged with having brought in, I think, some 30 lbs. or 40 lbs. of tobacco, made up in packages just about the size of a "Quarterly Review," put under the hollow casing that supported the frame of the steamer's engines. A very smart attorney, who defended the man, contended that this had been placed there on a previous voyage, and that the engineer in charge was not responsible as another man had been working the engines a week before. One of my partners was called by the Customs. He was asked if that was possible. He said it was quite impossible, because that tobacco had a certain amount of moisture, and taking the average temperature of an engine-room on board a steamer had it been there the time that the lawyer contended it would have been reduced almost to dust, that it clearly could not have been there more than about 48 hours, which was about the time the vessel had taken to make her voyage from Antwerp, so the man was convicted.

24,941. (*Mr. Harvey.*) Looking at the matter for a moment from the standpoint of the revenue exclusively, without regard to the convenience of the merchant at all, do you think you would go to the length of saying that if you were Chancellor of the Exchequer you would amalgamate the services?—If I could get over the possible opposition of the permanent heads of the departments.

24,942. For instance, there being admittedly and confessedly a certain rivalry between the Excise and the Customs, do you think the argument that the rivalry was benefical to the revenue would have weight with you?—No, I do not think it would. I think it is a divided authority.

24,943. Let me put it in this way: that you do not bring any allegation whatever, as I understand you, of a complaint on account of that divided authority?—Certainly not.

24,944. You say, theoretically, you think it would be better to have a united service, but still you do not give us a single complaint?—No; I have had every assistance and every courtesy from both services, and I cannot point to any disadvantage except that which practically comes of two people doing one person's work.

24,945. Would it occur to you that if you had one service that the courtesy which you now have, which I will for a moment imagine to be the result of the rivalry, might be replaced by torpor, and you would be worse off in the conduct of your business?—I do not think so. A great deal depends upon people who fill particular offices at particular times. I can easily suppose that you might have a chairman of Customs not so disposed to take a little trouble for the British trader as was the late Sir Charles Du Cane, and that you might have a chairman of Inland Revenue who was not so thoroughly well posted and so anxious to make things work smoothly as Sir Algernon West; but I do not think that the departments would suffer.

24,946. In fact, viewing the departments as they are, you, certainly one would say, are a very good witness for keeping them in their present condition, because you think their work is done so well that you do not suggest a complaint?—Yes; but I think it could be done much more economically, and the work could be

Mr. W. H. Wills.

7 Mar. 1889.

simplified very much, if you had only one department to deal with instead of two.

24,947. (*Mr. Lawson.*) And more than economically, much more conveniently to the trader; that I understand to be the whole gist of your evidence?—More conveniently to the British public.

24,948. (*Mr. Harvey.*) It is a point upon which we have had evidence. I may say that what instances were given us in favour of amalgamation seemed in some cases to come to be merely instances of too great adhesion to convention and red tape on the part of the departments, and had nothing to do with the question of amalgamation at all. Now do you feel quite clear in your own case that the instances that you may have in your mind of greater convenience would not also come to that, that what you are complaining of is perhaps undue adhesion to red tape, which may be remedied even without uniting the services?—No; I go upon the broad business principle that the more you can unite and consolidate the administration of certain departments that have kindred duties, the better and cheaper your work will be done, and the more satisfactorily will the duties be performed.

24,949. (*Chairman.*) I have been looking at the list of the Customs' warehouses at the different ports. I want to see where your bonded factory appears. Is it the Virginia Cavendish Works, Redcliffe Street?—Yes.

24,950. It is described as a manufactory of cavendish and negro head tobacco?—Yes. It is difficult legally to define what is cavendish tobacco. I have never found a Chancellor of the Exchequer or a chairman of the Customs who could define it. It still goes under that name of negro head and cavendish. When Mr. Leonard Courtney was Financial Secretary to the Treasury we got into some difficulty because we were manufacturing bird's eye tobacco in bond, and they would not allow us to export our bird's eye unless we called it cavendish, and that was very much like sending out port wine with a champagne label on it. Things got rather to a deadlock. Then I moved in the House of Commons for a clause to be inserted in the Customs Act, and Mr. Courtney would not accept it, and I had to withdraw it. Afterwards he found that there was a clause in the Act which allowed the Treasury from time to time to make such regulations as should seem fit to them, and under that now all kinds of tobacco are included under the generic term of cavendish or negro-head and manufactured in bond.

24,951. All that is manufactured in bonded factories; it is a similar description to the one in Liverpool?—Yes.

24,952. (*Mr. Cleghorn.*) You have referred to a railway amalgamation as an analogous case. Do you think the union of the Customs and Inland Revenue quite analogous to the union of two railways?—I was simply speaking as to the economy of work.

24,953. Referring exclusively to the head offices, I understand you think there would be an economy were the two departments united in the same way as you suppose there is an economy following the amalgamation of two railways?—That is my idea.

24,954. Have you followed that out? Do you speak from any actual knowledge of the fact that there is such an economy?—Yes, because I was a director of the Bristol and Exeter Railway Company for many years, and I am now a director of the Great Western Railway.

24,955. Do you find that the general charges are less in amount than the general charges of the Great Western Railway and the Bristol and Exeter while they were separate?—I could not say, because so many changes have taken place since. The capital outlay has been very largely increased, and many other things would have to be taken into account.

The witness withdrew.

Mr. Benjamin Biggs called and examined.

Mr. B. Biggs.

24,956. (*Chairman.*) You represent the firm, I believe, Lister and Biggs?—Yes.

24,957. We have had a communication from your firm stating that you had experienced some inconvenience from the different methods adopted by the Commissioners of Customs and the Commissioners of Inland Revenue in dealing with spirits of wine?—Yes.

24,958. As we are upon the subject of the suggested amalgamation of the Customs and Inland Revenue, we thought that it would be well to ask you to be so good as to come here and say what your inconveniences are?—The inconveniences arise from the difference in the way in which the Customs and the Inland Revenue deal with the spirit. I am what is called a methylated spirit maker. By a law passed some 20 years ago, you are allowed to put a certain per-centage of wood methyl to methylate the spirit, and then it becomes free of duty. This trade is carried on by those who are rectifiers as well as by persons like ourselves who are not rectifiers. The rectifiers who are also methylated spirit makers take in the spirit, duty paid, and when they methylate it, that is, add the methyl to it, then they get a drawback. I, on the other hand, take it in under bond, and therefore get no drawback. I simply have to pay the differential duty of 4*d.* between the price of English and foreign spirit. English spirit is subject to 10*s.* duty, and foreign spirit to 10*s.* 4*d.*, and I simply have to pay the 4*d.* But then the result comes to be this: by the Customs mode of computing the contents of a cask there very often are occasions in which a cask contains several gallons, as much as five gallons I have known them, more than is shown by the gauge. The consequence is that the rectifier takes from the Customs a cask which is gauged, let us say as at 100 gallons, and he pays duty on the 100 gallons, the duty being about 16*s.* a gallon on the strong gallon. Then he takes that home and methylates it, and gets a drawback on the full content as computed by the Inland Revenue of 105 gallons. The consequence of that is, that he receives in a case of that kind five 16*s.* more than he pays, and the further consequence is, that I, who am not in that position, cannot afford to compete with him.

24,959. How would that difficulty be obviated by the amalgamation of the Customs with the Inland Revenue. As I understand it that arises principally from the fact that the gauging, which must be done by the Customs or whatever department fufils analogous duties, cannot be so accurate as the absolute measurement made by the Inland Revenue by emptying the cask and weighing it, and then putting in a certain quantity of spirit and weighing it again. I do not see how the consolidation of the two departments would get over your difficulties?—I am assuming that if there were one department they would have one rule. That the rule for estimating spirit would be an exact rule; that is, that it would be the exact contents of the cask. I can see no difficulty in the Customs arriving at the exact content of a cask. A cask is very easily weighed, emptied, and filled again. Her Majesty's Government would receive on a cask of spirit perhaps 100*l.* duty, so that without putting the merchant to the expense they could very well afford to go to the expense of paying a dock company to ascertain the exact content of that cask.

24,960. Are you suggesting that instead of the system of gauging which I always understood, and I think the Commission generally understood, was an absolute necessity with reference to all wet goods that may be dutiable imported into England, it would be easy to open all the casks and weigh them, and then to weigh the spirit or wine, or whatever it is?—Where it is, comparatively speaking, a low duty, a difference of a gallon is no very great consequence, but when the duty on a gallon is 16*s.* 6*d.* there you come to a very large sum.

24,961. Would your difficulty be got over if there was an absolutely correct gauging?—If there were correct gauging that would get over my difficulty. It is not a question for me whether the Customs and the Inland Revenue should be amalgamated, but the point is that their rules should be the same, and that one body should not be, I will not say, in opposition to the other, but working on a different rule.

24,962. Do those rules come within the code; I suppose you are familiar with what is known as the warehouse code?—The Customs have their code and their code is to gauge; the Inland Revenue is to weigh.

24,963. That is before it comes into the warehouse; you refer entirely to the practice of gauging?—Yes; it

is not within my knowledge that the Customs adopt any other plan than simple gauging.

24,964. (*Mr. Harvey.*) As the Chairman says, does not your contention come to this: that in the case of the whole of the wet goods coming into the country you would want the casks to be emptied, weighed, and refilled in order to get perfect accuracy?—Practically, that is so.

24,965. Do you think that is a feasible suggestion?—Well, I really do.

24,966. Then it is the abolition of gauging altogether really that your proposal comes to?—The abolition of gauging in strong spirits where there is this heavy duty.

24,967. (*Chairman.*) How can you tell that they are strong spirits; do you say that samples should be taken?—Every cask is sampled.

24,968. If a cask were sampled and the Department were perfectly satisfied that the spirits were of the kind that they were described to be, then do you say that the casks should be weighed and the spirit measure, as it were, separately?—Precisely; as I have said, every cask is sampled or should be sampled, and when the contents are subject to a high rate of duty, the content should be taken exactly.

24,969. Supposing that sampling to be done, do you think that would be sufficient protection, and would that meet your difficulty?—That would get rid of my difficulty. My difficulty is that one branch of my trade gets an advantage which I cannot get. For instance, in the spirit that I have dealt with this year I find there is a gain of 243 strong gallons, which amounts to a duty of 201*l.*; that is, taking the casks without any selection—taking them just as they come to me. But if I were able to avail of the duty, and legitimately avail of the duty, I should then arrange to have casks which could be gauged so as to give me all the advantage. For instance, I get on 1,000 gallons here 12 gallons; on another 1,000 gallons 6 gallons; on another 1,000 gallons only 2 gallons; and then on 1,500 gallons 34 gallons.

24,970. (*Mr. Harvey.*) Have you ever had any correspondence with headquarters on this point?—Yes, with both the Inland Revenue and the Customs.

24,971. And what is their answer?—Practically no answer.

24,972. When was the last correspondence with them?—I should think about two months ago with the Customs. I had a lot of casks weighed in my place for the Customs to have an exact account of it; that was, I think, in the beginning of January. With regard to the Inland Revenue I frequently have to go to Somerset House, and often when I see Mr. Micks or Doctor Bell or Mr. Bannister, I ask whether anything is going to be done about this matter.

24,973. (*Chairman.*) Have you made any suggestion other than that which you have just mentioned to us, for getting over the difficulties under which you labour on the assumption, say, that it is an impossibility to do away with the gauging?—My feeling is that the methylated trade should be carried on entirely under bond, and that the rectifiers should take in free spirit. Of course, they would have to have a separate warehouse. But that, I think, is a question for the Inland Revenue Department; whether they could do that by themselves alone I do not know. As it is now the Customs receive the duty, 100*l.* we will say, on a cask of spirits, and the Inland Revenue pay out the 100*l.* more or less, and I say a trader is perfectly justified in getting the best gauge he can, for this reason, that if I were to get a cask home, and I found five gallons short I should have to pay duty on the full quantity; the Inland Revenue would not listen to any excuse of any kind.

24,974. (*Lord Lingen.*) Would your difficulty be met by this: by a rule that no man should get a drawback on a greater number of gallons than he had paid duty on?—That would meet the difficulty, but you see that would scarcely be practicable, because the rectifier by the law now takes the spirit into his duty-paid stock, and it is all mixed together. *Mr. P. Biggs.* 7 Mar. 1889.

24,975. Still he always has a record of how much he has paid the duty on?—When the two are mixed together you cannot say which it is.

24,976. (*Mr. Harvey.*) You cannot identify it?—You cannot identify it.

24,977. If this lack of identification exists, how are you sure of your facts?—I have my own figures what I could do, if I were a rectifier, and I have a statement made to me by those who do know, that it is the custom to order certain casks to go backwards and forwards to be filled.

24,978. If you put the case to a Customs officer or an Inland Revenue officer as you have put it to us this morning would they admit (whether they could remedy your grievance or not) that the facts are true?—They would agree that they cannot gauge accurately. The cask can be prepared for gauging.

24,979. (*Mr. Lawson.*) What do you mean by that?—You can have a thick stave at the bottom—you have got a round cask, say—the first thing to be satisfied upon is that you have the same thickness of stave all round, but then it could be bellied out at the sides. There is the fact that the casks will contain a great deal more than the gauge; that is an undoubted fact.

24,980. And you lose the difference?—I do not gain the difference, which comes to the same thing.

24,981. (*Mr. Harvey.*) Would the gauging sometimes be understated?—Sometimes it is understated. I have got the number of mixings I have had this year. I have had two cases in which I had a loss; altogether, I have had 15 gains and two losses. If I could have prepared my casks, I have no doubt that the 200*l.* shown on that paper might be 800*l.*

24,982. (*Mr. Lawson.*) How do you mean?—Simply because I should have every cask which would gauge well. It is no object to me to have the cask prepared. I take them just as they come.

24,983. If you would gain all this by the difference why do not you have your casks prepared?—I do not do it because I do not deal with duty-paid spirits. I could only deal with it by a fraud; the rectifier can deal with it, and he is justified in dealing with it.

24,984. (*Mr. Harvey.*) Is your suggestion then that the whole of this business should be done in bond?—That, it appears to me, would get rid of the difficulty that I am speaking of.

24,985. Then the gauging would not be necessary?—If you got two or three or five gallons on a cask, and the difference is only 4*d.*, it is not worth speaking of.

24,986. (*Chairman.*) At all events the difficulties which you experience could be got over by some regulation or other. I presume you are quite of that opinion?—I have not the remotest doubt about that. It is not at all necessary that there should be any amalgamation between the two bodies so long as they adopt the same rule when they are dealing with the same article.

24,987. (*Mr. Lawson.*) Have you formally petitioned them to adopt the same rule?—Yes, again and again; that is, I have been seeing each body from time to time. I have never been brought in contact with the Commissioners either of the Customs or of the Inland Revenue. We say, in our irreverent way, "The Commissioners will never see us because they do not know much." The officers are most courteous themselves, but then we do not get any change made.

The witness withdrew.

Mr. Peter Hutchison called and examined.

24,988. (*Chairman.*) You represent, I believe, a large firm of shipowners in Glasgow?—Yes, I am the sole proprietor of J. & P. Hutchison, shipowners. *Mr. P. Hutchison.*

24,989. We understand that you desire to express some views to us upon the proposed consolidation of the Customs and the Inland Revenue from the point of view of the experience that you have derived from having to deal with both these Government departments?—Yes, but we have more to do with the Customs than with the Excise. Any little dealings we have had with the Excise were not very happy for us, so that we look upon the Customs and their desire to facilitate business as much more amenable to the common sense view of the state of trade now

Mr. P. Hutchison.

7 Mar. 1889.

24,990. I do not want to lead you in any way, and perhaps, therefore, I should ask you to give us anything that you have to say in your own way?—You must understand our business is that of ship carriers. We are the largest carriers of wines into Scotland from foreign parts, and we have a large amount of traffic on the quay.

24,991. Do you import into Leith as well as Glasgow?—No, only to Glasgow. We are still, however, the largest importers of duty goods into Scotland. There are transit sheds upon the wharf. The goods are taken from the ship and put into the transit sheds. The transit sheds take the place of the hold of the ship, and we deal with it from the ship, as it were, to a separate bond. In this way we save a great deal of trouble. The Excise people would demand to be dealt with separately. We have, perhaps, 50 or 100 lots of goods in a ship. The way we deal with it in the Customs is that we pass an entry for the whole of those goods to a bond, No. 5, that is our own property, and then we transfer the orders to the separate towns that they go to, such as the inland towns, to Leith, to Edinburgh, to Aberdeen, and Dundee, for instance. We send them forward in that way. I will put it clearly to you in the way it is put to me by the clerk who has charge of it. This is called constructive warehousing. We do not have that in the Excise at all.

24,992. The necessity for it does not arise under the Excise, does it?—Perhaps not. I mean to say that if we were to deal with the Excise regulations at present we would require to write out 50 entries and 100 copies, that would be simple clerkship, besides the great delay entailed in going through the separate lots instead of going through the whole as at present. At present we pass one entry and we have two copies of that entry and we have 50 removal notes, and that is the whole clerking department, so far as we are concerned. The work is done by the officer who runs on in rotation instead of taking one lot, say, of five casks and marking them and going back to each gauge. It would take treble the time to do this operation with 50 lots by the Excise regulations than it would to do it by the Customs regulations of constructive warehousing as previously mentioned.

24,993. Then it comes to this, does not it, that doing the trade which you do you are quite satisfied with the present condition of affairs?—I would be very sorry to see it changed.

24,994. Do the Customs give you every facility?—Yes.

24,995. Whether you are sending your goods into bonded warehouses, into the country, or dealing with them in Glasgow?—Truly; we mostly do a through trade. Our trade is largely through, sending it through Glasgow into other parts of the country.

24,996. We have been told that there are some difficulties of delay; I think we had it from one witness from Glasgow, a shipowner, that the goods were kept some time on the quay owing to the peculiar way that the Customs have of dealing with them for obscuration, and that there was unnecessary delay before they were removed into some Inland Revenue bonded warehouse, but that does not seem to have been your experience?—The obscuration comes in all cases with the Customs, and it comes also in the case of the Excise, there would be no remedy there; indeed, we would have the same trouble with the obscuration. The obscuration has only of late been more trouble to us than it was formerly, when the duty was 2*s.* 6*d.* per gallon all over. We had very little difficulty then with the obscuration, but since they have come so close as a shilling up to 30 per cent. or all under 30 per cent., the obscuration comes when they are very near to the 30 per cent., they are so frightened of losing the 2*s.* 6*d.* duty. A man brings in his wine and says "I want to make my wine exactly the shilling," and he brings it to 29 or 29¼ or 29½. The obscuration is to see whether he has not topped the 30, consequently that is where the obscuration mostly comes in in the wine; in the brandy there is always obscuration, and has been for all my experience.

24,997. Then, if I understand you rightly, you do not see any advantage from putting the collection of the revenue under one department either at Glasgow or at headquarters?—I suppose the object of this inquiry is to find economy in the working of the two departments to some extent.

24,998. To see whether it is desirable from an administrative point of view, and from the point of view of convenience to the traders, and the collection of the revenue, and so forth?—True.

24,999. (*Mr. Lawson.*) It is not proposed to incorporate the Customs into the Excise, but to fuse the two?—I understand that one of the objects is that the officers of either department would employ what spare time they may have in the other department. In that case the officers from the Excise would be very detrimental to the progress of our work if they came down to work wine cargoes because we require very experienced men. New men are always an obstruction to a large extent to the trade, but when they have learned it they are a good deal better. For instance, they have to gauge the casks. There are five or six different kinds of casks, and unless you are accustomed to the style of the cask you cannot gauge them properly. In the Excise they weigh, I understand, all the empty casks and then weigh them again when they are filled.

25,000. (*Chairman.*) Of course it is quite clear that in any scheme of amalgamation or consolidation, or whatever it may be called, all those officers who have special duties, whether on behalf of the Excise or the Customs, would have to be kept, as it were, specialists; and there would be nobody who would propose that they should be less efficient public servants than they are at present. The idea is, no doubt, that it might be economical, for instance, to put one collector at the head of affairs instead of there being two, and in that way there might not only be economy but some convenience to traders in enabling them to deal with one department rather than two. The point that we are anxious to have from you is whether you, having to deal with two departments, although only to a small extent with the Inland Revenue, have experienced any inconvenience from the fact of there being these two separate departments?—One point which I think may weigh a little is this: We had some brandy going to Edinburgh. In sending that through we sent it through an excise warehouse. It was consigned in a bill of lading "to order"; that is a very frequent way of shipping goods. We do not know who is the receiver of the goods.

25,001. (*Mr. Cleghorn.*) You mean no name is given?—Where the name should be, is written "to order."

25,002. (*Chairman.*) To you "to order"?—We are the carriers, and we become the forwarding agents because we carry at a through rate to Edinburgh, consequently when we come to Glasgow we look up our bill of lading, the captain's copy, and it says "to order." We cannot find the consignee, but we send them through to our agents in Edinburgh who are carters, Wordie and Company. When the goods went through there they went through the Excise, the Canning Street Excise bond.

25,003. In Glasgow?—No, in Edinburgh. They were sent to Edinburgh. When they arrived there, zeal prompted the Excise officers to say, here is Mr. Wordie receiving brandy to dispose of to some party who has the bill of lading; but Mr. Wordie had no license for selling spirits, he never sells spirits, he only carts them, he is not a seller; but we have to put some name on. The result was that the officers informed against Mr. Wordie, and we have been informed against also, as sellers of spirits. We are not sellers of spirits, but we are forwarders. The looking after of the licenses in the Excise has been a bar, in so far that those goods had actually to be dealt with quite differently, and we had to get re-warehousing orders. That means we had found out the consignee in the meantime, who was the man who held a license, and we had to make a re-warehousing order to have those goods transferred from Mr. Wordie to this man, who was to receive them; and it took 10 days to do this work.

25,004. (*Mr. Harvey.*) When you say you had to find who was the consignee, I suppose the goods were not handed over to anybody except he had paid for them?—The man who holds the bill of lading is the consignee.

25,005. But he cannot get the bill of lading until it is consigned to him by the consignee?—That is so. For instance, we carry goods from Bordeaux to Glasgow and undertake to send them to Edinburgh; we grant two bills of lading to the consignee, one for the shipper and one for ourselves. We see exactly what is intended with the goods, they are to go to Edinburgh "to order." The man in Edinburgh may be dilatory or from some other cause does not declare himself, because unless he

declares himself to us we never can find him out. He declares himself later on. In the meantime the goods have not completed their voyage until they go to Edinburgh, and therefore we have to send them to Edinburgh.

25,006. Where does the bill of lading go to?—The bill of lading is in Bordeaux issued to a shipper. Say that Mr. Johnson is shipper of 40 casks of wine to an Edinburgh merchant. He sends the bill of lading to the merchant in Edinburgh and that merchant, if he was prompt, would at once write to us saying, I am the holder of the bill of lading for these 40 casks shipped by Mr. Johnson, send them on to such and such a town, but many men do not do this much.

25,007. If they do not do that, is not the Government perfectly justified in regarding the agent as for the time being the holder of the goods?—No; no more than we could be declared sellers of wine; he is declared only a carrier, and so are we. Of course, he can never sell the wine because he has no title to it.

25,008. Do not you think, if you issue a bill of lading, or if a bill of lading "to order" is issued, that the Government are only adopting the simplest course, and the straightforward course, in regarding the man into whose hands the wine for the moment is, as the person who is responsible for the wine; there is nobody else for them to get hold of?—If he was the party who held the wine, and could hold it by any title; he has no title, he is only forwarding; he is like a carter who gets possession of your goods and takes them from one house to another, and may keep them in a store, but that does not entitle him to the goods. The wines, of course, belong to the party who holds the bill of lading.

25,009. Surely, it is the business of the Government to look into that?—When they found out the facts why should not they have acted as the Customs would? The Customs would say this is an acknowledged thing; there is such a thing as men who forward without being sellers. We are forwarders; we never take a license for dealing in wines, for we never sell sixpennyworth; therefore, why should we pay for a license?

25,010. (*Mr. Lawson.*) Have they tried to make you pay for a license?—It was mentioned to us that we ought to pay for a license, but we refused; we said, "We do not sell; we only forward."

25,011. (*Mr. Harvey.*) Do you allege that against the Inland Revenue officials alone?—I say that is an inconvenience. There is a difference between the two departments in aiding business people in getting through their work. In the case I have mentioned it was admitted the Excise were wrong. They admitted themselves that they were wrong; but then they had made the step, and they could not draw back, and it took us 10 days to get out of it.

25,012. (*Mr. Cleghorn.*) Would the Customs have done differently, do you think?—The Customs would have acknowledged the position. It is a common position, it is a frequent position; it is so common that there would never have been a question with the Customs.

25,013. (*Mr. Harvey.*) Is it not the business of the Inland Revenue to see that none but duly licensed persons sell exciseable liquors?—Yes, but Wordie and Company were not sellers.

25,014. Still it is not the duty of the Customs, and in this particular point the Inland Revenue authorities took an improper view of the persons who ought to have a license, because you were not sellers?—Yes. the Inland Revenue were zealous, perhaps more zealous than they should have been, and we find they are rather awkward for barring our work. That is the point I object to in the Inland Revenue, they delay the work.

25,015. (*Mr. Cleghorn.*) Do you mean they put impediments in the way?—Yes, that I call a very serious impediment in the way because it might have been the loss of the sale of the brandy to that man. Business is done so very fine now that we cannot afford to allow barriers of that sort to come in.

25,016. (*Mr. Lawson.*) Did they acknowledge that they were wrong?—They said they were quite willing to allow this to be amended, which was just acknowledging they were wrong, because if they thought they were right they would have compelled Mr. Wordie by bringing him before a justice of the peace to hold a license; but they could not have done that, as he was not selling and had no occasion to have a license.

25,017. (*Mr. Harvey.*) Although you admit at the time the wines come into the hands of Mr. Wordie there was no one who had got a title to the goods?—There was, but he had not declared himself.

25,018. Nobody known?—Mr. Wordie could never touch those goods so far as selling is concerned. He could carry them into his place, or he might put them into a vault where these goods may lie unclaimed; that is the expression we use, "unclaimed goods," but he was simply a carter of the goods.

25,019. I will not refer to Mr. Wordie, but I will assume that certain people receiving goods under those conditions did sell them?—Then they were certainly not only liable to the Government, but liable to the parties who had the bill of lading. There would be a certain felony in it.

25,020. Do you think the Excise officers did anything more than they ought to do in the interests of the revenue?—I think they did in the interests of the revenue all that they are entitled to do, but it is a little more than they should have pressed.

25,021. (*Mr. Lawson.*) Have you continued following out the same system?—No; we always keep away from the Excise in all our dealings.

25,022. Do you still give those wet goods to be transferred to Edinburgh?—Yes; two-thirds of our trade is done in that way.

25,023. Without knowing to whom they would be consigned?—These bills of lading are sold. They come to London here and are sold in the market. All the traffic in grain from America comes in the same way. It is all sold to order. It is the biggest part of the business now to sell and consign to order.

25,024. (*Chairman.*) I ask you generally, do you suffer any inconvenience in the cases in which you have to deal with the Inland Revenue, leaving out of the question for the moment that particular case you have been thinking of?—We have not dealt much with them.

25,025. Do you do much with the two departments?—I deal with the Inland Revenue less than with the Customs. We find the Customs officials very agreeable and suitable but not at all under our dictation, mind you, because they keep to their points very strongly whenever they have any point against us. Oftentimes the officers find that we have gone wrong in some clerical mistake, and they make us pay and fine us, but I do not mean to say because the Custom House officers are working agreeably with us that they are neglecting the duties of the Government.

25,026. Have you considered the question of amalgamation from the public point of view, the point of view of economy?—Yes, I have thought over that.

25,027. What is your view upon that?—My view upon that point would be this: That with reference to the stamps and licenses and income tax and other taxes I think the Post Office would be quite able to deal with those.

25,028. Do you mean that there might be more collection of the Inland Revenue in that way by the Post Office than is now the case. As you may be aware, the practice of collecting the Inland Revenue from the Post Office has been very much of late extended?—I think so.

25,029. We are not dealing absolutely with that point now, we are dealing with the question of Customs and Excise?—I think with reference to all other revenue the Customs can quite well undertake it, and the Excise might cease.

25,030. We are dealing with the question of whether there should be one revenue department; practically, I understand you are in favour of one department?—I want to say the Custom House would be the best for the merchants.

25,031. (*Mr. Lawson.*) Let me repeat what I said at first. We are not discussing the incorporation of the Customs with the Excise, but merely the fusion. As I understand, you are in favour of fusion, but you think the Customs should be the body to incorporate the other?—Yes, that is what I think.

25,032. (*Chairman.*) Do you think at Glasgow there should be one officer of revenue?—Yes, I think so.

Mr. P. Hutchison.

7 Mar. 1889.

25,033. One controller, say, of revenue representing neither the Excise nor the Customs particularly, but, in fact, acting for both?—Governing both, I think that would be a very proper way of exercising some economy.

25,034. Have you formed any view as to what that might be?—No, I cannot say I have reduced that to anything like a statement.

25,035. Supposing that in the amalgamation the practical result would be that the Customs is swallowed up, would that be in your opinion a disadvantage. In any case of amalgamation or consolidation we must assume that when the thing is carried out, one or other department would appear to have the ascendancy, and would, in fact, have the ascendancy. I want you rather to come to this point. When you take into consideration the different light in which different traders would view whatever might be the higher authority, say that in Glasgow, the result was that the Inland Revenue became the sole authority by reason of their having more officers, or by reason of the exigencies of the service appointing the present collector of Inland Revenue rather than the present collector of Customs, or anything of that sort, would that be an objection felt by yourself, or other traders who view the thing in the same light that you do, to such consolidation?—Certainly, I have spoken to a good number of our traders in Glasgow who are wine receivers, and all of those to whom I spoke wished to support the view I am expressing.

25,036. You want to see the Customs swallow up the Inland Revenue?—Yes, I have not spoken to all the 150 wine merchants we have in Glasgow, but of those I have spoken to I have not met one who had any other view than that it would be better to retain the Customs than the Inland Revenue. That was the expression of opinion given me.

25,037. (*Mr. Harvey.*) So long as the practice at present adopted by the Customs is continued I suppose you do not care whether the service that carries it out is called a Revenue service or a Customs service?—Not if it is done in the same way, and done in the same place. You must remember the Custom House as a house is much nearer to the operations we have to perform than the Inland Revenue offices, consequently that has something to do with it. We, indeed, ourselves 12 years ago removed our offices close by the Custom House for the simple reason that we wished to be near the operations that were going on, because we have four clerks who do nothing else but Custom House work.

25,038. (*Mr. Lawson.*) I gather that you find the obligation of dealing with two departments, especially, of course, with the Inland Revenue, an inconvenience?—Yes.

25,039. And you think it would be far better for your trade if there were one code of rules interpreted in one way under which you had to act?—If the regulations were the Custom House rules I should say "yes;" if the rules were to be as beneficial as those we have at present.

25,040. That I understand; but you think that there is an inconvenience to you as well as a waste to the public in having two sets of officers to deal with; and you prefer to have to deal only with the Custom House all through your business?—I would not object to deal with any, but I think the Custom House suits us best: indeed, in Glasgow, we have nothing to do with the Excise; the Excise is for towns out of Glasgow.

25,041. You have only to deal with the Excise in the transfer of your goods?—Yes, out of Glasgow; we do not in Glasgow have any dealings with it.

25,042. From what you know, do you think that the Custom House officers in Glasgow could perform more work than they do at present?—I should say no, not at present, the number of their officers has been pretty much reduced—we employ about 10 or 14 regularly—there are 10 or 14 officers always at our sheds.

25,043. With regard to the higher officials of the Department, do you believe they could supervise the work generally, supposing there were an amalgamation. Take the collector of Customs at Glasgow; do you think he can supervise the whole work?—I think he could.

25,044. You think he could?—I think the head man, the collector, could quite well manage more.

25,045. Then there must be a certain waste at present in having two?—Certainly. I think it is possible to exercise some economy in reference to the heads of the departments.

25,046. I suppose all those who unite with you in this expression of opinion and who are of the same trade, would not like to have men without experience or knowledge, suddenly thrust into their warehouses?—That is one grievance in prospect that has caused me to come up here to speak to you; there is just that fear that I have because we have experienced, even with new men, such trouble and delay.

25,047. Of course, in time, supposing there were one service, the men coming in would learn the whole duty that was expected of them?—Truly; but if they were moving from the Excise Department, which weighs the spirits, to the other, which gauges, they would not be so good judges as if they were continually at the gauging. A great deal of our wine is done by looking at and shaking the bottle, you cannot uncork a 10*s.* bottle of wine and have it sampled, they shake it and men who are judges of it can test it. It has been often so tested by the bells, that is, the bubbles on the wines, and then undone and obscuration taken, when it was found to agree. In brandy they do not do that, but in wine they do it.

25,048. Would you say that one department is less vigilant than the other in the collection of the revenue?—I know so little about the collection of the revenue in the Inland Revenue Department that I would be wrong in saying anything; but I know that the Customs are very active.

25,049. (*Mr. Cleghorn.*) Have you had much occasion to appeal to the collector of Customs to settle any disputes?—Yes; that is one of the reasons for the position I take. I think the Customs understand us, and on questions between the officer and us we appeal to the collector as a practical man who knows all the practical working of this.

25,050. Have you frequently occasion to do that?—Yes, frequently; our requests have frequently been refused, so that he does not always take the side of the merchants.

25,051. Still you want to have to appeal to a man who understands the business?—That is true.

25,052. And you deprecate having to go before a man who does not understand the business?—Yes; that would be a very serious point with us.

The witness withdrew.

Adjourned to to-morrow at 12.

SEVENTY-THIRD DAY.

7, Whitehall Place, S.W., Friday, March 8, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

EARL BROWNLOW.
LORD LINGEN, K.C.B.
MR. J. CLEGHORN.
MR. R. W. HANBURY, M.P.

MR. H. L. W. LAWSON, M.P.
MR. J. MACLURE, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

MR. HENRY WILLIAM HUNTER, MR. JOHN GEORGE CUNNINGHAM, MR. RICHARD CROWE, and MR. WILLIAM HOMERSHAM WEBSTER, called and examined.

Mr. H. W. Hunter Mr. J. G. Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 Mar. 1889.

25,053. (*Chairman to Mr. Hunter.*) I believe you are a supervisor and the chairman of the executive committee of the supervisors and officers?—Yes.

25,054. (*To Mr. Cunningham.*) What position do you occupy?—I represent the first-class officers.

25,055. (*To Mr. Crowe.*) Do you represent the second-class officers?—Yes.

25,056. (*To Mr. Webster.*) Do you represent the assistants?—Yes.

25,057. You have been good enough to send us a very carefully drawn up memorial. I think it is hardly necessary that we should go in detail over every point in it. I do not know what you yourselves are prepared to do, but what the Commission would like would be that you should call our attention to the special points in it which you desire to bring before us?—(*Mr. Hunter.*) Would you allow us to refer, in the first instance, to the main points of our work, and then to refer to our main grievances?

25,058. (*Chairman.*) Certainly, take it in your own way.—With reference to the work, the main points that we wish to refer to are the responsibility, nature, and extent of our work, which consists in charging and securing Excise duties arising from all sources, spirits, beer, tobacco, and the various kinds of licenses. To do so with success the officer must be acquainted with the operations of distillers, brewers, tobacco manufacturers, rectifiers, and other traders, for without this knowledge frauds upon the Revenue would be possible. The volume of traders' businesses, and the mode of conducting their businesses are matters known to officials, but must not be disclosed. The officer must be a good bookkeeper to render correct accounts for the Board and collector, and a fair correspondent. He must possess a thorough knowledge of mensuration so as to be able accurately to gauge vessels in which charges for duty arise, and, finally, he must possess tact and firmness so as to be able to say no, if pressed by a trader to be liberal at the expense of the Revenue. Where the daily hours are fixed the minimum is eight, and in the majority of cases the working hours of officers are very irregular—that is, they commence early in the morning and end late at night.

25,059. (*Mr. Lawson.*) What is the average duration of your work?—Eight hours for the officers we say is the average. That would dispose of the officers' part. Then the supervisor is acquainted with all the duties of the officer, having passed through the whole of the several grades. He supervises and acts as a check over the officers in his district, varying from six to eight. He checks every calculation made by every officer, and at the close of the month summarises the duty charge accounts and sends copies to the Board and to the collector who receives the duties. Week by week he advises the Board of the amount paid to the collector until the whole charge for the month is met. He acts as practical adviser to the Board on all matters connected with revenue business within his district, including repayments of duties or licenses. He places the particulars of frauds before the Board by report, and, if legal proceedings are ordered, he conducts the legal proceedings to a close before the magistrates. The daily hours of work average from 9 to 10, and in most cases are very irregular, not closing until as late as 9 o'clock at night. In my own instance I can state that on four evenings in the week I am absent from my home at different parts of my district until as late as 8.40, checking the charges at breweries, and I frequently commence at 8 o'clock in the morning. That disposes of that point. Then we come to the main grievances. The main grievances are that the lower or charging grade (that is the officers) and the upper or supervising grade (the supervisors) are each unnecessarily subdivided into three classes, although the work is practically the same, and promotion is only possible on vacancies occurring in the grade above, which is frequently rendered uncertain by fiscal changes, notably so at the present time. Then we would refer to the fact that in 1874 it was stated before the Playfair Commission that an assistant served four years, a second-class officer five years, and a first-class officer five years before promotion.

25,060. (*Lord Lingen.*) If you quote from the pamphlet you have sent the Commission would you be good enough to give the page when you read from it?—That is on page 21. The only difference in the work of the second class officer and the first class officer is that the duties of the latter are more concentrated. We have put in a map of my district to show this point to the Commission.

25,061. (*Chairman.*) An officer of the first class may have his work in a district which may be smaller; but where the population is more dense, may he not?—Sometimes. If you look at this map, the Reigate district, you will see that all the stations of my district are coloured and marked, whether they are of the first or second class. Assistants either do the same work as officers or they act for the officers during their absence. The same argument applies to supervisors, the status of districts being frequently altered from one class to the other without any addition to or subtraction from the work. We therefore ask that the service scale on the lines laid down in your second report should be granted to both grades, subject to the tests of fitness suggested on page 14 of our statement. The charging grade feel that, as it has been publicly admitted by Sir Algernon West to a deputation of our officers who waited on him in January 1883, that their work is of a superior nature to that of an ordinary lower division clerk, a maximum salary of about the same amount should be open by progressive increments, and without any intermediate stops. The supervisors make a similar claim, and contend that their maximum salary should equal that of an ordinary higher grade clerk, say at the head office, Somerset House, where drafting clerks receive salaries of 400*l.* a year, and in the Customs' service, the official corresponding to the supervisor, who is called a surveyor, rises from 350*l.* to 550*l.*, and in the Taxes they rise to 600*l.*

25,062. (*Mr. Lawson.*) Who rise?—The surveyors of taxes.

25,063. (*Mr. Cleghorn.*) Do you assume that the position of the surveyor of taxes is the same or analogous to

Mr. H. W. Hunter. Mr. J. G. Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 Mar. 1889.

the supervisor?—Well, he does to a large extent the same kind of work.

25,064. I mean that is your assumption?—Yes. Then we want to point out that promotion from class to class cannot return to what it was in 1874, and that owing to the fact that since the change from a malt to a beer duty a large number of small brewers throughout the country are continually dropping off. As soon as that happens in any district, the work of that district is re-schemed by our inspectorial staff, and some men done away with. Between 1883 and 1888 no less than 290 appointments above the grade of assistants, that is, the junior grade, have been abolished, or, in other words, about three years' promotion. There would not be more than 290 men promoted to the second class officerships in three years, so that between 1883 and 1884 290 appointments have been done away with from these younger men, and we cannot go back because there is no work for our men throughout the country. If a few brewers give up in a place it abolishes one officer, and so on like that, and with the small brewers, as I say, the tendency is for them to decrease.

25,065. (*Chairman.*) I understand that that part of your case is this, that the higher officers among the supervisors and other classes become unnecessary from the change of conditions, whether from legislation or otherwise, and that there is a consequent absence of the same rapidity of promotion?—Yes.

25,066. There are not so many plums in the profession, if you like to call them plums?—That is so.

25,067. And, in order to put that right, you suggest that there should be a service scale of salaries?—Yes; that there should be a service scale for the officer and a service scale for the supervisor, and all the subdivisions in the supervisorship and in the officership should be abolished. I am, for instance, a second class supervisor, and one of my colleagues who is giving evidence now is a second class officer. A first class supervisor does exactly the same kind of work that I do, and he works no more hours than I do, and at the present moment I have attained my maximum salary, and it is quite possible that it may be five years before I will be promoted to the first class—quite possible; in fact, I think it is very probable if I take my turn.

25,068. Do you suggest, further, that the rank or the class of supervisors should be kept as it is, distinct from the officers?—Certainly.

25,069. You do not propose that as soon as the first class officer gets a certain maximum he should become a supervisor by mere length of service?—No.

25,070. You mean to keep those distinct?—Yes. The distinctions must be kept.

25,071. (*Mr. Hanbury.*) You said there were fewer plums at the top of the service, but, I suppose, at the bottom of the service there are fewer people entering who would compete for those plums ultimately?—Nothing like the same proportion. (*Mr. Crowe.*) There is a per-centage of 13·8 of appointments in our department above the rank of officer. (*Mr. Hunter.*) Just one other point. I gave you the total number of officers above the rank of assistant, and then between 1883 and 1888, 18 appointments above the rank of supervisor have been abolished. In my own case that would delay my promotion for over three years. If I were promoted it would delay my chance of being allowed to compete for promotion, because I should have to compete for the inspectorship amongst a lot of men—my colleagues—and my chance of being allowed to compete is delayed fully three years by the abolition of these 18 appointments, and they cannot come back again, because these 18 men above me are not required, and, of course, we do not say they should be put there merely to keep promotion for us; we know they cannot be put there for that, but we say, that is a reason why a service scale of salary should be possible, so that we could proceed to a certain salary without these fiscal changes interrupting the promotion. (*Mr. Crowe.*) Comparing the year 1874 with the year 1888, there are 74 fewer appointments above the rank of second class officer.

25,072. (*Chairman.*) Then that is exactly the same case, as far as the principle is concerned, as Mr. Hunter has been stating with reference to the supervisors?—Yes.

25,073. It is the general case, namely, that the upper appointments became fewer, and, therefore, of course, the prospects of the lower ranks are worse than they were?—(*Mr. Hunter.*) I have, on behalf of the supervisors, prepared a short paper that we want to put in. It shows the proportion of appointments in some offices. In the secretary's office in our own department at Somerset House there is 43 per cent. of men with 400*l.* a year and upwards, and about 45 per cent. in the Controller General's; 38·4 in the Receiver General's, and 35·0 in the Controller of Stamps and Stores, and open to our young men there are only 2·8 superior appointments of over 400*l.* a year. I have pointed out in this memorandum a number of changes where the districts have been changed from first to second class without any addition in work, and have shown also, in some cases, the amount of duty collected to show that that is no criterion of work. I have also submitted four examples of the kind of reports that supervisors make to the board showing their importance, and, of course, in some cases, the amount of duty would be very largely affected. Those are taken from my own correspondence and the fractional numbers of the cases are given with the names omitted.

25,074. (*Mr. Hanbury.*) Do you say that your work is much more responsible work than that of the clerks at Somerset House whom you have mentioned?—I could point out one case. For instance, when I submitted a case for repayment of 18*l.* to a brewer through an accident by a vessel of his falling, the clerk who drafted the reply to me receives over 400*l.* a year, and I who wrote the original report and estimated the quantity that was lost and estimated the amount of money that should be repaid get about half the salary of the clerk who drafted the reply approving of my letter.

25,075. (*Chairman.*) Then your second point is the difference in remuneration for the similar kind of work which you say is performed by the indoor and the outdoor officers?—Yes.

25,076. Those at headquarters, in fact, and yourselves all through the country?—Yes.

25,077. What changes have recently taken place. There has been a partial re-organisation of your department in the last two or three years, has not there?—Yes, consequent, as I said, on the ceasing of a large number of small brewers throughout the country. The Beer Act came into force in 1880, and then, between that time and the present there have been as many as 6,000 small brewers who have ceased working. There have been small re-organisations taking place every year since 1880, but a thorough overhauling of the country of all the stations throughout the United Kingdom took place in the early part of 1887. The result of that was, as I said, the abolition of a large number of second class officers, first class officers, supervisors, and collectors.

25,078. Was that effected by removing some officers from the service and pensioning some off?—Promotion was entirely stopped for 12 months, there was no promotion of any kind for 12 months. (*Mr. Cunningham.*) A number of second class and first class officers became redundant in consequence of the change, and were placed on half pay for a considerable period, some of them. (*Mr Hunter.*) On the map I handed in there is one station shown that I did not have before 1887, Epsom. I am supervisor for all the six stations on that map. I am at Reigate district and then there is the Reigate station, and there is Horsham station, both first class, and then there are Epsom, Dorking, East Grinstead, and Red Hill, second class. Before the re-organisation of 1887 there were six officers in that piece which I did not have then, but there are now five. A brewer having ceased to work at Charlwood the Board communicated with the collector and myself, and in the end that officer was done away with, a portion of his station being given to this station, a little bit of it to this, and so on.

25,079. (*Lord Lingen.*) Is it through that piece that you are late at night?—We are late in any case. One of the largest brewers in my district is at Horsham, and if I am any use at all as a check officer I have to visit Horsham in the evening when the brewer collects his beer, to see that he enters the proper amount and that the officer charges the proper amount. That is the use the supervisor is. I have to visit East Grinstead the same, and also to visit the other districts; I visit them in turn. The officer probably never knows when I am coming until I walk into his office. I frequently go to the breweries and do not come to the office to all. The same with the bonded warehouses. The officer who has to deal with the casks of spirits can never tell when the supervisor will come.

25,080. (*Chairman.*) I believe you have only one bonded warehouse in your district?—Yes, at Reigate.

25,081. (*Mr. Cleghorn.*) Where is your headquarters?—At Reigate.

25,082. Do you reside at Reigate?—Yes.

25,083. (*Chairman.*) That is a district of the second class, is not it?—Yes.

25,084. And it is considered to be properly served by the officers you name?—Yes.

25,085. Is a first class district a more populous district or a larger district than a second class one?—It might be a more populous one, but not as a rule, as you will find if you will refer to my paper. Guildford district, which adjoins me, was at one time, until about a year ago, a first class district. The gentleman who was there died, and then they appointed another man; but turned it into a second class district and reduced it. The Board have power to make those changes and often do. They might raise my district now from a second-class to a first-class district if they wished to do so, and they could do that without in any way altering the work, or changing the man.

25,086. (*Mr. Lawson.*) What I understand is that the status of a district depends upon the personal position of a supervisor and not upon the population or area, is that so?—Yes, that is the case. There are plenty of second-class districts very narrow and some of them very wide, and plenty of first-class districts very narrow and some of them also very wide.

25,087. (*Chairman.*) Still the assumption is, as I understand it, so far as you know, that the principle upon which the board divides up these districts, is that a first class district is a position of more responsibility than a second class district?—If you will refer to the paper I have put in you will see that the duty in my district is about 50,000*l.* a year, taking licenses and all. I have not got the exact amount of licenses because I could not get it; but the duty is about 50,000*l.* a year. There are several first class districts where the duty is not above 25,000*l.*

25,088. But you have said yourself that the amount of duty is not entirely a criterion?—Yes, that is so.

25,089. Is not there a difference between first and second-class districts, based upon the responsibility or the nature of the work in some form or other; is not that the idea?—It is the idea, but it is not the fact.

25,090. Do you say it is not carried out?—When I was what they call a deputy supervisor I officiated in a number of first-class districts, and I officiated in several London districts, where the duty was above a quarter of a million a year in some of them, and I could, as far as hours of labour are concerned, do the London district in perhaps a little less than my present one, for the simple reason that the work is more concentrated. In Dublin districts where the duty may be very large because of the distilleries, I could do the work in a little less time than I could do my present work also, because it is more concentrated; in my district you have to travel so much.

25,091. (*Mr. Cleghorn.*) Do you keep a trap and horse?—No, I do not; a trap and horse would not be able to go over my district, it would take a couple of horses to go over the district. I travel by rail and hire.

25,092. (*Chairman.*) I understand your position to be that as regards these first and second class districts over which there is a supervisor, there is practically no difference between the work, and there is no reason why when an officer becomes a supervisor according to the distribution of the district he should not go on by service scale and become a first class supervisor without there being a vacancy in the upper division?—Yes, with this condition: we say we are willing to submit ourselves to any reasonable test, that is, that we do our work satisfactorily and obtain the certificate of our staff officer, and that the books of our district show that we have done our work satisfactorily; we are willing to submit to that, and subject to that test we say that there ought to be no distinction, and we go further than that, and say that there should be no distinction in the case of officers. Here is Horsham station, for instance, called a first class station, and in area it is not larger than Epsom. (*Mr. Crowe.*) Epsom is second class. (*Mr. Hunter.*) Yes, Epsom is second class, and Reigate is a first class station with a bonded warehouse attached to it, and is almost equal to Epsom in area.

25,093. (*Lord Lingen.*) When a first class district becomes vacant is it, as a matter of course, always filled up by a first class supervisor?—It is sometimes filled up by a second class supervisor, if it is reduced; if continued first, then by a first class supervisor.

25,094. Is that sometimes?—Generally, because they must promote a man from the lower class into the upper to fill the vacancy; they have no other way of doing it.

25,095. Then a second class supervisor may be put in charge of a first class district?—A second class supervisor might.

25,096. (*Chairman.*) He would become a first class supervisor on his promotion to a first class district, would not he?—Yes, Guildford was raised from second to first class for the previous supervisor, and then reduced from first to second for the present supervisor; but no change was made in the work. Canterbury was raised from second to first class for the previous supervisor, and then reduced from first to second for the present supervisor. Chester was raised from second to first for the present supervisor. The Dudley second district on the appointment of the present supervisor was reduced from being a first class district to a second class; and a few months afterwards this gentleman was raised in the same district with the same work from second to first, and he is my junior now; that is rather curious.

25,097. (*Mr. Hanbury.*) What do you mean by curious?—That, without any change in the work, in the first instance, it was reduced from being a first class district to a second class district, and that then without any change of any kind with still the same supervisor occupying the district it was raised.

25,098. You do not know any reasonable explanation of it?—None.

25,099. (*Mr. Cleghorn.*) The board might have reasons of their own for it?—Of course they may have. The gentleman is junior to me, and junior to some hundreds of men. We do not know, of course, what reasons the board may have had.

25,100. (*Lord Lingen.*) May I take this for certain, and unconditionally, that a first class district means a district under a first class supervisor?—Yes. And we contend, as I have explained, that the supervisors wish the barrier broken, and the officers demand the same. The duty in many second class stations exceeds the first, and with reference to each officer, no matter whether he is in a first class station, or in a second, the supervisor or the collector is responsible that he has a fair amount of work assigned to him. In Guildford and Yarmouth, now second class, the duties are 46,000*l.* and 62,000*l.* respectively. In Hastings, recently raised to the first class, they are 23,000*l.*, and in Wrexham, also recently raised to the first class they are 30,000*l.*

25,101. (*Chairman.*) Then, with regard to promotion from a second class to a first class supervisor, that is made when there is a vacancy, as I understand it, in a first class district?—Yes.

25,102. Is that promotion made by seniority?—It is not purely by seniority.

25,103. It is seniority coupled with fitness?—Tempered by fitness and selection.

25,104. (*Mr. Cleghorn.*) Is there an examination before that appointment is made?—The working books, of the supervisor's district are taken out and inspected at the head office to see whether they are all kept in a satisfactory manner. A limited number of the calculations are checked to see that the brewer is surveyed according to the regulations, and that all the work is done in a proper and methodical manner.

25,105. (*Mr. Hanbury.*) But when a second class district is turned into a first, as it is sometimes, is the supervisor, who has been the supervisor in that second class district, invariably given the supervisorship in the district, which then becomes a first class one?—It is a frequent occurrence that the supervisor in the position of second class is turned into a first class; but his books would also be subject to the scrutiny.

25,106. (*Chairman.*) That is not a point, I believe upon which you desire to say anything now?—No.

25,107. (*Mr. Lawson.*) Is it usual for a change in the district to be made on the occurrence of a vacancy?—Not always; the districts are frequently changed without that at all.

25,108. (*Chairman.*) What you have been saying on behalf of supervisors with reference to their districts is also what you wish to say on behalf of officers as I understand?—Yes. (*Mr. Cunningham.*) Practically it is.

Mr. H. W. Hunter, Mr. J. G. Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 Mar. 1889.

25,109. It is exactly the same thing as I think you have stated in your memorial?—Yes.

25,110. The general contention being both on behalf of you as officers and of the assistants (to whom we will come presently), and also on behalf of the supervisors that what you want is what you call a service scale?—(*Mr. Hunter.*) Yes.

25,111. Rising by seniority to the maximum in each class?—Yes, without any barrier like there is at present.

25,112. Without any barrier between the grades up to first class officer for the officers and up to first class supervisor for the supervisors?—Yes. (*Mr. Crowe.*) There is practically no difference at all between the duties of first class officer and second class officer. In many cases even the duties charged in a second class station are more than they are in the first. I have a little table here for comparison which I would like to hand in (*handing in same*).

25,113. Upon this point you go into detail, I think, in your book. Perhaps you would state shortly what your proposals are?—(*Mr. Cunningham.*) The proposals would be found on pages 13 and 14 of the amended statement.

25,114. You propose the abolition of classification of supervisors and officers and of the existing distinction between officers and assistants, and the substitution of the designation "unattached officer" for "assistant"?—Yes.

25,115. That is quite intelligible. Then you propose the granting of a scale of salaries for officers at 80*l.*, rising by 5*l.* to 100*l.*, whereas they now begin at 50*l.*?—Yes, without allowances. (*Mr. Crowe.*) In addition to that 50*l.* they receive 2*s.* a day when they are actively employed.

25,116. Then is there any increase as far as salary is concerned in your proposals?—(*Mr. Cunningham.*) Not in the initial salary.

25,117. There is a difference, is there not, in the maximum?—We suggest an increase in the maximum.

25,118. You suggest an increase of salary to 100*l.* in the maximum for what you wish to call "unattached" officers?—Yes.

25,119. The assistants of Excise, I believe, rise in six years to 65*l.*?—With allowances.

25,120. And with allowances, that would make, so far as I understand, about 95*l.*?—(*Mr. Hunter.*) About 95*l.*

25,121. So that that would be an increase of about 5*l.*?—(*Mr. Webster.*) Yes, just so. (*Mr. Hunter.*) But then the assistants also claim that if they obtain the certificate of fitness, they should proceed on because they are unattached officers still. (*Mr. Cunningham.*) On page 14 you will find a suggestion as to this.

25,122. Is it the case now that the assistant officers whom you propose to call "unattached" officers stop at their maximum unless there are vacancies in the second class above?—(*Mr. Hunter.*) Yes, that is the case.

25,123. Does that apply right through the service?—(*Mr. Crowe.*) That applies also to the case of the second class officers. (*Mr. Webster.*) I have been practically eight years at the same salary without any increase.

25,124. Do you mean that you rose to your maximum?—I have not had any maximum. I am practically at the same salary now as at the first year I entered.

25,125. (*Mr. Lawson.*) As an assistant?—Yes.

25,126. (*Chairman.*) What does a man get after three years' service?—That only applies to an assistant who entered the service before 1885. There was a reduction of the salary in 1885 to 50*l.* It was formerly 60*l.* There was not any increment then, but the increment of 7*l.* 10*s.* was only given to the assistants who entered since 1885. I mean the triennial increments. There are about 750 assistants and only 250 of these receiving the triennial increments; the others only received a single increase of 5*l.* after six years, and, as I have said, I have been eight years, and many of them will have been 10 and 12 years, before they are promoted to the next class, and they will only receive during the whole of that time 5*l.* increase over their original salary.

25,127. (*Mr. Lawson.*) Are you now at the original salary of 65*l.*?—95*l.* is mine.

25,128. Do you mean 65*l.* plus your extras?—No, I have a fixed salary of 95*l.*

25,129. Are you an assistant late of the first class?—Yes; the class has been abolished. I was appointed first class assistant.

25,130. Then in the estimates it is a misleading thing to say that the assistants of Excise only get 65*l.* or 50*l.*, as the case may be, because they get 30*l.* in addition?—They get 2*s.* a day every day they are employed in addition. I think that is shown under the head of allowances.

25,131. (*Chairman.*) You, apparently, Mr. Webster, have been receiving 60*l.* plus 30*l.* when employed, and you have been employed during the whole time of your service?—I received that for four years, and then I was appointed first-class assistant, a distinction which has now been abolished; and for four years I have received a fixed salary of 95*l.* I was four years receiving 60*l.* plus 2*s.* a day, and my average salary for those four years was 90*l.*, and then when I was appointed first-class assistant I received that increase of 5*l.* only, and I have not had any further increase during the whole time. I should like to repeat that although I have been eight years many present assistants will be 10 years and possibly 12.

25,132. An assistant appointed under the present system will be how long before he gets to the salary that you were at the first year?—An assistant appointed at present would not receive the same salary until about three years afterwards.

25,133. And after six years he would get 95*l.*?—Yes.

25,134. (*Mr. Hanbury.*) Was the scale before 1885, from your point of view, a better or a worse one than that?—The initial salary was better. There was no increment received, but the initial salary was 10*l.* more.

25,135. Taking it all through?—Taking it all through, I think it was about the same.

25,136. (*Mr. Lawson.*) You made a slightly better bargain than you would have if you had entered under the present conditions?—Yes. (*Mr. Crowe.*) I may also say that I have been practically four years and four months at my maximum salary, because in September 1887 the maximum of the second-class officers was increased from 130*l.* to 140*l.* I stood at the old maximum for three years and ten months. I have been now at the present maximum six months, so that I am practically four years and four months at my maximum salary, and shall be two years more at least before I am appointed to the first class under the present arrangement.

25,137. (*Chairman.*) Your suggestion is also on behalf of your class, that you should go on by regular increments to a maximum of 190*l.*, and then in the next class that the maximum should begin at 190*l.*?—Exactly.

25,138. And in fact that it should not be a class at all, but grades, that you should go on by 10*l.* to 250*l.*?—(*Mr. Cunningham.*) We say that the officers who have travelled to the 190*l.* should proceed into the grade above on satisfying the conditions.

25,139. Which you set out on page 14?—Exactly. (*Mr. Crowe.*) In the case of a collector's clerk of the second class, he commences at 100*l.* a year, and goes by 5*l.* up to 140*l.*, and then without any break by 7*l.* 10*s.* up to 220*l.*, while a second-class officer who commences at 115*l.* and goes by 5*l.* a year up to 140*l.* is there stopped until there is a vacancy in the class above, which at the present time occurs in about five years; he is practically stopped five years now, and the interval will become greater. (*Mr. Cunningham.*) He goes up to 220*l.* without any test whatever. (*Mr. Crowe.*) These collectors' clerks are recruited from the outdoor department. (*Mr. Cunningham.*) I may say that I have served as a collector's clerk and I have practical knowledge of what the work is and of its value as compared with that of an officer of the Excise of the outdoor branch.

25,140. There, again, is the comparison which you draw between yourselves—the outdoor officers—and the indoor officers?—Quite so.

25,141. (*Lord Lingen.*) What promotion is before a collector's clerk after he has reached his maximum?—A superintending clerkship is the highest point which he can reach at present.

25,142. Therefore in that respect he compares very unfavourably with the lowest officer of the outdoor service, who may become a collector and an

inspector?—The prospects of a collectorship are extremely distant. The superintending clerk reaches the same maximum as a first-class supervisor. A great many of the clerks might get to that position, but only one officer in six can possibly reach that position. (*Mr. Hunter.*) And only one officer in six can become a supervisor, and only one supervisor in three can ever become a collector. (*Mr. Crowe.*) I would like to say that there is 43·3 per cent. of appointments of 280*l.* and upwards among the collectors' clerkships, whilst there is only 13·8 per cent. of appointments above 220*l.* in the outdoor department. We may, of course, rise to higher appointments, but they are very few.

25,143. (*Chairman.*) The principal point in your case is, is it not, the diminution in the number of the higher appointments?—Yes, quite so.

25,144. And the natural desire, of course, for increased salary?—And the slowness of promotion consequent upon that.

25,145. The slowness of promotion is really the principal thing, is it not?—(*Mr. Cunningham.*) The retardation of promotion has been very serious. I am a first-class officer. I have now served 17½ years. When I entered the service, in 1871, men of my rank were passed into the supervisor's rank after 16 years' service. I have now had 17½ years' service, as I have said, and I am still a first-class officer. I shall probably be a first-class officer under the most favourable circumstances for quite two and a half years to come, and that will give me somewhere about 20 years' service before promotion to the supervisorship.

25,146. As against what?—As against 16 years when I entered the service.

25,147. Then it takes four years longer?—At least that. (*Mr. Crowe.*) I have been in the service 13 years and 2 months, and I have 140*l.* at the present time, which is 50*l.* more than when I entered.

25,148. I quite understand that there is an increased slowness of promotion. Then we come to the question, How is that to be met? In the first place, is it right that it ought to be met by the Government; and in the next place, could anything reasonably be done to make your position better without bringing too heavy a burden upon the Exchequer? I observe you make a very strong statement in your green book; you make the statement that there is discontent and dissatisfaction permeating the service from end to end. That is a very strong statement?—It is perfectly true. (*Mr. Hunter.*) Yes; this agitation commenced very shortly after the passing of the Beer Duty in 1880, and it was to a large extent in consequence of the passing of the Beer Duty, which changed the officers' work under the old Malt Duty. The maltsters only worked on the average about eight months in the year, and the greater part of the malt work was done in the morning portion of the day, because, in fact, operations were, as a rule, by law forbidden after 4 o'clock.

25,149. And also during a limited period of the year?—Yes. Then under the Brewing Law the brewers worked the whole year round, and they call the officer out early in the morning, perhaps all day, and frequently at night. (*Mr. Crowe.*) Usually at night now. (*Mr. Hunter.*) Yes, usually at night, because they generally collect their beer then, and the charge is made at night, and the officer goes to take the charge. So the work has been changed since 1880, and made more disagreeable to the officers, and we consider that that point alone is one which has never been made up for us since the imposition of the Beer Duty. We brought one of the brewing books here to show you the importance of the officers' and of the supervisors' work. This (*producing same*) is the brewing book of the Reigate Station. The charges that are here made are made by the officer going to the brewery and dipping the vessels and testing the gravity of the beer, and then the charge is set out. But the supervisor of course checks occasionally a certain amount of those, as much as he can through that district, and at the end of the month the whole of those charges are made up, and we send an account to the collector to receive the money, and an account up to London in order that they may raise a charge against the collector to see that all those amounts reach the Exchequer. We hold that the officer who surveys a brewery and makes an original charge does more important work than an ordinary clerk who merely performs clerical work, because if the officers are not particular in charging the full amount of duty on the brewer, distiller, or bonded warehouse-keeper, it would be absolutely lost to the revenue, unless the supervisors came in and checked that particular charge and raised it. We hold then that the officer is entitled from the very nature of his work to at least as good a scale of pay as that given to those we call second division clerks. And we also hold that the supervisor who supervises that work and checks the accounts, and checks the officer, does more important work than an ordinary higher or drafting clerk in the office; and that he should have at least an equal amount of salary. We do not think that it is our business to point out where the increased cost should come from. We know that this discontent, as I say, has been going on for over eight years, and we could not more clearly say how dissatisfied we are. We have thoroughly looked into the question, and we know, by comparisons with some men who have left our service and gone into the indoor office in Somerset House, what is the difference in position. I myself spoke to one of those the other day, and got a thorough description of his work. He himself admitted that he is now progressing to 140*l.* in the office by annual increments. He would have been an assistant if he was in the outdoor service, and for the next four years would have been at 95*l.* He admitted that he was doing clerical work of a merely routine character; but if he had been outside he would have been charging duties on brewers or doing work of a very important character. (*Mr. Webster.*) I should like also to say that to the accuracy of every statement in every one of these books the officer must be prepared to swear in a court of law.

Mr. H. W. Hunter, Mr. J. G. Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 Mar. 1889.

25,150. I am only asking you with reference to the feeling of the service. It is a very important statement you make. I quite understand that there is a general desire on behalf of the service that there should be quicker promotion and that there should be some changes made in the salary. At the same time it is a strong statement that you make, and I am sorry to hear that you endorse it?—(*Mr. Cunningham.*) On page 30 you will find details showing how wide the discontent is. I beg to hand in on this occasion a copy of the petition which we recently presented to the Commissioners of Inland Revenue, and of the correspondence which ensued thereupon (*handing in same*).

25,151. (*Mr. Hanbury.*) Do I understand that the discontent rests upon this basis, that the work you do is very much more responsible than that done by the clerk in the indoor department and yet he gets paid more than you do?—(*Mr. Hunter.*) Yes.

25,152. It is on the ground of the responsibility of your work?—Yes. (*Mr. Hunter.*) We have alluded to the loss of prospects. (*Mr. Crowe.*) I should like to say, before we go from this portion of the subject, that the supervisor in the days of the malt duty had more facilities for checking the officers than he has at the present time, because the basis of the charge in breweries is more perishable, owing to the attenuation of the worts.

25,153. (*Chairman.*) Have you formed any idea as to what the cost of the suggestions that you make would be to the establishment of the Inland Revenue, or is that a subject upon which you would rather not express an opinion?—(*Mr. Cunningham.*) We have got insufficient data. (*Mr. Crowe.*) It would be very small at first. (*Mr. Hunter.*) We could only roughly enter into that. (*Mr. Cunningham.*) The data at our disposal are not sufficient to enable us to offer really a substantial and correct figure.

25,154. You have handed me a paper which appears to me to be of late date (1888), which is a reply of the Board to a memorial which is presented, I think, by exactly the gentlemen you represent?—(*Mr. Hunter.*) Yes.

25,155. In that letter the Board states that a general increase of salaries and allowances would extend to about 150,000*l.* on the mean and 300,000*l.* on the maximum cost of the present outdoor Excise branch? How has the maximum cost been worked out?—That maximum cost could not possibly be; it is a word that I do not exactly understand the force of, as it is put there. 300,000*l.* would be the increased cost if every man in the service was always at his maximum; but that is a perfect impossibility with a service of over 3,000 men.

25,156. I understand it to mean this: I daresay it is an impossibility, but still I resume that there is a maximum cost to the present service?—Yes.

25,157. And that is equally impossible to attain?—It is.

Mr. H. W. Hunter, Mr. J. G. Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 Mar. 1888.

25,158. If you compare the present maximum cost, and the maximum cost, if all the suggestions you make were adopted, I imagine that the meaning of this paper would be that the 300,000*l.* would represent the increase?—(*Mr. Crowe.*) I do not think that it would be so large.

25,159. I am not saying that it is so, but that that is the statement in this paper?—Quite so. (*Mr. Hunter.*) With reference to the mean cost, we consider that is slightly above what it would cost if it were put in force. According to the best information we have, we estimate that it would not cost at any time more than 120,000*l.* a year, and that would cover the cost of the superannuation charges as well. We consider the first year's increase of salaries would be met by an increase of something like 20,000*l.* Of course that sum would go on augmenting from year to year.

25,160. (*Mr. Hanbury.*) This grievance, as far as I can make out, only affects people who are in the service at the present moment. People who are entering now will know what offices there are open and what chances of promotion there are, and will act with their eyes open; it is only the people in the service now who have been disappointed in their promotion by those offices being abolished?—Yes; but the incoming men are liable to changes or alterations in fiscal policy quite as much as we have been; and it is to avoid that alteration of prospects which may arise from changes in fiscal policy that we suggest a service scale. (*Mr. Crowe.*) I do not think it would be a very good policy to lower the status of the service, because an officer has to act very much upon his own initiative.

25,161. (*Mr. Cleghorn.*) What do you mean by lowering the status of the service?—By putting the incoming men lower; of course they cannot reach the same salaries that the older men used to, unless there is some reorganisation.

25,162. (*Mr. Lawson.*) You complain in your memorandum that there is an entire absence of rewards for good service to officers. How do you think that would be supplied by the changes that you propose?—(*Mr. Hunter.*) An officer who would satisfy his chief would go on by a progressive salary, and would not be stopped as this second-class officer and this assistant here are stopped, and I as a second-class supervisor am stopped. If the barriers were removed the officer and myself would both proceed, and so would the assistant examiners.

25,163. I know that, but, of course, that would involve regularity of promotion, but it would not supply any particular reward, would it, for good service?—(*Mr. Cunningham.*) It would give the Commissioners of Inland Revenue an opportunity of stopping the inefficient officers at the barriers we suggest. (*Mr. Crowe.*) I may say I am stopped at 140*l.* now, and I have never had any report at all of any character scarcely against me, and we are reported for any little irregularity in the Excise.

25,164. (*Chairman.*) Do you wish these papers to be handed in, giving your reply to the Board in the memorial?—(*Mr. Cunningham.*) Yes, the rejoinder summarises our arguments to a great extent.

25,165. (*Mr. Lawson.*) I understand you to maintain that the divisions in the lower or charging grade are purely artificial?—(*Mr. Crowe.*) Yes, quite so.

25,166. That they do not represent any real distinction of work?—No, it is a distinction without a difference. (*Mr. Cunningham.*) I have been through all the grades I may say, and I can corroborate that. (*Mr. Hunter.*) And I have been a supervisor in a number of districts, and I can corroborate it.

25,167. Would you say that an assistant has the same measure of responsibility as an officer of the first or second class?—When he is doing the officer's work he has. (*Mr. Webster.*) He does exactly the same work whilst he is officiating for the officer.

25,168. Does he only officiate in the case of absence of officers?—A few of the seniors are employed in permanent stations. I am in that case myself—I am in a station with a first-class officer—the duty charged at that station is about 23,000*l.* a year. I do exactly similar work to the officer, and there is no difference whatever, my salary is 95*l.*, his salary at present is 220*l.* I submit in that case that I ought not to be employed in such responsible work, and that an officer who has such responsible work as that to do should have more salary—there should be two first-class officers there instead of one.

25,169. Are you responsible for the collection of the whole of that revenue?—No, only for half of that. I am jointly with the officer responsible for the charging of duty amounting to between 22,000*l.* and 23,000*l.*

25,170. (*Lord Lingen.*) How long have you been discharging that superior work?—I have been in the station about 2¼ years at the present time.

25,171. And discharging superior work?—Discharging that work.

25,172. All that time?—Yes, all that time.

25,173. (*Mr. Hanbury.*) It is quite clear that if there were collusion between the officials and the brewers the revenue would be defrauded to a great extent?—Certainly, until discovered by a superior official.

25,174. I want to know in what grades possibility of such collusion exists?—(*Mr. Crowe.*) It would exist in the whole service.

25,175. How low would it go?—(*Mr. Webster.*) To the lowest.

25,176. But the lower officer would be checked, I suppose, by his superior officer?—(*Mr. Cunningham.*) By the supervisor.

25,177. But is there nobody who can check the supervisor?—Yes, there is the inspector who can come at any time unexpectedly. (*Mr. Hunter.*) And also occasionally the collector acting in the capacity of inspector.

25,178. (*Chairman.*) He would make periodical visits?—(*Mr. Cunningham.*) Quite so. (*Mr. Hunter.*) In my case the inspectors have not been to my district for three years.

25,179 That shows confidence in your supervision?—(*Mr. Crowe.*) An inspector has not been in my station for the last two or three years.

25,180. (*Mr. Lawson.*) What is the method of checking your own returns?—(*Mr. Cunningham.*) The entries are actually checked by the supervisor. (*Mr. Hunter.*) I could show you if you wish the taking of a sample of spirits, we have the means here if you wish to see, it would only be a matter of a minute or so. The quantity in the vessel is taken by dipping. The vessel is gauged and tabulated, and the quantity is obtained by dipping, and the gravity, and then it is worked out according to the standard gravity, and that is totalled up at the end of the month

25,181. (*Mr. Lawson.*) That is not quite an answer to my question; I want to know how far your superior officer would be able to check that?—The supervisor is able, as far as the limited time placed at his disposal, to check all the work of the officer.

25,182. Supposing it was a fraudulent return obtained in order to benefit the trader in the particular case, what hold has your supervisor over you?—(*Mr. Cunningham.*) After the lapse of a few hours no hold whatever, because the brewers' operations are such that the gravity upon which our charge depends would be altered altogether, and the supervisor would have no means at his disposal of checking the original gravity.

25,183. (*Mr. Hanbury.*) What is the lowest officer, then, upon whom that responsibility is cast?—The assistant.

25,184. (*Mr. Lawson.*) The lowest of all?—Yes. (*Mr. Crowe.*) We all practically do the same work—all the officers. (*Mr. Hunter.*) The same with the spirits at the bonded warehouse, Reigate. If a cask of spirits is charged by an officer, and he charge 1*l.* too little on it, and I come in five minutes after the cask has gone away, I could not check it. If I came in before the cask went away, of course I could check it, but once it has left the premises I could do nothing with it; so I have to trust to the officer at that station. If you want a supervisor over every officer that would be very expensive.

25,185. In most cases, of course, you have an absolutely final responsibility?—The supervisor has to a large extent. (*Mr. Cunningham.*) And the officer has.

25,186. I want to know in relation to a particular sample of spirit or beer; is there anybody who gauges except yourself?—Do you mean in the case of the officer?

25,187. Yes, in the case of the officer?—Not unless the supervisor comes in, which is purely an accident, so far as he is concerned. The officer never knows when the supervisor may come.

Mr. H. W. Hunter, Mr. J. G. Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 May 1889.

25,188. (*Chairman.*) It is the business of the supervisor to be responsible for the proper conduct and the efficient charging of all the officers in his district?—Quite so.

25,189. And it is his first business to take the proper means of ascertaining that the various officers, from the lowest to the highest, are performing their duty?—Yes.

25,190. And if he is satisfied that a particular charging officer is to be trusted he does not exercise so much supervision?—No.

25,191. But if he has any reason to suspect that he is either incompetent or dishonest—I will not say dishonest, I would rather say lax—if he has any reason to suspect such a thing it is his business to put a further check upon that?—(*Mr. Hunter.*) Yes, the supervisor then would devote particular attention, and he would make visits at times which he, himself, from his experience would know, would enable him to check those points that he thought were lax on the part of the officer.

25,192. (*Lord Lingen.*) Although he does not go into the work, and could not go into the work of each individual officer in his district, he is at liberty to go into any detail of the work that he choses, and the officer in his district does not know which part of his work the supervisor will take up?—No.

25,193. That is a true statement of the organisation and discipline of the service, is not it?—Yes. Every charge that is made by an officer the supervisor must himself check to be satisfied of the correctness of the charge, because it would not be safe to leave the revenue depending on his calculations entirely. Take a cask of spirits; every calculation must be checked by the supervisor, because there might be a loss of duty by the officer making a mis-calculation by mistake, a clerical error, and the supervisor, therefore, has to check every calculation on which a charge of duty arises made by each officer within his district. If you look at that document you will see the charges are all checked by the supervisor.

25,194. (*Mr. Hanbury.*) If an assistant goes into a brewery and makes his calculations there, if the supervisor is not there at that time, how can the supervisor check him afterwards?—(*Mr. Cunningham.*) He can only check the calculations. (*Mr. Crowe.*) He cannot check the basis of the charge unless he goes in immediately. (*Mr. Hunter.*) The assistant puts down his charge in the official books, and it stands there as the basis of the charge. (*Mr. Crowe.*) I may say that I have raised the gravity in a beer vat upon brewers by one degree, and that meant 1*l.* to the revenue, that one degree alone. If I allowed that to go for only a couple of hours there was no possibility of anybody checking it, unless it was sampled and distilled, and then that is not always an accurate test. (*Mr. Hunter.*) With the brewers it is a very simple matter. In the case of testing spirits it is a matter of money to the trader as well as to the revenue, and as a rule the trader is also trying in each case to get you to call both the quantity and the strength a little lower than you may be willing to call it, and the officer must be a man with a certain amount of nerve for him to say no, when he has reached the proper limit; he must say no, and go no further, or the revenue would lose.

25,195. (*Chairman.*) Is there any other point that you would like to call the attention of the Commissioners to, because, I think, we have got your case fully before us?—(*Mr. Cunningham.*) With regard to first-class officers, I should like to say a few words upon the question of travelling allowances.

25,196. Would you kindly refer to the page. Do you refer to the allowance for horses?—No; that is not the point, because the nature of my work does not require a horse to be kept. But in consequence of the wide extent of my station and the number of visits I have to pay to people who are under Excise surveillance, expense is involved in my case. (*Mr. Hunter.*) And also in wide first-class stations like Horsham. There is no allowance for officers of first-class stations. (*Mr. Cunningham.*) An expenditure is also incurred from the fact that rents are so high in the locality where my duties are performed that I find that I cannot afford to reside there. I therefore reside in a cheaper suburb, and I have to pay my travelling expenses between my residence and the place where my duty is performed.

25,197. (*Mr. Lawson.*) Where is that?—My duties are performed in the neighbourhood of Upper Holloway and Islington and Highgate. I reside at West Green, Tottenham, which is a much cheaper neighbourhood. It costs me about 8*l.* a year for travelling from and to my residence and within the limits of my station. I consider that the latter at least is an expenditure which ought not to come out of my pocket, and which is contrary to the principle laid down by the Playfair Commission with regard to moneys expended in the public service. Our petition goes into that. I do not know that our statement deals with that point particularly. I cannot lay my hand upon it at the present moment, but our petition, a copy of which has been handed in, does deal with it. Then, again, I should like to say one word with regard to the salary upon which I have been existing in London for the last seven years. I began upon a salary of 140*l.* a year. I have a wife and six children. My salary now is 177*l.* 10*s.* 0*d.*

25,198. You could not expect your salary to be increased because you had a wife and six children, could you?—Certainly not; but I want to point out that it is insufficient for our maintenance, because I can assure you most solemnly that since I have been in London I have spent upwards of 200*l.* beyond my salary in the necessary maintenance of my family.

25,199. Because of what?—The expense of living in London.

25,200. The expense of living in the district where you had to live?—Yes; and my case is one of many, it is not at all a single case. (*Mr. Crowe.*) I may say as a second-class officer that my salary would not keep me and does not keep me.

25,201. And yet there are plenty of people who come into the service knowing the prospects before them?—I should never have entered the service if I had known I should only have 50*l.* increase in 13 years. (*Mr. Cunningham.*) You see the prospects changed so.

25,202. I quite understand your point?—Our object is to change that.

25,203. If things had been as they were when you respectively entered the service you would not have been here now?—We should not have had the cause of complaint that we have.

25,204. Not the same cause?—Not the same cause. (*Mr. Crowe.*) That is so. (*Mr. Hunter.*) The promotion, as we pointed out, can never return to the state it was before on account of the number of men above the grade of assistant who have been abolished, and there will not be that same chance again, of course. When I entered the service men were passed up to the supervisorship after between 12 and 13 years' service. That was in 1867.

25,205. (*Chairman.*) I am afraid that is the fortune of war, and that that cannot be altogether met, if it could be met at all, by Government. You do not imagine that when you entered the service you entered a service which was never to be altered in its appointments and the good things at the head of it?—(*Mr. Crowe.*) No. (*Mr. Cunningham.*) No.

25,206. I do not think you put your case quite as high as that, but you put it very fairly.—Seeing that when we entered the service the work of the three grades was practically the same as it is now, and a man progressed from one to another without the long stoppages that have since occurred. Of course, we naturally concluded that that state of things would continue. (*Mr. Crowe.*) Naturally. (*Mr. Cunningham.*) Especially as it had continued for many years prior to our entering the service.

25,207. You expected that the average rate would continue to be what it had been?—Exactly so; it was stated before the Playfair Commission by Mr. Young as five years in the grade I am now in, but at present I am in my eighth year (7¼ years to be exact), and I shall certainly serve nine years before I get a chance. (*Mr. Crowe.*) He said I should be only five in my position. I have been eight years already. (*Mr. Cunningham.*) Mr. Webster's grade ought to have been four, and he has now been upwards of eight. (*Mr. Hunter.*) There was a point about the amount of discontent. I think the officers to a large extent have all of them, as has been explained, a large amount of responsibility. Along with the spirit and beer duty, there are licenses that have to be charged by the officers, and of course a zealous officer looks up every person, and charges him with the proper license duty, and the supervisor, as has been explained, cannot be at the heels of each officer; he cannot see that everything is done.

Mr. H. W. Hunter, Mr. J. G Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 Mar. 1889.

They have now arrived at this point: they consider that they are unfairly treated comparing themselves with other men who do no more important work, and if the reasons are allowed to continue we cannot say that men going about from day to day with those reasons and the power referred to in their hands will continue efficient, and we believe the men at the present time are quite up to their work; but it is thought by a great many men that, if we are to be treated in the future as we have been in the past, a limit will come to the patience of the men, and that they will not be perhaps as zealous as they all ought to be. (*Mr. Crowe.*) I am sure they will not be efficient.

25,208. That is rather in the nature of a threat, is not it?—(*Mr. Hunter.*) No, it is not put in that way.

25,209. It is very much like it?—(*Mr. Hunter.*) I only put it in the way that men who are allowed to go about from day to day with an unredressed grievance, keep thinking of the grievance, and that work that should be attended to may escape their attention, perhaps unwittingly; men think a certain amount about things of this kind. I know from my position in connexion with the agitation how much and how largely men do think of it. (*Mr. Cunningham.*) I should like to put it in this way, if you will allow me, that an officer whose own pecuniary troubles press upon him cannot devote the same attention to the Revenue as an officer might who is free from that pressure.

25,210. I think you state very fairly on page 31 "that discontent most unquestionably tends to a per- "functory performance of work."—(*Mr. Hunter.*) That is the manner in which we wish to put it. We wish to emphasize that point. We say, and I am sure our own chairman would say, that he believes we are an efficient body of men, and of course it would be his wish to keep us like that, and it would be his wish that the service should continue an efficient service, and the service wish to retain the good opinion of all men in high positions.

25,211. (*Mr. Maclure.*) What about the travelling expenses; how is that regulated?—(*Mr. Crowe.*) I was just going to refer to the horse allowance.

25,212. (*Chairman.*) Does the horse allowance refer to travelling expenses? You said that in your case you had neither horse allowance, nor did you altogether use the railways, that you had various ways of travelling about. How is that regulated?—(*Mr. Hunter.*) My travelling allowance is fixed on an estimated number of journeys to the different parts of my district. That was gone into by the inspector's staff in London, and they gave me a lump sum of 55*l.* a year. If it costs more than that I have to pay it out of my own pocket, and if it costs less I gain.

25,213. That is the very point I wanted to get at. Is that allowance of 55*l.* a fairly liberal one, so that it makes up in any way for the deficient amount of salary?—On the contrary; the allowance is cut too fine as a rule; in my own case I think it is, and it is the same in the majority of cases. (*Mr. Crowe.*) I may say that in the case of second-class officers who have to keep horses the allowance given of 40*l.* to provide and keep a horse, of course there is a trap and harness as well, is not sufficient. I have kept a horse for eight years myself, and I can say it is insufficient I do not know of any official, but a Revenue officer, who has to provide and keep a horse upon 40*l.* a year. I have a statement written out upon the matter which I should like to hand in (*handing in document*). (*Mr. Webster.*) I should wish to add a word to what Mr. Crowe has said upon this, that an officer has to purchase his horse and trap himself.

25,214. (*Mr. Maclure.*) That is what I understood him to say, that the 40*l.* was to provide and keep a horse and trap?—(*Mr. Crowe.*) Yes.

25,215. (*Chairman.*) The same as the postman in the district?—And the police inspector and superintendent.

25,216. The postman has to find a horse and cart sometimes for 10*s.* a week, has not he, but then he can make a little money by carrying parcels?—Yes; the officer's allowance is 15*s.* 4*d.* a week. (*Mr. Hunter.*) But a postman and an Inland Revenu officer are in different grades.

25,217. Upon this point of horse keep you say that 40*l.* for the second-class officer is not enough?—(*Mr. Crowe.*) The same with the 55*l.* for the supervisors; we consider that in both cases the allowance is insufficient, but more particularly in the case of the officer. If you will look at the end of the second page of the paper I have just handed in you will find what is granted to the superintendents and inspectors of police. These allowances are fixed by the magistrates at quarter sessions, and, being large ratepayers themselves, they are not very likely to be extravagant, and they are well acquainted as a rule with the cost of keeping horses, but at the same time they give very fair allowances.

25,218. You say that 40*l.* is not sufficient?—It is not sufficient for horses for second-class officers nor is 55*l.* for the supervisor. I say also that some of the second-class stations are so hard that even an ordinary horse will not do. I had to keep two horses, for instance, myself in the winter of 1887–8.

25,219. If you lived in a district where it was possible would you be allowed to go on a bicycle or a tricycle, taking the 40*l.*?—I never asked. (*Mr. Cunningham.*) We might be allowed to use the bicycle or tricycle, but the allowance would be less than that for keeping a horse. (*Mr. Crowe.*) In the winter time I could not do that because the roads would be very bad, and some of my journeys are about 11 miles, or 22 there and back.

25,220. Of course it is not every district where such a thing would be possible?—I knew an officer who asked to be allowed to dispense with the horse, but to receive the 40*l.* as travelling allowance, but the Board would not listen to it; they did not grant it. (*Mr. Hunter.*) The reason that a larger allowance is looked for with the supervisor is that he has a wider area to cover. (*Mr. Crowe.*) And the journeys are longer. (*Mr. Hunter.*) And it would be supposed, as a rule, in the town, that the position he had to keep up is a better one. If he starts out for a day's journey with his horse he has to make more calls than the officer; he has to put up oftener, and all that entails expense. Very few supervisors could possibly keep a horse and pay the incidental expenses connected with the horse-keep of 55*l.* a year. (*Mr. Crowe.*) I think if I have erred at all in the statement I have erred on the side of moderation.

25,221. Then, leaving that point of horse-keep, is there any other point that you wish to urge?—(*Mr. Webster.*) I should like to speak on behalf of the assistants, if I may.

25,222. (*Mr. Lawson.*) Before that, I should like to ask this question: a certain number of your colleagues have left the out-door service and entered the clerical establishment. How many did?—(*Mr. Hunter.*) It is only within the last two or three years, about four years, perhaps, that the privilege has been allowed, and it is only the younger men among the assistants who can leave. (*Mr. Cunningham.*) Men under 30. (*Mr. Hunter.*) You cannot go from the outdoor to the indoor department if your age is over 30, and it is limited to the assistants.

25,223. Under what conditions is it allowed?—They have to pass a kind of qualifying examination to show that they are competent. They are asked a number of questions to see if they have a knowledge of the out-door work that would be useful to them when they go inside; in fact, they have to pass a kind of test examination.

25,224. They then enter the lower division?—Well, it is the lower division now, inside the house, but it is only a limited number who do that. Some of the men prefer to enter our service because they do not like office work, and some of the men who have got dissatisfied with the prospects in front of them perhaps want to go where there is something more certain, but it is not a large number of men who want to go into the office. (*Mr. Crowe.*) They could not all go in, even if they tried.

25,225. (*Chairman.*) Now, about the assistants, if you please, Mr. Webster?—(*Mr. Webster.*) I should like to point out that in the last Commission that inquired into the several services—the Playfair Commission—it was stated that an assistant was promoted in about four years. I wish to speak about the very great retardation of promotion. The assistants do not receive increments of salary, as a rule a great proportion of them do not receive any increments of salary so long as they remain assistants.

25,226. Why is that the case?—The assistants who entered since 1885 receive two triennial increments of 7*l.* 10*s.*, but the others only received a single increment of 5*l.* after six years.

25,227. You do not suggest that those who entered upon the old conditions are to be put upon the new ones, do you?—I suggest that they ought to be allowed an annual increment.

25,228. When they entered the service upon different conditions?—They entered the service understanding that they would receive this promotion in four years. That would have been an increase of 20*l.*

25,229. (*Lord Lingen.*) That was their calculation?—That was an official statement that was given before the Commission of 1874.

25,230. You do not mean to say that when they came into the service they were told officially that they would be promoted after four years?—They were not told so officially. I may say that was the usual term.

25,231. (*Mr. Hanbury.*) You started from a higher minimum than that from which men who have been promoted since 1885 have started from?—We had 10*l.* higher.

25,232. (*Chairman.*) Perhaps you will go on?—In the 10 years after 1874 the average term was 4½ years; there are now 470 of these assistants who have served from five to eight years. It is perfectly certain that many of them will serve from 10 to 12 years, and during that time they will receive only a single increment of 5*l.* What I wish to say is, that if the man is in a department for 10 years he ought to be of more value after 10 years than 5*l.* difference in his salary makes. Then with reference to the triennial increment of 7*l.* 10*s.* given to the juniors, I should also wish to point out that that is the only instance in any rank of the outdoor department of a triennial increment being given; further, that it is only half the increment that is given to the lower division clerk, and it is not quite half of the annual increment which is given to a boy clerk of 15 years of age. An assistant must be 19 years of age. He is employed upon exceedingly responsible work of charging the duty, and I do not think for a moment it can be contended that a boy clerk does more important work; and yet a boy clerk receives twice the amount of annual increment that an assistant does.

25,233. The comparison is not, perhaps, necessary. I do not see that you get much out of it?—I should also wish to speak about the work of the assistants. I have been explaining before that the assistants are employed for first and second class officers during their absence on private business or sick leave. They are not actively employed all the year round. It sometimes happens during the winter months that they are compulsorily idle, sometimes for as long as six or eight weeks at a time. I have a table here showing that many assistants were unemployed, that is, they were compulsorily idle for, in some cases, from 100 to 175 days in the year. My contention is that if a man is employed in the Government, some provision ought to be made for employing him wholly. I believe this Commission have recommended that the whole time of a Government servant should be given to the Government. If that is perfectly fair, and I think that is fair, I think, on behalf of the assistants, if they are not allowed to do anything else, work ought to be provided to employ them entirely, and not that they should be walking about idle waiting for something to turn up for them to be sent to another place.

25,234. (*Mr. Hanbury.*) Are they the same as the officiators, of whom we heard the other day?—Yes.

25,235. That is another name for them?—Yes.

25,236. (*Mr. Lawson.*) What is the average number of hours that an assistant works per day?—(*Mr. Hunter.*) The same as the officers, and that is not less than eight.

(*Mr. Crowe.*) I think when Mr. Hunter said that the average for an officer was eight hours he was a little below the mark, it is at least eight hours.

(*Mr. Cunningham.*) Mr. Hunter is probably remembering the time when he was an officer himself when the hours were not quite so prolonged as they are now.

(*Mr. Crowe.*) I have a note here of an officer who did 59 hours work in an ordinary week.

25,237. (*Chairman.*) Eight hours is the minimum?—Yes.

25,238. (*Mr. Lawson.*) What is the difference between the average of hours now and the average before the beer duty came into force?

(*Mr. Hunter.*) It is quite two hours a day more in the case of the officers.

25,239. (*Chairman.*) Will you proceed, Mr. Webster?—I should like to refer to the matter of the travelling allowances of the assistants, Mr. Crowe has said that a second-class officer receives an allowance of 40*l.* to keep a horse to do the duty of his station. If an assistant is employed on that station he only receives an allowance of 1*s.* a day. I contend that that is not a sufficient allowance. In my own case and that of the senior assistants who receive a fixed salary of 95*l.*, we do not receive any allowance whatever. A second-class officer has a salary of 115*l.* rising to 140*l.*, and in addition he receives either 40*l.* to keep a horse or an allowance, a lump sum of perhaps from 20*l.* to 50*l.* for the purposes of his travelling There are about 300 assistants who are getting a fixed salary of 95*l.*, and if they are employed by a second-class officer, they have to pay their expenses out of their own salary of 95*l.*, I have some instances here.

25,240. Do you mean they have to travel over the same districts as the second-class officer?—They have to do exactly the same work.

25,241. The same districts that second-class officers travel over?—Yes, without having any allowance whatever.

(*Mr. Crowe.*) Only 1*s.* a day.

(*Mr. Webster.*) No, these senior assistants at 95*l.* do not receive a single halfpenny, they have to pay their travelling out of their salaries.

(*Mr. Crowe.*) Yes, that is quite right.

(*Mr. Webster.*) In the case of the Hereford collection an assistant was employed for 212 days in the year in certain stations; his salary was a fixed sum of 95*l.* and he had to pay his travelling expenses out of that 95*l.* I find that the average amount paid to the second-class officers of the Hereford collection was 36*l.* This assistant was employed 212 days and he got nothing.

25,242. Was he employed that number of days because the officer was absent on sick leave?—He was employed by different second-class officers for that time, not in one station, but in different stations.

25,243. (*Lord Lingen.*) Was that case brought before the Board, or before the authorities at Somerset House?—Yes, these cases have been brought before the Board frequently, and they have stated that it is in accordance with the regulations of the department. I should, however, say that the Board have twice directed that these senior assistants are to be employed in the first-class stations as much as possible, but there are about 300 of these officials, and in many collections the number of second-class stations very largely outnumber the first-class, so that it is absolutely impossible that they can be employed entirely in first-class stations. I have about 20 cases in which assistants have been employed for long periods in second-class stations, and they have had to pay their own travelliug expenses out of a sum of 95*l.* I submit that if the officer of the second-class station requires from 20*l.* to 50*l.* to do the work of his station the assistant, who has to do exactly the same work, and who does the work for the officer when he is absent, is equally entitled to the same sum.

25,244. (*Chairman.*) Is it the idea that if there is a horse the assistant should have the use of the horse belonging to the other man?—No, because that horse is the officer's property. We think he ought to be allowed a sufficient allowance to cover his expenses.

25,245. (*Lord Lingen.*) Your statement is this: that if an assistant has to take the place of an officer, the assistant gets no horse or travelling allowance at all?—300 of these assistants do not—the old first-class assistants who receive a salary of 95*l.* do not—the others receive 1*s.* a day.

25,246. For travelling?—For travelling.

25,247. (*Mr. Cleghorn.*) Is it not 2*s.*?—No, that is 2*s.* for every day they are actively employed, and when employed on a second-class station they receive a further 1*s.* per day to cover their travelling expenses.

25,248. (*Lord Lingen.*) I want to be quite clear about this. The assistant who has to take an officer's district, if that assistant is receiving 95*l.* a year, gets nothing for locomotion?—He gets no travelling allowance whatever; if he is in receipt of a fixed salary of 95*l.* he has to pay his expenses out of his salary.

25,249. (*Mr. Maclure.*) What if he has more than 95*l.*?—None of them have more than 95*l.*

25,250. When does he get this shilling?—If he receives 65*l.* then he gets 2*s.* a day, and also receives

Mr. H. W. Hunter, Mr. J. G. Cunningham, Mr. R. Crowe, and Mr. W. H. Webster.

8 Mar. 1889.

the further shilling. There are two kinds of assistants, those who receive a fixed salary of 95*l.* and those who receive a salary, and in addition an officiating allowance of 2*s.* a day; those with a fixed salary of 95*l.* do not receive any allowance at all. Those who receive the officiating allowance receive an additional sum of 1*s.* a day to cover all their travelling expenses.

25,251. But then if you have 95*l.*, when you are taking these extra duties for another man who has a horse, do you have an allowance?—No, we do not.

25,252. (*Lord Lingen.*) Is your application confined to the allowance of 1*s.* a day while the man is in charge of the district?—No, I do not think that that shilling a day is sufficient.

25,253. Therefore your case would take in the other assistants as well as the "ninety-five pounders," as they might be called?—Yes, it does.

25,254. Have the other assistants raised this question, that the 1*s.* a day is not sufficient?—Yes, they have. I might point out that in Ireland many officers who do not keep horses receive as much as 50*l.* because their districts are very wide. An assistant who is employed for that officer has to do the same travelling on an allowance of 1*s.* a day, which is only equal to 18*l.* in the year.

25,255. (*Mr. Hanbury.*) You get 95*l.* a year, but how many days' work in the year do you get as a rule?—I am permanently employed in one station.

(*Mr. Crowe.*) Some of the Irish stations, I am afraid, according to some correspondence I saw recently in the "Field" newspaper, are not properly looked after. Some gentlemen have been crying out because many people had been poaching, and using guns and killing game without licenses, and they complain that there is no officer to look after them. The officer lives 40 or 50 miles away from them, and cannot look after these sort of men at such a distance.

25,256. Are all the men at 95*l.* per annum permanently employed?—(*Mr. Webster.*) No, not all of them.

25,257. What is the average amount of work that they do in the course of the year, do you suppose?—On the average they would be unemployed perhaps 60 days in the year.

25,258. (*Mr. Maclure.*) What licenses have you to look after?—In the station to which I am attached I have to charge the duty on a brewery and all the licenses; all the establishment licenses, the carriages, the male servants, the dogs, and all the retail and wholesale liquor licenses, the auctioneers, the appraisers, the pawnbrokers, hawkers, plate dealers, and refreshment house licenses, patent medicine licenses; there is a long string of licenses, that I could not exactly give you all now.

(*Mr. Cunningham.*) All the Excise licenses.

25,259. I suppose public-house licenses and refreshment-house licenses are looked after by the police, are they not?—(*Mr. Webster.*) No, not that kind of license. These are Revenue licenses, the police have nothing whatever to do with them.

25,260. Have not they to come and get them from you before they can get a license from the magistrate?—No, they have to apply to the magistrates first, and then if the magistrates grant a certificate they produce it to us, and we grant a license to sell the liquor.

25,261. So that you can easily trace it if a man did not take a license out, because you get the list from the local police?—Yes.

25,262. (*Mr. Cleghorn.*) Those licenses are annual?—They are.

25,263. They only occur once a year?—Once a year.

(*Mr. Cunningham.*) With regard to the establishment licenses I should like to say that they require very considerable vigilance upon the part of the officer, because the revenue from them depends very largely upon the officer's own exertions. He has to exercise constant vigilance to see that people pay what they ought to do. I can give an instance of that in my own station.

25,264. (*Chairman.*) We do not want instances of that. That simply is the officer's duty?—It is important that they should perform that duty with zeal.

25,265. (*Mr. Lawson.*) I understand if a question arises respecting the *bonâ fides* of a claim for repayment of duty, it falls to you as supervisor to advise the Board?

(*Mr. Hunter.*) If it arose within my district it would.

25,266. And also with regard to the sufficiency of sureties?—Yes, the sureties have to be for very large amounts. In the case of a bonded warehouse the lowest amount is 3,000*l.* I had a change in sureties at Reigate a short sime ago, and I had to satisfy myself that the gentlemen who gave their names as sureties were worth 3,000*l.* We have very delicate work sometimes to do in connexion with that. We have to wait on the solicitors perhaps of one of those gentlemen to ascertain that he really is possessed of 3,000*l.*, because if I stated the gentleman was worth that much money and anything happened afterwards, and it had to be looked to, and the man was found to be worth nothing at all, the Board would visit me with displeasure for telling them that I believed he was worth the money when he was not.

25,267. In what trade is that?—In connexion with bonded warehouses. In some bonded warehouses sureties have to be given for as high as 20,000*l.*, and the supervisor has to inform the Board whether he believes the sureties are able to meet the amount of money or not.

25,268. And if a loss of duty occurs in your district are you jointly with the officer responsible?—Yes.

25,269. Have you to repay the loss?—If there was a calculation made and the officer made a mistake and I did not find out the mistake, and it had happened to be discovered at Somerset House afterwards, we would be called upon to pay that money in equal proportions.

25,270. In a case of mistake?—Yes.

25,271. But you would not be called upon to pay any loss from the default of a bondsman whom you reported to be good.

(*Mr. Cunningham.*) No.

(*Mr. Hunter.*) If the bondsman was a defaulter and the supervisor had certified him within a very short time, he would be told by the Board that he had not discharged his duty very well, that is if the bondsman became a defaulter within a very short time after.

(*Mr. Crowe.*) We have to inquire into the bonds too for country postmasters, to see that the surety is sufficient, perhaps not in all cases, but generally we have to do it——

(*Mr. Hunter.*) In all cases. To give you an idea of the general knowledge that an officer must possess, in a couple of words, we have to be acquainted with over 100 Acts of Parliament, and we have to be acquainted with over 800 pages of instructions of this nature, and they are constantly changing by different Acts of Parliament and other things, and we have to keep them posted up to date, so as to allow traders every facility that is to be granted by the changes.

(*Mr. Cunningham.*) Would you permit me to say one or two words on the subject of leave? I shall be very brief. We respectfully claim 28 days. We are now allowed 21 days leave in the year. The reasons for that are given on page 26 of our memorandum. Perhaps it would illustrate the case were I to give my own conditions. I am a native of the west of Ireland. It takes me two days to travel to my home, and it also takes two days on the return journey. That is a very considerable deduction from my annual leave of 21 days. Again, the expense incurred in travelling is very serious, so that it is really a very grave consideration to me whether it is worth while to spend so much money for such a short holiday. If I had 28 days it would be better worth my while to make the expenditure.

25,272. (*Chairman.*) The annual allowance you suggest of 21 days for all officials, meaning officers of the superior grade of less than 10 years, and 28 days over 10 years' service?—Quite so. That is my suggestion.

25,273. Instead of being as now 14 and 21?

(*Mr. Hunter.*) The supervisor only at present gets 21 days' leave.

(*Mr. Cunningham.*) It very frequently happens that the officials in this department are employed at places very far away from their native place.

(*Mr. Hunter.*) On the question of leave I should like to say that many of our officers are employed in bonded warehouses. There is one of the bonded warehouse books from Reigate. It is only three years old, but

the back of it is so damp that it has rotted the cover off the book. The officer gets 21 days' leave; if he had a nice dry place in London, he would have more leave —28 days. (*Mr. Crowe.*) And it is to the interest of the warehouse proprietor to keep his warehouse damp, as in that case he will not lose so much spirit by evaporation as he otherwise would. (*Mr. Hunter.*) Now, with reference to the disadvantages that Revenue officers suffer over ordinary Government officials.

25,274. Do you mean owing to not having evenings for other work?—More than that. The nature of the work of the Revenue officials in one way, that is the regular evening's work, and the fact that they are frequently moved about from place to place, so that they are unable from the irregularity of their work to attempt to supplement—we are not allowed by the Board to supplement our incomes by anything from an outside source, and even if we were willing to act as correspondents to newspapers or do any writing work, we have not got time to do it, because our work takes up so much time. We are barred in that way from it, and we suffer under that disadvantage.

25,275. That is a reason why the service should be unpopular, is not it,—that is a reason rather why people should choose some other kind of service?—If we have been in the service for a length of time we have to put up with it.

25,276. Young men know what to expect before they come in?

(*Mr. Webster.*) Not as a rule.

25,277. (*Mr. Lawson.*) What I understand you to say is, that before the beer duty was imposed you had all your evenings to yourselves?—To a large extent we had.

(*Mr. Crowe.*) We had whole months, practically, in the summer of very light work.

(*Mr. Hunter.*) The average evening work of an officer under the malt duty would not average one evening a week, and now some officers are out on the six evenings in the week.

(*Mr. Crowe.*) I am often out till 10 o'clock at night.

(*Mr. Cunningham.*) I should like to refer to the subject of office accommodation mentioned on page 26.

25,278. The allowance for office accommodation?—Yes. The sum of 5*l.* a year, allowed for the use of a room in London or in Manchester, or many of those large towns, I respectfully submit is altogether insufficient for the accommodation which is expected.

25,279. (*Lord Lingen.*) Are you aware that before 1878 nothing was allowed?—I am quite aware of that.

25,280. (*Chairman.*) You say 5*l.* is insufficient in London and large places?—Yes.

25,281. (*Mr. Lawson.*) What sort of a room have you to provide?

(*Mr. Hunter.*) The officer provides it. It is called "the partial use of a room," that is, that he allows the general public who have business to conduct with him, and the supervisor on every occasion of his visit, to use this room. The officers hold that the same accommodation could not be found in the house of an outside person for 5*l.* a year, and I am quite sure it could not be done in my place for 5*l.* a year. For instance, it could not be done at Dorking or East Grinstead. You could not even get an empty room for 5*l.* a year at places like Dorking, or East Grinstead, or Horsham, or Epsom, and yet an officer is forced to give the use of his room for 5*l.* whether he likes it or not. He must give it because he must admit the supervisor to his books and the general public to do business with him.

25,282. (*Chairman.*) What do you suggest is the proper allowance?—That the minimum amount should be made larger if the Board found a necessity, that they should give even 10*l.* for the partial use of a room, or more—that it should bear some proportion to the cost in the locality, and not be limited as it is at present.

25,283. That the Department should find a room so that the officer should not be out of pocket for finding the room, is that what you suggest?—(*Mr. Cunningham.*) It is a room provided in the officer's house for that allowance. Perhaps that is not clearly understood.

25,284. (*Mr. Maclure.*) In cities like Manchester, and in Manchester itself, they do not find the room, do they?—In many cases the officers in Manchester have to allow the use of a room in their houses for official purposes.

25,285. As offices?—(*Mr. Hunter.*) When they are not near revenue offices, in suburban parts of Manchester they do. (*Mr. Cunningham.*) Not in the central portions of Manchester, nor in the central portions of London; but in the suburbs of London, Manchester, and other towns. (*Mr. Hunter.*) The service suggest that the maximum amounts should be larger than 7*l.* and 5*l.*

25,286. (*Chairman.*) Well, gentlemen, I think you have put your case before us. (*Mr. Webster.*) May I be allowed to hand in this statement (*handing in document*). It deals exclusively with the assistants. The other document handed in is the general case.

25,287. (*Lord Lingen.*) Is it in addition to your General Statement Book?—Yes. In the statements which I have just handed in there are several points introduced which are not included in the general statement. The reference to the travelling allowance and the enforced idleness is not included in the general statement.

25,288. Then, must we assume that this comes from yourself, and not from the outside service?—That comes from myself on behalf of the assistants.

25,289. The general statement purports to be an amended statement of the condition of the Excise outdoor services; is that for the whole of it?—For the whole of it; yes. And the statement I have just handed in is on behalf of some 750 assistants.

25,290. Then the general statement is sent for the whole of it?—That is for the whole; but this draws attention to special points which are not dealt with in the general statement. (*Mr. Hunter.*) There is just one point of comparison about the supervisors which I think some supervisors would wish to be brought out, and that is: that a first class clerk in a collector's office receives the same maximum salary as the second class supervisor; but that the collector's clerk does no work of supervision, he acts under the collector, and the supervisor does the work of supervision over six to eight officers, according as it may be. The supervisors consider that that is an anomaly.

25,291. (*Chairman.*) Do they think that the clerk to the collector is paid too much?—No, we do not; we consider that he is not.

25,292. At all events, that the comparison with him is not fair to you?—Yes.

The witness withdrew.

Mr. James Anderson and Mr. Frederick Fisher called and examined.

25,293. (*Chairman.*) Both of you gentlemen represent the second class inspectors of the Inland Revenue?—(*Mr. Anderson.*) Yes.

25,294. You have been good enough to send us a paper which states the case which you desire to bring before the Commission. I daresay you would like to call our attention to some special points, or possibly some additional points?—Yes.

25,295. You are, I believe, inspectors of the second class, and your salaries and so on appear in the Estimates under "Head Quarters," on page 31 of the current Estimates?—Yes.

25,296. You begin at 380*l.*?—Yes, and go on to 400*l.* by 10*l.* a year.

25,297. You attain to your position by working up through the various ranks of the service?—Through all the ranks of the service, from the lowest rank to the rank we are in now by examinations.

25,298. And that applies to the last appointment, that is, you have entered your present class by examination from supervisors?—That is it, exactly.

25,299. And, of course, only when there are vacancies?—Only when there are vacancies.

Mr. J. Anderson and Mr. F. Fisher.

8 Mar. 1889.

25,300. There being naturally a limited number of inspectors?—Yes, 19 inspectors.

25,301. Now kindly state to us in your own way what you would like to say?—I would like to make a few statements with respect to the duties and salaries of our class, and endeavour to show how money could be saved from the present Department, so as to enable us to be paid better than we are at present. I may say that the term Inspector of Excise is a little misleading, as one might infer from it that our duties were confined to Excise only; but this is not the case, for the Excise branch, as it is called, receives and disburses the whole of the Inland Revenue, which comprises Excise, stamps, with a few exceptions, taxes, legacy and succession duty, railway duty, income tax, house duty, land tax, &c. These duties we inspectors collect when we are officiating for collectors of Inland Revenue.

25,302. You do not interfere with the superintending inspectors or the inspectors of taxes, do you?—The superintending inspectors have to scrutinise our work.

25,303. Do I understand that you do work which would apparently, according to the estimates that I have before me, be done by the inspectors of the Chief Inspector's Office of Taxes?—No; we have nothing to do with taxes. We are speaking of the Excise side of the Department only. We receive the money; we collect all the duties of the Excise, taxes and nearly all stamps.

25,304. (*Lord Lingen.*) Do you collect income tax?—We do; we collect the whole of it. We bring the whole to account; and that is why I began by saying that the term Inspector of Excise is apt to mislead, because you might infer that our duties were wholly confined to the Excise Department. That is not really the case, we charge the Excise duties, and the stamp duties, and we collect all the Excise duties, and the stamp duties, and all the taxes, house duty, legacy and succession duty, &c.

25,305. (*Chairman.*) When you say "collect," perhaps you will explain what you mean by collecting?—When we officiate for collectors in the country. There are 75 collectors of Inland Revenue, and those 75 collectors bring in about 55 millions of money in the year, in fact rather more than less.

25,306. (*Lord Lingen.*) Are you speaking now of your function as a Second Class Inspector of Excise or are you travelling into what you may become—a collector?—I am talking of my function as a Second Class Inspector of Excise. My object in making these remarks was to show that our duties were not confined to Excise only. Our place or rank in Somerset House is something like this: After the Commissioners there are two joint secretaries and four assistant secretaries. The officials are then divided into two classes. One is termed the outdoor and the other is termed the indoor department. The outdoor department consists of Inspectors of Excise and of Taxes. The Inspectors of Excise consist of one chief inspector, three superintending inspectors, eight first class inspectors, and 19 second class inspectors. The indoor consist of five committee clerks, six principal clerks, and a number of Upper and Lower Division clerks, and boy clerks; so our position in Somerset House is immediately below that of first class inspectors of Excise. I may draw your attention to the fact that there is a great difference in the salaries.

25,307. (*Chairman.*) Between what?—The minimum of our rank is 380*l.*, and the minimum of the first class inspectors is 550*l.*

25,308. 450*l.* is it not?—I beg your pardon, 550*l.*

25,309. It is 450*l.* in the Estimates?—That is wrong.

25,310. (*Lord Lingen.*) Has it been altered in the course of the last year?—Yes, it has been altered within the last 12 months; they received an increase from the Board of 100*l.* to their minimum salary.

25,311. Is the figure in the estimate simply wrong, or has a change been made since these Estimates were presented?—I expect the change was made since the Estimates were presented. My object in speaking of this was to show the difference between our salaries, because our maximum is 400*l.*, and the maximum of the first class is 650*l.*—a difference of 250*l.* a year.

25,312. You spoke of your natural promotion as being that of becoming the collector. Would not your natural promotion be to become an inspector of the first class?—Yes, it might be. It is not usually the case.

25,313. Then both those chances are open to you?—Yes. It is very seldom that the case you refer to has occurred in practice. They are generally sent out to be collectors first, and then selected from the collectors back into being inspectors of the first class.

25,314. And if you were sent out to be a collector you would become a collector, I suppose, at what your existing salary was, because the third class of collectors are, 450*l.* up to 500*l.*?—Yes, but the existing salary would be 400*l.*

25,315. Therefore your promotion, if you are promoted at all, would be to the second class of collectors, is that it?—To the third class of collectors.

25,316. The third class of the collectors would be no promotion at all?—Yes, it would; it would be an increase from 400*l.* to 450*l.*, the minimum salary of third class collectors.

25,317. (*Chairman.*) Perhaps you will kindly go on?—If you will allow me I will describe the duties which we have as second class inspectors. They may be divided into four divisions, the first division is our duties when at Somerset House, the second division is our duties when officiating for collectors, the third division is our duties on general inspection in the country, and the fourth division is our duties when on special inquiry. To take them separately and explain them a little I will commence with the duties in Somerset House. There we deal with the difficult part of the correspondence received from collectors and supervisors of Inland Revenue and from traders, subject to Excise laws. We write our opinion on the letter, and it is scrutinised by one of the three superintending inspectors; the opinion is then signed by the second class inspector and by the superintending inspector, and it is then taken by one of the committee clerks, if not by the secretary, to the Board. It is then copied by a clerk in the form of a letter and sent to its destination. We also prepare, as necessity may call for them, schemes of business in which the several duties are allotted to each officer, and we give our opinion on complaints against officers.

25,318. Against all officers on matters of discipline?—Yes, on matters of discipline, if there is a complaint against a supervisor or an officer we have to investigate it and give our opinion upon it. The second head was that of our duties when officiating for collectors. When we are officiating for a collector we receive and disburse, with a few exceptions, the whole of the Inland Revenue, which comprises Excise stamps, income tax, land tax, legacy and succession duty, railway duty, &c., and we have to be conversant with all these matters. We have to superintend and control all the officials in the collection, who vary in number from 50 to 60, or more. In some of the larger towns like Glasgow there are more than 100 officials, and the collector of the Inland Revenue there not only collects the money but superintends the work of these officials and inspects their duties.

25,319. If the collector of Glasgow, as you mentioned has got a question affecting the discipline of his office, do I understand you to say that the person that he would deal with at head-quarters first is an inspector of your class?—Yes.

25,320. If he sent a question for decision to the Board with reference to some question of discipline at Glasgow, would it first be submitted to an inspector of your class?—It would be referred to the inspectors either of the first or second class, because we do the same class of work, unless in any case in which it is dealt with by the secretary (Mr. Micks).

25,321. It comes to this, that it would come to the inspectors first?—Yes, as a rule it would come to the inspectors first. The third head of our duties is that of inspection in the country. Our duties are then very various; we get a certain part of the country, perhaps it might be the whole of Ireland, to travel over; two of us go together to all the large places, and we take singly the smaller or less important places afterwards. One takes the north, and the other takes the south, and we travel alone then. Our work chiefly consists in inspecting the work of the various officials, and in visiting distilleries, breweries, and other Excise traders. We see to the security of the Revenue, and we inspect the charging of the duties on foreign and British spirits, wines, tobacco, chicory, dried fruits, tea, coffee, beer duty, railway duty, and all licence and stamp duties. Our fourth head of duties is when we are on special inquiry. That occurs when we have to inquire

and to report respecting the extent of business allotted to some officials in the country; they may wish to re-scheme one of the country collections—it might be the Birmingham collection, and then Birmingham, Chester, and Coventry, and some of the surrounding towns or districts might require re-scheming, and one or two of our inspectors would go down for the purpose, and inquire and report, and re-allot the work of each official. We have to investigate also into the offences against traders when the matter is of great importance. The supervisor, as a rule, makes such investigations, but if there is anything exceptional in the case an inspector is sent. We also inquire into complaints against officers on these occasions.

25,322. You and the other inspectors of the first class are in the relations which you have been describing to us under all those collectors?—Yes, sometimes an inspector of the first class officiates for a collector, sometimes an inspector of the second class; it depends on circumstances. I have told you the duties of the outdoor inspector of Excise, and I would mention now some of the duties of the indoor department.

25,323. Do you mean your own department?—It is the part of the Inland Revenue permanently located at Somerset House.

25,324. (*Lord Lingen.*) Those who remain at headquarters you mean?—Yes.

25,325. (*Chairman.*) Inspectors?—Not inspectors; I refer to committee clerks and principal clerks.

25,326. What have you got to do with them?—Because they have to do with our duties. As I go on it will become apparent to you that they have to do with our work. These gentlemen superintend the registers of letters and deal with certain papers. Each of them has a special class of subjects which, being much the same in most cases, may be considered more or less as routine work. These gentlemen have not had any outdoor practical training, and so, when subjects arise which they are unable to deal with, from want of experience or from precedents afforded by previous cases, the papers are sent to the Inspector's Department; if Excise, to the Excise Inspectors; if taxes, to the Tax Inspectors. The papers are there again registered and given out. Inspectors of the First and Second Class deal with them as already stated; the papers are again registered, and returned to the registrars on their way to the committee clerks or secretaries.

25,327. You stated, on page 5 of your memorandum, which is apparently the same point:—"Important "papers relating to Excise business are dealt with by "the Second Class Inspectors, who are in receipt of "salaries of from 380*l.* to 400*l.* per annum; whereas "routine papers in connexion therewith are dealt with "by officials receiving salaries of from 600*l.* to 800*l.* "per annum." Those are the papers which you are now speaking about?—Yes.

25,328. (*Lord Lingen.*) Would this be the view you want to put before us: that practically the letter which goes out in the name of the Board on a certain important class of questions is drafted in your department, although the ultimate form of it may be drawn by a committee clerk. Is that your case?—Yes, that is part of the contention.

25,329. Also does it go in this way: that the papers are referred to you on inspectors' questions much as, in the same way, on a legal question, they might be referred to the solicitor, and then come back with his memorandum upon them. Do you think your position is analogous to that?—Yes, very much the same, only the indoor gentlemen perform a certain class of work which the inspectors never see, and it is generally of that unimportant class which they can perform by having precedents of the same kind of work before them, and also by the definite directions which may be found in the Board's instructions provided by the Board, and these instructions are prepared by the inspectors. When any difficult question arises the inspectors have to deal with it. What I would like to call your attention to is the difference of the salaries of the inspectors and of the committee clerks in that connexion. You will find that the committee clerk gets 725*l.*, rising by 25*l.* to 800*l.*, and the principal clerk has 600*l.*, rising by 25*l.* to 700*l.*, but the salary of the inspectors, whose papers they copy or carry to the Commissioners, is only 380*l.* to 400*l.*, by 10*l.* a year.

25,330. Which class are you speaking of now?—I am speaking of the second class. These papers, to be properly understood, ought to be before you, because you would grasp the matter better if you had an example of them. I may state that at one time all the secretaries, and indeed all the principal clerks at the head of the Excise Branch of the Inland Revenue Department used to be selected from the outdoor members of the service—used to be selected from the inspectors, then called surveying general examiners, but of late years a great number of these indoor clerks have come in one by one and taken the higher positions. They are taking now all the secretaries posts. The next secretary we expect will probably be one of them. There is one reason for that, that the inspectors seldom come before the Commissioners. We seldom come in contact with the Commissioners, and it is probably owing to that that our services are not more recognised than they are. We think so sometimes. There was a re-organisation of the department in 1887. In September 1887 the indoor department was re-organised, and there were established five committee clerks and six principal clerks. The principal clerks had been in existence before, but the five committee clerks had not. They were quite new. They were then introduced.

25,331. (*Lord Lingen.*) Was that in 1887, do you say?—Yes, in September 1887.

25,332. Because we have got down in the estimates under this year only five committee clerks?—Yes, five committee clerks, and six principal clerks immediately below them.

25,333. (*Chairman.*) There are only five principal clerks in the estimates, but we need not go into that. You are speaking of the secretary's office now?—The number of principal clerks is shown in the book I have here as six. It was understood by the inspectors shortly before this change that some of the inspectors from our rooms would get some of those posts, but such turned out not to be the case; none of us got them. They were filled by men very much younger who had not risen from the ranks, and had not gone through any of the hardships that we had done. I may say that there are now 16 officials between us and the Commissioners, and only one of them, Mr. Micks, the Excise secretary, is a practical man who has passed through all the Excise grades, and whose training and experience make him familiar with all the duties of his position In this connexion I think we might ask if you could have one, if not more, of our superintending inspectors examined on the subject; coming from men of their weight and experience, these remarks would certainly be more telling than coming from inspectors of the second class.

25,334. Your point is, that whereas there are 16 officials in the ranks between yourselves and the Board, there is only one of them, you say, who is a practical man—you are speaking now of the whole of the inspectors?—I am speaking of these indoor men that are between us and the Board.

25,335. Between you and the Board, you say that there are 16 officials?—Yes, between our chief inspector and the Board there are 16 men who have never acquired a practical knowledge of the business.

25,336. (*Lord Lingen.*) Those officials that you speak of as between you and the Board, beginning from the bottom, would be the principal clerks, the committee clerks, the assistant secretaries, and the secretaries; and I understand you say that one only of the secretaries was a man who had the experience of the inspector class?—Yes, that is right.

25,337. Was there ever a time in which the inspectors were more freely promoted to the secretariat?—Yes.

25,338. There was?—Yes, even up to late years the principal secretary and the assistant secretary were always Excise officials. For instance, William Corbett was the principal secretary, and Adam Young was the second secretary. We are of opinion now that, if these posts were filled by practical men, there would be a saving so considerable as not only to enable our salaries to be increased, but that the business generally would be performed with greater efficiency and dispatch.

25,339. Where would the saving of the salaries be? Would you propose to reduce the committee clerks' and principal clerks' salaries to the standard of the second class inspectors?—We would propose a different course. Our alternative proposal would be to re-organize the departments of the secretary and chief inspector, so that the superintending inspectors, in addition to the secretary and the chief inspector, should carry their papers to the Board.

Mr. J. Anderson and Mr. F. Fisher.

8 Mar. 1889.

25,340. Do you think the inspectors, without being increased in number, could do the work that is now done by the committee clerks and principal clerks?—Yes, with additional clerical assistance. We consider that there is no necessity for both the indoor and the outdoor staff of officials. One of the classes we consider is unnecessary at least above the rank of drafting clerk.

25,341. That would be what are called upper division clerks?—Yes; there is a number of them. The out door could well perform the business without the chiefs of the indoor department; but the indoor could not get on without the outdoor. It is stated in the Horsfall Committee Report, paragraph 124, that "surveying-general examiners, now called inspectors, are the great organs of the Board," meaning the machinery by which the business is conducted. We think that the indoor staff should be reduced, and that our three superintending inspectors should take the papers to the Board direct. This would save much time, and the superintending inspector, being well acquainted with the subjects, could quickly and correctly answer any question asked him by the members of the Board. This course would do away with the necessity for committee clerks, and for some copying and drafting clerks, and for some at least of the principal clerks. And in addition to this a considerable saving could in many cases be effected by sending papers to collectors and supervisors to note and return, instead of the present unwieldy system of writing formal replies. You see, if the superintending inspector took the paper after an opinion was placed upon it to the Commissioner himself, and got it approved and initialed, it would be passed then into the register office, and simply a note would be written "Collector to note and return." The paper would go back to the country, be noted by the collector or supervisor (who keep a copy of all these papers) sent back to Somerset House, and put away in the registry as finished. As regards the merits of the work which the committee clerks and the principal clerks perform, in the Assessment Division for instance, the work could nearly all be done efficiently by lower division clerks if the assistant secretaries were practical men. The Assessment Division comprises railway duty, corporation duty, some probate duties, and some assessments. The railway duty is really charged and collected by the excise officials outside, and the corporation duty is so small a sum that it might be well entrusted to the same officers. The corporation duty amounts to 36,000*l.* a year. The next division I would mention is the Repayments Division. The work consists chiefly of repayments of income tax charged and paid on incomes of under 150*l.* a year; and as these claims as a rule are very uniform in character, no special knowledge or judgment is wanted. The other repayments are of a trivial nature, as in the case of a person in error paying carriage license at a wrong rate and wishing the difference to be returned, and are dealt with by the indoor men. Such case might safely be entrusted to the Collector of Inland Revenue. If a person inadvertently takes a license out at 42*s.* instead of at 21*s.* or 15*s.*, the matter has to go before the Board before the difference can be returned, but the Collector of Inland Revenue in the locality is quite responsible enough to be entrusted with a matter of that kind. Then there are repayments of duty on spirits, beer, &c.; but these repayments being really difficult questions, are referred to the inspectors for their opinion. A committee clerk is, in my opinion, not required; if a few trained experts of the Inspectors' Department were in the chief posts, their services might be dispensed with altogether. If any one of our three superintending inspectors were examined on the subject, I have no doubt that the evidence they would give would be of a corroborative nature generally, and it would be also advisable that one of our first-class inspectors should be examined if you could see your way to such a course. I may mention that the salaries that would satisfy us would be these. We think that for our class we ought to get 450*l.* rising to 500*l.* a year by 20*l.* We think that the duties we perform are in comparison with the duties of others, entitled to that amount.

25,342. (*Mr. Cleghorn.*) Instead of 380*l.* rising to 400*l.*?—Rising to 400*l.* by 10*l.*

25,343. (*Chairman.*) Have you made this representation to the Board of Inland Revenue on behalf of the second class inspectors?—This month last year—the 23rd of March we had a joint petition with inspectors of the first class that our position might be improved; they gave the inspectors of the first class 100*l.* a year more to their initial salary, but they did not reply to our letter at all. We applied to them several times since on the subject; sometimes we got a reply and other times we did not get any reply.

25,344. But the Board at present, at all events, have not seen their way to increase the salaries of your class from what it is now—380*l.*, by 10*l.* to 400*l.*?—We do not know; we have had no communication. We had an idea that there might be some hope, but as this Commission was sitting, and the occasion might pass away, and our case might never come up again, we thought it would be very unwise to allow it to pass. We acquainted the Board with this fact.

25,345. Then you have also represented to the Board, have you, the memorandum with reference to this suggested re-organisation of the work, which might result in doing away with some of what you may call the lay clerks?—We have not brought forward that point, but it was suggested to us by one of the secretaries that, if we could show a means by which money would be saved, then that our salaries would be increased. We said that it was not for us to propose any change or anything of the kind. That is the reply that we gave; but now we bring up this as a means which, if carried, we are quite sure would not only make a great saving—I mean a saving, perhaps, of 2,000*l.*, 3,000*l.*, 4,000*l.*, or more, a year—but would also pay our class well—sufficiently well.

25,346. You state on page 5 of this memorandum that on the 23rd of March last you, with the first class inspectors, submitted a joint memorandum to the Board, in which you set out to them the way in which you thought it could be economical to increase your salaries, to re-arrange the work. I want to know if you have had no answer to that beyond the fact that the first class inspectors have been raised the 100*l.*?—No, we have got no answer to that. I might say that one of the things that makes us feel a little dissatisfied is, that in former years our position was reached at a much earlier period of service. For instance, Mr. Johnston, collector of London West, entered the service on the 1st of January 1845, and became an inspector in 1860, which was 15 years after. It takes us now from 28 to 30 years to attain that position.

25,347. I am afraid that is owing to natural causes, is not it, that there are not the upper offices to rise to?—I do not know. There have been a number of things done; for instance, there have been 10 collections lately discontinued. Other matters of that kind have taken place which tend to bring about these results. Then there is Mr. Richards, collector of Birmingham; he entered the service so long ago as the year 1839, and he was an inspector in the year 1856—that was 17 years it took him to reach that point. Then I may mention the case of a Mr. Edgar; he was collector at Ipswich. He entered the service in 1845, became an inspector in 1856. That was 11 years of service, and so on. There are other instances of a similar kind; but the promotion now, you see, has got to be almost twice as slow.

25,348. Your way of improving the position is to raise the salary?—Yes; and besides, it ought to be raised for this reason: that if we are only in the same rank, we have greater experience by having been longer in the service, and there should be some allowance made for that. In other classes of the Civil Service, I believe compensation has been made to men who have had loss of prospects. When we entered the service our prospects were very much better than they appear to be now; it is said amongst us that some of our men will never see collections at all, we may never reach that point. Now make a comparison with the gentlemen of the indoor class, the committee clerks; they reach their positions at from 17 to 21 years' service, and their salaries, you see, are very much greater than ours, 750*l.* a year they are getting now, rising to 800*l.*

25,349. Is there any other point which you would like to add, Mr. Fisher?—(*Mr. Fisher.*) I would wish to speak in regard to the value of the work. Other divisions with which we are more intimately concerned are the offences, correspondence and establishment. The committee and principal clerks of these divisions deal with routine papers, difficult papers being referred to the chief inspector's department. In using the word "routine" work, the work that falls to the committee clerks and the principal clerks when they take the papers to deal with them, those very simple papers, they cannot deal with them if they have no guidance from the submissions that we have previously made

upon papers, or our predecessors may have made, which are noted in a book called the "Digest." These gentlemen refer to the Digest when they take a paper to deal with, sometimes two or three times. A paper was in my hands not very long since, a very simple matter indeed, which could have been by one of the inspectors settled in about six words. The principal clerk wrote on this paper "Query a precedent," and handed it to one of the clerks in his division to look into the Digest. The clerk looked into the Digest, and noted on it, "Not in Digest." He again refers it "Query in old Digest," and after a further search the reply came in, "Not in old Digest." The paper then was sent in to the assistant secretary, and he referred it to the chief inspector. That was six days after it was received in the office. The claim is made for these divisions that have been created that they cause greater rapidity of work. Also I would wish to say that from their imperfect knowledge they send out imperfect instructions, which necessitate a further reference to the Board, when the case is then referred to the chief inspector. I would also like to say with regard to the late re-organisation, it was largely beneficial to the indoor department. There was not a single man in the indoor department but got an increase of salary amongst the higher division clerks; the lowest was 30*l.* a year, the greatest increase was something like 260*l.* to one man. They have had seven additional posts created—highly paid. In the outdoor, the branch we represent, on the contrary, has had 12 collectorates abolished and two inspectorates, and there appears to be a probability of a further decrease. The gross savings that were made by the re-organisation amounted to about 30,000*l.* a year. The total amount of that has been obtained from the outdoor department, including the inspectors. The saving in the indoor department — that is the secretary's office, did not amount to quite 1,600*l.* a year, and that only represents in figures the amount of money represented by the cost of the staff at present, because there are some excise assistants employed in that office which cost is borne on the estimates for the outdoor branch, and certain increase of salaries of late have been granted to the tax surveyors, a sum, I believe, of 3,000*l.* having been taken from the savings in our branch, and handed over to them.

25,350. That is an additional argument in favour of what Mr. Anderson has been telling us, namely, that the proposals which you, as inspectors, made to the Board that the work could be economised by employing your chief inspector in communication with the Board themselves for the work now done by committee clerks, and so forth, has been carried out to some extent?—Yes, but instead of having the register split up into five or six divisions, and the papers going to the committee clerk and the principal clerk, and by him referred to the secretary, who then refers these papers to the chief inspector, use, we say, but one registry as before. The registrar immediately on receiving the papers could refer them at once to the chief inspectors' department to be dealt with. Then the superintending inspector having received the second-class inspector's submission or advice, having countersigned it, could take it direct to the Board himself. A great deal of the committee clerk's time is occupied in conveying the superintending inspector's papers to the Board to get their order upon them. He is unable from his want of technical knowledge to explain the points that arise on these papers to the Board, or to a committee.

25,351. Speaking shortly, you want a closer relation between the inspectors and the Board?—Yes.

25,352. A more direct communication?—Yes, we feel there is a wall raised up between the Board and us—we never see them—very seldom, at any rate. I have only seen the chairman once, when he sent for me to go over to Ireland about the late re-organisation. I re-organised Ireland—he sent for me, and I was with him for half an hour. I saw another of the Commissioners, Lord Iddesleigh, for something like a minute once, and another of the Commissioners, Mr. Osborn, I saw at a meeting for about 20 minutes to half an hour. I never had any personal communication with any of them, except Mr. Robinson, who gave me further instructions about the Irish organisation. We never see them—we are put as a class apart from them. The consequence is we feel we cannot properly state any case, and that if we wish to make a representation to the Board it would have to be filtered.

25,353. The natural person to correspond with the Board is your chief inspector?—Yes, he is the natural person.

25,354. Whether it be or be not desirable that the Board should be in closer personal relations with the inspectors or other officials in their department is perhaps hardly for us to judge, but as far as regards questions of organisation, as I understand, you would suggest to the Board what Mr. Anderson said before, I think, very fairly, that you thought that the inspector's position altogether would be much improved if they did some of the work now done by the secretariat and committee clerks, and if these committee clerks were dispensed with, that so there would be an opportunity of improving your own class?—Quite so, and the amount of work, the amount of registration and everything, could be materially reduced, which we pointed out.

Mr. J. Anderson, and Mr. F. Fisher.

8 Mar. 1889.

25,355. To your application to that effect you have had no answer, although you made it on the 23rd March last?—No answer whatever. After we had sent a copy of the statement to the Board, and informed them that we had been compelled at last to apply to your Commission, I did receive an answer from the Board saying that they had received our letters of the 18th ultimo and previous dates, and that the Board understand the second class inspectors have now sent a statement of their case to the Royal Commission which is sitting on Civil Services, and the Board cannot, of course, forestall the judgment of that body.

25,356. Have you any reason to believe that the Board would take an unfavourable view of your case?—They have shown no very great anxiety to take a favourable view.

25,357. Is there any point that you would like to add. We are very anxious not to omit anything that you wish to put before us. I do not myself see anything in your memorial to which you have not alluded?—(*Mr. Anderson.*) There is one remark that I might call your attention to. It is rather a difficult one to explain, but it shows the position of the committee clerks in the Customs and the committee clerks in the Inland Revenue. In the Inland Revenue the committe clerks appear to be above our superintending inspectors as regards salary.

25,358. (*Mr. Cleghorn.*) They rise to the same maximum?—They are a little above the superintending inspectors. You will notice that the minimum is 725*l.*, instead of 700*l.*; there is the difference.

25,359. But they bothrise to 800*l.*?—They both rise to 800*l.* In the Customs you will find that the committee clerks are 725*l.* to 800*l.*, but the surveyors general are 800*l.* to 1,000*l.* You see in the Customs department the surveyors general, as they are called, performing equivalent duties in the Customs to those in the Excise, go from 800*l.* to 1,000*l.*

25,360. (*Lord Lingen.*) Do not the surveyors general correspond to the chief inspector?—No; they correspond to the superintending inspectors.

25,361. (*Mr. Cleghorn.*) There are only three of them?—And there are only three of our superintending inspectors.

25,362. (*Chairman.*) The position of the committee clerks in the Customs is one more in subordination to the officers corresponding to the chief inspectors in the Inland Revenue than the committee clerks are to the chief inspectors in the Inland Revenue?—Yes; that was the object of my speaking on the point, to point out really the position and the rank.

25,363. The pay is the same of the committee clerks, but in the case of the Customs the officers that you say correspond to your superintending inspectors in the Excise, are higher paid in the Customs than in the Excise?—They are, and that marks the grade.

25,364. Of course, without going into the work done, the comparison is difficult for us to follow?—Exactly, but the money is easily understood.

25,365. But it is a question of what you get for your money. It is a question of duties and of administration which is not so easily understood?—Yes. (*Mr. Fisher.*) We wished very much to bring samples in order to show the papers dealt with by the committee clerks and papers dealt with by us. We applied to the Board for permission to make extracts and produce them before the Commission, and they rejected our application.

25,366. With reference to those papers, let me not misunderstand your position. Is it this: that the committee clerk is too much of a mere go-between or carrier of messages between the Board and the inspectors,

Mr. J. Anderson and Mr. F. Fisher.

8 Mar. 1889.

who are practical men who have risen from the various ranks of the service, and that you think that if there was a system adopted whereby the inspectors generally were brought, by some system of redistribution of work, and by doing away with some of these lay clerks, in closer connexion with the Board, a great deal of the work of unnecessary carrying back and unnecessary reference of papers, might be avoided?—Quite so; and unnecessary passing of the papers through books—through registries.

25,367. That is the point that you took about the register?—Yes, one central register.

25,368. Do I understand you that the system of registration has been altered within the last year or two?—It has been altered in this re-organisation when the committee clerks were created, and altered in such a way that it takes us now, if we want a paper to refer to, sometimes a week in order to get it. Formerly we could get it in a day; instead of making it easier to get papers it makes it more difficult.

25,369. In speaking upon the question of re-organisation and the position of the committee clerks, do you represent more than yourselves?—We represent 18 out of 19.

25,370. And as far as the question of re-organisation is concerned, and with special reference to the point of bringing the practical officers into closer connexion with the Board, have you any reason to say you represent more than second class inspectors?—No, certainly not. But we would ask you earnestly to call one of the superintending inspectors and take his opinion upon the point. There are three superintending inspectors. You could also call one of the first class inspectors, who would be able to give you valuable information upon the subject.

25,371. Is Mr. Molineux the chief inspector?—Mr. Molineux is the chief inspector. The nature of his office is to control us, and in virtue of his position is inimical to our interests.

25,372. (*Lord Lingen.*) You said the prospects were much worse now than when you joined the service. Has the scale of salary of second class inspectors never been improved?—(*Mr. Anderson.*) Yes, it has. But they were called surveying general examiners at that time, and they were in different grades and classes, and it is difficult to draw a comparison—at least it could be done, but not readily. I may mention this, that since the date I entered the service the chief inspector's salary has been raised from 700*l.* or 750*l.* a year—I am not sure which—to 1,000*l.*, but there has been no proportionate increase in the surveying general examiners' salaries. There has been nothing at all of the same class of increase, whereas the prospects are not nearly so good.

25,373. In the examining classes, you say, the examiners are local officers, are not they?—I am not talking of examiners, I am talking of surveying general examiners, a term that has not come lately before you, because it has been abolished some six or seven years ago.

(*Mr. Fisher.*) The present inspectors.

(*Mr. Anderson.*) The inspectors who were called surveying general examiners.

25,374. At this moment, you, as a second class inspector, are receiving a higher salary than you would have received, we will say, ten years ago in the same class, are not you?—I believe so.

25,375. Do you know what the difference between the two was. Do you remember what the minimum and maximum were before the last revision?—There was a different scale of classes. There were surveying general examiners of the third class and second class; and it is difficult to draw a comparison between the classes without having the statistics before you. But they can easily be had; the salaries of ten years ago can be had.

25,376. I did not want the detail. I only wanted a general answer to this question, how far the alteration in the salaries of the second class inspectors would modify your statement that the conditions of the service have been altered for the worse since you joined it, or, to take a later date, since you got into your present position; whether under the old system, if you had got to where you are now, you would have been better off than you are now?—Yes, I should.

25,377. You would?—Because if it had not been for the discontinuance of these collections that we spoke of, I should now have been in a collection, and my salary would have been 450*l.*

25,378. It is a question not so much of your own class as of your being kept so long in it?—We are not paid according to the class of work.

25,379. If you had been made a collector it would not have mattered to you so much what the maximum of your own class was?—No.

25,380. (*Chairman.*) There are not so many places above you as there were?—No.

25,381. Fewer collections?—Yes, and we take longer to get to them.

(*Mr. Fisher.*) With regard to the alteration of salaries of late years, when the re-organisation was made of the outdoor department, the supervisors' salaries were raised to a maximum of 350*l.*, our salaries by the same order were raised from a minimum of 350*l.* to a minimum of 380*l.*, and from a maximum of 380*l.* to a maximum of 400*l.* But although I am receiving an actual benefit of 10*l.* a year from this increase, I am losing at least 50*l.* a year of an increase I could have received from a collection.

25,382. (*Lord Lingen.*) The real gravamen of your class, as I understand it, is that the reduction in the collectorships has stopped your promotion?—Altogether.

25,383. That is where the shoe pinches you, is it not?—Partly.

25,384. Chiefly, we may say, may not we?—No. The third class collectors have several times approached the Board with a view to the amelioration of their position. One of their points is the increment of 10*l.* a year. There is no other class under the Crown receiving a salary of 300*l.* a year, rising by increments of 10*l.* There is a man receiving a salary of 400*l.* a year, and rising by increments of 10*l.* a year.

25,385. That is not a change in the service. It is merely a continuance of what was the state of the service when you entered it, is not it?—Yes.

25,386. The increment was 10*l.*?—The increment was 10*l.*

25,387. Therefore, whatever may be the objections to that, and whatever may be the reasons for making it a higher increment, at any rate that is what it was when you joined?—Yes.

25,388. Therefore it seems to me that your real grievance, if you have a grievance, is this: that the collectorships are fewer, and therefore your promotion is slower. That is the chief part of it?—That is part of it, and the other part of the grievance is this: that we who do skilled work get less pay than the men who do the routine work and get the easy work.

(*Mr. Anderson.*) Yes, that is the contention.

The witnesses withdrew.

Adjourned to Monday next at twelve o'clock.

SEVENTY-FOURTH DAY.

7, Whitehall Place, S.W., Monday, March 11, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.
MR. A. B. FREEMAN-MITFORD, C.B.
MR. J. CLEGHORN.
MR. A. S. HARVEY.
MR. H. L. W. LAWSON, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

MR. FREDERICK BLAKE and MR. WILLIAM LANE GOUGH called and examined.

Mr. F. Blake and Mr. W. L. Gough

11 Mar. 1889.

25,389. (*Chairman.*) You, Mr. Gough, I believe, are the secretary acting for the Surveyors of Taxes?—Yes.

25,390. You, Mr. Blake, are one of the signatories of this paper which you have sent to the Commission, and which we have looked through?—I am.

25,391. Perhaps I had better ask you to kindly lay before us the chief points upon which you desire to make suggestions. I do not think I need ask you to go through your work, because you have set all that out here, and I think we are perfectly familiar with that; but perhaps you will kindly call our attention to those specific points on which you desire to make suggestions?—(*Mr. Blake.*) Yes. Our grievance as to salary has been partially remedied since the statement was sent in, for which the surveyors as a body are very grateful; but they think that the difficulty and delicacy of the work, as performed in the more important districts, have not been fully recognised. As regards the surveyors' clerks, the surveyors are of opinion that such important duties as are performed in surveyors' offices ought not to be entrusted to men engaged on small weekly wages. It is suggested that a clerk should be attached to the important districts, and have some inducement to remain there; say, increasing weekly wages to 40*s.* a week, and after reaching that stage, they should be called upon to pass qualifying examinations, and be allowed to rise, say, to 150*l.* a year, and be permanently established.

25,392. You make a suggestion about boy clerks in your paper?—We have had boy clerks, and we have found them very serviceable; but it must be understood that the surveyors have a junior clerk, as well as the clerk to which I referred.

25,393. (*Lord Lingen.*) You are speaking now of casual clerks independently of lower division clerks?—Precisely. The class that I am speaking of are termed surveyors' private clerks.

25,394. And for them you have an allowance, have you?—We have no allowance, and 30*s.* a week is the maximum our principal private clerk gets.

25,395. (*Chairman.*) You suggest 45*s.* as a maximum?—We suggest that it should go to 40*s.* by weekly increments, and, after that, that they should pass a qualifying examination and go to 150*l.* a year, so as to give them an inducement to stay in our employ.

25,396. (*Lord Lingen.*) Are these clerks considered to be established officers?—No.

25,397. Are they continuously employed?—They are continuously employed, but we are subject to lose them at a week's notice, and we can get rid of them at a week's notice.

25,398. Your proposal then practically would be sure to end in making them established officers?—In the end, if they behaved themselves, of course. (*Mr. Gough.*) Those who proved themselves qualified.

25,399. What is the total number of them, do you think? Does each surveyor employ two, on an average?—All the principal districts have two, and an assistant or a lower division clerk as well.

25,400. Then we shall not be very wrong in considering them as six or seven hundred people, for there are 230 surveyors?—There are 234 surveyors, but the principal districts would not reach to more than 80 or 90, I should say.

25,401. (*Mr. Lawson.*) And you would propose to admit them to the establishment without any examination?—No; after they had reached, say, 2*l.* a week they should pass a qualifying examination to entitle them to further promotion.

25,402. And how long would that take them, on an average?—That would all depend upon the arrangements made by the Board of Inland Revenue as to how the increments would come.

25,403. I only want an average case?—Five or six years at least.

25,404. (*Chairman.*) Have you calculated at all what increase there would be on the present charge, which is something like, in round figures, 20,000*l.* for the clerks. In the sum you have alluded to in your paper you have not calculated that have you?—(*Mr. Blake.*) No, we have not. (*Mr. Gough.*) The object we have in view in making this suggestion is to obviate the difficulty we so frequently experience of a man leaving us at a week's notice, and we are practically thrown on our beam ends, may be for some weeks without a clerk at all, and then we have to take probably a raw hand.

25,405. (*Mr. Lawson.*) Do you mean to say it is not easy enough to get clerks of a sufficient calibre to satisfy your requirements at a very short notice? You say you are left on your beam ends without a clerk?—I think every surveyor has experienced more or less difficulty in getting a suitable man to fill the post at a short notice.

25,406. (*Lord Lingen.*) You see you must be yourself aware that you are coming with a very formidable proposal when you ask that some hundreds of persons who are now retained on temporary wages, dischargable at a moments notice, should be taken on the establishment and should become entitled to pensions.—(*Mr. Blake.*) Not more than one hundred.

25,407. (*Mr. Lawson.*) I should like to realise exactly what these casual clerks do. What is the distinction between their work and the work done by a lower division clerk who is working in the same office?—(*Mr. Gough.*) Private clerks, where lower division clerks are employed, would not have the same confidential work that the lower division clerks would perform. They would have to do copying, sending out returns, and such like things, and to a certain extent corresponding with collectors.

25,408. (*Mr. Harvey.*) Do these clerks know all the assessment to income tax of the various tradesmen in the town?—It is practically impossible to prevent their knowing it.

25,409. As a matter of fact, do they not know in any large town the whole of the returns made to income tax by all the mercantile community in that town?—They must know it.

25,410. (*Chairman.*) You told us just now, I think, that since the sending in of this memorial the salaries have been altered?—(*Mr. Blake.*) Yes.

25,411. Could you tell us what has been done in that direction?—Shall I give you in a few words the present classification of surveyors?

Mr. F. Blake and Mr. W. L. Gough.

11 Mar. 1889.

25,412. Thank you.—The late re-organisation has done away with the duty pay that existed up to the 1st of November last, and the scale now stands thus: We have 11 surveyors of the first section, of the first class, with 500*l.* a year, going to 600*l.* by 20*l.* annually.

25,413. (*Lord Lingen.*) There has been a great alteration as compared with this printed statement, has not there?—Yes, I think the statement as regards the salaries must be reconsidered.

25,414. Because you complain here of being confined to a maximum of 400*l.*?—(*Mr. Gough.*) Service pay, 400*l.*; and duty pay, 200*l.* (*Mr. Blake.*) Then, in the second section of the first class, there are 29 from 500*l.* by 20*l.* a year to 550*l.* Those two sections are called the first class.

25,415. Only 11 of the class of 40 go up to 600*l.* a year?—Quite right. Then, in our second class, we have 45 surveyors beginning at a salary of 425*l.*, rising by 15*l.* per annum to 475*l.* Then we have a third class, which also consists of two sections, the first section numbering 65 from 200*l.* by 12*l.* annual increment to 375*l.*, and the second section of that class, consisting of 84 surveyors, rising from 200*l.* by 12*l.* to 250*l.*, the same increment as the first section. That is our present classification, which has been in existence since the 1st of November last.

25,416. (*Mr. Harvey.*) Then is your commencing salary 200*l.* a year?—Yes, the surveyors commence at that.

25,417. (*Chairman.*) Perhaps you would give us the assistant surveyors now?—I cannot give you the numbers. (*Mr. Gough.*) About 45 in number.

25,418. (*Mr. Harvey.*) What do they begin at?—100*l.* a year to 180*l.*, by 10*l.* annual increment.

25,419. You have accounted for 279 men with the scale that you have given us. They represent the 279 men down in the estimates for 1888–89 as rising from 100*l.* by triennial increments of 37*l.* 10*s.* to 400*l.*?—(*Mr. Blake.*) They represent the same, but the estimates would refer to the state of things before this change.

25,420. (*Lord Lingen.*) The duty pay is merged in this new scale?—Precisely. In addition to that rising to 400*l.* there would be the duty pay.

25,421. (*Mr. Harvey.*) Besides that, there are these four inspectors from 550*l.* to 650*l.*; are they affected?—They are not affected. There are 13 inspectors, I think. (*Mr. Gough.*) The inspectors remain the same.

25,422. (*Chairman.*) What promotion is open to surveyors in the department? What posts do you consider open?—(*Mr. Blake.*) All the posts, from the chief inspector downwards; that is to say, four superintending inspectors and 13 inspectors. The inspectors get 550*l.* to 650*l.*, and superintending inspectors from 700*l.* to 800*l.*

25,423. (*Mr. Lawson.*) The same as before?—The same as before.

25,424. (*Lord Lingen.*) I suppose the chief inspectorship is considered a staff appointment, and not necessarily within the range of promotion, or is it?—The chief inspectors have, during my time, always been selected from the inspectors. (*Mr. Gough.*) The inspectors and the superintending inspectors are both considered to hold staff appointments.

25,425. And the persons above are, one chief inspector and three superintending inspectors?—(*Mr. Blake.*) Four superintending inspectors.

25,426. (*Mr. Harvey.*) They are increased, are they? There is only one in this estimate?—There are four, because we are embraced in Scotland now.

25,427. (*Lord Lingen.*) Then 13 inspectors?—Yes.

25,428. (*Mr. Lawson.*) In all?—Yes, in all.

25,429. (*Chairman.*) Are the collectorships open to your class at all?—No, they are in the Excise Department.

25,430. They are entirely in the Excise, and they are kept entirely to the Excise?—Entirely, we are quite separate.

25,431. I suppose you say that that re-arrangement of salaries has given pretty general satisfaction?—We say that we are very grateful for the re-arrangement, but we do not consider that the Board have realised the delicacy and the difficulty of the duties performed in the more important districts.

25,432. Then in some districts you still think that the salaries are inadequate, as I understand you?—Yes, no doubt.

25,433. (*Mr. Lawson.*) Or is it that you think there is not sufficient difference made between the salaries in the larger and the lesser districts, that the present maximum is high enough, but that there ought to be some distinction made, and that the others ought to be lower?—(*Mr. Gough.*) No, not high enough. (*Mr. Blake.*) We think it is not high enough for the more important districts.

25,434. (*Chairman.*) What are the salaries to which you suggest the highest districts should rise?—(*Mr. Gough.*) 700*l.* at least.

25,435. You are at 600*l.* now?—Yes; that is the highest we rise to as surveyors. (*Mr. Blake.*) In the paragraph on page 8 it is stated on this point, that is with reference to the salaries as well as to that of leave of absence, "Surveyors venture to urge their claim to at least "equality of treatment with the members of the indoor "branches."

25,436. (*Lord Lingen.*) Has that ever been so yet?—(*Mr. Gough.*) I am afraid it has not.

25,437. It was not when you joined the service?—(*Mr. Blake.*) No.

25,438. (*Mr. Lawson.*) What does an equality with the members of the indoor branch mean? It seems to me that the new scale of salaries is rather higher in some respects?—(*Mr. Gough.*) We will take committee clerks in the secretary's office. (*Mr. Blake.*) And principal clerks. (*Mr. Gough.*) We contend that our duties are at least as important as the duties performed by them.

25,439. But there are only five principal clerks and only five committee clerks?—Quite so. (*Mr. Blake.*) We have only 11 out of 234 who get the maximum salaries now. (*Mr. Gough.*) The committee clerks go to 800*l.* a year, the principal clerks to 700*l.*, and we contend that there is a certain analogy between the duties performed by the committee clerks with many of the duties performed by the surveyors. The committee clerks deal with the Board of Inland Revenue, we also have to deal with the Board of Inland Revenue. In addition to that we have to deal with the district commissioners. We have to present our cases to these district commissioners: we have to argue our cases, both as regards the practical and as regards the legal bearings, and, although it is stated in the Act of Parliament that neither solicitor nor barrister shall be allowed to plead before the Commissioners of Income Tax, solicitors and barristers do attend. In addition to having to deal with the Board of Inland Revenue, we have to deal with all these difficulties. Out of nearly 4,800 cases in certain districts for the year 1887 which were dealt with by Commissioners and surveyors, in only 140 of those cases were the appellants required to attend before the Commissioners. The surveyors settled themselves all the remaining cases. (*Mr. Blake.*) The exact figures are 4,788 appeals.

25,440. (*Mr. Harvey.*) What power have you to settle an appeal without reference to the local Income Tax Commissioners?—(*Mr. Gough.*) No legal power. (*Mr. Blake.*) These cases are all submitted to the Commissioners.

25,441. Then you have the assistance of the clerk to the Commissioners, do you not, for legal questions?—(*Mr Gough.*) Yes.

25,442. Is not your position this: that a man says you have over-assessed him. You come and state to the Commissioners the reason why you consider he is not over-assessed, and the Commissioners have the help of their clerk to enable them to determine whether or not the assessment is within the law. I do not see how your claim is based on quasi-judicial functions, as you say in your statement?—A person complains of being over-assessed, he gives the surveyor notice of his objection to the assessment.

25,443. First of all, you do not assess him, do you?—We have to deal with the assessment.

25,444. But you do not make the assessment?—Technically, certainly not.

25,445. Does not the clerk of the local Commissioners make the assessment in every case?—No.

25,446. First of all, you do not make the assessment; as I understand the action of the Income Tax Acts, you are not supposed to make the assessment?—We are not supposed to make the assessment, but practi-

cally, in a great many districts, we do make the assessment.

25,447. (*Lord Lingen.*) Do not you come before this Commission in this position, that quite recently, within the last 12 months, your own Board having very much improved your scale of salary, given you on the whole what would be called a liberal one, and you having had in the shape of promotion 16 tolerably good appointments, you now come before us not at all saying that your own salary is inadequate, but that some other people get a higher salary, and you think you do as important duties as they do. Surely your Board must have had that question before them when, quite so recently as they have done, they settled your new salaries. You are arguing now, you see, not only the adequacy or inadequacy of your own scale, but that some other people, whose duties you say are not superior to your own, are getting more. Your Board have had that before them within the last few weeks. Surely they must have had when they fixed this scale of salary?—(*Mr. Gough.*) I think there can be no doubt that that question was before the Board. I apprehend that the Board, in dealing with it, would have in their minds what they were able to obtain from the Treasury.

25,448. (*Mr. Lawson.*) Is not the line of comparison which would be more applicable perhaps than yours, that between the committee clerks and the principal clerks on the one hand, and the superintending inspectors and the inspectors on the other? They correspond more or less both in salary and in function, do not they?—We contend that that is not so.

25,449. (*Chairman.*) Let me take another point now, please?—(*Mr. Blake.*) Another ground that we consider we have to complain of is that of leave of absence.

25,450. Have you anything further to add to what you say in your paper?—We merely wish to emphasise that in the most important districts no greater opportunity is afforded for relaxation than at the head office; consequently the surveyors of those districts ought to be allowed the same leave of absence. With regard to leave generally, surveyors think that some arrangements should be made for carrying on their duties during their absence.

25,451. (*Mr. Lawson.*) Have you nobody who can take your places?—(*Mr. Gough.*) No one in many instances. (*Mr. Blake.*) In ordinary leave of absence we get no one, and there is the accumulation of work for us to come back to after our relaxation is over.

25,452. (*Chairman.*) That is to say, you have a good amount of work to get through, and you have to arrange it the best way you can?—Precisely.

25,453. And when you take your holiday, you naturally have a heavy amount of arrears to deal with when you come back?—Yes.

25,454. (*Lord Lingen.*) I suppose you are obliged to take your holidays in fragments; can you ever get away 28 days continuously?—I have done so.

25,455. As a rule, can you?—I think not, as a rule. The instructions state we should not be allowed more than 14 days at a time.

25,456. I suppose some parts of the year are slacker than others?—Yes, there are times when we have less work to do than at others; the autumn and going right up to Christmas is our busiest time. (*Mr. Gough.*) Beginning from September. (*Mr. Blake.*) Right up to the 1st of January may be considered our busiest time.

25,457. Can one surveyor give assistance to another during his absence if he is away at a slack time of the year?—(*Mr. Gough.*) That is done.

25,458. (*Mr. Lawson.*) May I ask what the average day's work is at this time of the year?—(*Mr. Blake.*) This would be about the easiest time of the year, about six or seven hours—seven hours perhaps. (*Mr. Gough.*) I can speak for my own office that it is never less.

25,459. (*Mr. Harvey.*) Where are you located?—In the Sixth City District.

25,460. Where is that. What part of the City?—Great Winchester Street.

25,461. You are one of the City surveyors?—One of the six City surveyors.

25,462. Under Mr. Colquhoun or with Mr. Colquhoun?—In the same building with Mr. Colquhoun.

25,463. You are a surveyor, and he is a collector?—No, Mr. Colquhoun is a surveyor, and I am a surveyor. Our standing is practically the same.

25,464. (*Chairman.*) You do not say the 28 days are insufficient leave, do you? You say it does not compare favourably with 42?—(*Mr. Blake.*) We consider we should like 42 better.

25,465. (*Lord Lingen.*) Suppose that an increase were granted you on the 28 days, do you think you could manage that without an addition of numbers?—I am scarcely prepared to answer that. The part of the reply I gave with reference to leave of absence, that the surveyors wish that their duties might be carried on as well in their absence as in their presence, would imply that there must be an increase of surveyors to take charge of these districts.

25,466. (*Mr. Harvey.*) If you could ensure getting your 28 days on end, and continuously, would you be satisfied with 28 days?—(*Mr. Gough.*) May I give you an illustration on that point? I will take the case of the City. There are six surveyors there; they have really no more opportunity of relaxation than what are called the indoor clerks. We contend, if the indoor clerks be entitled to 42 days, we certainly ought to be entitled to the same. Then, with regard to the difficulty that has been mentioned of our duties being carried on during our absence, there are a certain number of surveyors in the City, and I think I can say that one is always ready to help the other or look after his duties during his absence: and as a matter of fact this is done. But in country districts it is practically impossible for one surveyor to perform the duties of another say 40 or 50 miles distant.

25,467. I suppose you would not consider the strain of the country duties so considerable as those of London, would you?—Certainly not, but the difficulty and the hardship of which the country surveyors complain is, that they cannot take their leave, even the leave that they are entitled to, without subjecting themselves on their return to excessive work—piles of correspondence unanswered. They must work almost night and day to get rid of the arrears.

25,468. (*Mr. Lawson.*) Are you located in the City?—(*Mr. Blake.*) No, my office is in Parliament Street, Westminster. I was in the City 11 years, so that I am perfectly conversant with the City work.

25,469. What I wanted to know was, whether you do speak from personal experience as to the nature of the work in rural districts?—(*Mr. Gough.*) Yes, we do. (*Mr. Blake.*) Mr. Gough has only been in London two and a half years. (*Mr. Gough.*) We have both been in country districts before coming up to London, and we have practical experience of the work in country districts as well as in the town districts.

25,470. (*Chairman.*) Have you anything to say upon hours?—(*Mr. Blake.*) I was about to observe that the Board of Inland Revenue issued a circular to the surveyors on the 9th of June 1882, in which they said the surveyors work seven or eight and ten or more hours a days, which is perfectly true. That is in the centre of page 8.

25,471. It is a kind of work which cannot be exactly confined to any named official hour, can it?—Certainly not.

25,472. There are no recognised particular official hours?—Ten to four are the recognised hours. (*Mr. Gough.*) For dealing with the public.

25,473. Six hours?—Six hours; but the state of affairs has been considerably altered since this statement was sent in, in consequence of the abolition of the Playfair system. Our contention on this point was that we were established under the Playfair system, and that it was manifestly the intention of the Commissioners to recognise six hours as an official day's work.

25,474. I am afraid we cannot recognise that. Certainly it was not the intention of the Playfair Commissioners, quite the contrary was the intention of the Playfair Commissioners, The same as with this Commission they regarded seven hours as a proper official day. However, that does not alter the facts, of course, as to what is done?—I think I may say that there is not a surveyor in the kingdom who has not, taking the year through, to work more than seven hours a day.

Mr. F. Blake and Mr. W. L. Gough.

11 Mar. 1889.

25,475. Then what is your suggestion. As I understand now, the hours during which the public can come to consult the surveyors are six?—Yes.

25,476. You are not prepared to suggest that they should be more?—Certainly not.

25,477. What suggestion do you make about it other than that which you have just made with reference to the work?—The object of this paragraph was that if six hours a day were recognised as the official day's work, and surveyors had to work seven hours a day, they should have their salaries increased in the same way as clerks in Somerset House had their salaries increased in consequence of being put upon the seven hours' scale.

25,478. The question of salaries has been dealt with, and I think you may take it probably that the Commission will not be prepared to recommend any increase of these salaries which you have recently had established by your Board. I do not think it is at all likely, therefore you may leave that point. Of course the question of promotion and the other points you name are open to consideration?—Quite so.

25,479. But this scale that you have given us appears to have very much improved your position?—(*Mr. Blake.*) It is very much improved. (*Mr. Gough.*) We admit that.

25,480. I do not think we should be prepared to recommend any advance on this scale of salaries, it is not at all likely that we should entertain the idea. You have spoken of the clerical assistance, and that appears to be dealt with in the statement. I do not exactly see what other points you have got to lay before us?—There are other questions, with regard to parochial ledgers, for instance. We contend, on page 10, that economies might be effected in that direction. At the present time there are about 35,000 accounts kept at Somerset House for England and Wales—duplicates of accounts, of those kept by the surveyors of taxes. We contend, that if the accounts at Somerset House were kept in divisions instead of in parishes, the number of those accounts might be reduced to under 2,500.

25,481. Have you made that suggestion to your board?—Not directly to the Board.

25,482. (*Mr. Cleghorn.*) What do you mean by accounts?—There is an account kept against each parish in the kingdom. So much money is due from each parish under the head of income tax, inhabitated house duty, and land tax. That is entered in the surveyors' ledgers, and also in the ledgers kept at Somerset House. We contend that the keeping of those duplicate ledgers at Somerset House is not necessary.

25,483. (*Mr. Harvey.*) What do you base your ledgers on?—(*Mr. Blake.*) The actual payments by the collectors. (*Mr. Gough.*) On actual payments and accounts issued by ourselves. Pay tickets are issued by ourselves to the collectors to pay in so much money; and it is from these pay tickets that information is sent to Somerset House to enable them to keep their ledgers.

25,484. (*Chairman.*) Your suggestion, Mr. Gough, is that the change you propose would be an economical arrangement, and would in fact set free some money to devote to the improvement of the position of the surveyors?—Clearly so. (*Mr. Blake.*) We calculated that it would save at least 2,500*l.*

25,485. (*Mr. Harvey.*) But you have not represented that to the department at Somerset House, have you?—(*Mr. Gough.*) Not in a direct manner; suggestions have been made by myself unofficially.

25,486. (*Chairman.*) The next point that you mention here, I think, refers to the chief inspector. Of course you do not represent the chief inspector here; but you suggest that he might deal more directly with the Board than through the committee clerk?—Yes, we think that the chief inspector's department should have the entire control of all questions relating to the assessment and collection of income tax; and that no part of this duty should be performed in the secretary's office.

25,487. Is not that rather a subject which should be brought before us by the inspectors themselves, because you represent the surveyors? Have you any reason to know that the inspectors take the same view of it that you do?—I believe they do. It is a practical question, we take it, and we think that we are entitled to express an opinion on the point. (*Mr. Blake.*) We have so much work to do in connexion with it. (*Mr. Gough.*) And we think that the work which is now performed in the secretary's office, by gentlemen who have never been through the practical work of a surveyor's office, would be better performed by those who had begun at the bottom and had gone through the whole routine and work of a surveyor's office.

25,488. Would that point not be met, or rather would it be met by considering that the appointments of those committee clerks were open by promotion to gentlemen who have risen as you have through the service—through surveyors of taxes, inspectors, and so on?—That would meet the case partially; but we still should say that that would not meet the difficulty in its entirety.

25,489. Then you want to get rid of the committee clerks altogether,—some of them at all events?—We want to have the control of the assessing and collecting of the income tax in the hands of practical men.

25,490. (*Lord Lingen.*) Does not the committee clerk represent the decision of the Board? You would not make the chief inspector the ultimate authority. The matter must come to the Board, and must be argued out before the Board, and must be stated to Parliament and to the public. Is not there plenty of duty for the secretary's office in turning the official information to account, and exercising discretion upon it, and expressing the decision of the Board?—Quite so; there are certain questions which we admit must come before the Board; but many questions now which are dealt with nominally in the secretary's office are dealt with actually and practically in the office of the chief inspector. If any difficulty arises the papers are at once referred to the chief inspector, and he really deals with the case and remits it again to the secretary's office; and our contention is that a certain amount of circumlocution would be avoided if those matters were dealt with entirely in the office of the chief inspector.

25,491. (*Mr. Harvey.*) Do you mean to say that the Board should accept the decision of the chief inspector without hearing what the secretary may have to say upon it?—I would say that, certainly, and for the simple reason that the chief inspector is a practical officer who understands not only the law and the theory of the tax, but has had practical experience.

25,492. But assuredly if a man had a grievance against the income tax assessment he would write to the secretary, would not he? He would not write to the chief inspector; he does not know the chief inspector; he would write to Somerset House to the secretary, and say "I am overcharged," or "I have a grievance about this or that point." Does not it almost follow that the secretary of any great department, in order to do his business, must represent the Board through these committee clerks, or whatever the mode may be, so as to check the chief inspector—check the surveyors and look after them?—I apprehend that the chief inspector would check the surveyor. It is not suggested that the chief inspector should communicate with the public, but that all references and reports relating to assessments should be between the chief inspector and surveyor, instead of some being sent, as at present, to the secretary.

25,493. (*Chairman.*) Then the next point you refer to is as to Forms 48, &c. But that appears to have been met according to a note that you have at the bottom of the page; and then you make some suggestions with reference to the reports on schedules?—(*Mr. Blake.*) We might say with reference to Forms 48 that they still have to be sent through the head office in Scotland. If the Scotch Forms 48 were sent from surveyor to surveyor, instead of through the head office, there would be a great saving at the office in Edinburgh.

25,494. All these suggestions are in improved administration?—(*Mr. Gough.*) Clearly so.

25,495. Which gentlemen of your experience are naturally well qualified to make. You think they would tend to economy, and therefore that justifies you in making the application for the improvement of your position; that is what it comes to, is it not?—Precisely. (*Mr. Blake.*) Yes.

25,496. Is it the same case with reports on schedules?—(*Mr. Gough.*) Our contention is, that instead of writing, or rather copying, say hundreds of pages, in some cases of detail, it would be sufficient or should be sufficient to give the total of the seven classes of discharges as now given, that is to say, instead of

giving hundreds of pages put the whole matter into seven lines.

25,497. I am afraid we cannot do more than make that representation to the Board, because it is a point of detail which it is impossible for this Commission to go into?—Quite so.

25,498. The same thing very probably applies to what you say about the Valuation Act and the assessments on public companies?—(*Mr. Blake.*) These suggestions, if carried out, would effect a very large saving.

25,499. (*Mr. Lawson.*) You say that boy clerks in some cases have been found most useful, and it is thought a great number might be employed with advantage. Has anything been done with regard to extending the use of boy clerks at your offices?—I think not—they were sent to us quite young, and the engagement terminates when they reach the age of 19 years—that is just exactly the time when they are very useful, of course.

25,500. (*Mr. Harvey.*) You say it is open to question whether clerks subject to a week's notice should be employed in an office where the work is invariably of a confidential character. Have you any instances of their having betrayed any confidence?—(*Mr. Gough.*) Personally, I have not.

25,501. (*Mr. Lawson.*) Have you heard of any?—Yes, have.

25,502. Do not mention names?—(*Mr. Blake.*) I have heard of cases in Somerset House of clerks of the lower grades.

25,503. (*Mr. Harvey.*) I mean these private clerks to the surveyors?—Never.

Mr. F. Blake and Mr. W. L. Gough.

11 Mar. 1889.

25,504. You say you think you should not have clerks subject to a week's notice doing confidential work. The obvious question upon that is, have you any instance to give us where that confidence has been abused?—I have not. (*Mr. Gough.*) I certainly have none personally. Might I be allowed to give one or two examples of cases which have come under my notice of the action of surveyors to show the importance of surveyors' duties.

25,505. (*Chairman.*) I think you have put it in your case clearly. If you desire to add anything to this paper, I am sure we do not wish to cut you short?—They are simply illustrative examples. Here is a case where an assessment was found at 800*l.*; that assessment was increased to over 5,000*l.*, and arrears of duty of 150*l.* were recovered through the action of the surveyor.

25,506. I think we all know that you look after us very closely. I do not know that there are any other points untouched, you seem to have dealt with all the points raised in your paper very fully?—The statement itself will show the very large increase in the surveyors' duties during recent years. Page 6 shows that the total number of assessments has increased from 7,830,044 to upward of 11,000,000.

25,507. Have you anything more to add?—(*Mr. Blake.*) I think we have not.

(The witnesses withdrew.)

Mr. Thomas Cubbin, Mr. William Symons, Mr. Michael Devereux, called and examined.

25,508. (*Chairman.*) You three gentlemen represent, I believe, the examining officers of both classes in the port of London?—(*Mr. Cubbin.*) Yes.

25,509. You have sent us in a paper containing an exhaustive statement of your case, perhaps you will now shortly call attention to the principal suggestions that you make. I think the first is that your salaries should rise from 110*l.* by 10*l.* to 350*l.*, but that no officer should have a higher salary than 220*l.* unless the requirements in paragraph 4 in your statement were fulfilled; those requirements being on the lines of the report of this Commission. At present that would mean an increase of increment, would it not?—(*Mr. Symons.*) That means an increase of increment for the second class officer, the increment of the first class officer is 10*l.* at present.

25,510. Has there been any reduction in the posts immediately above you?—(*Mr. Cubbin.*) Yes, in 1882 there were 75 surveyors immediately above us, and a reduction has taken place in the meantime, I think of 25, reducing the number now to 50.

25,511. (*Mr. Lawson.*) Is that in consequence of the amalgamation of the outdoor departments of the warehousing branch?—No, it is owing to the amalgamation of the two branches. The number of surveyors was increased by 25 on account of so many gentlemen from the indoor department coming outside; and holding superior posts inside, they received certain posts outside at an equivalent salary. These posts are now quietly being withdrawn, so that 25 increase has been nullified by being reduced to about the original number.

25,512. The second scale of salaries given in the third paragraph of your statement is taken from the estimates of 1888–89, is not it?—Yes. (*Mr. Symons.*) As a matter of fact there are only 53 surveyors at present in the port of London, although the estimates provide for 60.

25,513. When was the reduction made in the number?—(*Mr. Cubbin.*) I think there is an order extant by which it is understood, as we are informed, that the number will ultimately be reduced to 50, so that this reduction is taking place as vacancies occur.

25,514. There are in the estimates 60 surveyors set down, 10 first class, 17 second, and 33 of the third class, but you say only 53 are in existence?—53 at present.

25,515. Have they have been reduced in the meantime?—They have been quietly reduced as surveyors die out or become promoted.

25,516. (*Mr. Harvey.*) Do you mean to say that the appropriation account shows a saving every year on that head?—On the ground that the establishment is represented as likely to cost more than actually it does. (*Mr. Symons.*) The actual number of first class examining officers at present, I believe, is 113; the estimates provide for 120. The actual number of second class examining officers is 387, while the estimates provide for only 302; the actual number of assistant examining officers is only 43, although the estimates provide for 160. We are unable to give any account of the reason for these discrepancies between the actual staff and the estimates submitted to Parliament.

Mr. T. Cubbin, Mr. W. Symons, and Mr. M. Devereux.

25,517. I imagine the fact is that the assistants have been promoted to be second class examiners?—No. (*Mr. Cubbin.*) No, they have not been created yet. (*Mr. Symons.*) The class of assistants has been gradually increasing, and it has only now reached the number of 43.

25,518. But there are 160 in the estimates?—There never have been more than 43 in the port of London, and there are only 43 at the present time.

25,519. (*Chairman.*) Perhaps I had better ask you to mention the particular points by way of explanation of your statement that you would like to bring before the Commission; we do not want the whole thing repeated, because we have looked through it: but if you would call our attention to the specific points we should be obliged?—(*Mr. Cubbin.*) We might say that in 1882, when the amalgamation took place, certain inducements were offered, or rather a certain establishment was created, and several officers or clerks were induced to come outside and accept places in this establishment on the understanding that this establishment would continue. They find that after going outside to learn other duties on the quays and docks, this establishment becomes reduced, so much so that their prospects (which induced them to come out) have been taken away altogether, and they are left now with their existing salaries without any prospect of this establishment, which was created in 1882, being carried out. So they consider that they have a distinct claim of some kind on the ground that if they were induced to come out on a certain understanding, and that arrangement has been made null and void, they have some right to be heard or some increase of salary should be given, or a new classification made to meet the loss of this establishment which actually did exist in 1882.

25,520. (*Lord Lingen.*) Do you mean by the words "come out" the warehouse duty now being dispersed

Mr. T. Cubbin, Mr. W. Symons, and Mr. M. Devereux.

11 Mar. 1889.

compared to its having been concentrated?—Yes; the clerks were formerly principally employed in three large offices, one in the Customs House in Thames Street, one at the London Docks, and one at the West India Docks, and they were employed on purely clerical work. In the amalgamation of 1882 the clerical work or the warehousing work was handed over to the outdoor department and became interchangeable with the outdoor duties. An officer might be employed outside boarding ships or examining goods, and the next week be transferred inside to become a clerk and *vice versâ*. so that it became really one establishment.

25,521. I only wanted to be sure that I was understanding what you meant by the words "come out"?—That is it; that they came out from a purely clerical establishment to be exposed to the outdoor work.

25,522. (*Mr. Lawson.*) Did they come out of the clerical establishment and undertake this work without any previous training?—They did. (*Mr. Devereux.*) Yes. (*Mr. Cubbin.*) Of course they were allowed two months to go round and acquire a knowledge of the duties first.

25,523. In two months did they acquire the whole knowledge that was requisite for the proper performance of the Customs outdoor work?—No; they afterwards got quiet stations to a certain extent, or were assisted in certain ways to learn the duties.

25,524. (*Mr. Harvey.*) Did they do gauging duties at once?—No, they cannot at once do gauging duties.

25,525. How long does it take to learn gauging duties?—These gentlemen were allowed a month to learn the gauging duty, but I venture to say (and that I think they will admit themselves) that six months would be quite little enough to acquire a practical knowledge of gauging alone.

25,526. (*Mr. Lawson.*) Still they had to do it after a month?—Not by themselves. You know there are various technical parts of the work of gauging, and the new man might assist; he might be on a station where he might become an auxiliary as it were in excess of the requirements of the staff, and quietly learn the gauging work. (*Mr. Devereux.*) And perhaps what would appear more unreasonable still, those that belonged to the old outdoor department were called on to do the clerical work of the indoor department when there was this transfer. I, happening to be one of the old outdoor department, got no probation at all for the purpose of enabling me to perform the clerical work.

25,527. You had to go straight to it?—Yes.

25,528. (*Lord Lingen.*) Then your first point would be the reduction of the establishment. As far as I can make it out now there are 10 first class surveyors where there were 15; there are 17 second class where there were 20; and there are 33 third class where there were 40: that would make a total reduction of 15 appointments; is that what you want to bring before us?—(*Mr. Cubbin.*) Yes; and that it is determined that there should be a reduction of 25 of that establishment of 1882; I mean an ultimate reduction of 25; that none of these vacancies shall be filled up.

25,529. (*Chairman.*) Then, if it had not been for the reduction in numbers, you would not have suggested the increase of salary that you now make, in all probability?—In all probability we should not, because the prospect of promotion would have secured to us an increase at some time or other—that has been taken away. (*Mr. Devereux.*) The establishment now is composed of two classes, the old outdoor officers and the clerical, they compose one establishment now. The particular grievances of these officers are somewhat different. The old outdoor men complain that if their original establishment had been left with them, many of them who will never get promotion now to surveyorships would have already been surveyors. Thirty-six vacancies have occurred among the old outdoor men, and only six of the outdoor, I think, have been promoted to these vacancies. The indoor men have a grievance that there was a classification promised them of 75 surveyorships, but that now this is cut down to 50 surveyorships, taking one-third of their chances of promotion away; and every section of the department has grievances in that way owing to the stagnation of promotion—in fact, I myself should expect to have been a first class examining officer in three years hence under the old system. I have made a calculation, and according to the promotion of the last three years, I will be made first class in 75 years hence. That is, I suppose, that I shall never get into the first class under the present conditions.

25,530. (*Mr. Harvey.*) Which class are you in now?—The second.

25,531. One of the 302?—Yes; and under old conditions I should expect naturally to be in the first class three years hence. Under the present conditions, I never expect to get into it. (*Mr. Cubbin.*) I might venture to say on this point that this amalgamation which took place in 1882, although it has secured the co-operation has not secured the good will of the men. What I mean is that the officers are not in favour of this all-round duty—that an officer after 20 or 30 years on the river, rummaging ships, should be put into a clerical office, or *vice versâ* a man being in an office for 20 or 30 years, and then put outside to do all kinds of rough work. They think that where there is a sufficient amount of work of various kinds, that a person is of more value to the Crown—his services are more valuable and he can perform his duties better, if he is kept on one kind of work where there is a sufficiency of it. If there was not a sufficiency of it, then of course utilise the services of the officers as much as possible; but where there is a sufficiency of work we consider, as I have said, that officers become more valuable to the Crown, and their services are worth more and their time more fully occupied, and occupied more beneficially to the revenue and to the country at large, if kept to one kind of work. So that we are in favour, not of the old classification exactly, but of something on the old style of service—that is that there should be special officers for gauging and for landing duty, and that there should be clerks proper who should be fully and thoroughly acquainted with warehousing accounts, and be kept at it, and that the work would then be better done and perhaps more economically performed.

25,532. (*Lord Lingen.*) Then there were two changes, one when there was a great change in the warehousing service?—Yes.

25,533. But you are now speaking of a further change still as between the clerical indoor and the outdoor services of the ports, is that what you are speaking of?—Yes, and that occurred at the time that the great change in the warehousing system took place—concurrently with it. (*Mr. Devereux.*) I could, in support of what Mr. Cubbin has been saying, read an extract that I have here from the evidence of Mr. Dobell, Surveyor-General of the Customs, given before a Commission in 1852. At question 2841 he said, "You will not "reduce the number of officers, but have less efficient "officers in both." We contend that that is what has been done by this amalgamation of 1882. I should think it requires the same number of officers still to perform the work, but necessarily, if they have to perform more duties, they will be less efficient in a greater number of duties than they will be in one.

25,534. (*Chairman.*) Is it the case that the number of officers who perform the work is the same that it was, or has there been in consequence of this amalgamation of the clerical and outdoor work a reduction; are you in a position to state how that is?—I hardly know the facts, because I do not know exactly how many clerical men came out, and how many outdoor men remained. There has been one great grievance in taking out the clerical men in 1882, the older officers of the department were superannuated, and therefore in coming out, so to speak, they brought out no vacancies with them. Young men came out, but the vacancies that would have occurred in any case continued to go on, and the old outdoor department (and there is a certain class of the old outdoor department who think that is a peculiar grievance) think that if these vacancies had occurred under the old conditions, in any case they would have got them. They have occurred and they have never got them, and never can get them now, because such vacancies have to cover a wider area; the vacancies have been spread over a wider area.

25,535. (*Lord Lingen.*) Is not one result of this change to make certain of the better appointments open all round—nobody but a second class clerk would have become a collector under the old system?—(*Mr. Cubbin.*) Yes, that is so.

25,536. And no clerk could have become an inspector under the old system. You have got a benefit have not you? The clerks of the inspectorships, and the

superior outdoor promotions, and the examining officers have got the benefit of the collectorships being open to them; is not that so?—Yes, that is if we can take it for granted that the collectorships are now thrown open to the outdoor department, but on the other hand, speaking from my knowledge of outport clerks, it will be a serious hardship to them. To become a collector in the old days a clerk had to give up his prospects of promotion in a large port, and he had to go to a small port where he was supposed to acquire an acquaintance with the general duties of the service.

25,537. As a clerk?—As a clerk in a large port for the prospect of becoming a collector. Now he finds that after giving many years to that service at these outports, the posts which he looked forward to are going to someone else; so if you give a benefit to one, it becomes a great hardship to men who specially set themselves apart for that line of promotion.

25,538. But he gets the chance of an inspectorship which was not formerly open to him?—Not a clerk.

25,539. In the case of one of these clerks that has "come out," as you speak of it, if he did his general duties well and was thought fit for it, an inspectorship is open to him, is not it?—Yes. The clerks in the warehousing branch who came outside, and became examing officers, have the prospects, but the second class clerks at the outports, who were only eligible for collectorships, have not become part of the outdoor department, they still remain clerks.

25,540. Then they consider that the collectorships are now thrown open to another class than themselves?—To another class than themselves. (*Mr. Symons.*) I should like to say that the clerks who came out in 1882 consider there has been a distinct breach of contract. Many of the clerks had the option of being transferred to other departments, or of accepting the position of examining officer in the new outdoor department. This new outdoor department embraced the three duties which formerly belonged to three separate departments—the gauging department, the landing and water guard department, which were together—one classification—and the warehousing branch of the clerical department. In March 1882, a Treasury Minute was handed round to every clerk, showing the new classification which the Lords of the Treasury had approved. This classification embraced, as we say in our paper, 75 surveyorships. The clerks who were offered this position had to consider whether it would be worth their while to accept this new position of examining officer, or ask to be transferred to other departments. About half of their number determined that the prospects were not good enough, and elected to remain on clerical work, either in the Customs or in other departments. About half the number, of whom I am one, accepted, and within two years they found that the superior appointments were being reduced. The superior appointments have been undergoing continual reduction ever since, and we are unable to see that there is any finality in this reduction. When a surveyorship becomes vacant, as a rule it is not filled up; and now the surveyorships in the short space of less than seven years have been reduced from 75 to 53. We do not feel any assurance that the numbers will not finally be reduced to nil, and that our prospects will not be absolutely swept away. It has always been considered that there has been a certain security in a Government appointment; but we in the Customs do not feel any sense of security whatever. That is of course merely a personal question looking at it from our point of view.

25,541. (*Chairman.*) I do not quite see where the breach of contract is?—We should not have accepted if a less favourable classification had been offered to us.

25,542. (*Mr. Harvey.*) But there was no agreement that a particular classification, which was the best classification at the time, should be kept up in the future, was there?—(*Mr. Cubbin.*) No, there was no distinct understanding that the classification would remain for any number of years.

25,543. (*Chairman.*) There is no doubt that the gentlemen in your position may have had an expectation that the number of surveyorships, or the number of upper posts to which you might reasonably look, would remain the same, but you cannot surely maintain, nor can any Government official maintain, that he had a vested right to have the same number of higher offices kept always for him as long as he is in the Government service?—No, speaking for myself, I know we had not. (*Mr. Devereux.*) We admit that by inserting paragraph 4 as an alternative; we do not dispute that they have a right to reduce.

25,544. You do not state it in your paper, but Mr. Symons was stating it practically when he said to us there was a breach of contract?—I may admit that it is necessary to reduce these, which would, however, injure us; and we would submit, as an alternative, that a certain classification carrying higher salaries with it, would, to a certain extent, compensate us for the reductions that were necessary in the higher branch, and that was this classification submitted in paragraph 4; because we think it is very hard that if we arrive at the maximum of our class before there is a vacancy in another class, we must stop there through no fault of our own. To obviate that we suggest this paragraph, so that when we come to the maximum of our class, if our character would entitle us under the other conditions to go on, that we would go on to a certain maximum under this new classification.

25,545. You suggest a service scale, not waiting for vacancies?—Yes, not waiting for vacancies.

25,546. Have you calculated at all what the additiona cost of that would be?—I should think it would not be an additional cost at all, as compared with the classification of 1882. But if you continue cutting down all the superior appointments and give no compensation, that would necessarily be a saving to the country.

25,547. (*Lord Lingen.*) Your point, as I understand it, is this, that you would not have made this proposal of carrying on from 220*l.* to 350*l.* if the old scale of the establishment had remained?—Yes, that is so.

25,548. But that your chances of promotion are made a great deal worse by these 15 reductions in the surveyorships—(I am giving no opinion; I am only just seeing that I have got clearly what you have put)—and you think that you ought to have some equivalent for that, which would be given by carrying you on to 350*l.* instead of going simply to the 220*l.*, and being stopped there, that is your point?—That is just exactly it. (*Mr. Cubbin.*) I may say in connexion with that point that we quite admit that there can be no definite finality about our classification, and are quite in accord with any spirit of change whether it be for the purpose of economy, for better administration, or whatever purpose. At the same time after spending 15 or 20 or 30 years upon a certain classification, given the best part of one's life in acquiring a knowledge which is of no marketable value outside of our service, to find at the end of that time that this classification is swept away from us, leaves us in a very hard position. We have nothing to look forward to; we have been waiting for years to reach a certain goal; all at once we find a change effected, we cannot transfer ourselves into the public market because the knowledge which we have acquired is of no marketable value; we cannot tell it to another, there is no other bidder for the service, consequently we look for some *quid pro quo* for this classification which has been taken from us.

25,549. (*Chairman.*) I am sure you state your case very fairly?—(*Mr. Symons.*) I should like to say that I perfectly agree with Mr. Devereux and Mr. Cubbin, but I still adhere to what I said with reference to a breach of contract, but I hold if this paragraph 4 were adopted by the Commission, it would really be a sufficient compensation for this practical breach of contract.

25,550. (*Mr. Lawson.*) What you suggest is that the annual increment of 7*l.* 10*s.* should be raised to 10*l.*, is not it?—Yes. (*Mr. Cubbin.*) I think all that is in accordance with the Playfair Commission.

25,551. (*Mr Leghorn.*) And that the officer should go on to 350*l.*?—Yes. I think the Playfair Commission met the difficulty which at that time existed. There were three classes of examining officers, and they reduced the number to two.

25,552. (*Mr. Lawson.*) As I understand, you do not suggest that all should go to 350*l.*; you suggest that they should go to 220*l.* for the second class, and that the maximum of the first class should be raised to 350*l.*?—Yes. (*Mr. Devereux.*) We think that a report should be made from the superiors, and the result of that would entitle officers, other conditions being fulfilled, to go on.

25,553. As in the case of the recommendations of this Commission in respect to second class clerks?—(*Mr. Cubbin.*) Yes.

Mr. T. Cubbin, Mr. W. Symons, and Mr. M. Devereux.

11 Mar. 1869.

25,554. (*Mr. Harvey.*) That is to say, when you get 220*l.*, if there is no vacancy and there is a satisfactory report, you are to go on to 350*l.*?—(*Mr. Devereux.*) Yes.

25,555. (*Lord Lingen.*) You would yourselves be content, I presume, also to confine that to gentlemen who came out on the offer of these terms; that need not be extended to future entrants?—No.

25,556. Your case is personal to yourselves?—(*Mr. Cabbin.*) Yes. (*Mr. Devereux.*) We hold that the State has a right to make any bargain it likes with candidates entering the service, but having come in under certain conditions, we do not maintain even that these are to hold for ever, but we think that if it is necessary to do away with any conditions under which we came in, some compensation ought to be given to us for the loss of expectations.

25,557. (*Chairman.*) Perhaps you would kindly let us get on to another point now: we need not speak of details, as I think your case is very clearly stated and that we understand it?—(*Mr. Symons.*) I should like to say something with referenee to the interchange of duties, if I might be permitted.

25,558. Is that what you referred to just now?—It was briefly referred to just now. Some reference was made to the inconvenience of asking clerks whose whole training had been in an office to perform gauging duties. I have suffered personally from this inconvenience to a certain extent. Most of my official service has been given in connexion with keeping accounts, but a little more than 12 months ago I came out upon gauging duty, and I have been performing gauging duty ever since. At present I am employed in a laboratory; but I must say that, although I have been more than 12 months engaged in gauging duty, I have yet much to learn, and probably two or three years' experience would be necessary before any officer could become a thoroughly competent gauger capable of undertaking all the duties. The same objection would apply to transferring men who have been employed upon waterguard duty perhaps for 20 or 30 years to clerical duty. The difficulty of transferring a young man from one duty to another if he has an ordinary amount of intelligence is not so great as when a man who has been employed for a considerable number of years upon one duty is suddenly transferred to another. In the clerical department most of the work is checked. At first it was laid down that the surveyors would check the work of the examining officers, but since 1882 the surveyors have to a great extent been relieved of this work, and the checking is now largely done by first class examining officers. They sign "*pro* surveyor." It is nominally supposed to be done by the surveyors, but it is really done by first class examining officers.

25,559. (*Lord Lingen.*) What do you mean by checking; seeing that the casting of accounts is right, that sort of thing?—Seeing that goods are properly entered and delivered in the books; that quantities are correctly estimated and duties assessed and paid; that casks and packages are correctly written off and brought to account in the ledger; and that the accounts are properly kept.

25,560. Was that done by first class clerks formerly?—By higher division clerks formerly.

25,561. And now it is done by ——?—First class examining officers very largely, although the surveyor is nominally supposed to be responsible. There are numerous instances in our service at the present time of men who have been employed upon gauging or waterguard duties having been brought into an office, and they have been expected to check the accounts of second class examining officers without having had the necessary experience which would enable them to check accurately; it is not the fault of the officers it is really the fault of the system.

25,562. (*Chairman.*) The system of changing those duties is not one that you say suits you or suits others in your position; and therefore it cannot be good for the service generally?—I do not think it suits the service. I think if the Commission were to examine some of the registers in our offices at the present time they would find the accounts are not very satisfactorily kept.

25,563. (*Lord Lingen.*) Was the object aimed at in this change that it would be convenient for the officers to be interchangeable; was that the notion?—I do not think that was the notion.

25,564. What was it?—I think the notion was that it would be economical to have a man who was capable of performing any of the duties and capable of being transferred from one duty to another, so that if he were at a small station—say at an outport—he might perform gauging duty, outdoor duty, and keep accounts at the same time. It might produce economy in small warehouses, but it certainly does not tend to economy in London. (*Mr. Cubbin.*) As far as I am a judge, I should like to put that point like this: at small ports where there is not sufficient work of a specific kind to employ one officer, it is right that that officer should do all the general work of the port; and I think he is quite capable of doing it; but where there are certain branches like the larger ports, London, Liverpool, and Bristol, at these places, where there is a certain amount of special work, it would be more economically and more efficiently performed by having separate officers performing that work.

25,565. But at these large ports, I suppose, the work does practically sort itself, does not it, and a man remains a clerk or he remains an examining officer, although theoretically he is interchangeable. (*Mr. Devereux.*) It is quite the opposite to that in practice.

25,566. The opposite?—Yes, without qualification, it is quite the opposite to that.

25,567. (*Mr. Harvey.*) Do you mean to say a man is doing outdoor work one day and indoor work the next day?—He may be. I should say there are perhaps more indoor men or former clerks doing outdoor work than indoor work, and a large proportion of the outdoor men are now doing clerical work: that is the way that things have assorted themselves now.

25,568. Do we understand that you all agree that in the larger ports the distinction between outdoor work and clerical work should be maintained right through the officers' career?—I do not know that we care so much as officers; but we do think that it would be economical to the State, and to some extent it would benefit us also, because it is a hardship some times to go from one duty to another. Several of us have got colds when transferred from a close office to do gauging on the quay on a cold day. I have been in an office or in a vault for the last year where the temperature was never to my knowledge less than 54 degrees. On the 7th January I went to the Rum Quay in the West India Dock, where last Monday week the temperature was six degrees under freezing point—26 degrees of temperature; that is hard upon a person to be transferred from one place to another frequently, and we think—I do not wish to lay stress upon it, that it is much injury to us—that it would be beneficial to the State not to have that transfer. It cannot be economical for us to be transferred in that way; it is like compelling a tailor to make his own shoes.

25,569. You think there is a division of labour in the larger ports which might fairly be carried out?—(*Mr. Cubbin.*) We think so.

25,570. (*Mr. Lawson.*) Might be restored?—At the same time, I should like it to be understood that the officers do not consider that they are not qualified to do or to perform the various duties; they simply look at it that the work could be more efficiently and economically done as they suggest.

25,571. I should like to know whether you attach great importance to this complaint of yours in regard to hours of labour?—(*Mr. Symons.*) Yes.

25,572. Your average day throughout the year you say, when employed on gauging, clerical and landing duties, is 7⅔ hours?—(*Mr. Devereux.*) Yes.

25,573. Have you now to complain of the 12 consecutive hours of which mention was made before the Horsfall Committee?—We personally have not—not one of the three here—but we represent officers who have to complain of it.

25,574. (*Chairman.*) Are they the waterguard?—Yes, all those employed on what they call rummaging duties.

25,575. (*Mr. Lawson.*) But you yourselves have not to complain of the length of the day?—Not at the present time, but we may be transferred at any day to these particular duties. (*Mr. Symons.*) We see no reason why clerical work in the Customs should extend over more hours per day, than clerical work in other departments of the State. We believe the work is quite as severe, in fact we are inclined to think it is more

severe than clerical work in other departments, and as the Commission have recommended that the clerical work in all departments of the State should extend over seven hours per day, we should be very glad if that recommendation were also applied to clerical work in connexion with the outdoor department of the Customs. It might involve a slight increase of staff; but as I have said the hours of clerical work at present average 7¾ hours per day.

25,576. The waterguard will speak for themselves, so I do not suppose we need ask you about the night and Sunday visits to the dock; but in 1886 I recollect a representation being made to me that the offices in which you had to work were in a very unsanitary state and were most unsatisfactory from every point of view; has there been no improvement since that time?—There has been a considerable improvement.

25,577. Would you say now that the unsatisfactory state of the accommodation in the offices still exists and that they are unfit for occupation?—Many are in existence; but there has been a great improvement. The worst of the offices which were brought under your notice, then, I think have been abolished since; that is because there has been centralization of the tea accounts. The tea accounts are now kept in the Custom House instead of at the warehouses as formerly. There was a separate tea department for the whole of London proper down to 1882; then the tea accounts were transferred to the various warehouses; but recently the tea accounts have been transferred back to the Custom House again—not entirely but to a very large extent.

25,578. Have you still to work in many cases underground without sufficient air or light as you complained that you had to then?—Yes. (*Mr. Devereux.*) I can speak from personal experience. In the beginning of last year I was working in a vault two floors under the ground. There was no ventilation except what could be got down by the gangway as you went down into the vault. There was a watercloset in the centre of this vault with 23 men attending it, and on several occasions there was no water for it. I got an ulcerated sore throat and lips, and two doctors told me that it was from the bad smell, and what would have given me that would have given me typhoid fever. I recollect several cases were brought before me at that time. I might say it could easily be mended; certainly the closet could have been mended.

25,579. (*Lord Lingen.*) Does that state of things go on now. I mean is that particular place unaltered?—That particular place is in existence now.

25,580. (*Chairman.*) That is a simple point of administration I think?—Yes. I should say the two points on which we feel most aggrieved are the stagnation of promotion and the hours. (*Mr. Symonds.*) We might if you would allow us put in a memorial with reference to the proposed increase of our hours of labour that we presented to the Lords Commissioners of the Treasury recently. This was signed by 728 officers of the port of London. It was forwarded to the Treasury because we had reason to believe that the hours of labour of officers employed upon landing and shipping duties would be increased. Their hours at present are when employed upon free goods from 6 a.m. to 6 p.m., when employed upon dutiable goods from 8 a.m. to 4 p.m., for eight months of the year, and 9 a.m. to 4 p.m., for four months of the year. I may remark that the officers think it is scarcely fair that when employed upon the landing of free goods they should be liable to attend for 12 hours a day, and when employed upon the landing of dutiable goods their hours should be seven or eight. Of course it does not matter to them what duty they are employed upon, and they think eight hours should be the maximum in any case, but the Commissioners of Customs recently issued an order in the port of Liverpool.

25,581. We are going to have some of your officers from Liverpool, so I think perhaps you need not go into that?—This was the reason why we made the submission. The hours were extended in Liverpool from 6 a.m. to 6 p.m., for all duties, and the Secretary to the Board of Customs wrote to the Secretary of the Hull Chamber of Commerce, stating that the hours for the landing and shipping of goods would also be extended in all the other ports of the United Kingdom. At first it was intended to make officers work the extra hours without any compensation whatever; but we took steps to bring it under the notice of the House of Commons; questions were asked and the Financial Secretary to the Treasury then stated that officers could not be compelled to work more hours per day than they had been accustomed to, and that is practically the reply of the Lords Commissioners of the Treasury to our memorial.

25,582. Then practically you have no grievance?—Yes, we have a grievance.

25,583. What is the grievance?—If we are compelled to attend eight hours, say from 6 a.m. to 2 p.m., we shall be in a different position altogether than in giving the eight hours to which we have been accustomed from 8 a.m. to 4 p.m. We cannot live near our stations. There is not a proper train service in the early morning, and it would necessitate getting up in the depth of winter at 4 or half-past 4 in the morning, thus altering our social arrangements and the conditions under which we had formerly given service.

25,584. How is the convenience of the trader and the public met without somebody being at a little inconvenience in getting up in the hours of the night?—(*Mr. Cubbin.*) That arrangement is met now by a system of overtime payments. That if an officer gives more than eight consecutive hours, the wharfinger or shipowner pays the officer, and our Board has recognised that by laying down orders regulating the amount per hour which the different grades of officers are to receive.

25,585. Then it is the change that you object to from that system—as long as that system obtained, it was not that that you objected to?—We do not object to that, but at the same time we do not make overtime a point with us. We do not want overtime in that sense. We would prefer to have simply eight hours per day, and let anyone else take the overtime or make what arrangements the Crown could. We do not ask for overtime, we simply want a fixed day of so many hours. We have been giving that, I have, for upwards of 20 years now—from 8 to 4 or 9 to 4 in the winter on clerical work or on landing duty; and to alter those hours and perhaps have us give 16 hours one day or 20 consecutive hours, and then two or three or four hours another day is such an arrangement that it would upset a great deal of our social arrangements. Moreover, we have to live at suburban stations now, and in that case we would have to come inside as near as we could to a certain station, and I might be one six months at the Albert Docks, and the next six months I might be at London Bridge, eight miles intervening between my stations, so that it would be very difficult to keep moving my household according to the change of stations that I might have in the port of London.

25,586. (*Mr. Harvey.*) How do you propose to meet the requirements of the merchants?—Our proposal to meet the requirements of the merchant is: that this order is simply to give relief for four hours at the most per day to the shipowner by letting him work his ship from 6 in the morning to 6 in the evening without any charge for overtime. The overtime charges will remain before 6 a.m. and after 6 p.m., so the relief contemplated is only for four hours per day. The question with us is that that relief, if given, should not be at the expense of the officer.

25,587. (*Chairman.*) That he should not be in a worse position under that new regulation than he has been under the old?—Just so. That he should not bear the burden, that our own Board should make its arrangements. If they are going to relieve one party are they going to relieve it at the expense of the Revenue or the State, or is it at the expense of the officer? We complain that it is scarcely fair to put the whole of the burden upon us.

25,588. (*Lord Lingen.*) If the officer has to be on duty at 6 o'clock in the morning, then he is discharged at 2; is that so?—That is to be the new arrangement.

25,589. But then, I suppose, he would have somebody else come on to duty and take his place; is that so?—That is what we are informed will be the case. A system of relays, if possible.

25,590. Then, supposing that it was so organised, I presume they would not always keep the same man, or intend keeping the same man, getting up at 6 o'clock in the morning and leaving off at 2; but there would be an interchange of the easiest and harder services between the men from time to time; is that contemplated?—I expect the present arrangement of six months on a station of that kind would still be adhered to. We have a system of six months at these stations where these hours exist at

Mr. T. Cubbin, Mr. W. Symons, and Mr. M. Devereux.

11 Mar. 1889.

present, but we contend that a relay of officers must be more expensive than the system even of the Crown paying overtime for the two or three or four hours at the most which would be necessary every day. To keep a relay of officers we think would be more costly than the Crown at once taking over the burden of paying two or three hours' overtime.

25,591. (*Mr. Harvey.*) I do not quite catch then, what is the gravamen of your grievance. You do not mind getting up at the early hours of the morning for the requirements of the service, but you want to be paid for it as overtime, is that it?—Yes. We are in the habit of now giving eight hours' service per day—from 8 in the morning—and if I am put on a station where I must attend at 6 in the morning, two hours before my time, arrangements are now made by which the persons requiring my attendance pay me for overtime and conveyance for attending those two hours. Under this new system it is proposed that I should give the two hours earlier in the day myself; and, if the exigencies of the service permit, that I should go away two hours earlier in the day to compensate me for the two hours earlier in the morning. We hold that if it is necessary for an officer to be on the station to do this work, to relieve him by sending another officer is more costly than by paying him for two hours when employed.

25,592. (*Lord Lingen.*) Is it not assumed that the two hours from 6 to 8 are more valuable to the merchants for unloading than two hours from 2 to 4?—No, but it suits his case; ships come in, of course, according to the tides, the wharves, the docks, according to the weather, and they may have been entered outwards to sail on fixed dates, and if any untoward event occurs the ship is bound, perhaps, to work all night—night and day—the discharge would be continued throughout the day and night, and the officers now on certain stations have to give that attendance. An officer has to come at 6 in the morning and remain till midnight, and to compensate him for this extra attendance the shipowner pays the cost of the extra attendance.

25,593. Under the old system?—That is the present system.

25,594. In present circumstances, your hours being from 8 till 4, if you had been summoned at 6 o'clock in the morning you would have got extra pay for those two hours?—Yes.

25,595. But your day would have been a day of 10 hours?—(*Mr. Devereux.*) Yes.

25,596. But now your grievance is, at least your complaint is, that these two hours from 6 to 8 are much more than a mere part of the day's work—they are given especially in winter time, at a time that imposes considerable hardship, and interferes with your domestic arrangements, that is your point, is not it?—Yes; the grievance is, first it would imply that we should have to get up about 4 o'clock in the morning.

25,597. Yes, I know all that, but I want to know whether that is your actual point—that eight hours from 8 to 4 are a very different thing from eight hours from 6 to 2?—(*Mr. Cubbin.*) That is the point. (*Mr. Symons.*) That is set forth in our prayer to the Lords Commissioners of the Treasury. (*Mr. Cubbin.*) I think that is the whole of our case on that eight hours question; that eight hours from 8 to 4 which we have given is not so valuable as eight hours if we have to give them from 4 in the morning to 12 or from 6 to 2, or from 4 in the evening to 12 at night,—at whatever time it might be,—in fact, that these hours become more valuable according to the early part of the day or the lateness at which they are performed.

25,598. (*Mr. Harvey.*) And therefore you should have overtime allowance?—No, we do not ask for overtime. We would prefer simply to have a fixed day of eight hours. I should, and I think the other officers would, prefer to have it and let the overtime go. We simply ask for a fixed day if it is possible, and then if it is not possible, we say, if the Board wishes us to stay longer, it is easier and simpler to pay the overtime than to get a relay of officers.

25,599. (*Mr. Lawson.*) You say that in spite of the recommendation of the Playfair Commission, practically officers are debarred from rising to collectorships. What I want to ask you upon that is this, has there been any instance where one of your body has been promoted to that office?—There has been one instance, and that within a very recent date.

25,600. When?—Last month.

25,601. Where?—To the collectorship at Dundee; an officer from the Port of London was appointed to be collector at Dundee. (*Mr. Symons.*) I think there is another instance where an examining officer became examining officer and clerk at another port. He had also had experience as a clerk. He was ultimately appointed collector.

25,602. (*Lord Lingen.*) I think you must bear this in mind, that your point is that you are now required to come at hours that are new to you, but you know there are other services—the Post Office pre-eminently, and the police, again—in which people are not allowed to measure their week by daylight and darkness, as it were?—(*Mr. Symons.*) Just so. (*Mr. Devereux.*) We do not object to that. Where we consider it is necessary, such as on the rummaging duty, we never object to doing it there, because it is necessary for officers to attend through the night; but here, in the matter of the shipping, if it is to be admitted that we come on at 6 o'clock we will have to breakfast out, which will entail greater expense upon us than it does at the present time, and greater difficulties. At the present time we are not allowed any time for meals in the eight hours. Of course, we take some meals, but officially it is not recognised that we should have any time for meals. Now, if they institute this other system, I think it would be very unreasonable not to allow us some time for breakfast. This will entail a lot of expense upon people who have not large salaries, and will further bring us into contact with dock officials, and perhaps labourers, and everybody else, and the houses that surround the docks are not very desirable houses to breakfast in, and I think it will demoralise the service altogether. This question has been considered by Commissions in 1832, 1842, and 1852—exhaustively in 1852—and spoken about in 1862.

25,603. Has not the Customs some sort of canteen of its own, has it nothing of the sort?—Nothing whatever, and it has always been decided against it, although on one occasion a commission sat for the special purpose of extending the hours. Lord Granville Somerset was chairman, and he said, "We must "remark that this would necessitate nearly 13 hours "official attendance"—giving the 10 hours would necessitate 13—"taking the time of travelling there, "and the getting home, and few things, in our "opinion, would tend more to demoralise the character "of the officer than to constitute a system which "would give him the habit of frequenting public-"houses." The tone of the evidence was all in that direction. Both the Treasury and the Board decided against it then, but our Board seems to think that they can carry out what has been exhaustively discussed on these occasions and decided against.

25,604. I do not remember in my time the question being brought before the Treasury of anything like the provision of a dining-room on behalf of the Customs, has it been raised lately?—We never had anything like that. (*Mr. Symons.*) There used to be a sort of dining-room in the Custom House, but I think those who kept it did not find it pay, and it was discontinued.

25,605. Then practically the men now bring their food with them?—(*Mr. Devereux.*) Yes, and wait till we go home to dine. I usually take a cold luncheon with me, and wait to go home to dine after 4 o'clock.

25,606. (*Chairman.*) I think we understand that point, is there any other?—The hours, as they exist, I wish to bring before you, are so irregular, one officer occupying the same position as another officer at the present time in the docks, landing from a ship or supervising the tallying into a craft—these two officers will be of the same grade occupied side by side—one by the anomalous regulations that exist at the present time will be supposed to give 12 hours' attendance and receive no extra remuneration, the other eight hours, simply because of the different qualities of the goods being acted upon. There are several qualifications that nobody is able to comprehend. I have seen a report which was made in last November. I do not know whether the Board called for it or not; but the report was made by one inspector relative to this different practice of charging overtime in some instances and not in others. This was referred to another inspector, and the two reports, I might say, directly contradicted each other, so that there are two chiefs of the Department who cannot at the present time interpret the orders of the service upon this question of hours; and I do not believe there is anybody that can thoroughly

understand it. As a substitute for that we would beg your Commission to recommend that our hours, whatever they be, should be fixed and determined so that each officer would know exactly what he was to do. Sometimes we have to work 12 or 8 hours according to the interpretation of a superior. We think that that is very unsatisfactory, and that our hours should be fixed.

25,607. You mean that one day you yourself might be called upon to work 12 hours, and another day 8?—Not only that one day, but suppose Mr. Symons and I, holding the same grade, were in the same dock, and employed upon two different ships, one of which was landing on what is called "perfect entry," and the other was landing on "captain's imperfect entry" one of us would receive overtime before the hour of 8 a.m. and after the hour of 4 p.m., and the other would receive no overtime from 6 to 6.

25,608. That I understand to be your suggestion, that examining officers should in no case be employed for more than eight hours without additional remuneration?—That is it.

25,609. Is there any practical difficulty—do you see, as a reasonable man, any difficulty in that—you know the exigencies of the service?—Why should there be distinctions made because of a perfect entry or imperfect entry, or anything like that? The officers have got nothing to do with that; what they look to is to perform the duties they are called upon efficiently, and to work a certain number of hours. Why should the working of these hours depend upon a thing over which we have no control, whether the goods are entered up or whether they are not? I do not think it is compatible with the public service to have such irregularities as that.

25,610. Is it the idea that the one kind of work demands closer attention than the other?—(*Mr. Symons.*) No. (*Mr. Cubbin.*) No. (*Mr. Devereux.*) There may be that idea, and perhaps as a penalty on the merchant for not having his goods entered up, the Board think that they have a right to charge him in the one case, and they have no right to charge him in the other; but I do not see how that ought to affect the officer. I think in dealing with the merchants the Board ought to some extent leave the officers out of the question, and deal with the merchants in some other way than bringing the officer in. (*Mr. Cubbin.*) I should like briefly to enumerate the three points in the examining officer's duties, I could do it in a few moments. Not that I wish to magnify the work of the officers in the least, or to detract from the work done by our superior officers. The three particular branches of work I should like to enumerate are these:—First, the water-guard officers are employed to rummage all ships from foreign ports, so that the protection of the revenue in the first instance falls upon them. The second is the examination of all free goods, which the examining officer is called upon to pass through his hands, or to see that these goods, which are entered as free, are free, so that the protection of the revenue again falls within his control. The third is that the examination of all baggage and of all goods that can be brought in baggage is performed by the examining officer. So that the three main inlets by which the revenue might be defrauded are completely controlled and guarded by the examining officer; and, holding that position, we simply ask (at least, I take it to be the plea of our position in this statement) that when the classification and the inducements which were held out, and under which we have worked for so long and for so many years, are taken away, our case should be considered, and that we should have some standing and some prospects still before us. I do not wish to detract whatever from the work of our superior officers, or to say that we do it solely, but we are simply there in that position. That is my case as regards our position, and I trust—indeed I have no doubt whatever—that it will be truly recognised.

25,611. I think you have stated your case very fairly—is there anything more?—(*Mr. Devereux.*) There is one point, I think it was in 1876, that a change in the emoluments of the examining officer was made. Prior to that, examining officers had higher salaries in London than at the out-ports.

25,612. In 1876, do you say?—I think it was the year 1876; I will not be definite, but it was about that time. The superior positions were also more numerous comparatively than at out-ports; these positions were reserved for London officers only. Now the salaries of second class examining officers in London and at out-ports are equal, and promotion to the superior vacancies in London is frequently made from the out-ports. This has placed London officers at such a disadvantage that numerous applications have been and are being made by London second class examining officers for transference to the out-ports. The Board cannot see their way to grant them. We therefore would most earnestly beg your Commission to recommend some compensation to officers in London for the extra time and expense spent in travelling, and for the enhanced rents they pay for dwelling-houses in London. Some dispute that dwelling-houses are dearer in London, but they cannot dispute that we incur from 6*l.* to 7*l.* a year travelling expenses, which are not necessary at out-ports. Our labours, I think, are more onerous, and I am certain that on the whole we deserve some consideration, more especially as we evinced a desire to go to the out-ports, and it was supposed that the officers who came into London would have a prior claim, because when we passed the competitive examination London was always put at the head of the list, and the officer who takes the highest place was allowed to go to London. Now having gone to London they find that the position is reversed, that it is more desirable to go to an out-port. We cannot go there, and we think, being compelled to remain in London, that we ought to have either higher salaries or some allowance for travelling expenses. (*Mr. Symons.*) I have a copy of a petition which was submitted to the Commissioners of Her Majesty's Customs, which was signed by nearly all the officers in the department, asking that they might be pleased to grant travelling allowances. I should like to leave a copy of this petition, and the reply, and also a copy of the petition to the Treasury with reference to the proposed increase in the hours of labour, and the reply of the Treasury, as well as a copy of a printed statement on the same subject sent by us to members of Parliament (*handing in the same*). (*Mr. Devereux.*) There is one short point, and I will tell you what it relates to. We think that in all probability this Commission will recommend an amalgamation with the Excise. We do not know, we think so. If so, we do not object to it, but we think that perhaps our case would not be sufficiently understood, considering that there has been an abolition of 25 surveyorships, as pointed out to you, and that we now stand in an adverse position. Therefore we hold inferior positions now, many of us to what we ought to hold if the old system had gone on. Accordingly, if transferred to the Excise, we think that some consideration ought to be given to those officers who ought to have attained higher positions than those that they now occupy; because some of these suffered severely from the amalgamation of 1882, and we think it would be very hard that in another amalgamation they should suffer again.

25,613. In fact, your experience of this amalgamation has not been such as to lead you particularly to desire another one and a larger one?—Not at all.

25,614. Upon that point you do not express any opinion, but you say if there is an amalgamation suggested this Commission ought to bear in mind your particular case, and take care that your interests are looked after?—Of course we would be likely to be transferred upon the status we now occupy. I think that would be unfair to many officers in the Customs, because they occupy an inferior position to that which they ought to occupy if promotion had gone on in the natural course. Further, that if there is an amalgamation it should be a real one, that the officers must be interchangeable, because we fear that many of us would be kept in the warehouses at the ports; and the large warehouses at the ports are far more unhealthy than the warehouses in the country places. If we are to be made Excise officers, we second class men, at least, do not fear it, but we think that we ought to be made thoroughly interchangeable—that we take the duties in the country places and everywhere else of Excise officers, and let them take the duties at the wharves and quays and badly-ventilated warehouses in London.

25,615. That you mutually should take the rough and the smooth together?—Yes. (*Mr. Cubbin.*) Might I say a word about the out-port examining officer? I was one for many years at the smaller ports, and know what the work is. When I was at an out-port I held five distinct commissions or appointments. My first was as Examining Officer of Customs, my second was Quarantine Officer, my third was Deputy Receiver

Mr. T. Cubbin, Mr. W. Symons, and Mr. M. Devereux.

11 Mar. 1889.

of Wreck; the fourth, Deputy Superintendent of Mercantile Marine; and the fifth was an appointment by the Board of Trade to make inquiries into casualties at sea, such as wrecks and loss of that kind. Reference has been made in the statement submitted by our own Board, and published in the appendix to your second report, enumerating the different duties performed by officers at the out-ports. I can speak and testify to the fact, having performed them for seven or eight years or more, and to the varied and valuable services which those officers render; and I think that there should be some recognition of the work done by these examining officers, that they should have the same chance of promotion, the same chance of preferment, all through the kingdom. I know for many years that they had not the same; they were not treated in the same way, and many of them were left at these little places for a lifetime, and I should like that whatever change does take place the officers of the service, no matter where they are situated, should be dealt with on the same basis, fairly, and treated alike.

25,616. As far as possible the whole service should be treated homogeneously in the matter of promotions, and equal chances given to everybody?—Yes, treated as one.

The witnesses withdrew.

Mr. Daniel Moloney and Mr. Thomas Augustus Webb called and examined.

Mr D. Moloney and Mr. T. A. Webb.

25,617. (*Chairman.*) You and Mr. Webb represent the outdoor officers of the Customs?—(*Mr. Moloney.*) Yes.

25,618. Not only, I believe, in London, but at most of the outports?—Partly so; at the outports with the exception of Liverpool.

25,619. With the exception, perhaps I may say, of those ports that have sent in separate memorials to us?—Yes.

25,620. I must ask you to put before us the points upon which you lay most stress; take it in your own way, remembering that you have set your case very fully before us already?—We do not wish to over-elaborate our case, so long as we have explained to you the points which we wish to lay clearly before you. We will take the acting examining officer first. (*Mr. Webb.*) We refer now to page 6 of our paper. (*Mr. Moloney.*) I might say with reference to this case that the acting examining officer forms one of the greatest grievances that we have as outdoor officers.

25,621. One of the greatest grievances?—Yes; not alone in London, but with a number of the outports that we have been in communication with. They are at one on this question, that the acting system ought to be abolished, as it deprives us of the actual amount of what we ought to receive in consideration of the labours that we discharge. We are doing the duties of examining officers when we are employed as acting, and we do not receive the emoluments that are attached to the examining officers' position. There are 70 acting men in London alone, and as such they get 1*s.* per day, or at the rate of 2*d.* per hour, which is not to exceed 1*s.* per day if so employed.

25,622. (*Mr. Harvey.*) Will you tell me where in the Estimates provision is made for that?—I cannot point out clearly to you in what part of the Estimates this charge is embodied. It comes under the class of special remuneration.

25,623. (*Chairman.*) Is it "special allowance" to outdoor officers acting as second class officers"?—(*Mr. Webb.*) No, this is acting examining officer.

25,624. (*Lord Lingen.*) An acting examining officer is a man to whom 2*d.* an hour not exceeding 1*s.* per day is paid?—For doing superior duty?

25,625. For doing examiner's duty?—Yes, exactly.

25,626. (*Chairman.*) Then what is your special point with reference to the position of the acting examining officers, or rather their employment?—(*Mr. Moloney.*) Our point is this, that by the employment of outdoor officers in the capacity of examining officers the positions are not filled up that ought to be filled up, and the 1*s.* extra per day is paid to outdoor officers for doing this duty to which the minimum salary attached as examining officers is 110*l.* per annum with a 7*l.* 10*s.* annual increment following on to 220*l.* (*Mr. Webb.*) Of course it cannot be done away with entirely; what we complain of is making it a regular system.

25,627. (*Mr. Freeman-Mitford.*) Do you mean instead of promoting?—Yes, exactly. At Goole there is one man who has been continuously acting for 10 years; he has been doing superior officers' duty for 10 years, and another man for nine years continuously.

25,628. There being vacancies amongst the permanent officers' places?—If those two men are doing superior duty they are simply filling up what should be superior appointments.

25,629. (*Chairman.*) Your complaint is that the superior duties, which should be done by assistant examining officers or examining officers of the first and second class, are done to too large an extent by acting examining officers who are outdoor officers receiving 2*d.* an hour, not to exceed 1*s.* per day for the work?—That is it exactly.

25,630. And that instead of that arrangement there ought to be promotion, or rather, I ought to say, more assistant examining officers and examining officers?—Yes.

25,631. (*Lord Lingen.*) Is not that grievance to a certain extent met by the creation of the assistant examining officer, on a scale from 100*l.* by 3*l.* a year to 150*l.*?—No, because these acting men still are existing.

25,632. Are they existing in the same proportion as they were before the creation of that class?—(*Mr. Moloney.*) They are and still more so.

25,633. How can that be? Here are 160 assistant examining officers; that class has been filled up by somebody, I suppose, has not it?—Yes; these should be, properly speaking, second class examining officers.

25,634. Then now we are coming to another point. You contend that these assistant examining officers are still not sufficiently paid; is that it?—(*Mr. Webb.*) No; that there are not sufficient of them.

25,635. (*Mr. Freeman-Mitford.*) Then you want the creation of new posts, in fact; is that it?—(*Mr. Moloney.*) No; we want existing posts filled up, corresponding with the responsibilities and the nature of the duties that are performed.

25,636. Existing vacancies filled up?—(*Mr. Webb.*) For instance, if there are two men acting as they are at Goole continuously, acting every day doing superior duty, I think that shows that there are two vacancies that want filling up.

25,637. (*Mr. Cleghorn.*) You mean that some of these, called outdoor officers should be called assistant examining officers?—Assistant or second class examining officers.

25,638. (*Lord Lingen.*) There are at present 160 of them. The state of matters is now this: a second class outdoor officer begins at 55*l.*, and by 30*s.* goes up to 80*l.*; then the first class go up from 85*l.* to 100*l.* Until quite recently the next step in the chain was an examining officer at 110*l.* to 220*l.*, but now you have got a class created, I believe; is not it the assistant examining officer?—(*Mr. Moloney.*) Created in 1886.

25,639. Who gets from 100*l.* by 3*l.* to 150*l.* That is very much better than the man who only can get 1*s.* a day for being examining officer, not above 15*l.* or 16*l.* a year, leaving sundries out?—(*Mr. Webb.*) Yes, but still there are not enough of the assistants.

25,640. That is the point we come to, that 160 assistants only are not enough, and that class ought to be increased?—Either that or the second class examining officer. I should explain that assistant examining officers cannot do all the work of a second class examining officer. There are certain properly defined duties that they may do, but an acting man, so far as I know, can do any duty of a second class examining officer.

25,641. (*Chairman.*) Can you give us at all the number of men who are now acting in the capacity of outdoor officers?—In London about 70. At various

outports it is different. For instance, at Bristol out of 18 officers I believe 13 of them are acting?—(*Mr. Moloney*) 13 are not paid. There are 18 acting men in Bristol and 13 are not paid anything for doing the duty.

25,642. (*Mr. Freeman-Mitford.*) To go back to what you said just now, it is obvious that according to you there is an insufficiency of higher posts. There are not vacancies in the existing higher posts, but you want more higher posts created, is not that it?—(*Mr. Webb.*) Yes, so as to do away with the acting system as a continuous system.

25,643. You said just now there were vacancies because two men were doing the duty; but there are not vacancies as a matter of fact. You wish that it should involve vacancies?—(*Mr. Moloney.*) I wish to point this out: that in 1883 and up to the year 1885 we had no such post at all as assistant. The examining officer's duties were confined to the first class and second class examining officers, with a salary varying from 110*l.* up to 300*l.* In 1885 a new class was created, called an assistant class, as we have shown in our statement, with limited powers, and those powers were gradually extended until now there is a saving clause in a recent Board's Order, which states that they may be employed temporarily in any duties for which they may be fitted. That means to say, they may be employed as long as the honourable Board wish to retain them. In London alone we have over 70 acting examining officers. I am an acting officer and have been for 4½ years, one of those men who are getting 2*d.* an hour. I was employed 4½ years ago and since then I have been employed about two-thirds of each year, for about eight months out of every year.

25,644. (*Mr. Freeman-Mitford.*) As acting?—As acting in the capacity of examining officer in all the duties.

25,645. Then does not the fact that you were only employed during eight months of the year as acting, show that there was not a permanent necessity for the post?—(*Mr. Webb.*) In his case alone, but then there are other men who are employed continuously. (*Mr. Moloney.*) In London alone there are 70 of us, and we contend that an average of half that number would put in a whole year's service as examining officer.

25,646. (*Mr. Harvey.*) Seventy continuously employed all day long in acting examining officer's duties—do you mean that?—Not altogether through the year—at stated intervals through the year.

25,647. (*Mr. Cleghorn.*) You said you thought about the half of them might be considered as required all the year round?—Yes, I said, that an average of the number of half of them would complete a whole year's service, that is to say: that there ought to be 35 more appointments to the higher grades made in London, to the assistants or second class examining officers. (*Mr. Webb.*) And 35 less acting appointments. (*Mr. Moloney.*) We are not altogether wedded to the assistantships, as we consider they did not exist when some of us entered the service.

25,648. (*Chairman.*) That is your principal point, is it not?—That is the leading point—we consider that that is a great grievance, not alone at this port, but at every other port.

25,649. Will you go on to some other point?—I will not enlarge further on that, seeing that there are a great many who were acting who are doing this superior duty without receiving any emolument whatsoever, not alone in London, but in the outports they are getting nothing whatsoever more than an outdoor officer's salary for discharging all the responsible duties of an examining officer—temporarily, I will admit.

25,650. (*Mr. Freeman-Mitford.*) Not for any great length of time, I suppose?—No, temporarily.

25,651. (*Chairman.*) Now we will take another point, if you please?—(*Mr. Webb.*) I have an instance here of an officer in Belfast who has been continuously acting since October 1886, without any extra remuneration at all.

(*Lord Lingen.*) We have got pretty well before us the case of the acting examining officers.

25,652. (*Chairman.*) You say that is your most important point?—(*Mr. Moloney.*) Yes.

25,653. Now will you be kind enough to take us to another point?—The next point that we wish to call attention to is the annual increment received by outdoor officers. (*Mr. Webb.*) Page four of our paper.

25,654. Was the present scale of annual increment established after the inquiry of Mr. Horsfall's Committee?—Yes.

25,655. What is the suggestion that you now make?—The suggestion we make is that at the present time those who entered the service at the lower rates—55*l.* per annum—are receiving 30*s.* as annual increment; and those who entered the service at 70*l.* a year are receiving, while they are in the second class until they reach 85*l.*, 20*s.*; after that they receive 30*s.* What we propose is this, that classification altogether be abolished, that there should be no such thing as first and second class within the department; and that the annual increment be increased to 3*l.*

25,656. (*Lord Lingen.*) You know the abolition of classification means advance without regard to merit. I think there must be some limit to that principle?—In our service there is no distinction whatsoever made, and the duty is discharged between one class and the other. A second class outdoor officer has to do the same duty that a first class outdoor officer has, and there is no examination or anything else required in passing from one grade to the other.

25,657. (*Mr. Harvey.*) Does a waterman pass into the outdoor officers' second class as a matter of course?—No.

25,658. Does a second class outdoor officer pass into the first class as a matter of course?—Yes. (*Mr. Webb.*) Provided his character is right. (*Mr. Moloney.*) But then there are barriers and classification between first and second class, and notwithstanding how good an officer's character may be the road is stopped, and there is no promotion until such time as there is a vacancy in the first class, according to the classification of it.

25,659. (*Chairman.*) There must be a vacancy in the first class?—There must be a vacancy. (*Mr. Webb.*) There is another point I would like to bring before you. Some little time ago a copyist at Cowes was appointed directly to a first class outdoor officership. He had never been an outdoor officer before, he was simply a copyist, and he was immediately made a first class outdoor officer. Of course, the officers considered that a grievance.

25,660. That is some special case that I think we can hardly deal with, there must have been some special reasons for that. Why do you quote it now?—We do not know whether it would be used as a precedent for other copyists to be served in the same way, because, of course, as outdoor officers pretty nearly the only thing we have to look forward to is being put in the first class while it exists, and when a copyist, who is quite an outsider is brought in, we reckon that it is loss of promotion for one man.

25,661. (*Lord Lingen.*) The outdoor officers come in by competition, I think?—Yes.

25,662. You said something about the increment, the 30*s.*, did you wish to make any suggestion about that?—(*Mr. Moloney.*) We wish to enlarge it to 3*l.* Have a 3*l.* increment and classification abolished, as we consider that at that rate it will even take 16 or 17 years' service for an officer before he reaches 100*l.* (*Mr. Webb.*) Fifteen years.

25,663. Is the promotion entirely a seniority one from the second class to the first?—Not entirely now, it was until quite recently, but within the last year or 18 months or so, two if not three officers that we know of have been placed over the heads of their seniors on account of special service I believe. (*Mr. Moloney.*) I might enlarge upon that point by saying that this special promotion to the first class in our service in the case alluded to has caused a great deal of annoyance within the department. There is one of these officers who has passed over 66 others within this port alone. We do not deny that superior merit ought to be rewarded by our superiors, but what we do contend is this: that it is an injustice to all those men who have been passed over that the merits of one man should re-act against them; if he has done any special act that he should be rewarded in some other way, either by promoting him to a superior capacity, or else by some monetary grant, but placing him in the first class over 66 others, causes all these men to be dissatisfied with this arrangement.

25,664. (*Chairman.*) How can you have promotion by merit without passing over the heads of some who are not thought to be of equal merit. I do not see how it

Mr. D. Moloney and Mr. T. A. Webb.

11 Mar. 1889.

is possible?—Within the class we may. (*Mr. Webb.*) We would not object to him being made an assistant, because we recognise that assistantships and examining officerships go entirely by superior merit. An outdoor officer on London duty has practically no chance of distinguishing himself, but an officer on Gravesend duty may distinguish himself very much, as in the instances we are quoting, by making seizures under difficult circumstances and so forth, and rendering himself entitled to promotion, but an outdoor officer in London might be an excellent officer and do his work very well, but it is simply official work, and we have no chance of distinguishing ourselves in any special manner. Those officers for a certainty can only look forward to the first class. They would not mind these special men being promoted to assistants or second class, because it is recognised that a man only gets in there by competition or on account of special merit; but the first class is one which we all look forward to go to by seniority alone.

25,665. (*Lord Lingen.*) This man was brought out of the second class, I suppose; was he put over these 66?—Yes.

25,666. He was not brought from outside the body?—No; he was not brought from outside the body. The copyist is the only man who has been brought from outside the body.

25,667. (*Mr. Freeman-Mitford.*) And you say that he had distinguished himself by superior ability in the discharge of his duties at Gravesend?—Yes. (*Mr. Moloney.*) I may also remark with reference to the copyist that we have been informed that at Cork, Bristol, Inverness, Liverpool, Llanelly, Wick, and Greenock, seven places in all, there have been recently copyists appointed to outport clerkships, superior appointments, and, so far as we have any knowledge, without any further examination.

25,668. (*Chairman.*) To outdoor officerships?—(*Mr. Webb.*) To second class outport clerks. If you look at the end of our paper, you will see there a copy of the petition which we sent down to the Board concerning that. We would like to have these outport clerkships thrown open to us. One examination was open to us, or part of it. (*Mr. Moloney.*) Twenty vacancies.

25,669. You want the clerkships at the outports open to your classes to compete for?—Yes.

25,670. (*Lord Lingen.*) I thought that had been done now, and the services amalgamated, the clerkships and the outdoor services at the ports?—No. (*Mr. Webb.*) There are still clerks, you know, at the outports, and in 1885 I think it was, there were 30 vacancies, and 20 of them were thrown open to us alone, the other 10 to open competition. Soon after that we petitioned the Board, asking them to make all these vacancies open to us, and they, as you see by the reply on the last page of our paper, said that they would take our case into consideration.

25,671. Then the Board appears to have granted your case?—Yes; but since then they have appointed these copyists to the vacancies as they have arisen.

25,672. (*Chairman.*) Now, let us leave the question of the clerks and take another point on which you are anxious to say something?—(*Mr. Moloney.*) The next point which we wish to call your attention to is retirement at the age of 60 in our service.

25,673. That is the question of superannuation?—Yes. We have a number of men in our service since the amalgamation of 1882 who are in the higher posts, and from the responsible nature of the duties—being interchangeable now from gauging to rummaging, and from that to water guard and landing—these men are obliged, in some cases, to go into the clerical offices and quiet posts, consequently, a great deal of the labour devolves upon the young men in the service; and not alone that, but it keeps back the legitimate promotion which every officer of younger years may be led to expect; and after 60 we contend that an officer is not fit for the active duties of an examining officer.

25,674. You want compulsory retirement at 60, in order to provide for promotion?—(*Mr. Webb.*) Yes.

25,675. (*Lord Lingen.*) Is there any compulsory age of retirement in the Customs service?—(*Mr. Moloney.*) No.

25,676. None?—I know one dock in London alone where the average of 22 examining officers' service is 34½ years' each.

25,677. As examining officers?—(*Mr. Webb.*) That is as examining officers alone—the higher posts. We contend that with such a length of service, and at such an age, it is impossible for the junior grades to advance in the service.

25,678. (*Mr. Freeman-Mitford.*) But they would be under 60 even then, would not they?—Some of them may; but I do not think they all are. I believe that a good large proportion of them are over 60, we leave a large margin of service. After 34 or 35 years a man may possibly be under 60. We have taken 60 in order to be on the lenient side of the question. At other places they suggest retirement at 35 years' service; but we advocate retirement at 60 years of age.

25,679. (*Chairman.*) Whether a man is fit or not?—Whether a man is fit or not; the compulsory retirement at that age within our department.

25,680. What would the men of 60 say to that, do you think? Do you think they would like to be compulsorily retired at 60, when they felt that they were fit for work?—I daresay some of them would like to remain a century if they could remain so long.

25,681. (*Mr. Harvey.*) Have you considered the general cost that would entail?—We have not worked that out; but we consider, in looking at it from an individual point of view, that very probably these men would receive high pensions, as they have, no doubt, reached the maximum of their class.

25,682. (*Lord Lingen.*) You see that is a question that should only be considered with regard to the whole service at large; you could not possibly deal with that question as applied to the Customs only?—Would it not be possible to make an exception in the Customs case, since the nature of their duties is different from what it is in other appointments.

25,683. (*Chairman.*) I do not know how that might be. At all events you have represented your views to us, and we must consider them. Is there any other point especially that you would like to allude to?—The alteration of the hours of labour. We in London are not in a position yet to know to what extent our honourable Board are going to alter our hours, but we may say that the Liverpool officers will be able to tell you that there is a scheme now in force there as an experiment which we are informed was ready to be extended to all the ports in the United Kingdom. With a view to avert that we went and consulted our Board on the matter, and the secretary informed us as outdoor officers that our hours were from 6 a.m. to 6 p.m. throughout the year with a reasonable interval for meals. We contend that no such conditions exist as regards our terms of service, and we are fortified in this by a circular which has been issued to candidates for outdoor officerships in the Customs by the Civil Service Commissioners at the request of the Board of Customs, telling the candidates that when they were employed upon the river their hours were irregular, and could not be defined, but when employed in the warehouses their hours are from 8 to 4 in the summer and 9 to 4 in the winter. Yet in the face of that they told us distinctly that our hours were from 6 a.m. to 6 p.m. throughout the year. We contend that it would be an impossible condition for us in London to work from 6 a.m. to 6 p.m. considering the distance that we have to travel to our stations. If we had to attend from 6 o'clock in the morning till 6 in the evening it would practically mean 14 hours continuous work.

25,684. I do not understand that the alteration or fresh regulation has yet been made?—At Liverpool.

25,685. We are talking of London, and the Liverpool gentlemen are going to be represented here, so I really must ask you to keep yourself to your own facts, because we are going to hear those gentlemen. I understand that in London the object you have in mentioning these things is simply in advance, as it were; you fear that something of the sort is going to be done. Well, that is hardly a question for this Commission to consider?—The question has been raised, and we dispute the contention of the Board of Customs that our hours are from 6 to 6.

25,686. Do I understand that the Board of Customs have told you that your normal hours are from 6 to 6?—They told us distinctly that our hours were from 6 a.m. to 6 p.m. throughout the year for the outdoor officers with a reasonable interval for meals. That was told, by the deputy chairman of the Board, to a deputation of our body which waited upon him at his request.

25,687. (*Lord Lingen.*) Did you understand him to mean that your ordinary regular hours for your salaries were from 6 to 6, or that you might be required to attend for those hours with the understanding that beyond the regular hours of service, 8, or whatever they may be, you would have extra pay?—(*Mr. Moloney.*) No. (*Mr. Webb.*) No; because we understand at once that we may have to perform any duty at any time without extra pay, Sundays or week days, night or morning, at any time.

25,688. Do you feel quite sure that the proposal of 6 to 6 was service for your regular salaries?—(*Mr. Moloney.*) Yes. (*Mr. Webb.*) I did not hear that myself. I was not present; but I should like to state that for some duties outdoor officers are often employed now from 6 to 6 in London, without extra remuneration.

25,689. Occasionally, you do not mean regularly?—(*Mr. Moloney.*) Not in London, in the waterguard it is very irregular. There were no definite rules there, but on land the regulations are governed by the regulations at the warehouses.

25,690. (*Chairman.*) You mean that the regulations of the warehouses, as regards hours, govern all the regulations as to hours and all the work of the outdoor officers?—Yes; our hours and theirs are the same, except the extra hours. Of course there would be an overtime charge made.

25,691. Did not I understand you to say just now that when you entered the service you were informed that, as regards warehouses, your hours would be from 8 to 4, or from 9 to 4, as the case may be; but as regards employment on the river the hours would be irregular?—Yes. (*Mr. Webb.*) Yes.

25,692. Does that cover the case from 6 to 6, or any other time that might be required of you as a Government servant, or does it not? I imagine it might be held that there are no regular hours at all, that you must do what is required of you?—(*Mr. Moloney.*) Candidates frequently complained that they were deceived as to the number of the hours that they had to perform the Customs service, and as an instruction to candidates entering the Customs service, the Civil Service Commissioners issued this circular. We looked upon that in the light of being the recognised official hours for the salaries that were awarded to that position.

25,693. I know nothing about it beyond what you have now mentioned; but it seems to me, from what you state to us, that the warehouse hours are clearly defined; but with reference to the others they are stated to be irregular, and that is all the information that you appear to have had?—It is not exactly laid down in one continuous line. Of course, by the circular the hours are really changeable, according to the nature of the duties.

25,694. Then your contention is that to ask men to work from 6 to 6 on riverside duties is an unreasonable length of time?—In warehouse work and landing duties we consider it unreasonable.

25,695. In landing duty?—In any duty, while we are employed on land.

25,696. Why would it be unreasonable on land when it is not unreasonable on board ship?—Simply because on board ship the men are always on board the vessel, and the moment they rise in the morning they are at work, and there are reasonable times for meals on board the vessels and not on land. On land we have to travel two hours in some instances,—four, five, and six miles to reach our respective stations in London. The work is continuous. The warehouses are not shut during the day, and we are constantly in attendance till they are shut at night.

25,697. You are speaking now of attendance outside the warehouses, are you not?—I am speaking of the land, the ordinary land duties in London.

25,698. Outside the warehouses; but inside the warehouses the hours are not from 6 to 6, as I understand?—(*Mr. Webb.*) Any of the landing duty we reckon as warehouse duty.

25,699. That is what I wanted to understand clearly?—Inside or outside is no difference; the only difference is land duty and water duty. Water duty is done by the waterguard officers, and if free goods are being landed the officers are detained there till 6 for nothing. I have been detained myself. It does not very frequently occur; but it does occur.

25,700. Let us be clear as to what your position is about these hours of labour?—(*Mr. Moloney.*) Our contention is that when on land in London—when I say land I mean duty as distinct from that on the river—let our hours be from 8 till 4, as they are at present, in the summer, and 9 to 4 in the winter. Those are the hours at present in force, but we were disagreeably surprised to find that we had no claim to such hours, and further it was stated that any charge that we had made beyond these regular hours was only by the courtesy of our superiors.

Mr. D. Moloney and Mr. T. A. Webb.

11 Mar. 1889.

25,701. Have you any other point that is not sufficiently clear in your statement?—With reference to the awarding of characters, I should like to make a remark on that point. It is referred to on page 7 of our statement. The present method of awarding characters is in the scale of A, B, C, D and E letters, and the distinction between those are very close. A means a first-rate character, but special qualifications. Then B. is a little below that, and so on down to about seven letters, and the distinctions are so very close that surveyors, I am sure, are at an utter loss to recognise the difference in qualifications of an officer that would entitle him to one character beyond the other. We wish these lines to be abolished and a broader system of awarding characters substituted. Another matter in reference to that is, that there is no intimation whatsoever given to the officer when his character is at fault. After these yearly examinations into the characters of officers the records are kept at the Custom House, and we, as officers, have no knowledge whether they are bad, good, or indifferent, until such time or we make an application for a higher appointment or we are passed over, or we wish to attend another examination; then we are told that in a certain year there was something against us. That is a long time passed over, and there are no means of having it questioned.

25,702. I observe you state in your paper that there is a practice prevailing in the Excise which you would like to see imitated. Is it the practice that all these characters are investigated and recorded in a broader sense than is the case in the Customs, and that each officer knows what is said?—Yes, we believe that is the case in the Excise. I am not in a position to go very clearly into the Excise practice, but that we believe it to be the fact. (*Mr. Webb.*) I should tell you that we all carry what we call charge books with us, that is, small books in which we insert the duty we do every day, and every Monday morning we have to take these to our surveyor, who is a superior above the examining officer, and he has to write at the bottom "satisfied," and sign it. An officer may have "satisfied" on his charge book for 52 times in the course of the year, and yet at the inquisition he would find himself reported for being moderately attentive or having a character bad enough to prohibit him entering for any examination. There is another point I would like to bring in here. Before now I have been accused of something—openly I mean—which was done by another man. He was a man who resembled me very much, wore glasses, and had a full face with whiskers all round, and I was generally called by his name by various men on the river. I would like to point out that I may occasionally have got his character in the inquisition, but I have had no chance of rebutting it, and he may have had my character.

25,703. To whichever side the advantage might accrue by that unfortunate misunderstanding your point is, that at the time when the character is registered each officer should be acquainted with the character, and that he should have an opportunity of putting it right if he thinks it is wrong?—Exactly. If he commits any offence on duty, let it be recorded in his charge book, and if he thinks that he has a grievance against that charge, let him appeal against it. If he does not appeal against it, take it that he admits that he is guilty of the charge, but it seems rather strange that a man should have the surveyor, who is so much above him, satisfied with him for 52 weeks, as witnessed by the surveyor's signature, and at the end of that time he is told that his character is not good. (*Mr. Moloney.*) There is one more point I should like to bring before you before we close; it is with reference to the examination. On page 5 you will see the method of recruiting second class examining officers into our service. They are recruited half by competitive examination and half by selection. We complain of the method of withholding the result of the examinations from the candidates who compete. They simply give the names of the successful ones.

Mr. D. Moloney and Mr. T. A. Webb.

11 Mar. 1889.

25,704. Is not that the case generally?—No. At the outports clerks' examination to which we are admitted, by the payment of sixpence we can get an analysis of the results of the examination, so that every officer, if he was successful or not, knows how many marks he got, and it is a usual thing for the Civil Service Commissioners to publish these analyses for every examination. By that means an officer is able to tell somewhere nearly where his weak points are, and so for a future examination he could fortify himself on those points. The Board were approached upon this matter, I believe, by the "Civilian" newspaper, but they refused to give any satisfaction. I should mention that we have to pay an examination fee just the same as outside candidates.

25,705. Is this the practice, do you know, to any extent in the examination for any other Government office?—I never heard of another instance.

20,706. Can you give me any reason, or do you know at all why it is in your case?—I have not the slightest idea. The Board simply refused to give the information. I believe the "Civilian" offered to defray any expenses that would occur, but I cannot say that positively. I have exhausted all I have to say about London. I have a few items here that I have received from the outports, which I think the Commissioners would like to know. I will not detain you long with them. We have heard altogether from 42 ports, some very smal places, and each of them have their own grievance. We have endeavoured to tabulate as much as possible what the general grievances are, but they are at one with us as regards the acting system. All ports agree with us in that. They complain of the abnormally long hours at seven ports, North Shields, Middlesbrough, Boston, Alloa, Barrow-in-Furness, Hull, Folkestone.

25,707. How long hours?—Long hours extending to 18 and 19 hours per day they tell us. They complain of having to perform menial duties, which they described as washing and scrubbing boats and offices, painting, and running messages at Hayle, Barrow-in-Furness, Folkestone, and Newcastle-on-Tyne. There are 14 ports complain of acting examining officers working without any remuneration whatsoever. These do not include Liverpool or Southampton or Harwich. In Bristol alone there are 13 not paid out of 18 who are acting. The officers at Queenstown complain that the watermen, who are an inferior grade, receive preferential duties to themselves, the outdoor officers. At Grangemouth the officers complain that there are two who have been acting continuously, one for seven years and the other for five years, and are not yet established. That is a summary of their statements to us.

The witnesses withdrew.

Adjourned till to-morrow at 12 o'clock.

SEVENTY-FIFTH DAY.

7, Whitehall Place, S.W., Tuesday, March 12, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

MR. A. B. FREEMAN-MITFORD, C.B.
MR. R. W. HANBURY, M.P.
MR. H. L. W. LAWSON, M.P.
MR. MACLURE, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

Mr. GEORGE MAIN SMITH and Mr. ISAAC E. GEORGE called and examined.

Mr. G. M. Smith and Mr. I. E. George.

25,708. (*Chairman.*) You gentlemen both represent, I believe, the out-door officers of the Customs at Liverpool?—(*Mr. George.*) We do.

25,709. We had the advantage yesterday of seeing some gentlemen representing the out-door officers in London, who also spoke for 42 other ports; and therefore I will ask you to keep yourselves to the points which especially concern Liverpool, and wherein you differ from the other ports. I understand you wish to be dealt with separately?—Yes.

25,710. You sent us a paper which is very exhaustive; perhaps you would kindly supplement that by calling attention to the special points in it; do not take us right through it because we are pretty well familiar with the main facts?—You will be interested to learn something which would probably increase the efficiency of the service generally. The sore point which is specially felt at Liverpool is this, that young men coming into the service under competitive examination, as you read from the statement of the London officers is the case, are put upon water-guard duty at Liverpool. There is a staff now of about 30 young men on water-guard who have been on it about two years. That duty we shall contend is not such as requires a great degree of intelligence, nor such as would require that a man should be put to a severe educational test to make him fit for it. He is on that duty for various periods, a large staff now having been on over two years. During that time there is absolutely no opportunity of an officer learning any other duty at all than that of the water-guard, and of the water-guard only such as absolutely belongs to watching. The officer does not even get to learn the tide surveyor's duty, the tide surveyor being his senior officer. We consider that by that system the efficiency of the Revenue Department which we represent has deteriorated very much. It is not at its best.

25,711. What do you suggest?—We have suggested that the water-guard duty should be performed by a carefully selected staff of naval pensioners who would be able to do it more efficiently, as far as physical performance is concerned, than these young men, many of whom are fresh from school or from inland towns, and are not so well adapted for it physically. The naval pensioners would be able to do the watching quite as efficiently; we contend that they would be able to do it somewhat more economically. Numbers of these young men are continually on the sick list, perhaps five out of thirty. That will not be a large per-centage to estimate for those who are sick—chest complaints, most frequently neuralgia and such things, all derived from exposure. They are sent out in boats on the river and may be cruising about for several miles until they are boarded on a ship, the boats starting from what we call a boarding station, where there is a staff of men ready to place on foreign arrivals.

25,712. Have you ever complained at all as a class to the Board that this exposed work was hard upon young fellows first joining?—We have.

25,713. And have you made a suggestion to the Board?—Yes.

25,714. Has the Board considered the suggestion that you make. Did you originate the suggestion that there should be a select staff of naval pensioners to perform that duty?—We originated that suggestion.

25,715. Has it been considered by the Board?—It has not been considered by the Board. The Board have been complained to as regards the severity of the duty as felt by the young men; and their reply was to severely censure the officers for combining to—it would be difficult to say what—for the mere fact of combination—they must combine in order to sign a document, a petition which they sent to the Board. They were censured for that. The water-guard surveyor described them as the most discontented set of officers he had ever been called upon to superintend.

25,716. Is this recently that you are speaking of now?—It is recently.

25,717. In coming before us that is the recommendation that you make with reference to boarding duty; you summarise it, I think, at page 5 of your paper?—Yes.

25,718. Then I think you make the suggestion, which has been made by others before you, with reference to the hours—8 hours in summer and 7 hours in winter—without extra remuneration. I do not think there is anything special in the hours at Liverpool that differs from the hours in the port of London, or in other ports?—Generally speaking, there is not with regard to landing and shipping of goods.

25,719. I believe that the practice is identical at the ports, and the views that you entertain are exactly those that are put forward by the gentlemen who came here yesterday?—They will not be able, perhaps, to speak from actual experience of the duty. They have not felt the pressure as we have.

25,720. Where do you feel it?—We were commissioned to express the gratification of the officers that the Treasury had definitely extended to them this concession of an 8 hours day in summer and 7 in winter; or, more correctly, 42 hours duty during the week in winter and 48 during the summer months. We express our gratification at that, although it has told upon us a little severely in some directions by calling us out earlier or keeping us at duty later. For instance, although we may work 8 hours in the day, yet coming at 6 in the morning makes itself felt a little more severely than coming down at 8 in the morning, 8 being the legal hour at present. Then, again, working from 10 to 6 is highly inconvenient as shortening the evening very much for the officer.

25,721. But then I understand that you are satisfied with the concession of the Treasury?—We are, but we would like it fixed on a still firmer basis. We would like it, so to speak, in black and white from them; some order which there would be no possibility of gainsaying in the future. We think something of the sort is due to us still.

25,722. Then you make the same suggestion with reference to the increment of your salaries being increased from 1*l.* 10*s.*, which it is in both classes of out-door officers, to 3*l.*, and the abolition of classification?—Yes.

25,723 There is nothing new, I think, in that, and that is exactly the same point that your brethren make from the other ports?—Those are very strong points; but there are, perhaps, some special features in connexion with Liverpool duty which call for consideration, and we urge our claims in that connexion.

25,724. What are the special points in connexion with Liverpool that you wish to call attention to?—The general loss of prospects suffered by the officers.

25,725. That is not peculiar to Liverpool, is it?—To a certain extent it is. There is a large per-centage of our class on what we call clerical duty. That work a few years ago was done by lower division clerks. It is now done by out-door officers.

25,726. We know all about that. That was what was called the amalgamation of the out-door and clerical department in the year 1882?—Yes. The anomaly is this, that the work is given to out-door officers, men who entered the service at 55*l.* a year, so that we are now doing the work that should really be done by examining officers and was formerly done by lower division clerks, so that the number of staff appointments open to us is diminished by the number of out-door officers doing the superior work. That is our strong contention for an increase of salary and increment.

25,727. You ask for that increment of salary principally upon the ground that since you have joined the service the reorganisations have injured your prospects by taking away a large per-centage of the higher appointments which were open to you?—That is very much so.

25,728. Then you dwell upon the acting system, which is the employment of the first class or second class out-door officers as acting examiners, whereas a class of assistant examining officers has been appointed recently, as you say, for the very purpose of doing that work?—Yes.

25,729. And you think that there should be more of those officers, and that your class should not be employed as acting officers so long without remuneration?—Yes, we do.

25,730. Or with such a small remuneration?—Yes, the large number of the acting men is a most grievously sore point with us at Liverpool. There are 20 per cent. of the Liverpool out-door officers continually employed in doing the examining officers' duty. For instance, of the staff of 45 tide-surveyors you may have 20, that is one half, composed of out-door officers, continually doing that work, not for a day or two or a week, but at it quarter after quarter, and year after year.

25,731. Do you mean that 20 per cent. of those officers are practically employed for the whole year?—Constantly that number.

25,732. Wholly on examining work?—Constantly.

25,733. (*Mr. Hanbury.*) How long has that been going on?—It has been growing gradually for years. It has been going on for a few years at this per-centage.

25,734. What do you call a few years—five or six?—Yes.

25,735. (*Chairman.*) Then you suggest the to abolition of that system, and, I suppose, if that was an impossibility you want, at all events, a reduction of it?—We contend for the abolition of anything in the nature of a permanent acting man. For instance, with regard to work which is continually required to be done by an officer of the status of the examining officer, there are certain cases where a wave of work may come to a station. The thing may be got over by employing an out-door officer to act as an examining officer just for a week, or perhaps for longer. For instance, I may be a locker at Liverpool, at a Mediterranean shed, looking after free goods or general bonded cargo for a time. During the fruit season, as we call it, from August to December, a large quantity of dried fruit comes there, and it requires to be weighed off the quay. For that work the ordinary examining staff of the station would be found insufficient, and that is where an acting man can be legitimately called in to assist. We deprecate the employment of acting men outside this sphere.

25,736. For anything like the permanent work of the establishment you mean?—Yes.

25,737. Then you make a suggestion that all vacancies for clerks should be open to competition amongst outdoor officers; that has been to a great extent met, has it not, by the Board?—Yes, the Board have admitted a large number of young officers already to compete for the last examination held for clerks, and we have requested that they would do so entirely in the future. That would mitigate the loss of prospects to some extent.

25,738. Another point you take is that officers of the out-door department be eligible for promotion to the situation of collector and superintendent. That, I think, is an old suggestion, is it not—the suggestion of a former commission?—Yes. The contention is that the out-door staff would be qualified by their experience generally to do that superior work, and that the posts should be open to them on that account.

25,739. I do not see any other special points that appear to me to be peculiar to Liverpool. If there is anything special to Liverpool that you desire to say anything upon, perhaps you would be kind enough to do it. The other points that you name here are all points that we have already had brought before us, and of course your paper endorses the views of your colleagues, those who are in the same class as yourselves from the other ports?—We are requested to

Mr. G. M. Smith and Mr. I. E. George,

12 Mar. 1889.

speak very strongly as to the necessity of filling up the vacant assistantships. There is a large number of those still vacant at Liverpool according to the establishment.

25,740. Do you refer to assistant examining officers?—Yes; and further, the young men there, those who come in at 55*l.* recently, feel very strongly indeed the insignificance of the commencing salary. They feel it more especially since this recent extension of hours for landing and shipping goods.

25,741. (*Mr. Hanbury.*) Who are you talking of. I thought you were mentioning assistants; their salary is 100*l.*, is it not?—No, the young men who entered the service at 55*l.* feel the smallness of the salary very much more since they have lost several shillings a week in overtime under the application of this new order. Our financial case may be summed up in a very few words, that since the superior appointments have been so very much reduced the last few years through several causes, most of which you have heard, I think it naturally follows that we are to be out-door officers for longer and longer periods continually, and we cannot be drafted off so quickly. The remedy seems to lie in the increase of increment so that we should not suffer so much by remaining out-door officers for a longer period. Then there is the contention as to the superior work now done by out-door officers. I may point to a reference in one of our paragraphs. At the middle of page 3 we say: "in short, the tendency in this department at present is to take advantage of the abilities of competitive out-door officers and place them upon superior duty alongside of, and doing the same work as, examining officers, getting from twice to three times as much salary, without granting them any extra remuneration." I think that grievance is more felt at Liverpool than at any other port. We happen to be somewhat remote from London; London seems to be sacred in the eyes of reformers to some extent; it is not tampered with so much; and directly the Treasury or the Board have a scheme of reform to work, they send down to Liverpool, and it is we who suffer. We are the next largest port to London. We have suffered continually there to some extent, perhaps through not being under the eyes of the Board so much. Our executive have been made to pare away in every direction, and we find now that out-door officers on all hands are doing work formerly done by examining officers.

25,742. You say that experiments are made at Liverpool?—Yes.

25,743. You are the *corpus vile* upon which the Board's experiments are made?—That seems to be so.

25,744. But is it the case at Liverpool more than anywhere, do you think, that, as you say, out-door officers are put to superior duty alongside of examining officers without remuneration?—It is so.

25,745. (*Mr. Lawson.*) For how long at a stretch?—Permanently. For instance, in London, I understand that there are no out-door officers keeping ledgers; that is done entirely by out-door officers at Liverpool. That is a portion of the clerical work transferred to the out-door staff.

25,746. (*Chairman.*) You are speaking now of what has been the case since the amalgamation of 1882 of the clerical and out-door establishments?—Yes.

25,747. (*Mr. Lawson.*) What I want to understand is, do you object to keeping ledgers?—We do not. We want to be paid for it.

25,748. But if you had your choice at your present rate of salary whether you would do that work or the work that is proper to your class, which would you prefer?—I should prefer the higher work and expect some recognition for it, of course.

25,749. But you would prefer to do the higher work?—Most decidedly. We expected to do something of the sort when we came in. I think the mere fact of our going through a severe competitive test is an indication that that work is most suitable to us.

25,750. Let me understand you; did you expect to do that work at the rate of salary at which you entered, or at a higher rate?—No, we expected to do it in the ordinary course of promotion, as we were raised up to the higher posts. It would then fall naturally to our lot.

25,751. (*Chairman.*) Let us be clear about this. At Liverpool who kept the ledgers that you now say your class have to keep upon a lower remuneration than you think they ought to have? What class kept these ledgers previous to the amalgamation?—They were kept by lower division clerks.

25,752. Then it was found, I presume, that the work might be done by officers of your class?—Yes.

25,753. Who enter upon a lower salary?—Yes.

25,754. And not upon the same examination?—They were gradually handed over to us first, one man at one office and another at another, and so on.

25,755. Is not that giving your class an opportunity to develop skill and show your ability in keeping accounts and ledgers, and then afterwards opening up to you the clerkships that you say have been opened to a certain extent, and which you wish to see opened more. Is not that improving your opportunities for promotion, even although the work may have been formerly paid for at a higher rate; is not it improving the prospects of your class?—No, it is dead against our interests to do that work as out-door officers, especially without some recognition of it.

25,756. Why is it dead against your interests? I do not quite see why it is against your interests. I quite understand that you desire to be paid a little more for doing it; but I should have thought that the opportunity for doing work which you say was rather higher paid work, and showing proficiency in it, would be increasing your opportunities of self-education and showing efficiency in the public service?—I am sure no one would object to it on the score of increasing one's proficiency and so on; but the same argument could of course be applied to a tide surveyor's work or a gauger's. I have no doubt I could do either myself as an out-door officer with a little more training; but it would not be politic to do it. There are well defined grades and certain responsibilities attaching to those grades.

25,757. Is there any other special point that you wish to bring before us?—(*Mr. Smith.*) I feel under a great responsibility in this matter, as the out-door officers in the service generally are very strongly convinced that this may be, what it probably will be, the last opportunity which they will have of placing their case before a Royal Commission. I feel the responsibility of the position, and I hope that the Commission will bear with me if I go over the ground, so to speak, which has been already gone over, so long as I shall introduce some new matter and throw some new light or give it, if possible, some new force.

25,758. I think we must ask you not to go over the old ground, but to confine yourself as far as possible to points of special importance which have not been sufficiently dwelt upon to-day?—That is what I wish to do. I shall be as brief as possible. In referring to the points which I wish to bring before you I wish to say for my class that we suffer from a deficiency of salary; not that our salary has not been sufficient for the work which we perform. We urge that it is not; but from the fact that we cannot live upon our salary.

25,759. (*Mr. Freeman-Mitford.*) What is your salary?—My salary is 64*l.* a year, and I have six years' service. I have a wife and family to maintain upon that. I am paying 18*l.* a year for rent, and I am left with the net sum of 46*l.* to maintain my family respectably and educate them; and I think it is scarcely fair that men who are called upon to pass a fairly high competitive examination should be called upon to serve the English Crown for such a sum as a net salary of 46*l.* That is the main grievance of our class.

25,760. (*Mr. Lawson.*) Is that 46*l.* after deducting your travelling expenses, &c.?—No; deducting the item of house rent alone. I am speaking of my own case now. I have 46*l.* to maintain my wife and family upon after six years' service. My family is increasing, and many others—hundreds—are in the same position as myself. We find that it is simply impossible to maintain the respectability which we must maintain in this service upon that sum. This is our principal reason in making this representation to you. We have been asked more particularly to make this representation to you on behalf of the junior officers. You will understand, gentlemen, that there are two classes, or rather two grades of pay, of out-door officers in our service at present, one grade commencing at 55*l.*, he other grade commencing at 70*l.* I have been asked more particularly on behalf of the grade that commences at 55*l.* to say that we should require a 10*l.* addition to our salary—an immediate 10*l.* addition—to

enable us to live upon our salary with the respectability which ought to attach to our position in the Government service.

25,761. (*Chairman.*) Do you mean that the beginning salary should be 65*l.* instead of 55*l.*?—Not necessarily; but that it should apply at least to the men who have come into the service and who are now suffering. Future entrants may be taken in under any scheme which the Treasury may appoint. It is those who are in the service and are now suffering for whom we wish to have a better pay.

25,762. Did not you know when you entered the service what the pay was?—Yes, I did.

25,763. Does not what you say with respect to the future, namely, that any conditions that the Government may think fit, or that Parliament may think fit to apply, must be accepted? Does not that apply also to yourselves? Whatever the salary may be it is the salary that you knew you would receive, and the salary which you entered the service to receive?—Yes; but we have, I should think, a very proper claim for this increase, as I will show you immediately. When I came into the service we understood that we should be eligible, after three years' service, for promotion by competition to the class of examining officer.

25,764. (*Mr. Freeman-Mitford.*) Three years' service, I suppose, you mean; not competition?—After three years' approved service. These promotions have been reduced practically to nothing. We have a table in our statement which shows that the number of promotions in 1883 to examining officer from out-door officer was, I believe, 70; in 1888 they had dropped to seven.

25,765. (*Chairman.*) Four, I think you say in your paper?—That is up to October.

25,766. Then there have been three more?—We have three more up to the end of the year. We contend that that amounts to a very serious grievance in our case, and will justify us in asking for such a salary as will allow us to live. When I entered the service in 1883 there had been precedents that examinations for examining officer would be held about each three years, and that a considerable number of appointments were usually given. In the year that I entered the service there was an examination, and 123 candidates were declared successful in 1883. That examination took place three years after the previous one. I think we were fairly entitled to expect that that state of things should continue; that once in three years we should be fairly entitled to expect such a number of examining officerships as 123 to be competed for by the out-door officers. We waited for four years and eight months before we got an opportunity to compete in an examination, instead of three years, and at the end of that time, when we naturally expected that the number to be declared successful would be greater, we only got 25 vacancies instead of 123. We say, that that amounts to a case in which we are justified in declaring that we ought to get some compensation in the nature of an immediate increase in our salary for the great loss in our prospects of promotion. Further, in the same time we find that in 1883—I am giving these figures from a year book which is recognised in the service—Ham's Year Book—the number of first class out-door officers given in that book for 1883 was 742. That was the year in which I entered the service, and I naturally expected that such a proportion in relation to the second class of out-door officers would be maintained. In 1889 I find that there are only 517 of that class, namely, a reduction of 225; more than one fourth of the whole number of first class out-door officers existing when I entered the service. I think that is a very serious grievance. In the Liverpool establishment alone there are 58 less examining officers than there were when I entered the service. The number of examining officers also has been very considerably decreased as the number selected by the examination will show. In 1889, in Ham's Year Book, they show 1,065 examining officers on the books. There is that number in the kingdom at present. To show that we have further reductions to expect the estimated number of examining officers for the establishment taken in 1888–89, as issued by the Treasury is only 849. We are here again threatened with a reduction in our superior appointments of 216, as though we had not already suffered enough; a threatened reduction of 216 in the examining officers class again.

25,767. (*Mr. Hanbury.*) Have the numbers below that class decreased or increased lately?—There was an intermediate grade created since, which is not yet filled up, but we maintain that, when we entered the service, as the intermediate grade did not exist, the introduction of that class at less than half of the salary, or about half, roughly speaking, of the salary of the next highest grade which existed when we entered the service, is a further justification of our claim for some increase—immediate increase—of our salary, for we had legitimate expectations of promotion to examining officer.

25,768. My point is this: You say that the number of these higher posts is reduced. Has the number of candidates for the posts below them been reduced or increased within recent years?—The number, do you mean, as compared with these higher posts?

25,769. (*Chairman.*) Take the total number of first and second class out-door officers, the class that you belong to?—I do not know that that has materially decreased, it is the relation of the superior appointments which is so terribly changed; it is not so materially the inferior staff. I have not the exact figures, but it is the relation of the classes and the introduction of an inferior class of which we complain. For instance, to examining officer, when I entered the service, was the next step of promotion open to our grade. The ultimate salary, the maximum, was 300*l.*, and by a single step we were legitimately right in expecting to rise to 300*l.* Since we entered the service, and without any compensation being granted to us, an intermediate grade has been introduced, with a maximum salary of 150*l.*, just exactly one half, and we have received no compensation whatever for the consequent reduction of prospect.

25,770. (*Mr. Freeman-Mitford.*) Is not that to your advantage?—We should think not, if we can by examination after three years' service immediately be promoted to a salary which will command us 300*l.*, that was one of the conditions under which we entered the service. I have now to expect only a salary which shall be 150*l.*, instead of 300*l.*

25,771. But would not that show that your class was benefited by that other class being interposed?—Well I have just shown by the figures quoted that there is a diminution of superior appointments up to the present, and it has gone on gradually. I should say the class of examining officers has been very extensively diminished, and there is an estimated further diminution for this year of 216 on the Estimates. There are 1,065 at present in the kingdom, but as I have said, the estimated number of that class is now 216 less than that.

25,772. In the table which you give upon page 4 of your statement and to which you have referred, showing that in the year 1883 there were 70 promotions from out-door officers to examining officers, and that last year there were only seven, do you include in examining officers there the assistant examining officers, or have you left them out of the calculation for the purposes of the table?—We have left them out for the purposes of the table. We have no correct data as to them, as there are only two years' promotions; that assistant class has only been in existence since 1886. Our prospects by the reduction of the examining officers class have been steadily reduced since 1883. This is the purpose for which we have prepared this table. The next point to which I should wish to direct your attention very particularly is the increment. We request an increase of increment, to 3*l.* I have no doubt you will have heard that pretty well spoken to, and I shall only quote the other increments which exist already in the Civil Service, and with which I think we have some legitimate right to be in some favourable ratio of comparison. Boy clerks get an increment of 2*l.* 12*s.* We, men, who entered under 25 years of age, receive only an increment of 30*s.* Female clerks even, who pass an elementary examination compared with ours, or at least I ought to say an examination not so testing or so severe, get an increment exactly twice ours, 3*l.* Take a class, which perhaps we should not think it a great compliment to be compared with in any other way than simply as to our rate of salaries, which very nearly correspond; the second class sorters in the General Post Office. I find that they have an increment of 3*l.* 18*s.*; we have only 30*s.* They enter by a comparatively elementary, in fact by an absolutely elementary, examination, in the four simple rules of arithmetic and the geography of the British Isles. I consider that an elementary examination compared with ours. These men, without any classification rise to a maximum almost identical with ours, that is, our ultimate

Mr. G. M. Smith and Mr. I. E. George.

12 Mar 1889.

maximum of 100*l.* We rise to 100*l.* If we abolish classification our ultimate maximum as outdoor officers is 100*l.*, theirs is 98*l.* 4*s* Immediately on receiving their appointment as second-class sorters they there and then become entitled to an annual rise of 3*l.* 18*s.* up to 98*l.* 4*s.* I think their scale of salary corresponds very closely with ours, and I think that we surely in all conscience ought to have some increment corresponding to theirs. We have asked for 3*l.*; theirs is 3*l.* 18*s.* Their duty is mechanical, as sorters' duty must be; ours is to a great extent intelligent. We think that these figures will go to prove that we ought surely to get some further increase in our increment.

25,773. (*Mr. Freeman-Mitford.*) What are your subjects of examination on entering the service?—Our subjects of examination include English composition for an hour and a half—a very testing and trying examination of the intelligence of the candidate. The arithmetic examination is up to and including vulgar fractions; it really embraces all the problems that can be set in arithmetic, and includes the square and cube roots—I should say practically includes the whole range of arithmetic.

25,774. (*Mr. Lawson.*) I should say that this information is already in our possession. I think it is very important, but we have already realised your points?—I quite understand that, but I was simply answering a question just put to me. We wish the classification abolished, that has been already stated to you, but I should like to point to a case or rather an argument which we have, which I think will maintain our case. These grievances which we are now complaining of were considered by the Norwood Committee in 1881 or 1880—1881, I believe—the same grievances; the acting system; the abolition of the prospects of promotion, and the abolition of classification. These were three main points then. In their report they reported in favour of the initial salary at London and Liverpool, which was 70*l.*, being "somewhat reduced" for a general initial salary, and that the "present increment" (and the then present increment was 1*l.*) should be "somewhat increased." We should like some explanation, or rather we would wish to draw attention to the fact that the "somewhat of a reduction" of salary was taken to mean and so carried into effect as a 15*l.* per annum reduction—very nearly a fourth of the initial salary. 15*l.* per annum the "somewhat" was taken to mean and so carried into effect. The "somewhat" of our increment was 2½*d.* a week—10*s.* per annum. The same term was used. They reported in favour of somewhat reducing our salary of 70*l.* and of somewhat increasing the increment. The way that that was carried out was by reducing the salary by 15*l.* in London and Liverpool and raising the increment by only 10*s.* We think that it may be perfectly justified according to the vagueness of the term "somewhat," but it is surely straining the meaning of the word, and straining it not at all to our advantage. Then as to the matter of classification. This report was considered by the Treasury, and the Lords of the Treasury issued a minute in which the following occurs. I should like to direct your attention to it because it was deliberately issued after full consideration by that committee, and after full consideration by the Treasury of the committee's report. The minute stated that the Surveyor of Customs, or I ought to say the Surveyor General of Customs, would indeed go so far as to abolish classification altogether. "He would adopt "a scale dependent for its progress from minimum to "maximum on service only." That is what we would request. The Surveyor General of Customs at that time was in favour of that scheme as the Treasury here report. But the Treasury added in criticism of it, "but it may be added that where there are well "marked grades of duties, as is the case in the Customs "service, there should also be well marked grades of "salaries." We are quite willing to admit that the argument is perfectly right, but if there were well marked grades of duties of out-door officers at that time which justified the existence of well marked grades of salaries, these certainly do not exist now. There is no grade whatever of duty for out-door officers. Every out-door officer in the service is liable to perform the same duty. The only grade which exists now is through the fact that the second class out-door officers and the inferior paid officers are the officers who are, generally speaking, capable of the superior duties, and the grade of salaries now exists while the grades of duties, if there are any, exist in exactly the opposite direction to that in which it was maintained they existed then. There is no grade, practically speaking, but the second class men are the men found to be capable of the superior work which is wanted to be done in our service, and as there are no marked grades of duties now, we maintain that according to this contention of the Treasury's the case for the well marked grade of salaries falls through, and consequently we wish to see classification abolished altogether, that we may rise to the maximum if we simply have well conducted ourselves and have deserved it. To show the injustice of this classification I might mention the cases of officers at Liverpool. We have an officer at Liverpool who has 19 years' service, and during the 19 years his salary has only been increased 10*l.*, and he has been years on superior duty—he has had no increase of his salary whatever for nine years. I may say that we have two officers with identically the same particulars in that respect. This officer is still in the second class; both of these officers are, in fact, still in the second class.

25,775. (*Chairman.*) Is that because there is no vacancy in the first class?—There are no vacancies in ports now whatever in the first class. The first class, I believe, is a general class. Previous to 1886 I believe there were a certain number in each class in each por. An order was issued at that time abolishing that system and adopting a system whereby there would be only a certain number in the kingdom to be promoted at any port, and they would be taken in the order of seniority of their service, on a vacancy on a service list, and not locally, which, I believe, would be a great improvement could it be favourably carried out. We wish again to draw attention to this acting system. On November 23rd in Liverpool we had 68 men acting altogether; that is more than one fourth of our entire staff. On that date we had more than a fourth of our entire staff so employed. We are justified, I think, in maintaining that this is only a fair sample of the ratio of acting to non-acting men in other ports, and at that rate there is a fourth of our whole class doing the duty of examining officers. We maintain that the number of officers who are required to be acting continuously represents the number of vacancies which exist in the superior appointments in which these men act, and that the superior appointments should be increased by the number of men who are continually acting in the service.

25,776. We have that point before us, and I think we quite understand it?—Bearing upon this I think we may say that we have men in Liverpool who have been acting examining officers for 22 years.

25,777. Permanently and consecutively?—I believe practically consecutively; consecutively, certainly, but whether continually throughout the 22 years I could not say; practically, continually and constantly, I should say. With reference to this acting system again, I would refer to the Treasury minute, which criticised the principle, and I would like to accept their own terms and adopt them in the same way as we should do with their declarations on classification, accepting their judgment. We contend that the service does not now show grades of duties, and we contend that it should not now show grades of salaries. We should maintain the same conditions with reference to acting, inasmuch as the Treasury minute, which says that when the position of acting examining officer is officially recognised, it carries an addition to the out-door officer's salary; that is to say, 10*l.* per annum then, now 2*d.* per hour. But this is the point which I wish to emphasise "and it is the usual step towards "selection for advancement to the rank of examining "officer" That is the Treasury's declaration upon the acting system then. Now, I wish to point out that we have men in Liverpool who have been in every way qualified for this promotion, and who have been taking this step for 10 years. I say they have been qualified for the promotion from the fact that they were ultimately promoted. We have one instance of a man who was promoted not six months ago who was 10 years approved by the Board to act, and he did this superior duty, and thus we are justified in saying that he was 10 years in taking this important step, which the Treasury here stated is a step towards advancement. I think that is surely too long for us to wait before taking such a step. With reference to three other men who were promoted also last year, the average length of time in each individual case that they were acting continuously for was 5½ years. I say that that cannot properly be described as a step towards advancement. When a man is kept acting before being promoted so long as that—10 years or 5½ years, which is an average of over 7½ years—I say that that is too

long to be taking such a step. We are entitled to make the step surely in a less time than that. We have similar cases of men still acting who are unpromoted.

25,778. Perhaps you will kindly leave that point as you are rather overloading it?—I should refer again, if you will permit me, to this Treasury minute before I leave this part.

25,779. Is it anything more about the acting system, because I must stop you upon that point. You have put your case very fairly before us, and we quite understand it?—It was with reference to the acting system, so I shall not push it. I should like to refer to the system of boarding duty, to which we referred in our statement. I had the misfortune to perform that duty for three years, and a more outrageous duty I never could have conceived, and I am perfectly certain that the British public do not know what we do on that duty. I am perfectly certain of that, and I wish to take this opportunity of placing it before them so far as they care to read it; that this system is iniquitous, it is certainly not known by them how the servants of the Crown are employed upon this duty.

25,780. (*Mr. Lawson.*) What is the duty?—This boarding duty. I have refrained from defining it because we have defined it in our statement. I am simply referring to it, taking it for granted that the duties are understood in some measure. I am simply referring to it with reference to the number of hours' duty which we do upon it. It is a very exposed duty, and I have been 43 hours upon it, with only three or four hours of a break.

25,781. I suppose it is necessary?—It is necessary, but it is not necessary to be done by employing a man 43 hours with three hours break, as I have been; it is not necessary to employ officers 24 hours consecutively under exposure to all kinds of weathers. Some system should be devised whereby the officers should be only required to work a reasonable number of hours, something such as policemen work, for instance, eight hours per day. Some fair system we are quite willing should be adopted, but any system by which we should have to work as at present 13 or 14 hours per day, at the very lowest average, continuously, under exposure, and that for years, is certainly an outrage that is surely not to be upheld in these days, when the tendency is to shorten hours of labour. We should wish some strong recommendation that such a system should be modified to some more humane one; and we wish to show that the out-door officers cannot be employed with benefit to the revenue upon that duty, they are young men mostly fresh from school.

25,782. We have had that before?—It cannot be maintained that these men are so capable.

25,783. You mention that in your statement?—Very well, I shall not dwell upon it.

25,784. (*Mr. Hanbury.*) How long were you engaged upon this boarding duty yourself?—I was well into three years, I was particularly fortunate, as I happened to be selected for a superior duty still in the department, but the men at the examination at which I entered each did over three years of this duty. I should wish to point out that on that duty we have no means of studying for the promotion by competition to which we have a right to look.

25,785. (*Mr. Lawson.*) When you say you were engaged for 40 hours' duty in 48 consecutive hours, you do not mean that you were absolutely on duty, but that you were on board ship for that time, is not that so?—We mean that we have not been relieved of the duty during the hours which I stated.

25,786. That you have been 40 hours on duty without any opportunity of sleep or refreshment?—I am speaking for myself. I have been 40 hours on duty, with only three hours' break when on that duty.

25,787. (*Mr. Maclure.*) Were you on that ship by yourself?—I cannot particularise any case now.

25,788. You have made a statement that you have been 40 hours on duty?—Yes.

25,789. Very well; were you by yourself, without anybody to relieve you at all in the 40 hours?—I mean I have been upon a single ship and I have not been relieved in any way whatever. When I say consecutive duty, I mean 40 hours' duty with only a break of three hours on that duty. Here is one case which happened to myself: I was on duty from 9 o'clock on Saturday morning until 6 o'clock on Sunday evening.

25,790. By yourself?—I was along with others; others did the same duty; I am speaking of my individual case; but, as I say, others did the duty with me.

25,791. On the same boat?—This was not on boat duty, this was baggage duty, and we had only a break of five hours during that spell. But on boarding duty it is the system, or was when I was on it, to do 24 hours consecutively without any break whatever, a whole night and a whole day, and then be allowed off 6 hours for sleep.

25,792. (*Mr. Freeman-Mitford.*) Do you mean that you were continuously at work during that time?—Continually responsible for being on the deck and by the gangway; liable to be visited during all that time by our superior officers, and we were not allowed under any pretence whatever to leave the gangway unless for food during these full 24 hours.

25,793. (*Mr. Maclure.*) When you went for food who took your duty?—We generally board in twos, and the other officer would take the duty.

25,794. Now, did you not take it turn and turn about to have a sleep?—Yes, we did; but our turn of six hours for sleep only came once in 24 hours, you understand me, this way. We took the morning watch and the evening watch of one day. We came on duty at midnight and remained on duty until midnight again. We did that that we might alternate the watches. Perhaps it would be too technical to explain now, but under the system of boarding which I did, and which is now being done in the river at London, I was 24 hours consecutively on duty one day and 12 the next regularly, and have been 13 days from home without leave consecutively.

25,795. (*Mr. Freeman-Mitford.*) What do you mean without leave?—I mean, without leave to go home—without leave from the ship—practically, continuous duty during all that time, and we did not always get our six hours below. The question of characters you might allow me to refer to for a moment. I believe it has been referred to before.

25,796. (*Chairman.*) There is nothing special about that at Liverpool, is there?—Nothing other than the circumstance that we know of men who have been 18 years in the service, but who are still debarred from promotion on account of a mistake or rather of an accident which occurred 18 years ago.

25,797. We quite understand that point, namely, that you wish, if there is any mark against a man's character, that he should be informed of it at the time that it is made in order to give him an opportunity of making an explanation?—Yes, and that in some way the time should be limited during which such a mark may stand as a barrier to a man's promotion. It is surely unreasonable that a man for a mistake which occurred 18 years ago should this day still be debarred, and at a serious loss of salary, because of a mistake which happened 18 years ago, although that man, I believe, has honestly and has well done his best to live down that mistake, and cannot.

25,798. Have you any reason for saying that it is so at present?—I have no reason which I can produce for it other than that I believe it is a fact.

25,799. Can you state as a fact that a fault committed by an officer 18 years ago and nothing else done since, and a good character since, that that fault would be a bar to his obtaining promotion?—I am instructed to state that that is a fact, and without any other charge from the Board whatever during 18 years, that officer is still in the second class, and has been skipped by junior officers in the regular turn for the first class, and the only complaint which has been made against him direct from the Board has been one 18 years ago; when he was newly out of his probation and was inexperienced in the service.

25,800. (*Mr. Maclure.*) Is not that the case in every service in the world?—It would surely not be.

25,801. (*Mr. Lawson.*) Was that one of those officers who you say were not allowed any opportunity of self-defence?—He had not any opportunity for defence; but if his character has been dealt with since, he has not been formally charged. We have officers whose characters must have been dealt with as they are skipped for promotion—recollect, officers who have not been formally charged with anything.

25,802. And they are never acquainted with the particulars of the charge?—They are not. We have

Mr. C. M. Smith and Mr. J. E. Gee.

12 Mar. 1889.

Mr. G. M. Smith and Mr. I. E. George.

12 Mar. 1889.

five grades of characters in our service, from A to E. An officer may be classed low down without any specific charge. Anything under A may debar a man from promotion, anything under B will certainly, while he may be classed C without a specific charge and his promotion would be debarred without a specific charge. We think this ought to be remedied in some way and that some limit should be placed. We recommend that at the end of two years (and we think it a reasonable period) the debarment arising from any misfortune of that kind should cease.

25,803. (*Chairman.*) You cannot surely expect that with a large class of public servants a fault sufficiently grave to be recorded should not have some effect upon a man's subsequent career?—Not for ever.

25,804. Otherwise what is the advantage of having a permanently good character, the debarment should not last for ever certainly, but you say it should be wiped out in two years?—Yes, in two years, if he has justified himself during those years. (*Mr. George.*) That occurs, I believe, in the Excise, the bar has a very definite limit of two years there.

25,805. Is there any other point that you wish to take?—(*Mr. Smith.*) There is a point if you would allow me to refer to it just for a moment as we have evidence upon it, and very recent evidence as well, which I think may be drawn attention to. This is a circular issued to intending candidates in the service, and it here states that the hours of warehousing duty are from 8 to 4, and refers directly to London, but it goes on to state that the general duties of an out-port officer are as "above described." We are here led to understand that the time as here defined will apply generally in the service and the hours in the bonded warehouses are said to be from March to November, 8 to 4 and during the remaining months 9 to 4. We are doing in Liverpool, and have been for years 8 to 5 during the summer. Although in London when they do from 8 to 5 they are paid an hour extra, we do not get that hour extra in Liverpool.

25,806. You do not get that hour extra in Liverpool?—We do not get the hours of London which it is here announced that we are entitled to. Although when on warehousing duty our duty for the day should conclude at 4, we nevertheless are kept on duty until 5 in Liverpool, and we do not get the extra hour's pay for it.

25,807. Do you have no interval for dinner?—No interval for dinner, we work from 9 to 5 as a continuous spell, there is no recognised interval. There is a note here I took whilst my friend was giving his evidence with reference to the out-port clerkships. Our attention was directed to it on the ground that having to do the clerical duty was something in the nature of an advantage to us because it fitted us for the examination for out-port clerkships. That might be if we had any reasonable hope of ever being examined as out-port clerks, but at present copyists who have no claim for permanent service at all under the Government are being promoted to out-port clerkships, although we have a reasonable right to expect that they should be placed for competition amongst the out-door officers, as we have a Treasury minute upon a petition to that effect stating that it would be taken into favourable consideration.

25,808. (*Chairman.*) We had a statement to that effect yesterday?—There have been seven or eight instances, at least, that I am personally aware of where these posts have been given to copyists who have no claim to permanent service under the Crown, and who are promoted to these superior appointments, and very desirable appointments indeed, to our disadvantage. I know it is a fact, if you will allow me to state it for a moment, that the men who came in as copyists were told on coming in, distinctly, that they had no claim whatever for permanent employment in this service, that they might be discharged any day; they were paid hour by hour in order that their service might be dispensed with any hour. These men who have come into the service almost since I came in, certainly since my friend came in eight years ago, have been promoted to these posts and prizes, these high positions carrying very much higher salaries, while we who have had permanency in the establishment have not had a chance to compete for them.

The witnesses withdrew.

Mr. JOHN STRICKLAND and Mr. JAMES CARLISLE MCCLEERY called and examined.

Mr. J. Strickland and Mr. J. C. McCleery.

25,809. (*Chairman to Mr. Strickland.*) You and Mr. McCleery represent the examining officers of Customs at Liverpool, I believe?—Yes.

25,810. We have had the advantage of a statement from the examining officers of the Customs in London. I do not know whether you have seen it, but it covers nearly the whole ground that you yourselves have covered in your paper?—Yes, we have seen it.

25,811. Therefore I would ask you to be so kind as far as possible to keep to the points which specially have reference to Liverpool?—Would the Commission allow us to make a small correction in our statement by deleting three words at the top of the table in paragraph 4. The words are "promoted to be." They have got in there by mistake; there should be nothing there. (*Mr. McCleery.*) That statement represents the establishment not the promotions. (*Mr. Strickland.*) Our statement was made last November, since which time many changes have occurred in Liverpool; but the summary of what we now ask is substantially the same now as then. If the Commission would kindly allow me I would summarise the first 14 paragraphs which contain a grievance, and propose a remedy. Briefly it is this, that in 1883 when the warehousing and out-door departments were amalgamated a new classification was given to Liverpool which was generally accepted as a permanent measure. It gave to Liverpool 193 examining officers, 19 surveyors, and 2 inspectors (a total of 214 officers of our rank and the ranks immediately above us in the line of our promotion), whose aggregate maximum salaries amounted to nearly 56,000*l.* Since then the superior appointments have been reduced, and chiefly by these reductions and the use of the acting system about 6,000*l.* less is now allowed by the present classification for the performance of the same duties by the same number of officers. Thirty-four surveyors and first class examining officers have been abolished in the United Kingdom in five years, but their duties have not been abolished. They are chiefly provided for in this way. An examining officer has the honour of acting as surveyor, but he has not the satisfaction of drawing the salary of a surveyor, except when the merchant pays him for services rendered.

25,812. (*Mr. Lawson.*) And does not he appreciate the honour without the salary?—Not when acting too long. For example, a first class examining officer was approved and appointed to act as surveyor in 1883. For three years out of four he was so acting, serving the Crown as a surveyor and receiving only an examining officer's salary. He was superannuated at the end of last year on the pay of an examining officer. Again, certain duties are ordered by the Warehousing Regulations to be performed by either supervisors of Excise or surveyors of Customs. We know of an instance in one port of those duties having been performed continuously for six months by a second class examining officer. In Liverpool about 20 per cent. of the officers in the out-door department are acting in a capacity superior to their rank.

25,813. (*Chairman.*) Perhaps you would confine yourself now to the examining officers because, perhaps, you are including the out-door officers below you?—It is to show the acting system generally.

25,814. Yes, but we have had some evidence upon the acting system as regards the out-door officers of the first and second class below your grade, and we should be rather glad if you could give us the figures applying especially to your own class. How many of your own class either first or second are acting?—The figures are in the table on paragraph 8. To act in a superior capacity used to be looked upon as a stepping stone to promotion, but the abuse of the system has now caused it to be generally looked upon as a roundabout way of reducing the salaries.

25,815. (*Mr. Hanbury.*) Are these 20 per cent. acting continuously?—(*Mr. McCleery.*) Almost continuously. (*Mr. Strickland.*) The case I have given is a fair illustration. I have given that as a fair instance.

25,816. Three years out of four?—Some are acting pretty continuously; some are acting perhaps for 18 months continuously. We submit that the acting system or rather the abuse of it should be abolished, and that the staff should be made equal to the demand made upon it for efficient supervision. Only 3·1 per cent. of the Customs officers in the out-door department are staff officers. In the Excise the proportion is much greater; 11·7 per cent. of their officers are employed on the work of supervision, and rank as staff officers. Their individual salaries are less than is paid to the staff officers in the Customs; but in the aggregate the Excise spend much more upon their staff than the Customs. They spend 20 per cent. of their total salaries for an efficient staff; the Customs less than 12 per cent. In order, therefore, to improve control and remove one of the leading causes of discontent in our department by abolishing the abuse of the acting system, we submit the scheme of salaries in paragraph 11, which will be found to be in accord with the recommendations in respect of Lower Division Clerks contained in the last report of your honourable Commission, and with the classification contended for by the officers of Inland Revenue. There are no officers in our department either in London or Liverpool who have salaries between 300*l.* and 350*l.* The maximum of an examining officer is at present 300*l.*, and the minimum salary of surveyors is at present 350*l.* We practically propose that there should be another and more numerous grade of staff officers at a less salary than the present surveyors; also that an examining officer should rise to a maximum of 250*l.* per annum, and that an assistant should have an increment of 5*l.* instead of 3*l.* as at present. It takes an assistant examining officer 17 years to get to his maximum of 150*l.* A second class sorter at the Post Office gets an increment of 3*l.* 18*s.* per annum, and the assistant examining officers at Liverpool earnestly wish that their annual increment should be increased from 3*l.* to 5*l.*

25,817. (*Chairman.*) Do I understand you to say that your suggestion is that the examining officers who now begin at the bottom from 110*l.* and ultimately attain to the maximum of the first class of 300*l.*, should begin at 150*l.* and that they should go only to 250*l.*, and that then there should be an extra class put in above them of assistant surveyors beginning at 250*l.* and going to 350*l.*?—That is so; for, as a matter of fact, about one half of these first class examining officers are now performing superior duties.

25,818. (*Mr. Lawson.*) Yes, but you said in your statement just now that this salary was on the same lines as that proposed by this Commission for the lower division. You must make a mistake, I think, as you see the minimum salary is very much higher?—(*Mr. McCleery.*) I understood that Mr. Strickland said it applied to the Excise. (*Mr. Strickland.*) It is in accord with it.

25,819. No, it is not. You suggest that the assistant examining officer should begin with a minimum salary of 100*l.*, examining officers 150*l.*, and the assistant surveyors 250*l.* Our recommendation is for a very much lower minimum with regard to the lower division, 75*l.*?—Below the examining officers there are out-door officers, and a man must pass through that grade before he comes to be an examining officer.

25,820. (*Mr. Hanbury.*) Probably you were comparing both the out-door officers and the examining officers with the lower division?—In respect of the scheme, a man entering our service must begin at the bottom of the ladder; you call him an out-door officer, but then a man must be an out-door officer before he becomes an examining officer. (*Mr. McCleery.*) He must begin at 55*l.*

25,821. (*Mr. Lawson.*) But there is no exact correspondence?—Except that it is in accord with the general scheme.

25,822. The maximum is the only point?—(*Mr. Strickland.*) 350*l.* is the maximum. The hours are rather longer. The hours of the clerks are seven hours and ours are eight hours.

25,823. (*Chairman.*) Have you compared at all the present arrangement of examining officers (keeping yourselves to examining officers and assistant examining officers) in a financial point of view with any system that you propose?—I did just rough it over, and I could only compare what the minimum might be. Then I should have to presume how many surveyors they would appoint. (*Mr. McCleery.*) Assistant surveyors. (*Mr. Strickland.*) The surveyors came in for the purposes of comparison.

25,824. What per-centage do you say? I see that in your statement of examining officers in the table which you have alluded to on page 2, you say that there are 11 first class examining officers acting as surveyors, and only one of them has 40*l.* a year for doing so, and the other 10 get nothing; and then there are 13 other first class examining officers who are "performing "duties of supervision required by Code paragraphs "81–2 to be performed by surveyors or supervisors"?—Yes.

25,825. So that there you have 24 first class examining officers out of 38. Do you suggest that any portion as large as that should be made assistant surveyors, or what per-centage do you think would appear to be fair?—If you take 20 assistant surveyors (taking the present staff of surveyors as it stands, I did not presume to alter that) at 250*l.* and 100 at 150*l.* and 80 acting at 100*l.* it would give a minimum salary, including the present staff of surveyors, of 34,620*l.*, which is much about the same thing as the classification of 1883 given on the first page of our statement.

25,826. (*Mr. Hanbury.*) There you gave us the minimum salary?—Yes.

25,827. Would you be able to compare the maximum salary under your scheme with the present maximum salary, which you have given us already?—It was only suggested to me recently that the question might be asked, and I just roughed the minimum for comparison with that, as to whether it would be a saving or not. I have the minimum in pencil here of the classification at paragraph 3. The minimum of that scheme is 34,610*l.*

25,828. (*Chairman.*) Then, taking the same numbers and re-classifying them in accordance with your suggestions on page 3, paragraph 11, you say there is not much substantial difference in the minimum?—There is not, but that is assuming that they would give the same number of first, second, and third class surveyors in addition to the assistants. I have not presumed to reduce them in my estimate. If the number of first, second, and third class surveyors was reduced, then, of course, you could make it less.

25,829. That new classification of officers that you give assumes that the surveyors of first second, and third class are the same in number, and that 20 assistant surveyors are added, and that the number of examining officers of the first class is reduced to 18?—No; abolished entirely.

25,830. That the total number of officers should be, for the purposes of this arrangement, the same as now, but that they should be subject to the salaries which you set out there on page 3?—Yes.

25,831. Then can you compare the maximum?—(*Mr. McCleery.*) The maximum in 1883 was 55,820*l.* and the present maximum is 49,830*l.*

25,832. (*Mr. Hanbury.*) Now what we want to get at is, what would the maximum be under your proposed scheme?—So far as I can see with a rough calculation just now, the maximum would be from 44,000*l.* to 48,000*l.* I have just pencilled it out in the margin.

25,833. That is less than at present?—That is less than the present total maximum, but I have not included the surveyors.

25,834. (*Mr. Maclure.*) That is not calculating the salaries of the first, second, and third class surveyors?—No; we presume that the addition of this class of assistant surveyors would necessarily do away with some of the present classes of surveyors.

25,835. Some of them?—Some of them would in fact possibly abolish distinctions between 1st, 2nd, and 3rd classes of surveyors.

25,836. (*Mr. Hanbury.*) That is what I want to get at. In 1883 there were 214 examining officers, surveyors, and inspectors, at maximum salaries of 55,820*l.*?—(*Mr. Strickland.*) That is so.

25,837. Now there are 214 examining officers, surveyors, and inspectors at maximum salaries of 49,830*l.*?—That is so.

25,838. I want to know how many officers there would be and what would their maximum salary be under your scheme?—I calculate that the number of

Mr. J. Strickland and Mr. J. C. McCleery.

12 Mar. 1889.

officers and the minimum and maximum salaries would compare as follows :—

Rank.	No.	Minimum Salaries.	Increment.	Maximum Salaries.
Existing Staff and Salaries:				
Inspector - - -	1	(Aggregate) 600	—	(Aggregate) 700
„ Assistant - -	1	560	—	590
Surveyors - - -	14	5,460	—	6,300
Add proposed classification:				
Assistant Surveyors -	20	(Each officer) 250	10	(Each officer) 350
Examining Officers -	100	150	10	250
„ Assistants -	80	100	5	150
Classification Totals:				
Proposed scheme as above	216	34,620	—	51,590
Classification of 1883 -	214	34,610	—	55,820
Present classification per estimates for current year.	214	32,290	—	49,830

25,839. (*Mr. Maclure.*) The basis of your argument is this, that by this new arrangement you would be able to reduce the number of first class examining officers, and you would make an economy there?—Yes; the majority are at present performing staff duties. Place them on the staff and abolish the acting as far as practicable. (*Mr. McCleery.*) And there would not be two classes of examining officers—simply one. (*Mr. Strickland.*) It would increase the number of prizes and make them a little less in value.

25,840. (*Chairman.*) I was going to say that appears to me to be the gist of the thing: that it increases the number of the principal officers, while at the same time it diminishes the money value of them to some extent?—Yes.

25,841. Perhaps you would kindly go on?—Under request in paragraph 15 we have had a concession which has been thankfully received. An officer in the out-door department has been promoted to be collector. The next part of the petition refers to the hours of labour. (*Mr McCleery.*) With reference to the hours of labour, which is touched upon in paragraphs 16 to 22, I might be allowed to say that the legal hours, according to the Customs Consolidation Act, are 8 to 4 in the summer and 9 to 4 in the winter; but in October last the Board of Customs issued an order, on which I think you will see an inspector's order in Appendix 2 to our statement. This order which the Board issued practically extended the hours to 6 a.m. to 6 p.m. all the year round. The terms of this Board's order were promulgated by means of an inspector's order, and that inspector's order the officers loyally carried out; but they combined together and presented a petition to the Board of Customs asking them not to alter or to extend the old hours. The Board replied to that memorial by stating that no officer would be required to give on the average more than the number of hours hitherto required of him without payment of overtime. This answer, I may say, is somewhat ambiguous for this reason, that the hours formerly worked were irregular and depended a great deal on the class of cargo which a vessel was discharging. That is, if a vessel was discharging, say, free goods from 6 in the morning to 6 at night an officer might be compelled to give 12 hours' attendance; but if they were discharging dutiable goods he would only be compelled to give eight hours without extra remuneration, and the remaining four would be paid for. But the Liverpool officers, while they are distinctly under the impression that the present varied hours are a hardship, are not disposed to throw obstacles in the way of a fair understanding being arrived at, and what they want is this: that the Treasury should issue a minute limiting the hours all round—at warehousing, waterguard, or other duties—to 7 in the winter and 8 in the summer; and when officers are required at abnormal hours, that is, before or after the legal hours, that they should receive some compensation for the inconvenience. As an illustration, I may say that an officer working from 6 in the morning till 2 in the afternoon, while he would only work eight hours per day will have a much more inconvenient attendance than an officer working, say, from 8 in the morning till 4 in the afternoon. Working at 6 in the morning means leaving home at from 4 to 5 a.m., and we think for this there ought to be some compensation granted.

25,842. (*Chairman.*) You mean that the Treasury minute should say that eight hours should be the normal work in summer and seven in winter, and that those hours should be at a comfortable time of day?—Not necessarily.

25,843. That was your point, was it not; that is to say, that they should be between the fixed hours beginning at 8 and 9 respectively, and that if you are called upon to go at 6 there should be some consideration for the inconvenience?—Yes, that is our argument.

25,844. Because formerly there has been overtime paid for the attendance at those hours?—That is so.

25,845. (*Mr. Hanbury.*) If you only worked between the hours that you name at some period of the day, I suppose, there would not be work for all the officers, would there?—I think there would be. Of course the ships are always at work during those hours, but, as a rule, in Liverpool they work from 7 in the morning till 5 in the evening. It is impracticable in the Customs to say that work will only commence at such a time and finish at such a time. That is absurd, because we are obliged to consider the necessities of trade. We are bound to give attendance, but we certainly think that when we give attendance at such inconvenient hours we ought to be compensated for it.

25,846. (*Chairman.*) If you were called upon to act as an examining officer to give attendance at the normal hours from 7 to 5, would you receive no recognition of that? That means an extra hour?—It means two hours extra. We consider 10 hours average is altogether too long, particularly as we are not allowed any hour for meals.

25,847. You mean to say that you would have no time for meals between 7 and 5?—Yes.

25,848. As a matter of practice, how would it be worked? Supposing a ship were in Liverpool and the duties of examining officer had to be exercised between the hours of 7 and 5, would it be done by two of you coming and going or how?—The way it is being worked at present is that there are two officers, say, at adjacent stations on which there are ships working from 7 to 5; one officer comes down at 7, and he stays till 3; that makes an 8 hours day; the other comes down at 9, and he stops till 5; that makes an 8 hours day.

25,849. If there is only one ship, how is it managed?—There must be cases where there is only one ship discharging, perhaps not at Liverpool?—Even when a ship is not discharging there are always deliveries of former cargoes going on that an examining officer has to superintend, examinations of cargoes, and so on.

25,850. Then, practically, there is no difficulty in arranging, according to you, for the eight hours' system?—There is this difficulty, that between the hours of seven and nine in the morning, and between the hours of three and five in the evening, one officer has got to do two officers' work.

25,851. Then I am asking you what you suggest by way of getting over that difficulty from the point of view of the examining officer. What does your suggestion that you make to us about hours come to, when you come to deal with a particular question of dealing with a ship between seven in the morning and five in the evening?—That, of course, is a departmental detail upon which I would not care to make a suggestion.

25,852. You are making very important suggestions for departmental improvement, and trying to improve your own position very properly, and, of course, I am rather anxious to find out how the particular case of this ship is to be worked, and we want you to suggest how it should be done?—(*Mr. Strickland.*) The scheme is worked out by the overlapping system, and we cannot propose anything better. We throw no obstructions in the way, but it is a very difficult scheme to carry out, and many heads have been at work to try and make it practicable. Not being the authors of the scheme, we cannot presume to suggest how it could be worked.

25,853. (*Mr. Hanbury.*) But, as I understand, the defect of the overlapping system, according to your contention, is that we will say from 7 to 9 in the morning, and from 3 to 5 in the afternoon, one officer is doing two officers' work; but what does doing two officers' work mean? Is it more than he can do or ought to do?—(*Mr. McCleery.*) Sometimes it might be. Sometimes it might mean that goods that were wanted to be delivered were detained. One officer could not be at two sheds at the same time, and it often, I believe, causes a good deal of grumbling on the part of the merchants that they cannot get their goods away.

I will give you an instance of one dock I have a note of. In the Prince's Dock in Liverpool there are three examining officers. The examining officers attend from 9 in the morning till 5. There is an acting examining officer comes down at 7, and he goes away at 3. That acting examining officer does three examining officers' work between 7 and 9, whatever there may be to be done.

25,854. (*Chairman.*) Is there any complaint on the part of the trade that during these two hours there is an insufficient staff to carry out the work?—There were several complaints that I heard of at the introduction of the scheme, but whether they have been lessened lately I cannot say. (*Mr. Strickland.*) As a matter of fact they have had to introduce additional officers on some of the stations. An officer does not merely take charge of a ship that is discharging; he takes charge of a station and all the ships that may be discharging on that station. A ship might probably have from 10,000 to 30,000 packages in her, which in these days would be discharged in perhaps two or three days into the transit sheds; that is the way the trade is carried on in Liverpool, and his duties are to take an account and see that all these packages are accounted for. It may be some time before they are all away from the shed; although the vessel is discharged, still a great quantity of dutiable goods might be in that shed, and the protection of the Revenue is necessary during the whole of the time. In an officer's station he might have three, or four, or five vessels discharging or none discharging, yet many cargoes to look after.

25,855. Will you please take another point now?—In connexion with the hours question, there is the Sunday and holiday duty. We look upon the Sunday duty in our service as a necessary evil; the protection of health and revenue must go on upon the Sunday as well as upon other days, but we submit that unreasonable concessions to shipping interests have added unnecessary and disagreeable duties to our Sunday duties. For instance, I experienced it myself in 1876. Light dues were levied on deck cargoes, and where there was a Board of Trade surveyor he had to measure them, but Board of Trade surveyors were not on duty on Sunday, and vessels with deck cargoes had their deck cargoes possibly discharged on Monday morning before that officer had measured them. The result of this was that that duty was thrown upon the Customs officers because they were on duty on the Sunday, and they had to measure these deck cargoes. They have done so ever since. In Liverpool cattle ships often arrive. An officer takes the report of these ships on the Sunday; he measures the deck spaces occupied by the cattle on the Sunday, and rummages and clears the ships, for which duty he used to be paid by the merchants until about two years ago, then a concession was made. The duties are still performed, but there is no charge to the merchants. Our contention is that those duties are a hardship; they are not necessary, and they intensify the very disagreeable obligation of being on duty seven days per week.

25,856. (*Mr. Hanbury.*) What proportion of you are on duty seven days a week?—(*Mr. McCleery.*) In paragraph 23 there is one Sunday taken, it was taken quite promiscuously.

25,857. As I make out from that it is about 10 per cent.?—It would be about that. (*Mr. Strickland.*) We would rather not perform Sunday duty, but we submit that about the best protection we can have against the infliction of it is that when it is discharged it should be paid for.

25,858. (*Chairman.*) At present there is no payment you say?—We do not say that we want the money; we would rather not do it, but as a protection against the infliction of it we think the best method is that it should be paid for.

25,859. Is there any allowance now for Sunday pay?—(*Mr. McCleery.*) Not to examining officers.

25,860. (*Mr. Hanbury.*) Is there to the out-door officers and boatmen?—The out-door officers are allowed a shilling every Sunday they are on duty. (*Mr. Strickland.*) The Sunday duty intensifies the discontent of officers when promotion is retarded. The junior officers generally perform this duty, and if a man is on duty, say, seven days per week for an extended length of time he feels it a very great hardship indeed; in fact, he feels it—I can speak from experience—as much as the loss of promotion. A man wants his Sundays at home and to be like other people.

25,861. (*Chairman.*) But a certain amount of Sunday work you say is necessary?—To protect the Revenue and public health, to perform quarantine duties, and also to see that there is no smuggling going on.

25,862. And when it is performed by an examining officer you suggest a payment, what is the kind of payment that you suggest for Sunday duty? You do not mention that in your paper? What was paid formerly by the merchants for the service?—(*Mr. McCleery.*) 12*s.* per day (*Mr. Strickland.*) There is a fixed scale for holidays and Sundays. (*Mr. McCleery.*) It was the examining officers who received 12*s.*

25,863. (*Mr. Maclure.*) These terms still maintain, do not they; they have not altered them, have they? I thought the merchants paid in an indirect way now?—(*Mr. Strickland.*) Not in the case that I mentioned, that has been an additional concession. The pressure brought to bear of course is considerable, and concessions are made one by one, and, we think, unfairly so.

25,864. (*Mr. Hanbury.*) Let us understand clearly. Do you mean that till recently the examining officers got paid by the merchants?—(*Mr. McCleery.*) For certain duties on Sunday. (*Mr. Strickland.*) Mentioned in our paper.

25,865. Now no extra payment is received for Sunday work?—(*Mr. McCleery.*) No, not for these duties. (*Mr. Strickland.*) Not for the same work. It is referred to in paragraph 24.

25,866. (*Mr. Lawson.*) When were these payments discontinued?—(*Mr. McCleery.*) In 1887, I believe.

25,867. (*Mr. Hanbury.*) Was the Sunday you have mentioned an average Sunday?—It was taken promiscuously.

25,868. And it was the last Sunday before you sent in this statement?—Yes, we sent this statement in at the end of November, and this was taken the Sunday before it was written out.

25,869. You have no doubt that it represents a fair average?—(*Mr. Strickland.*) Yes, no doubt; it does not fluctuate much. (*Mr. McCleery.*) I might remark, regarding Sunday duty, that the Post Office officials in London receive extra payment for their Sunday duty.

25,870. (*Chairman.*) Do I understand that an examining officer never gets any payment whatever for any services that he is called upon to do on a Sunday; never anything at all for any services on a Sunday? If you were called upon, Mr. Strickland, to do any Customs duty on a Sunday of any sort which an examining officer might properly perform, would you under any circumstances get any payment for so doing it on a Sunday?—If I was specially ordered down for baggage duty I should be paid for attendance on a special steamer, and waiting there to pass baggage.

25,871. You named a vessel arriving with foreign cattle?—That is a concession that has been recently made to the shipping interests, it was made a year or two ago. (*Mr. McCleery.*) We should not be paid for that duty now. (*Mr. Strickland.*) That has a tendency to increase Sunday duty, which we object to.

25,872. (*Mr. Maclure.*) But you would be paid if a Cunard steamer came in and you were employed on special duty, would not you?—(*Mr. McCleery.*) We would be paid to examine the baggage if we were specially ordered down.

25,873. For the baggage?—For the baggage.

25,874. Then the payment for the cattle landing on Sundays is abolished and the payment for the baggage still remains?—There is now no extra payment for cattle landing on Sundays. We still get paid for the examination of baggage on that day. (*Mr. Strickland.*) Except the officers who might be on duty on the Sunday as water-guard officers. If they were present and assisted in the passing of this baggage they would get nothing, but when they want a special staff down for a very large number of passengers the company pay those who go down specially. For ordinary purposes the staff of officers on water-guard duty on the Sunday is sufficient and then there is no charge made for it; they perform the duty; they pass the seamen's baggage, for instance; they would take the duties on anything dutiable, and if there were a few passengers they would also do the same thing in respect of the passengers without any charge.

25,875. (*Chairman.*) If an examining officer goes down specially to measure the cattle spaces on a cattle boat he would not get anything for it, would

Mr. J. Strickland and Mr. J. C. McCleery.

12 Mar. 1889.

he?—(*Mr. McCleery.*) He would not be asked to go down specially; that duty is now left to the examining officers who are on water-guard duties on Sunday.

25,876. Then I do not understand what duty an examining officer does on Sunday, except the special duty of examining the baggage on Cunard steamers, which I understand is paid for. What work can you be called upon to do on a Sunday?—(*Mr. Strickland.*) There is the quarantine service. Every vessel must be boarded, and an examining officer does that. He must attend to the laws and regulations of quarantine. They are always on duty for that. If the crew of that vessel wanted to land and have their baggage passed he would also attend to that. That was generally the limitation of the officer's duties; that is what he was there for, but finding it would be a convenience to the merchants as this man was on the spot, and a number of other officers, for the performance of these duties they have also added the receiving of the report of these cattle ships and the measurement of deck spaces, and that has thrown it on all these officers and relieved the merchants from the charge.

25,877. I think we have got sufficient, perhaps, on that point?—(*Mr. McCleery.*) I do not think there is anything we need take up your time with from paragraph 25 onwards to 30. Superannuation has been already pretty well dealt with, I presume, and so has the question of retirement. Paragraph 30 is rather an important paragraph as to the way the characters of the officers are inquired into. When an officer has any complaint made against him he seldom knows of it.

25,878. We have had that from the outdoor officers also. I presume your case is exactly similar. We have been told the general wish is that as in the Excise service, or what is believed to prevail in the Excise, if any mark is made against a man's character he should be informed of it at the time, and given an opportunity of explaining in case there should be a mistake. I think I understand that you urge the same point?—(*Mr. Strickland.*) Yes, he should know distinctly the charge against him in writing, and we think also he should have the sentence in writing.

25,879. (*Mr. Hanbury.*) Does he never know now when complaints are made of him?—(*Mr. McCleery.*) Not until his salary is stopped, or something of that sort, and that may be months after the charge has been made.

25,880. You mean when his increment is stopped?—When his increment is stopped. As an example I might say several officers were ordered to be removed from Liverpool only a week or two ago, and no charge whatever was made against them.

25,881. (*Chairman.*) What is that an example of?—Simply that they were punished by being ordered to remove from Liverpool; they were not removed under sentence nor were they removed for the purpose of reducing the staff. It was understood at the time that these officers were moved, or were ordered to be removed, because they took somewhat of a prominent part in the recent agitation against the new hours; but that charge was not made against them in any way; they were simply ordered to remove from Liverpool, and they were not told why they were so punished.

25,882. (*Mr. Hanbury.*) I suppose they are often removed even when there is no charge?—The exigencies of the service sometimes necessitate that. In the instance referred to, however, the exigencies of the service could not account for the removals.

25,883. (*Chairman.*) We understand that point, I think?—(*Mr. Strickland.*) We should like to hand in an extract from the Army Regulations which we think will satisfy our officers if adopted.

25,884. Is there any other point that you wish to call special attention to?—There is a point relating to the travelling expenses, but it has been referred to in connexion with the inconvenient hours of attendance.

25,885. (*Mr. Maclure.*) That would be a very difficult matter, would not it, in Liverpool; what you call the inconvenient hours; when you have to go the length of those docks?—(*Mr. McCleery.*) The docks are about 7 miles long.

25,886. I know the docks as well as you do, and I might say it would be a very awkward thing to arrange anything at those inconvenient hours, with reference to travelling expenses. How can you get there, tram cars do not go down at these early hours?—(*Mr. Strickland.*) They do not, and an officer frequently has to walk 5 or 6 miles.

25,887. Unless you took a cab you could not get down to the extreme end by conveyance?—(*Mr. McCleery.*) No. (*Mr. Strickland.*) We have to walk in many cases.

25,888. What you want the allowance for is for the labour and the time?—Some consideration for the time.

25,889. If you have to go in the very early hours that means 1½ hours' walk, because there are no tram-cars or anything of the sort running?—(*Mr. McCleery.*) Fully that.

25,890. And some of the large docks for the American steamers are at the very extreme end, are not they?—(*Mr. Strickland.*) Yes.

25,891. I think that really embraces all the points that are in the paper?—Yes, there is only a minor point mentioned by the officers. It is the abolition of the uniform. We do not see the necessity for it. The Excise can dispense with it, and except when a man is examining baggage on a large passenger steamer we do not see what use it is.

25,892. Is there any real objection to it?—(*Mr. McCleery.*) It costs us examining officers I should say 4*l.* or 5*l.* a year, and it is really of no service whatever. When we are engaged on dock duty everybody in connexion with the docks knows who we are, and I think on preventive duty a person in private clothes has a far better opportunity of effecting seizures.

25,893. (*Mr. Hanbury.*) Is no portion of the uniform found?—(*Mr. McCleery.*) No. (*Mr. Strickland.*) Not for examining officers.

25,894. (*Chairman.*) And is no allowance made for finding it?—No allowance is made, and in the vaults and on clerical duty it is quite useless; in fact, we are allowed to be on clerical duty without wearing it.

25,895. Does it cost more than an ordinary civilian dress?—(*Mr. McCleery.*) Yes, considerably.

25,896. But it wears better, I presume?—You cannot wear it more than 12 months, I think, if you wish it to remain anything like respectable. (*Mr. Strickland.*) Blue wears worse than other colours, I think. (*Mr. McCleery.*) The amount of gilt about it makes it very expensive.

25,897. I suppose after all it is principally an objection on the ground of the cost it is to the examining officer?—That is one objection. (*Mr. Strickland.*) Many do not like to wear it. (*Mr. McCleery.*) There is a certain amount of sentiment against the wearing of it. (*Mr. Strickland.*) In many duties the dress is inconvenient.

25,898. (*Mr. Lawson*) How could you have it for one duty and not for the other?—(*Mr. McCleery.*) We are sometimes engaged on baggage duty for a few months, and then do not go on it again for another four or five years.

25,899. Then you would be put to the expense of having a double set, your uniform and your private clothes?—Yes; but the one uniform would last five years, whereas at present it only lasts one. (*Mr. Strickland.*) In America officers have a badge I understand for the baggage duty. If their authority is questioned they have it with them, and they exhibit it, and it answers its purpose.

25,900. (*Chairman.*) Have you anything more?—(*Mr. McCleery.*) Would you allow us to hand in this statement which we sent to the House of Commons on the extension of hours (*handing in same*).

25,901. (*Mr. Lawson.*) I understand that you wish the recommendation of the Civil Service Commissioners with regard to the optional retirement at 60, and compulsorily retirement at 65, to be extended to you?—Yes. (*Mr. Strickland.*) At 60, or after 40 years' service.

25,902. Is that to facilitate promotion?—Yes, if it was compulsory.

25,903. Not on the ground of the unfitness of the men at that time of life to perform their work?—(*Mr. McCleery.*) I think on both grounds; we consider that when a man reaches 65 it is time he was making way for younger men.

The witnesses withdrew.

Mr. George Mayston and Mr. George Smith O'Loughlin called and examined.

25,904. (*Chairman.*) You represent the examining officers of the Customs at the out-ports generally, as I understand?—(*Mr. Mayston.*) Yes.

25,905. What out-ports do you speak of?—All ports except Liverpool and London.

25,906. We have had a statement from the examining officers at London, and they stated that they represented 42 ports besides, so that I daresay the points to a certain extent overlap?—Some of them probably do.

25,907. Perhaps you would kindly call our attention to the particular points upon which you lay most stress in this paper that you have sent us?—The first point is the question of salary. We believe that our work is of such a nature as to be at any rate equal to that which is performed by the ordinary clerk. The ordinary lower division clerk proceeds at present to 250*l.* a year with seven hours' attendance per diem, and for special services or special merit he obtains duty pay of 100*l.*, making his salary altogether 350*l.* Besides that we have to give one hour per diem extra for eight months in the year, and an equal time for the remaining four months of the year. Apart from that, too, we have to provide a uniform. We have greater wear and tear. Since the drafting of the statement I may say that we have read your report with reference to the pay that you proposed should be given to the clerks, that is, that they should go to 190*l.*, I believe that is the amount, and then if merited, they shall proceed on to 350*l.* We thought that ours is practically a similar recommendation. We recommend for the second-class examining officer that it should go from 110*l.* by 7*l.* 10*s.* per annum for eight years, and then by 10*l.* per annum to 250*l.* At the out-ports we are rather differently placed to what clerks in a London office would be, inasmuch as we are under so many different people, so many different heads. We have different collectors, and these different collectors of course have different opinions as to officers' merits, and we are inclined to the belief that the maximum salary of 250*l.* should be a fixture, and that those who go above it should be promoted solely because of merit.

25,908. The second-class examining officer now goes to 220*l.*?—Exactly.

25,909. And you propose that he should go to 250*l.*?—Yes.

25,910. And that the examining officer of the first class should go to 350*l.*?—Yes. I would like here to point out that the first-class examining officer really does duties which are above those of an examining officer. They are actually surveyors' duties to a very great extent; a large number of them are acting surveyors, so that they do work of a really superior nature. We have a code of warehousing regulations, of course, which governs the two departments, the Excise and the Customs. In that code the words "surveyor" or "supervisor" are used. Really speaking the "surveyor" is in half the number of cases a first-class examining officer.

25,911. Some idea was put before us that there might be a new class formed of assistant surveyors?—That would practically amount to the same thing, with the exception that there would be an alteration in title.

25,912. And another proposal coupled with that was that there should be only one class of examining officer at a lower salary than you suggest, and that the assistant-surveyors should begin at 250*l.*, rising to 350*l.*, and that practically there should be a larger number of better paid posts while the highest posts should not be quite so highly paid. If some scheme of that sort was possible, and it would give more promotion to gentlemen in your class, would that meet your view, do you think?—There is no doubt that is a great drawback, the want of promotion.

25,913. You insist, as the others do, upon the fact that the change in your prospects has been caused by the abolition of so many posts that you naturally would have looked to?—Exactly, I may say here that great numbers of us were induced to take upon ourselves the position of examining officer because of the higher positions that were at one time held out to us. A large number of the examining officers at the outports entered the service as clerks. In the great change of 1882 to 1884 they became examining officers, with slight increase of salary to cover increased attendance, and, of course, the classification under which they became examining officers was very much better than it is now.

25,914. The prospects of an examining officer were better then?—Yes, the prospects were.

25,915. Would you take any other point that you specially desire to bring forward?—There is another point, that is the point of the collectorships. The examining officers at the out-ports feel that the collectorships should be thrown open to the whole of the service. There has been recently a case where a surveyor in the port of London has been promoted to be collector at Dundee, and some time since there was a case of a gentleman who was formerly a clerk and had become an examining officer. He was made a first-class superintendent. And there was a case at Wexford where a second-class examining officer was made a superintendent. Those are the only cases, but we believe that it should be known throughout the service that the collectorships are thrown open to the whole of the body.

25,916. That was, I think, a recommendation that was made in the Playfair Commissioners' Report?—Yes, it was in the Playfair Commissioners' Report.

25,917. You say that has not been carried out except to the very limited extent that you have just told us?—Exactly. The examining officers' duties are scarcely known sufficiently by gentlemen outside the service, but they are very, very various. We have, for instance, the Merchandise Marks Act. We are the first officers who take that matter in hand. With these goods coming into the country, we are supposed to see that they are really in unison with the Act. And then, again, we have to deal with quarantine matters. We are really the advance guard in that matter, for the prevention of disease being brought into the country.

25,918. Have you, Mr. O'Loughlin, anything that you would like to add to what your colleague has said?—(*Mr. O'Loughlin.*) No, but I think, with reference to the classification that at present exists of what I call the examining officers, the salaries that they have will not admit of even a lesser number of that class, for the work that they have to do is of a very responsible nature, and there seems to be a disposition latterly to employ a lower grade of officers to perform that work at a salary which is not at all consistent with the class of the duties that they have to perform. There are a great number of men in the receipt of 67*l.* or 68*l.* a year who are doing the work of an examining officer. As I was coming across from Dublin yesterday I met an outdoor officer who was acting as an examining officer at a salary of 66*l.* a year, and he has the most responsible duties possible to perform in the course of his daily work. Perhaps there is no other department of the whole service where there is such a facility for fraud as there is in the case of the examining officer in assessing duty for the collection of the revenue. The check is very limited, and I think it is very injurious to the service and very injurious to the revenue, owing to the temptation it lays men open to, when you ask men with that salary to perform such very special duties.

25,919. (*Mr. Hanbury.*) You say the check is very limited, what check is there?—A surveyor coming down to visit you twice or three times in the day.

25,920. So that there is a very fair opportunity for fraud?—Yes, very fair opportunity. I believe, speaking of the whole service as a body, there can be very few stains pointed out through any of the officers having committed any frauds; but nevertheless a man with perhaps a large family and a small salary is open to temptation, and temptation is really the cause of a great many of the crimes that are committed. There is nothing to prevent an examining officer of Customs if he enters into collusion with the merchant when assessing his duty charging him a less duty than he is entitled to pay.

25,921. And the chances of his being found out are not very great?—They are not very great. In fact, in some ports they are nil. The chances of a surveyor coming to visit you unexpectedly are very small. In small ports, such as the port that I come from, the surveyor has not time to come and visit you frequently. The collector has to act as surveyor, and he comes round in the morning, then he has to go to two other stations, and he will go from one to the other; and a man knows or hears when he is coming. Having performed this duty properly with what is required of him

Mr. G. Mayston and Mr. G. S. O'Loughlin.

12 Mar. 1889.

as collector, he cannot make many unexpected visits. I have known a surveyor to come as regularly as the clock.

25,922. Do you mean that he always goes to the same offices at the same hours?—The offices are very near to one another, and we know when he has gone into one he is likely to come into the next office. He has to come to check the books, and there is no inspection of the goods at all, unless when he comes to check the book if there is anything going out he may check it and he may not. Of course he frequently checks the goods in the warehouse.

25,923. Is this checking of the books a sufficient guarantee against fraud?—No, it is not sufficient guarantee at all.

25,924. (*Chairman.*) What you are now upon is you say that outdoor officers should not be employed so much to do examining officers' work?—Quite so; and it was with reference to your suggestion that there should be a lesser number of smaller paid posts as examining officers and a greater number of better paid posts as surveyors.

25,925. I think you misunderstood me. It was a suggestion that was made to us by the examining officers of the port of Liverpool, to the effect that if a class of assistant surveyors was created to be permanent officers, and to which presumably examining officers, who now do surveyors' work as acting surveyors, would be appointed, then the class of examining officers might be to a certain extent reduced, the total number of officers as between examining officers and surveyors remaining the same, but the pay not being quite so high and more promotion for them. It did not refer to outdoor officers below at all?—Quite so; but of course the effect of promotion goes through the whole gradation of officers. And that class of officers absolutely exists at present, only under a different name, inasmuch as the first-class examining officers are perhaps 80 per cent. of them employed in performing duties that ought to be only performed by assistant surveyors or by surveyors.

25,926. The object of the proposal that was made to us was to improve the position of the examining officers by increasing their salaries, especially when you remember, as you say, that a good many of them are doing surveyors' work?—Quite so; for example, with reference to that suggestion that has been offered to you, there are 38 first-class examining officers at Liverpool; 21 or 22 of them are employed on surveyors' duty at present, so that if you carried out your suggestion it would be simply to take that 21 or 22 off the 38, put them into an assistant surveyor's class, and put the balance into the examining officer's class.

25,927. Would not that be an advantage to the examining officer?—I think only partially; it would be an advantage to the general body; they would go to the higher salary, but would not have a chance of promotion solely on account of merit. At present a man with average ability looks forward to become a first-class examining officer, but may not be selected for a higher post as a surveyor. Hitherto his chances have been better, because he went to 300*l.*, but now he would only go to 250*l.*

25,928. Do you mean to say that it would not be an advantage to an ordinary outdoor officer who rises to be an examining officer to know that if he rose to be an examining officer of the first class he would have the opportunity, if he did good service, of becoming an assistant surveyor at a salary of 250*l.*, rising to 350*l.*; would not that improve his prospects?—Of course it would, but the inducement of increasing the salary of a second-class examining officer going to 250*l.* to a man of merit that particularly deserves promotion is no inducement whatever, as he would hope and expect to get out of that class of examining officers long before he reached the maximum of the salary.

25,929. You mean he would, under the present system, have a chance of becoming a surveyor?—Quite so, or rather first-class examining officer, before he reached the maximum of that salary.

25,930. Then, in your view, you do not think that this proposal which is made to us by the examining officers of Liverpool, so far as I have put it before you, of much good to the service?—(*Mr. Mayston.*) Might I ask what would be the maximum the examining officers recommended at Liverpool?

25,931. Of the examining officer, 250*l.*?—Do they suggest that the assistant surveyorship should commence with 250*l.*?

25,932. The suggestion is this, that the assistant examining officers should begin at 100*l.* and rise by 5*l.* to 150*l.*, remaining much the same as they are, except with an increment of 5*l.* instead of 3*l.*; that the examining officers should form only one class, and they should begin at 150*l.* and go by 10*l.* to 250*l.*, and that there should be a kind of upper class really of examining officers, called assistant surveyors, beginning at 250*l.*, and rising by 10*l.* to 350*l.*?—(*Mr. O'Loughlin.*) That is practically the same thing as the out-ports suggest. There is very little difference between them. The reason we have not suggested the change of name is simply because there is no object of adding a class to the surveyors and taking a class from the examining officers.

25,933. The idea was partly that that would diminish the number of surveyors, but you say that does not practically differ from you; still you would call examining officers first and second class, but practically they would have pretty much the same salaries as they suggest?—Yes, pretty much the same salaries as they suggest.

25,934. (*Mr. Hanbury.*) Only it would better represent the work that they are actually doing?—Quite so, it would do that. (*Mr. Mayston.*) The only difference is in the title. We stick to the title of first-class examining officer.

25,935. (*Chairman.*) The title would not stand in the way if the pay was there, no doubt?—No.

25,936. (*Mr. Hanbury.*) But the title would correspond with the work which it does not at the present moment?—Yes. (*Mr. O'Loughlin.*) Then this scheme we suggest applies to surveyors. As examining officers we feel that in making a classification one must make a classification for the others also, so that the salaries would not be lower.

25,937. (*Chairman.*) You suggest something with reference, you say, to increase of salaries in the surveyors?—Yes. (*Mr. Mayston.*) We ought to point out that so far as the out-ports are concerned there are really four classes of surveyors. In Liverpool and London there are three—first, second, and third class—at present. The out-port surveyor commences with 300*l.* a year, and rises to 340*l.* The third-class surveyors at Liverpool commence with 350*l.* and rise to 410*l.* An out-port first-class examining officer would be made probably at an out-port a third-class surveyor; he would then in the course of a few years be transferred, possibly to Liverpool, as third-class surveyor still (but with higher salary), and then in the course of time he would receive promotion to second class; and then again so the first, so that practically the out-port surveyor is very much behind the surveyor in Liverpool and the surveyor in London. He has to wade through three classes before he can reach the first of the surveyorships. As a proof that that is the case, I might say that at Hull and at Glasgow there were two gentlemen who were transferred to London; they were first-class surveyors. On their transfer to London they were put into the second class of surveyors, thus showing that the Board believed or saw that the second-class surveyorship in London was equal to the first-class surveyorship at the out-ports. So that those gentlemen have really to go through the three classes before they can reach the first class of surveyorship as it exists in London and Liverpool. You will find that there is a difference in the salaries between the out-ports and Liverpool and London, that we believe to be radically wrong.

25,938. Then the suggestion you make is intended to obviate that?—That is with reference to the two classes of surveyorships.

25,939. Second-class surveyors, 360*l.*?—We recommend that there should be two classes of surveyors right through the United Kingdom; the second going up to 420*l.*, I think it is, and the first up to 550*l.*

25,940. As you say, that is a little bit outside your own province, because you have not yet had experience of the position of surveyors, although you naturally look forward to have that?—Exactly so; we look forward to have that.

25,941. And it is therefore very natural that you would like to see the position of the surveyors improved?—It follows as a matter of course if we recommend the improvement of the first-class examining officer or assistant surveyor. If you alter the one set we must of necessity recommend the increase of the salary of the surveyors. (*Mr. O'Loughlin.*) Or else you would have the officers having different ranks with the same salary. (*Mr. Mayston.*) I would like to point out

another absurdity—it really is an absurdity—an examining officer, we will say, gets up to 220*l.* a year before he is promoted; he happens to be promoted to a place, say Dover, as a first-class examining officer. He goes away on precisely the same salary. He receives 220*l.* and he rises by 10*l.* a year to 300*l.*; but his first year is precisely the same as the year which he has left.

25,942. That is true, but is not it the fact that he has got into a fresh class, with a right to rise by 10*l.* to 300*l.*, whereas he might have stayed at the sum of 220*l.*? Is not that part of your case that you desire to get rid of the inequality, and adopt a service scale?—That is one part of the scheme; but I am only pointing out the absurdity of letting the man go away without an increase.

25,943. (*Mr. Freeman Mitford.*) You want to see a difference between the minimum of one class and the maximum of the other?—Yes.

25,944. (*Mr. Hanbury.*) I see that under the present system the maximum of the assistant examining officer is very much higher than the minimum of the second class?—Yes. (*Mr. O'Loughlin.*) That is a very incongruous state of things. It is possible to have an examining officer of higher rank and the assistant of lower rank with a considerably better salary. The same thing exists with reference to the superintendent; the minimum of the superintendent is 190*l.*, and he may have an assistant officer under him who has 220*l.* (*Mr. Mayston.*) I might say, perhaps, that the assistant examining officers were formed in order to give promotion to the older class of officers; those who had not been able to pass the competitive examination for the examining officership. The examining officers, as a rule, are much younger men than the assistant examining officers. Outdoor officers are not permitted to become assistants until they have been some considerable time in the service.

25,945. Then the assistantship is not a stepping-stone on the part of the outdoor officer to the examining officer?—Not altogether; but it is not a bar to promotion to the examining officership.

25,946. It is a kind of little promotion to those who could not expect to get any higher?—Exactly, to those who really could not pass the competitive examination for examining officer. The examining officers, before they become such, have to pass an examination. I may say that the reason given for the assistant class is precisely what one of the late members of the Board told us at Portsmouth. At times there may be a young man who becomes an assistant examining officer, but that is altogether an exception.

25,947. (*Mr. Freeman Mitford.*) Then, as a rule, does a young man skip that grade altogether?—He does not enter the grade.

25,948. He skips that grade altogether?—Yes; he goes into the examining officership at 110*l.* per annum.

25,949. He becomes a second-class examining officer?—Exactly.

25,950. (*Mr. Hanbury.*) That is a sort of consolation grade for old outdoor officers then?—That is practically what the assistant examining officership is.

25,951. (*Mr. Maclure.*) You refer to the uniform. Have you any objection to the uniform?—(*Mr. O'Loughlin.*) We would like it if the Government would pay for it.

25,952. If the Government would pay for the uniform do you think it would be an advantage?—I do not see the advantage at all to the examining officers who are employed on clerical duty or to the officers who are employed on warehousing duty. I think it is rather a disadvantage, for it is a cumbrous and a useless kind of uniform. It is not a tidy kind of uniform by any means, and there is nothing, I should think, so displeasing to the eye as a distasteful uniform. It is an expense, too, compared with what one could buy an ordinary suit of clothes for, which could be worn when doing that sort of work.

25,953. (*Mr. Freeman Mitford.*) I suppose you would wear it for boarding ship?—Yes. I should strongly suggest that it should be continued for boarding ship, but it is quite useless as regards warehousing duty or clerical duty. (*Mr. Mayston.*) At a place like Portsmouth the uniform puts us in rather a queer predicament sometimes, inasmuch as we get saluted when we do not want to be saluted.

25,954. (*Chairman.*) It is taken for a naval uniform, is it?—Exactly. (*Mr. O'Loughlin.*) There is another thing we would ask strongly on behalf of the out-port examining officers, to prevent what seems to be the desire of the London officers, that promotion should be confined to the different ports.

25,955. How do you wish to keep it?—As it has latterly been carried out by the Board it would be general throughout the service. If what the London officers wish was carried out the result would be, to carry the thing to its end, that in ports like Limerick where I came from I should never expect to get beyond what I am. I am at the highest post I can go to there, and the ratio of promotion in the out-ports is so small compared with what it is in London, while the out-port officer has passed the same examination, is performing the same work, in fact has to have a more varied knowledge of the general duties of a Customs officer than a London officer has, for it is very possible you may have an examining officer in London who is employed from the beginning of one year to the end of it at the one particular duty, whilst at the out-port he has to deal with every class, and he has to have a knowledge of them in some way. He is expected to have the Merchant Shipping Act, the Merchandise Marks Act, and all the quarantine regulations at his finger's ends, besides all the warehousing regulations, while in London a man may not be required to know a single think except gauging or perhaps laboratory work.

25,956. I think the suggestion to us of the officers in London was exactly the same as yours, that the promotion should be general throughout the whole service?—(*Mr. Mayston.*) I think that is so now. The London officers have suggested that. (*Mr. O'Loughlin.*) If they suggest that they require an addition to their salaries. (*Mr. Mayston.*) To provide for travelling allowances, or something of that sort, is it not? We are of opinion that if that is granted at all it should be granted solely as a travelling allowance, so much per annum. We do not think that it should count as salary, because we say it should be general right throughout the United Kingdom; the various classes should have precisely the same salary, they have precisely the same duties, in fact, at the out-ports they have sometimes very onerous duties—as Mr. O'Loughlin has just put it—more onerous than would perhaps fall to the London officer for some considerable time.

25,957. (*Mr. Maclure.*) Have you much travelling?—No, we have very little travelling.

25,958. In Limerick you would have none at all?—(*Mr. O'Loughlin.*) None at all.

25,959. (*Chairman.*) But when there is occasion for the officer who is located at any particular part in London or anywhere else to travel some distance to the kind of house that he can get, then naturally you think the money out of pocket should be paid to him?—Quite so. (*Mr. Mayston.*) I am of opinion so. (*Mr. O'Loughlin.*) It is very hard that he should not. At some of the out-ports house rent is very expensive, and what you lose in one way you make up in another.

25,960. Then is your suggestion representing the officers for the out-ports that the Government should content itself with paying the salaries that you recommend and leave officers to take their chance?—Quite so, or else give to the Liverpool and Glasgow and Hull officers who have got as great a distance to go as a great number of the London officers, an equal allowance for travelling. In some of those out-ports they have to go quite as far as London officers.

25,961. (*Mr. Maclure.*) I know Hull very well, and I do not think they have to go great distances there for their houses?—I know that it has been put forward by the officers at some of the ports that they have just the same difficulty in getting houses near the Custom House as the London officers have.

25,962. (*Chairman.*) At all events you would be of opinion that wherever it could be shown that the distances that have to be travelled are considerable, or as considerable as they are in London or Liverpool, that question should be considered by the Government?—Certainly.

25,963. (*Mr. Hanbury.*) Provided it is treated as travelling expenses?—Yes.

25,964. (*Mr. Freeman Mitford.*) How far, practically, do you have to live from the Custom House?—I live two miles away.

25,965. (*Chairman.*) Is there any other point?—(*Mr. Mayston.*) There is one point with reference to the time between 8 and 4. The hours during the summer—on certain duties—are from 8 to 4, and for four months

Mr. G. Mayston and Mr. G. S. O'Loughlin.

12 Mar. 1889.

of the winter they are between 9 and 4. Supposing we were called upon to work longer hours, and supposing at any rate that the exigencies of the service rendered it necessary that longer hours should be insisted upon, or earlier hours, we are of opinion that work performed between 6 and 8 ought to be paid at a higher rate than work performed between 2 and 4. I may say here that the large proportion of the present officers became examining officers when the hours were fixed from 8 to 4, and from 9 to 4, and we are of opinion that any attendance beyond that time should be paid for, and as I just said, attendance between 6 and 8 should be paid at a higher rate than attendance between 8 to 10, or from 2 to 4.

25,966. That is the same point I think that has been brought before us by the gentlemen from Liverpool and other places?—Then we will not travel over that ground again, of course.

25,967. I do not know that there is any particular out-port that it applies to in any different sense from the way in which it applies to Liverpool where, as you are aware, they have made a strong fight for the very point that you are now mentioning?—There are really only four ports at which this has been adopted at present, and that is experimentally. At Liverpool, Hull, Grimsby, and another port (I forget the name). But still, of course, we are told distinctly that it is to be applied to all the United Kingdom. It will come very hard. We will take the case of a gentleman who happened to enter the service as a clerk: he originally gave attendance from 10 to 4. Under the altered circumstances, say he was allured to the examining officership by the prospects of overtime (we must bear that in mind, of course, because we look upon overtime after all as a portion of the salary to be earned). The prospects of the overtime induced him and others similarly placed to give up their more comfortable positions and take upon themselves positions which were not quite so comfortable as the other. Of course, it would be very hard upon those gentlemen if they have to work from 6 to 2, where previously their work was from 10 to 4, and then 8 to 4, or 9 to 4.

25,968. The hours not being so convenient?—Not at all convenient. Some of them will have to change their places of residence; it would be absolutely necessary, they could not help themselves. With reference to the superannuation question, it is hardly worth while our touching upon that, because you have recommended that in your last report.

25,969. You now suggest that practically your views appear to be the same as the views of this Commission were with reference to the clerical service?—That is it, so far as superannuation is concerned.

25,970. The compulsory retirement?—Compulsory at 65, and at 60 if found inefficient.

25,971. I suppose you desire that very much, in order to keep up promotion?—(*Mr. O'Loughlin.*) In order to keep up promotion, and we believe in the end it would be a great saving to the service, for when you have a man who is, perhaps, not very efficient and who is old, the Board do not like to put him out, but still another man has to do his work.

25,972. Do you mean that the Board should be at liberty to require any man to go after 60, unless he was a thoroughly efficient man?—Quite so. Then as regards the question of pensions, perhaps we cannot enter into that, as you have already made a recommendation on that point.

25,973. I think we cannot very well open that question again. Is there any other point upon which you wish to speak?—(*Mr. Mayston.*) I do not know of any other.

25,974. (*Mr. Hanbury.*) Sunday duty does not arise at your out-ports, does it?—Yes, a portion of them have to take their turn of Sunday duty unquestionably. All officers of the water-guard must take a turn of Sunday duty. There is no avoidance of it.

25,975. At Liverpool it seems that there are some new regulations owing to the fact that merchants do not pay them now for certain extra work; for instance, that the pay they used to get they do not now receive. Does that apply to you?—Not at present. It applies to Hull and Grimsby and Liverpool and another port the name of which I have forgotten for the moment. There are four ports to which it has been applied.

25,976. (*Chairman.*) You do not desire to say anything upon the subject of Sunday duty; you do not raise that point, do you?—So far as we are concerned we believe that Sunday duty is absolutely necessary, and that on waterguard service it cannot be avoided. For instance, in the case of ships arriving there must be officers in attendance to look after those ships coming in. We quite see that. Of course that is part of the rough that we have to take with the smooth. That is a duty which a clerk has not to perform. That is another point in favour of the examining officer getting more salary. The present examining officer is distinctly equal to the clerk in point of educational ability, and has to use great tact and discretion very often. Perhaps I may point out here that the outdoor department are frequently brought in contact with gentlemen of very high position returning from the continent. They are frequently brought into contact with ambassadors; they are frequently brought in contact with Royalty itself; and they have therefore to be men of a great amount of discretion in their dealings with various people. We have dealt with the question of collectorships and superintendentships being thrown open to the whole of the service.

25,977. That was, as we know, a recommendation of a previous commission?—(*Mr. O'Loughlin.*) I might say that in some small ports the greater part of the duty that the collector has to perform is really surveyor's work, pertaining to the outdoor department. When the Playfair Commission recommended before that it should be done, he had not then at all to perform the amount of outdoor duty that he has now to do, for since then the warehousing accounts that at that time belonged to his position have been removed to the outdoor department, and it is the surveyor that would have to look after that portion of his work, if there was a surveyor at the port; but in a port where there is the one officer occupying the dual position I should say three fourths of his work, if it is a warehousing port, is surveyor's work, and only one fourth collector's work.

25,978. (*Mr. Hanbury.*) Does he get the same salary as when he had only collector's work to do?—Exactly the same; but my argument is that a man who had been an examining officer and learnt that particular work was better qualified to fill the post than a clerk who did not learn that particular work, for the technical knowledge he had to acquire to perform the surveyor's duties properly is of a much more important and difficult nature than what he had to learn to be a collector. There is very little technical knowledge required in acting as a collector. There is only the ordinary education and intelligence which a gentleman in his position should have. But to act as a surveyor he has to acquire and to have in his mind the continual technical knowledge of gauging and outdoor work. (*Mr. Mayston.*) I should like to call your attention to this, it is really a repetition of what has occurred before. In the Third Report of the Civil Service Expenditure Committee, issued some considerable time ago, they say, "They consider that while "competitive examinations afford on the whole the "best means of selecting young men for admission "into the Civil Service the efficiency of an office "mainly depends upon a good system of promotion "under which men can be advanced according to the "evidence of their fitness which they give by the "actual discharge of their official duties, and to place "them all on a footing of equality as regards their "prospect of rising." That is one of the points for which we really contend, we say that there ought to be an equality all round.

25,979. You must be aware that it is not a very easy problem?—I quite agree with that. I see that there are many difficulties.

The witnesses withdrew.

Adjourned.

APPENDIX.

(1.)

MEMORANDUM BY THE BOARD OF INLAND REVENUE.

In view of the inquiry about to be made into the question of the amalgamation of the Customs and Inland Revenue Departments:—

A Memorandum is submitted for the consideration of the members of the Royal Commission, showing what has been attained in the saving of expenditure by the previous amalgamations of the Boards of Stamps and Taxes in 1834, and subsequently by the amalgamation of the Boards of Stamps, and Taxes, and Excise in 1848, together with some other details which may be of use to the Commission in deciding this question.

Up to 1833, the revenues of stamps, taxes, and excise were under the management of three boards.

In 1834, the Board of Stamps was united with the Board of Taxes, and instead of 712 persons with salaries amounting to 123,354*l.* in the separate establishments, the combined establishment contained only 662 persons, with salaries amounting to 105,012*l.*, showing a saving of 18,342*l.*

In 1848, the Boards of Stamps, and Taxes, and Excise were amalgamated (the Excise Board itself, at the time, being composed of seven Commissioners), and a saving effected of nearly 31,000*l.*, which was obtained by the abolition of the following officers:—

	£	
1 Chairman - -	1,600	per annum.
1 Deputy-Chairman - -	1,500	,,
4 Commissioners - -	4,600	,,
1 Secretary - - -	1,500	,,
1 Solicitor (England) - -	2,000	,,
1 do. (Ireland) - -	2,000	,,
1 Assistant-Solicitor (England)	1,000	,,
1 do. (Scotland)	450	,,
1 Clerk in Solicitor's Office (Scotland) - -	250	,,
1 Clerk in Solicitor's Office (Ireland) - -	100	,,
1 Receiver-General - -	1,200	,,
1 Clerk in the office of Receiver-General - -	800	,,
1 Cashier (Scotland) - -	300	,,
1 Accountant and Controller-General (England) -	1,000	,,
1 Accountant and Controller-General (Scotland) -	1,200	,,
1 Principal Accountant (England) - - -	500	,,
2 Clerks (England) - -	455	,,
2 do. (Scotland) - -	170	,,
1 Auditor and Comptroller-General - -	1,200	,,
1 Assistant do. - -	500	,,
8 Clerks - - -	1,500	,,
12 Receiving Inspectors -	6,800	,,
1 Inspector - -	300	,,
	£30,925	

Mr. Horsfall, in his Draft Report for the Committee appointed in 1862, stated that over 100,000*l.* a year had been saved by these amalgamations in salaries. In addition to this there was the price obtained by the sale of the offices in Broad Street, which became unnecessary for revenue purposes on the transfer of the officers previously located there to Somerset House. This Committee appeared to be about equally divided as to the advisability of amalgamating the Customs and Inland Revenue Departments.

In 1880 a Committee was appointed to inquire into the bonding system of the two departments: and also as to the reduction of Customs establishments at minor ports.

This Committee, which consisted of Mr. Holms, M.P., Sir C. Du Cane, Sir C. Herries (subsequently succeeded by Mr. West), and Mr. Barrington, laid down—

1. That the regulations for bonding goods in the warehouses of the Customs and Inland Revenue should be absolutely assimilated.
2. That in districts where there are duplicate establishments, all of them should, as far as practicable, be transferred to one Revenue Board.
3. That in each town or port the number of bonded warehouses should, as far as possible, be reduced to the actual requirements of the trade.
4. That Customs Establishments at minor ports should, as far as may be practicable, be abolished, or reduced to a lower class (*i.e.*, to the class of creeks or parts of larger ports).

Sub-Committees, consisting of members of the two departments, were subsequently appointed to carry out these recommendations, with the result—

1. That an unified code of warehousing regulations for the two departments was issued in 1885.
2. That the assimilation of the system of warehousing accounts was practically effected.
3. That the number of duplicate warehousing establishments was reduced from 35 to 7 (exclusive of a few warehouses occupied by distillers), and the bonded warehouses at 41 minor ports were transferred to this Board.

On this last subject the Committee reported to the Treasury in November 1883 as follows:—"We have "the pleasure of reporting that a saving of 15,000*l.* "per annum has been effected (through the transfers "in question), and this without any diminution what- "ever of the facilities given to the public, but rather, "if we may judge from the reports that reach us, to "the satisfaction of all concerned. This feeling will, "we believe, be deepened, as the public become more "familiar with the alterations.

"The saving above mentioned, 15,000*l.* per annum, "is in respect of changes carried out in accordance "with the recommendations of our previous reports, "at the places mentioned therein.

"There remain a large number (61) of places at "which warehousing business is still performed by the "Board of Customs. Of these places we append a "list, from which it will be seen that at only 19 places "is the business extensive, while we are strongly of "opinion that at the other ports (42) in the list, in- "vestigation by the practical officers of the two "Revenue Boards would show that the work could "be more economically performed by the Board of "Inland Revenue.

"We would, therefore, suggest whether your Lord- "ships should not issue instructions to both Boards "to bring about, with as little delay as possible, a "transfer of business on the lines above indicated, "observing that we do not consider it necessary that "our Committee should be continued to supervise such "transfer."

These recommendations were adopted by the Lords of the Treasury in December 1883, but the transfer was stayed in the following year by the Chancellor of the Exchequer, I believe on the assurance of the Customs Department that they could themselves effect great economies.

It may certainly be taken for granted that there would have been no difficulty in transferring the warehouses at these 61 ports to the Board of Inland Revenue, without any diminution whatever in the facilities hitherto given to the public, and with the same reduction in the cost of management as had been effected in previous transfers.

Appendix

The unified code of warehouse regulations has now been in use by the two departments since 1885, and although every endeavour has been made to keep the practice of the two departments identical, it is inevitable that where the instructions have to be interpreted by the local officers of two separate departments, and administered by two Boards, diversities of practice will arise. To such an extent has this been the case, that Treasury authority has even been obtained, in some instances, to admit of different practices being followed. This would not have been the case had the code of regulations been administered by one Board.

The gross revenue collected by this department in 1886–7 was 55,577,205*l.* Of this sum, nearly 12,000,000*l.* was in respect of direct deliveries from warehouses.

The gross revenue collected by the Customs Department, including the portion of the British spirit duty for the same year was 21,836,584*l.*, and of this amount about 97 per cent. was in respect of direct deliveries from warehouses.

The total cost of collection of the Inland Revenue for that year was 3*l.* 8*s.* per cent., and that of the Customs, 4*l.* 6*s.* 2*d.* per cent.

In Mr. Cardwell's draft report for the Horsfall Committee it is stated that "the principal and most anxious "labour of the Customs, employing the most expensive "part of the establishment, is connected with the "warehouseing system."

This statement would appear to be equally applicable to the present time, as about 97 per cent of the Customs revenue is still collected through their warehouses, and, as I have endeavoured to show that the warehouses of the two departments could, without difficulty, and economically, be transferred to the management of one Board, so would it follow that the revenues collected through such warehouses (which, in the case of the Customs Department, is nearly the whole) could be equally well collected by the same Board.

There are various extraneous duties performed by both Boards for other departments, such as—

Post Office work.
Companies' registration work.
The collection of agricultural returns.
Corn averages, &c, by the Inland Revenue, and
The collection of light dues.
Mercantile marine duties.
Wreck work.
Bill of entry, &c. by the Customs Department.

In the event of amalgamation taking place, it is presumed that these, as well as other duties would remain for the present in exactly the same position as they are now, until it is seen whether or no some of them could be advantageously transferred to other departments.

It has been shown in the foregoing remarks that each successive amalgamation has resulted in great economy to the State.

It has been admitted in evidence that the most important portion of the Customs work is in connexion with warehouses.

It has been shown that almost the whole of the Customs revenue is collected through warehouses, That the Inland Revenue and Customs warehousing business is regulated by an identical code of instructions, and that warehouses have been transferred from one department to the other without difficulty, and with a most economical result.

The conclusions to be drawn from these proved facts are—

a. That an amalgamation is quite possible; and
b. That it would be economical.

It would be impossible, at this stage of the inquiry, to estimate with any degree of accuracy what saving would be effected if this amalgamation were carried out. This could only be arrived at by the joint administration and enquiry of the two Boards; but it is beyond doubt that a concentration of the work of the two departments would lead to great economies, not alone in the more highly paid classes of officers engaged in the supervision of the various duties performed by what may be termed the outdoor officers, but also in the indoor staff of the respective departments, as it may fairly be assumed that the whole revenue business might be so managed as to render it unnecessary to retain more than—

One Board;
One Secretariat;
One Legal;
One Accounting, and
One Receiving Department for the combined Service.

It would be departmentally advantageous—

1. By securing absolute uniformity of practice as regards the warehousing code of instructions.
2. By putting an end to the correspondence constantly taking place between the two Boards on warehouse questions; and
3. By putting an end to the constant questions and comparisons by the officers of the two departments charged with almost, if not quite, identical duties, who are in receipt of different scales of pay, and have different official prospects.

It is apparent from the Customs Estimates for the past few years that large economies have been effected in its administration.

This may be regarded as one of the results brought about by the appointment of the Warehouse Committee in 1880, and, with this economy in view, does it not appear that it would be to the advantage of the State and of the departments, that they should be so placed as to be able to avail themselves of each other's experience ?

It is admitted that there might be some disadvantage in having so large a body of officers as upwards of 10,000 under one Board, but a great number of these are engaged on work of other departments, especially the Board of Trade, who would probably be willing to take over the whole of the work now performed for them by the Customs Department, and with it the large number of officers concerned.

It is believed, moreover, that public opinion is largely favourable to such a concentration of revenue business, and there can be little doubt that it would be hailed as a great administrative reform.

ALGERNON WEST.

12th October 1888.

I concur in the above Memorandum.

IDDESLEIGH.

(2.)

MEMORANDUM BY THE BOARD OF CUSTOMS.

The advisability of amalgamating the two Departments would appear to depend mainly on three conditions,—

A. The convenience of the merchants.
B. Improvement and economy in administration.
C. The convenience to Government generally in having to deal with one instead of two Departments.

A. *Convenience to merchants.*—In 1862, when the question was mooted, there appears to have been a feeling among those engaged in trade that inconveniences which the merchants met with were caused by their having to deal with two Departments and that these would be remedied by amalgamation.

But great changes have been introduced during the intervening years, as *e.g.*:—

(*a.*) British spirits intended for exportation had formerly to be first removed into a Customs bonded warehouse, as they could not be exported from an excise warehouse; whereas now the same privileges and facilities for exportation exist in respect of the warehouses of either Department.

(*b.*) Plain British spirits are admitted into Customs warehouses on removal under bond from excise warehouses for home consumption, for removal to other warehouses (Customs or Excise), or for exportation.

(*c.*) Imported dutiable goods of all kinds intended for warehousing are now admitted into Excise warehouses on equal terms with those under which they had previously been admitted into Customs warehouses exclusively, for home consumption, for removal to other bonded warehouses, or for exportation.

(*d.*) The warehousing practice of the two Departments formerly differed in many respects, and merchants found themselves subject to different rules, according as to whether they warehoused their goods under one Department or the other.

Of late years the warehousing practice of the two Departments has been assimilated generally at all points, and a code of regulations "governing the "deposit of goods in Customs or Excise general ware-"houses throughout the United Kingdon, the "operations therein and deliveries therefrom," has been issued by the two departments.

The provisions of this code cannot be changed without the previous assent of the respective Boards of both Departments, and the present administration of the whole of the general bonded warehouses of this country is carried out on a uniform plan.

One of the principal grounds of complaint was the number and variety of the Customs forms which were required for the transaction of business. A large reduction was made in these forms in 1863 and subsequent years, and in 1885, on the report of a committee which revised them, a further considerable reduction was effected.

We have thus far dealt with subjects, more or less common to the two Departments, which were brought prominently before the Committee of 1862, and as to which, since that date, facilities have been accorded.

But there are many other points, exclusively Customs, on which considerable facilities and concessions favourable to the mercantile community have in that period been introduced. Among these may be enumerated:—

(1.) The extension to importers of bulk cargoes of the privileges of continuous day and night discharge, free of expense for any overtime attendance of officers.

(2.) The grant of every reasonable facility for the reporting and clearing of vessels, for the landing, examination, and delivery of inwards cargo and shipment of outwards cargo at extra legal hours, including a considerable addition to the legal hours during which goods free of duty may be landed and passed.

(3.) By the amalgamation of offices, from which has resulted not only greater convenience to the mercantile community, but a considerable reduction in the cost of the Department.

(4.) Before 1860 the landing and preventive branches of the Department were, except at very minor ports, entirely distinct and not interchangeable for purposes of general duty; under the present system, all officers (not being clerks) are held available for any revenue and preventive duties as required.

In consequence of these and other changes, we believe that no difficulty is now felt by the public in having to deal with two Departments, and that the feeling in favour of amalgamating the services, which at one time prevailed among mercantile men, has ceased. We are not aware that any opinion in favour of amalgamation has been of late years expressed by the mercantile community.

We do not know whether it is contemplated by the advocates for amalgamation that the whole business now transacted at the Custom House should be moved to Somerset House; but we wish at once to point out that in our opinion any such transfer of business would be attended with the utmost inconvenience to merchants and clerks, who have been accustomed for many generations to transact business at the Custom House, whose offices have, in many cases, been selected on account of their proximity to that House, and whose personal attendance at it is by law, in many cases, compulsory.

We cannot doubt that any change in administration —one of the effects of which would be to remove the Customs staff from the east to the west end of London —would give rise to vigorous remonstrance by the whole mercantile community of the City of London. Whether a similar inconvenience would be caused to the business of the Inland Revenue were the Board and staff of that Department removed to our premises and neighbourhood, is a matter on which we are unable to express an opinion.

B. *Improvement and economy in administration.*—With the view of examining the question whether any improved administration or economy is likely to result from the proposed change, it will be as well first to state the main divisions of the work of the Customs Department, viz.:—

1. Preventive duties, inclusive of quarantine, of waterguard, and the guarding of cargoes during the time of their discharge; and the special duties under the Public Health Acts.
2. Dealing with ship and cargo on first arrival, as *e.g.*, receiving the report of the ship and entry and examination of cargo.
3. Receipt of duty on goods at time of delivery from ship.
4. The warehousing of dutiable goods, the control of them whilst in warehouse, and the receipt of duty on their clearance for home consumption.
5. Transhipments.
6. Exportation of goods, bonded and unbonded, and the supervision and ultimate clearance of the exporting ships.
7. Auditing of ships' cargoes inwards and outwards.
8. Supervision of ships' stores, including the packing and issue of dutiable goods from bond.
9. Ships' registry.
10. Receipt of light dues for Trinity House and Board of Trade at all ports, subports, and creeks.
11. Other work for Board of Trade, such as that of Superintendent of Mercantile Marine and Receiver of Wreck, and enrolment of men in the Royal Naval Reserve. At all except the largest of the Customs Ports, the collectors or superintendents are superintendents of mercantile marine under the Board of Trade, and at all ports the collectors or other Customs officers are receivers of wreck under the same Department. The duties under both heads are technical and often important.
12. Supervision of the landing and importation of cattle (for the Veterinary Department of the Privy Council.
13. Supervision of the landing and loading of explosives (for the Home Office).
14. Work for the Admiralty in connexion with the execution of Admiralty warrants.
15. Payment of pensions, civil, naval, and military.
16. Preparation of statistics of trade; and work in connexion with the bills of entry.
17. British marks, *i.e.*, the protection of the British manufacturer by preventing a British character being fraudulently given to imported goods of foreign manufacture.
18. The protection, so far as importation is concerned, of British copyright works.
19. Prosecution of offenders against Revenue Laws.
20. In the case of war between foreign powers, securing the observance of the provisions of the Foreign Enlistment Act.

For the performance and the supervision of the duties arising in the several divisions of this business there were employed, in the year ending the 31st March 1887, 4,485 established officers, and about 1,400 extra men (including copyists), and the expenditure on the salaries, allowances, &c. of the staff thus employed amounted in that year to 746,088*l.*

Out of the 20 heads into which the business of this Department has been divided, the two Boards come in contact only in cases which fall under Heads 4, 6, 8, and 15, but the possible saving under the two latter heads is not considerable enough to call for special remark here.

Dealing first with No. 6, the two Departments only come in contact at the exportation of beer, spirits, and plate, but the Inland Revenue have no share in the supervision or clearance of exporting ships.

We are not aware that any facilities could be obtained by the exporters under an amalgamated Board which could not be obtained while the administration of the two Departments is separate.

With respect to No. 4, it is true that the business is all-important to the Customs revenue, but it forms only a limited portion of the business of the Department, as will be presently shown. Its importance, however, may be judged from the fact that of the 20,135,476*l.* which, after the abatement of debentures and certificates, formed the Customs revenue in the year ending 31st March 1887, 19,676,992*l.* were paid in respect of warehoused goods, while only 458,484*l.* were paid on prime entries.

It is not easy to arrive at the exact number of officers who are employed—

A. In the receipt of revenue,
B. On warehouse accounts,

but, approximately, it may be stated that under A. 72 men, and under B. 1,143 men, are employed.

It will thus be seen that out of 4,485 established officers, only 1,215 are engaged on duty similar in the

Appendix.

two Departments, but the 1,143 employed under B. would not be affected by amalgamation, as we consider that the number does not exceed the requirements of the service, and if it did, its reduction could and would be effected independently of any question of amalgamation.

There remain only the 72 employed under A.; in the number of these, taken collectively with those employed on similar duties under the Inland Revenue, we think that a reduction could probably be effected under an amalgamated Board, but so far as this Department is concerned, the number actually employed does not appear to afford any wide margin for reduction. We are not, however, prepared to dispute the fact that the revenue might in all cases be received by the same cash clerks, if a satisfactory check is established as to the receipt of the proper amount of duty in each case. With this exception, the only portion of the service in which we think that reduction in expense might result from amalgamation is—

I. In the headquarter staff.

II. In the collectors at those ports at which at present both Departments have collectors.

As to I. The only establishments in which any reduction could ultimately be expected would be—

(*a.*) In the Boards.

(*b.*) In the Solicitors Departments.

(*c.*) In the office of the Accountants-General.

As far as this Board is concerned it has already been reduced to three members, and even if it is amalgamated with the Inland Revenue, we believe that two members at least would certainly be required for the effective transaction of Customs business. If the Inland Revenue Board were correspondingly reduced such reduction could probably be effected without amalgamation, as has been the case with the Board of Customs.

In an amalgamated Board there would be room, of course, for only one chairman, and the salary of the other would be saved; but we believe that at least in this respect, if not in others also, the amalgamation, if carried out, will be more nominal than real, and that it will be difficult to find any one man who would be able to grasp the business of so large a Department, and be competent to advise the Executive on all the various points which would arise in the administration of a Department dealing with such varied business as is included under the headings of—

Customs,
Excise,
Stamps, and
Taxes.

On this point we may cite the opinion expressed by Mr. Gladstone in the House of Commons in 1862. Mr. Gladstone stated that—

> "Having had considerable experience arising from a constant connexion with the heads of those Departments while filling the office which he had the honour to hold, he thought he had the means of forming a judgment on the nature of their functions, and he confessed he had come to the conclusion that these functions were so weighty and so anxious that, in the case of the Board of Inland Revenue, consolidation had been carried to the very furthest point to which it was possible to carry it without great mischief to the public service."

Referring to the Board of Customs, he observed—

> "It was quite true that owing partly to wise legislation during the last 20 years, and partly to the efficient management of the Department itself, the anxieties of the head of the Board of Customs had been very much lightened; but there were still heavy responsibilities attached to the office; and, on a consideration of all the circumstances, he thought it was not the duty of any Government to assent to a proposition for the consolidation of the Customs and Inland Revenue Departments. The question of consolidation was not one of principle, but of degree, and they were justified in carrying it to a certain point, but beyond that point it ought not to be carried; and that point would be reached certainly whenever the mind of man would be overstrained by its being carried further, as he thought would be the case in this instance if they were to amalgamate the two Departments."

These opinions were expressed two years subsequently to the great Budget of 1860, which removed a very large number of articles altogether from the Customs Tariff. Notwithstanding alterations which have been carried out in the duties and responsibilities of both Departments since these words were spoken, we believe that they are equally applicable to the existing state of things.

We have already referred to the great inconvenience which would be felt by the mercantile community if this Board were to sit at Somerset House, and we now wish to refer to the administrative inconvenience which would arise if the Board were at Somerset House, while all the principal officers and offices would still have to remain at the Custom House.

There are at present located in the Custom House 500 men employed on the work of the Departments.

It must be assumed that some of the Commissioners will be told off to attend to the Customs business. Are they to work it at Somerset House or at the Custom House? If at the former, the inconvenience to which we have referred will at once arise, for they will be separated from the officers whom they frequently require to consult in the daily transaction of the business; if at the latter, the nominal character of the so-called amalgamation will be at once apparent, for the Commissioners in charge of the Customs business would be practically ignorant of what was going on in all matters relating to excise, stamps, and taxes, and the Commissioners in charge of those branches would be ignorant of what was going on in the Customs branch.

We question whether the inconvenience and loss of administrative power which would result under either of the above arrangements would not more than counterbalance the ultimate saving which would be effected by the abolition of one of the chairmanships.

A prospective saving of 1,000*l.* a year could also, in all probability, be made in the offices of the two Accountants-General if an amalgamation of them was effected, as two Accountants-General would not be necessary; but as the staff in the office of our Accountant-General was inquired into by an experienced committee composed of Treasury and Customs officials, so lately as 1885, we doubt whether the staff is now in excess of the number requisite for the work, and the same work which has now to be done will continue under any scheme of amalgamation. Similarly, in the offices of the two solicitors it is probable that reductions may be made as in a combined department one solicitor with the requisite assistants might be sufficient.

In the Secretary's office, under an amalgamated Board, one secretary for Customs business would possibly be found sufficient instead of two, but any other reductions which may be made in the office as vacancies occur can and will be carried out irrespective of amalgamation, and have nothing to do with the question.

We should, therefore, estimate the ultimate reductions which would be made in the head-quarters staff, if an amalgamation were effected, at, in round numbers, about 6,000*l.* a year.

II. We now come to the reductions which might be made at the outports.

At present there are 31 towns in which, subject to any changes the Inland Revenue may recently have made, both Departments have collectors, viz. :—

In England, 16.

——	Salary of Collector of Customs.	Salary of Collector of Inland Revenue.

At some of the larger ports we consider that, subject to certain conditions, economy would result from amalgamation; to these ports we will presently refer.

But we will first deal with the 20 ports marked * on the list, at which we consider that little or no saving would be effected.

At these 20 ports the collector holds the double office of collector and surveyor; in the former capacity his duties are comparatively light, and he is required in his capacity of surveyor to take an active part in the warehouse and out-door duties at his port. We are of opinion that these officers could not take in addition to their present combined duties any of the work of the Inland Revenue collectors. But if they did, provision would have to be made for the charge of the out-door duty by the appointment in most cases of surveyors or superintendents whose salaries would approximate to those now paid to our collectors at those ports. The salaries of our surveyors at the outports are as follows:—

1st class	420 to 480
2nd ,,	350 to 410
3rd ,,	300 to 340

It is only at the ports of—

Swansea,
Aberdeen,
Greenock, and
Cork,

at which the salaries of the collectors are 500*l.* a year, that we consider any reduction could be made.

We now come to the 11 larger ports at which we employ both collectors and surveyors. At these ports, though the collectors are responsible for the whole business of their ports, the surveyors are responsible to them for the proper supervision of the warehouse and out-door duties.

In these ports it is possible that a reduction in the number of collectors employed by the two Departments may be effected, but only on the condition that the collector of the amalgamated Department is told off solely to a particular town or port, with such coast district as it may be found desirable to attach to it. He must be a stationary officer; the Inland Revenue practice of employing him as a perambulating officer must cease, and any Inland Revenue district hitherto attached to him must be otherwise assigned.

We are not prepared to deny that some such plan might be applied to all the 11 towns referred to, except Liverpool, Belfast, and Glasgow; but at the best it would have to be tentative and gradually applied. If the plan is successful it would bring within the range of reduction salaries amounting to 4,820*l.*, these figures being given on the supposition that where two collectors are at present employed the higher salary would be retained as that of the "Amalgamated Office."

We estimate, therefore, the probable saving which might be effected by amalgamation to be as follows:— Appendix.

	£
Head-quarters staff	6,000
At 20 smaller ports	470
At 11 larger ports	4,875
	£11,345

The amalgamation might, in some cases, render necessary an alteration in the line of coast assigned to different ports, but we admit it would be attended with one advantage to the public service, viz., that Inland Revenue officers stationed near the coast could be appointed receivers of wreck, and so relieve the officers of this Department of a considerable amount of travelling, the expense of which falls on the public. Taking, however, what we believe to be the most favourable view of the case, we are unable to see how any further saving can be effected.

C. *Convenience to the Government.*—On the third point, the convenience to Government of having only one department instead of two to deal with, we are hardly able to offer any observations. It is no doubt true that at present the two Departments sometimes take different views on questions which may come before them, but we apprehend that such will always be the case when the same question is examined from different points of view by experienced officers acquainted with the details of public business, and, it may be, not unskilled in criticism. But we venture to think that a minister is more likely to gain by such conflict of opinion among experienced administrators than he would do if he had to rely necessarily on the judgment of a single administrator, whose knowledge, though extending over a wide area, would probably for that very reason be superficial.

Having stated thus much on the general question, and shown the saving which we think would result from amalgamation, we wish to record the general objections to which we think the scheme is open.

General objections.—The first point to be considered is the extent to which alterations in the scales of salary of the officers of the two services might be rendered necessary by amalgamation.

At present the scales of salary vary at every point. In an amalgamated service these variations could not continue.

Taking the scale of the officers entering the respective services, we find that about 824 Excise officers enter with pay (taking salary and emoluments together) equal to 71*l.* 5*s.* a year, giving a mean rate of pay of 78*l.* 15*s.*, while 821 Customs officers enter at 55*l.*, rising to 80*l.* a year, giving a mean rate of pay of 67*l.* 10*s.* Are the Customs officers to be levelled up? If so, it will cost over 9,000*l.* a year extra, and the saving effected by amalgamation will be nearly eaten up. Or are the Excise to be levelled down?—If so, it will take some years to accomplish, and in the meantime the same duties will in many cases be performed by officers in receipt of different scales of pay. Would such a state of affairs be long tenable in the face of the organised agitation to which we refer at the end of this paper?

Above the scale at entry and below the rank of assistant inspector there are in the Excise six grades, represented by 3,112 officers at rates of pay varying between 116*l.* 7*s.* and 350*l.*; and in the Customs there are 8 grades above the scale at entry and below the rank of surveyor, represented by 2,058 officers at rates of pay varying from 85*l.* to 300*l.* These rates will all have to be in some manner equalised, and unless the levelling down process is also applied, in most of these cases an increased charge on the public will be the result.

These are details as to which nothing can be well decided until the question is in a much more advanced stage than we apprehend that it is at the present moment, and we only point them out in order to show beforehand some of the difficulties which will have to be met in any attempt to amalgamate the services. We omit from consideration the boatmen, whose salaries range from 55*l.* to 75*l.* a year, giving a mean of only 65*l.* They number 835, and it seems very doubtful whether their scale would not have to be raised if that of the outdoor officers is increased.

In the amalgamation of any departments it is in our opinion essential that the business with which they respectively deal should be of the same nature, inasmuch as no bona fide amalgamation can be accomplished unless the officers in the respective departments are

Appendix.

capable of undertaking, when required, all the detail duties in the amalgamated department.

We do not believe that any such interchange of duties is possible in the Customs and Excise.

We have shown that, out of 4,485 Customs officers, only 1,215 are engaged on duties similar to those on which a portion of the Excise service is employed. The remainder of the Customs officers are employed on various duties immediately connected with the coast and shipping duties which are only indirectly connected with the receipt of revenue—which require long and special training to master, but with which Excise officers are absolutely unacquainted. We do not profess to have much acquaintance with the business of Excise officers, but we apprehend that long special training is as requisite to enable them to understand the details of their business as it is necessary in the case of a good Customs officer. We do not believe that the average official in either Department will be found to be capable of mastering the details of both, and as far as we are aware it has never been attempted by any officer. The cases of officers who have, after a few months' service in the Customs, passed into the Excise are no examples to the contrary, as their short service in the Customs could not have enabled them to master its rudiments.

The experience which we have already had of consolidation within this Department would not lead us to advocate its further development. In the Customs service the landing, the gauging, the warehousing departments, and the waterguard were formerly distinct services. Under pressure from the Treasury these services have now been thrown into one, and the officers are supposed to be capable of mastering with satisfaction to their superiors the detail duties of each of those branches of the service. We cannot say that this consolidation or amalgamation of duties has been such a success as to encourage any further development in that direction. A good all-round man is decidedly the exception and not the rule, and it is believed that a loss of efficiency has already resulted from the attempt to spread official knowledge over too wide an area.

With this experience of amalgamation carried out within the Department, we cannot advocate an experimental policy under which it will be expected that officers, who are hardly able now to master in a satisfactory manner all the duties they are liable to be called on to perform, will be expected to acquire a knowledge of the details of a new service of which they know little or nothing except by name.

We do not forget that the reduction in the number of Customs and Inland Revenue duties which has been effected during the last 30 years has to some extent facilitated the amalgamation of the Departments, and that there is less for the officer now to learn than formerly: but on the other hand we have to bear in mind that, owing to the exigencies of trade, the service is now carried on in all the larger ports at constant high pressure, and that the acquisition of knowledge requisite for the performance of new duties would, for the bulk of the service, be out of the question. We believe that if the policy of amalgamation is attempted its only result will be the production of officers less skilled and less experienced in the practical details of the duties on which they will be employed, and that, as a necessary consequence of the deterioration of the officers, both revenues will suffer. We wish to press this point strongly on the attention of Government for we are convinced that, looking at it from the most sanguine point of view, a possible saving of 11,000*l.* a year in the administration of the Departments throughout the country will weigh but little in the balance when it is accompanied, so far as the subordinates of the Departments are concerned—and it may not stop there—by official smattering instead of official knowledge.

As we therefore believe that at head quarters the amalgamation of the Departments would be only nominal, and that their practical administration would remain distinct, and as we consider that there can be no real consolidation and amalgamation of the subordinate officers of the two Departments, owing to their being unable to master in a satisfactory manner the varied details of both services, we consider that the amalgamation of the two services, if not practically impossible, is highly undesirable.

There is another point also to which, in a semi-official communication of this nature, we are able more easily to draw attention than in an official report.* Those who are acquainted with the inner working of the two services are aware that of late years different grades of the service have combined and agitated for increased salaries; public meetings have been held, newspapers established, and pressure brought to bear on Members of Parliament, both at elections and in the House of Commons, to support their interests. Instances are already not unknown in which candidates and members are found willing to lend themselves to bring pressure on the Government, and to receive testimonials and addresses in recognition of their support of the agitation of the Civil Service for increased pay. Though this combination and agitation has prevailed to a larger extent in the Inland Revenue than in the Customs, our Department has not been free from it. In our opinion, an amalgamated department will afford a wider and easier ground for combination and agitation than is the case when the two services are separate, and are in some degree jealous of each other; we consider that, owing to the peculiar circumstances attending the entry into the services, agitation is likely to be in future its normal condition, and that if Goverment decide that for administrative purposes amalgamation is desirable, they must be prepared, on the other hand, to deal with an agitation for increased pay organised on a wider, and, therefore, more dangerous basis.

CHARLES DU CANE.
H. MURRAY.
H. SEYMOUR.

Board of Customs,
11th August 1887.

Although this Report was made on the 11th August 1887, the figures have, as a rule, been altered so as to agree with those in the Estimates for 1888–9. The passing of the Merchandise Marks Act has rendered it very problematical whether the saving contemplated last year in the Head Quarters Staff in the Solicitor's Department could now be effected.

REPLY to the CUSTOMS MEMORANDUM by the BOARD of INLAND REVENUE.

A.—CONVENIENCE TO MERCHANTS.

Whether the great merchants would prefer being under one department of the State or another can only be a matter of opinion which will be probably decided by evidence taken by the Commission from the principal traders; but it can be confidently stated that those who, in consequence of the Warehousing Committee of 1880, were removed from the supervision of the Board of Customs to that of the Board of Inland Revenue, are perfectly satisfied.

It would be difficult to argue that any traders could prefer the administration of two boards to that of one.

The differences of practice which must arise from officers of two separate departments taking different views of the regulations must tend to cause irritation.

A merchant may wish to pay duty on spirits in two warehouses (one a Customs and one an Excise) on the same day, but he must remit the duty to the officers of both departments to enable him to do so.

A merchant applies to be allowed some slight concession in respect of his operations in warehouse; neither department can grant such a concession, except in very special cases, without reference to the other.

An individual wishes to erect a duty-free warehouse, and applies to the Inland Revenue Department for permission to do so, who, before replying, have first to consult the Customs, with the result that a considerable delay takes place; or, it may happen that this department thinks that an additional warehouse could, with advantage, be allowed at a certain port; the Customs think differently, or, *vice versâ*; hence, a large amount of correspondence before the matter can be settled.

* This paper was originally prepared for the Chancellor of the Exchequer.

These instances could be multiplied, and whatever else might result from amalgamation, it is believed it would be a boon to traders generally.

Page 2, *para.* 5.—It would be unadvisable to remove the Board and staff of the Inland Revenue Department from Somerset House, which is in close proximity to the Treasury, the Law Courts, and legal profession generally. It would, moreover, involve the movement of all the stamping machinery.

Were the Inland Revenue Department moved, the part of Somerset House now occupied by them could not be sold, whereas the Custom House would be well adapted for mercantile purposes, and the staff of the port might be accommodated, for the most part, in the Government premises at Tower Hill.

There can be no necessity for a board sitting actually at the port, as is shown at Liverpool, where the trade carried on is enormous, and where there is only a Customs collector.

B.—Improvement and Economy in Administration.

The Board of Customs divide the work of their department into 20 divisions, and state that of these the two Boards come in contact only in cases which fall under Heads 4, 6, 8 and 15.

If the accuracy of this statement be admitted, it remains the fact that Heading No. 4 embraces practically the whole of the warehousing business of the Customs Department, and from which is collected 97 per cent. of the Customs revenue.

The most important of the remaining divisions appear to refer to work performed by the Customs for other departments.

This Board is not aware whether these duties are of such a nature as to require the special supervision of a revenue board, but it is presumed that the officers of the departments concerned, will be examined on the subject by the Commission.

It should also be observed that the number of Customs officers employed on these extraneous duties is very large, and it might be found possible in the general dovetailing of work to which it is hoped amalgamation would lead, to utilize the partial services of some of them on more strictly revenue business.

It is not thought that any serious difficulty would arise owing to there being only one chairman of the amalgamated departments. The chairman of either of the existing boards must depend largely upon the technical knowledge of the officers of his department, and it is not thought that his position will be much affected by amalgamation.

The work of the Excise and Customs is of a very similar character, and it would often be to the advantage of the chairman in advising the Chancellor of the Exchequer upon the taxation of articles common to both departments, to be able to avail himself of the advice of officers well acquainted with the duties of both departments, which is now impossible.

B.—Under this heading the Customs Department estimate the amount of saving which would be effected by amalgamation at about 11,000*l.* a year.

In the memorandum which this Board has placed before the Royal Commission, they express the opinion that at this stage of the inquiry it would be impossible to estimate with any degree of accuracy what the financial results would be. They are still of this opinion, but notwithstanding the great economies which appear to have been effected by the Customs Department in the last few years, this Board would be greatly disappointed if amalgamation did not produce a much larger saving than 11,000*l.* a year.

C.—Convenience to the Government.

This Board do not think it their duty to offer any observations upon this point.

General objections. Scales of Salary.

It is not thought that any great difficulty would arise in adjusting the scales of salaries of the two departments; but speaking generally, and without full knowledge of the Customs system, it is considered that the work done by the lowest class of excise officers, viz., assistants, would most properly fall to be amalgamated with that of the Customs first class out-door officers, and the salaries of these two classes are almost identical.

It might be necessary to re-classify the lower grades in both departments, in such a manner that all officers below these last-mentioned ranks should form a distinct class, and not be eligible for promotion to the higher ranks; but, as stated by the Customs Department, nothing could be decided upon this point until the question is in a much more advanced stage than at present.

The Treasury would, of course, insist that whatever scheme of amalgamation was agreed to, the result should show a saving to the public.

It has never been intended to suggest that amalgamation necessarily involves the knowledge, on the part of every officer, of the details of all the duties under the direction of the Board.

The Tax Surveying Branch of this department forms a distinct class to that of excise, nevertheless, officers of excise render important services in the prompt collection of the income tax.

In the absence of such an arrangement, and if the Tax Surveying Branch were entirely dependent upon their own officers for the collection of the income tax, a considerable augmentation in the number would be necessary. The collector of Inland Revenue, although an excise officer, receives the whole of the Imperial Revenue in his collection, whether tax or excise, and the fact of his not having had a technical training in tax work does not in any way operate against his efficiency as a collector of income tax as well as excise.

The line of promotion, however, for the excise officers is quite distinct from that of tax surveying officers.

This case furnishes a typical illustration of the advantages of amalgamation.

Last paragraph of Memorandum.—With reference to this paragraph, it should be observed that such agitation for increased salaries as exists in the Customs and Inland Revenue services is largely due to one great source of discontent, viz., the different rate of pay at present existing for analogous duties in the two departments.

October 18, 1888.

Algernon West.
Iddesleigh.

(4.)

Reply to the Inland Revenue Memorandum by the Board of Customs.

In dealing with Sir A. West's Memorandum it may be most convenient to take up its points seriatim.

1. The Board do not propose to examine how far the savings stated by Sir A. West to have resulted from the amalgamations referred to in his memorandum are due only to amalgamation, or how far fiscal re-adjustments may have contributed to them. But in any amalgamation efficiency, as well as economy, has to be considered. Within a public department it is possible to concentrate almost any public business, provided there is similarity in the duties performed, as pointed out in our memorandum of 11th August.

The question in the case now under view is whether concentration will not be carried too far, and whether the variety of business, which the Board will be supposed to superintend, will not be made too wide for the members of the Board to exercise over it "that "active, intelligent and energetic attention" (to use the words of Mr. Cardwell's report) which the heads of public departments ought to bring to bear on the discharge of their duties, for if "active and intelligent" control is lost, experience has shown how rapidly the expenditure of a department will rise.

As Mr. Horsfall's draft report was rejected by a majority of the Committee of 1861, it is clear that that majority were of opinion that improved efficiency in the central administration would not result from amalgamation, We are distinctly of the same opinion, and we have indirectly referred to the point in our

Appendix.

first memorandum; and if anything was needed to confirm that opinion, it is the large and very troublesome amount of business which has been added this year to the work of our Board by the passing of the Merchandize Marks Act and the Sparkling Wine Act.

Following Sir A. West's example, we have referred thus far to the report of Mr. Horsfall's committee, but so many changes have taken place in both departments since the date of that report that we do not attach any very great importance to the decision against amalgamation, at which the majority then arrived; the reports are, in fact, "ancient history," and we are aware that the reasons for or against amalgamation must be based on facts as they now are, and not as they then were. But as the argument in 1861, was that the business of the two boards was too large to make amalgamation advisable, it must be shown now that the business of both or of one of the departments has become so reduced as to render amalgamation more desirable.

We will leave Sir A. West to show whether the business of his department has decreased since 1861; we are not aware that it has, but in the Customs, while the actual Revenue business at the Board may have decreased owing to the abolition of duties, new responsibilities have been added by legislation such as those created by the—

British Marks Acts.
Copyright Acts.
Merchandize Marks Acts.
Registry of Fishing Boats, &c. Acts.

The British Marks Acts have been recently practically superseded by the Merchandize Marks Act, and the extent to which this Act has added to the work of the Board may be gathered by the fact that whereas the number of registered papers used to average less than 20,000 a year, they have in this year already exceeded 33,000, of which 14,500 refer to British Marks.

We hold it therefore difficult to show that the business of the Customs department has decreased since 1861. During the interval the Board has however been reduced from 5 to 3.

2. Sir A. West next refers to the reduction of expenditure which resulted from the recommendation of the Treasury Bonded Warehouse Committee between 1882 and 1883–84, and urges that similar reduction would follow under the policy of amalgamation.

The result of the action taken in 1882, 1883, and 1884, was that 187 Customs warehouses were taken over by the Excise, and 57 Excise warehouses by the Customs. As a consequence, there was a reduction in the Customs effective Vote of about 17,000*l.*; but Sir A. West has not shown the additional expenditure which was caused to the Excise *at the warehouses taken over*, in the collection of a revenue amounting at the date of transfer to 1,043,653*l.* Reductions may have been made *elsewhere* to meet the additional expenditure at the new points, but if so, it only shows that the Excise staff was at some other points too large for its duties, and ought not to have been maintained.

Sir A. West assumes, but the assumption is unsupported by any evidence, that at 61 other ports to which he refers, reductions similar to those effected by the Bonded Warehouse Committee may be made, but facts are against him. At two or three of these ports we should be disposed to agree with him, but we are prepared to show that at 11 of these ports which were selected by the chairmen of the two boards to test the question, it was found that the opinion of the Bonded Warehouse Committee, which Sir A. West again adopts, was erroneous, and it was for that reason that further action in the matter was stayed by the Chancellor of the Exchequer. But on this point the Commission can, no doubt, be furnished with information by the Treasury.

We here take the opportunity to call the attention of the Commission to the large expenditure incurred in order to provide bonding accommodation in numerous small towns scattered all over the Kingdom.

3. The Warehousing Code is the next point to which Sir A. West refers, and judging by his remarks, anyone not acquainted with the facts would be led to imagine that grave deviations in practice still exist, and are of frequent occurrence. We venture to assert, that such is not the case; minor differences on unimportant points may occur, for in a Code consisting of 633 paragraphs, there is room for diversity of opinion as to the interpretation of words by a large number of officers, but such diversity of interpretation will exist even in an amalgamated department, and allowance will always have to be made for local circumstances. Further information will probably be given by Sir A. West as to the *instances* in which the authority of the Treasury has been obtained to admit of different practices being followed by the two Boards under the Warehousing Code. It may be safely affirmed that the merchants are as well aware as the officers of the directions contained in the Code, and that if any practices affecting their interests were adopted by one department and not by the other, the matter would soon be brought to the notice of the offending Board. But such complaints are now very rare indeed.

4. Sir A. West has, with some degree of boldness, put the total cost of the Inland Revenue collection for 1886–87 at 3*l.* 8*s.* per cent., and that of the Customs at 4*l.* 6*s.* 2*d.*, but the comparison is absolutely fallacious.

The Revenue collected by the Customs is put by him at 21,836,584*l.*, of which 97 per cent. represented warehouse duties.

The Revenue collected by the Inland Revenue is put at 55,577,205*l.*, but this was collected from the following sources, the figures against each head of which show the actual net receipt of the year 1886–7 as set out in the Inland Revenue 30th Report:

	£
Excise	25,212,883
Stamps	11,780,333
Land Tax	1,065,359
Inhabited House Duty	1,954,011
Income Tax	16,111,174
	£56,123,760

The Excise, again, is subdivided as follows:—

	£
British spirits	12,852,767
Beer	8,495,654
Tobacco	14
Licences	3,541,294
Chicory	2,061
Coffee labels	3,212
Railways	316,969
Charges for deliveries from bonded warehouses	912
	£25,212,883

It is obvious that the cost of the collection of most of the heads of this Revenue cannot be compared with the cost of that of the collection of the Customs Revenue and that on British spirits, which are the only heads collected under the Warehouse system.

For instance, the Stamp duties are probably the cheapest form of Revenue; they are mostly received through the agency of stamp distributors and stamp vendors who are, we believe, in trade as such, and are paid by a poundage on their sales. This Revenue has, moreover, to a large extent, an automatic protection in the Courts of Law, which costs the Inland Revenue nothing at all.

The Income Tax, again, can hardly be said to be even levied by the Inland Revenue; the assessments and collections are mostly made through local and parochial officials, while a large portion of it, which is not thus locally assessed and collected, is collected through the Bank of England, private bankers, railway companies, and agencies of that description, who are also paid by poundage. With the exception of the payment of the poundage, the main duty of the Inland Revenue in connexion with this large item of Revenue is its receipt and account. The same remark would appear also generally to apply to some other items which make up the total of 56,123,760*l.*, such as the Land Tax and Inhabited House Duty, while a large portion of the duties in Licences are collected through the agency of the General Post Office, amounting in 1887–88 to over 900,000*l.*

The detail as to the cost and mode of collection of these separate heads of Revenue will, no doubt, form the subject of examination of the Royal Commission, and we have not the necessary information at our disposal to do more than to indicate generally the direction in which inquiry will be found useful; but we feel satisfied that the attention of the Commissioners will be profitably directed to the distinction to be drawn between the receipt of taxes and the collection of duties.

The only head capable of apt comparison is the cost of the collection of British spirits; and when Sir A. West has shown *separately* the cost of this collection, some accurate opinion may be formed as to whether the collection of the Customs Revenue on warehoused goods is more costly than that of the Inland Revenue.

We question the accuracy of his views on this point in spite of the cost to the Customs of the numerous duties performed for other departments, and of the advantage which the Inland Revenue have over the Customs in dealing with British spirits. As these spirits are manufactured in distilleries under the control of the Inland Revenue, they are able to ascertain the *contents* of a cask by weighing, which is much more accurate, rapid, and economical operation than that to which the Customs are obliged to resort in dealing with spirits and wine imported in casks, viz., gauging, the uncertainty which necessarily attends this latter operation giving rise to correspondence when its accuracy is disputed by the merchant.

In our Report for the year 1886–87, we stated that the percentage cost of the collection of the Customs Revenue for that year (the one to which Sir A. West's figures relate) was 4*l.* 6*s.* 2*d.* on the gross receipt, and 4*l.* 6*s.* 8*d.* on the net produce. This percentage included the cost of the pensions in the Department, viz., 200,585*l.*, which are at present, owing to the re-organisation which took place in 1882 on the introduction of the new warehousing system, at the instance of the Warehousing Committee, abnormally high. It also, of course, included the cost of the waterguard service.

In our Report for the year 1887–88 (not yet presented to Parliament) we have drawn attention to the approximate cost of this service, viz., 166,000*l.* a year; and we have pointed out, a fact which has perhaps escaped the attention of Sir A. West, that the waterguard service is as much a protection to the duty derived from British spirits, and that from beer, as it is to the Customs revenue; but the cost of this service is 22·25 per cent. of the whole charge for the effective service of the Department in that year, which amounted to 746,088*l.*

5. In Mr. Cardwell's draft Report there is the following passage:—"The principal and most anxious "labour of the Customs, employing the most expensive "part of the establishment, is connected with the "warehousing system." Sir A. West quotes this paragraph, and, assuming its statement to be correct as the present time, asserts the opinion, based, as he alleges, on previous experience, that the warehouses of the two departments could be more economically managed if placed under the control of one department, and that the two departments should therefore be amalgamated.

We question, however, whether the warehouses under the Inland Revenue are more economically managed than those which are under the Customs, and on this point we invite comparison, although we do not defend the system under which the clerical work in the warehouses has now to be performed by the Out-door Department; a system which was imposed upon us by the Treasury, and not adopted, in consequence of the experience of the department.

But we do not admit the correctness of the statement in Mr. Cardwell's draft Report. It is true that the "*raison d'être*" of the department is the collection of revenue, but the safe collection of the Customs revenue depends upon a careful and systematic organisation of staff at many other places besides the warehouses, which are only the final resting places of the goods on which the revenue depends. Not only have dutiable articles to be safely landed and guarded at various ports, and the accounts in most places accurately taken before the goods are warehoused, but free goods have to be carefully examined in order to prevent dutiable goods being landed under the guise of free goods. On this duty a staff of officers, largely exceeding in number those who are engaged in the warehouses, has to be employed at the various authorised landing places, and even in advance of such places. On these officers the safety and the collection of the Revenue depend quite as much, if not more, than upon the care of the officers employed in the warehouses. The landing and waterguard staff are the guardians of the Revenue in its first and most dangerous stage; the warehouse officers are its custodians after the goods from which it is to be collected have been safely stowed away under lock and key. We do not hesitate to say that the staff thus employed on landing, gauging, and waterguard duty, which Sir A. West's paper appears entirely to ignore, are employed on duty in every way as "anxious" and important to the Revenue as those engaged in the warehouse; and that the supervision of these branches of the Service and their frequent arrangement to meet the fluctuations and special requirements of trade, causes more trouble to the Board than the control of the warehouse staff. It is also to be observed that the difficulties which have to be encountered by the landing and waterguard staff, and the consequent arrangements which have to be made for its supervision, &c., have been largely increased of late years by the enormous size of the steamers now employed in the carriage of merchandise, and by the great rapidity with which cargoes are now shipped and unshipped—a matter of great importance to the shipping community.

It is this ignorance of the duties on which so large a number of the officers of Customs are engaged, duties which are not analogous to any which the Excise officers have to perform, which underlies the fallacies contained in Sir A. West's papers.

6. Sir A. West states—

a. That amalgamation is quite possible.

b. That it would be economical.

We have never denied that amalgamation was possible; we have only urged that it is not advisable.

In our previous memorandum we pointed out the directions in which we considered economies could be effected if the departments were amalgamated, but we expressed the opinion that economies which might be effected in one direction by amalgamation would soon, in consequence of it, be more than lost in another. To that opinion we adhere.

7. Sir A. West sets forth the following as the immediate advantages which would result from amalgamation:—

1. *Absolute* uniformity of practice in warehousing business. For the reasons given in the earlier portion of this paper, under heading No. 3, we regard any such expectation as chimerical.
2. Cessation of correspondence between the Departments. This would, of course, follow the union of the two; but the letters are not numerous, and, including some on unimportant subjects and 22 in relation to the new wine duty, they amounted in the year ending 30th September last to only 179, and in the preceding year to 120.
3. Similarity of scales of pay in the Service, and the cessation of comparison between the duties and pay of different sets of officers. We have in our first memorandum recorded our opinion that, upon amalgamation, increased expenditure on the salaries of the subordinate officers of Customs will have to be considered. So far from there being any cessation of agitation, the constant questions and comparisons to which Sir A. West alludes will multiply until the lower salaries have, as a rule, been levelled up.

8. Sir A. West observes that large economies have been of late years effected in the administration of the Customs, and he regards this as one result of the appointment of the Warehouse Committee in 1880. This conclusion is altogether erroneous. As a matter of fact, the actual expenditure of the department on its effective service was, in the year 1880–81, 778,546*l.*, and in the year 1887–88, 670,251*l.*, showing a reduction of 108,295*l.*; but, after making every allowance, we have been unable, in paragraph 2, to credit the Warehouse Committee with more than 17,000*l.* of these reductions. The remainder has been the result of administrative changes, with which that Committee had nothing whatever to do. Moreover, the original proposal to reduce the bonded accommodation at several of the smaller out-ports originated with this department, and not with the Bonded Warehouse Committee.

9. There is only one other point in Sir A. West's Memorandum to which we think it necessary to refer.

He expresses the opinion that the extraneous work done by the Customs for other departments, which is very large, might possibly be advantageously transferred to the respective departments to which it belongs; and, as no reasons are given for the change, we assume that economy is the only ground for the proposal. We have referred to some of the heads of this extraneous work in our previous memorandum, where they are set out in more detail than it is necessary here to give. With the exception of the Board of Trade, *qud* statistics, we are not aware of any department which has expressed the opinion that

Appendix.

it would be desirable that they should themselves undertake the work now done for them by the Customs, and we are confident that, on inquiry, none will be found to be of that opinion. As far as the Board of Trade is concerned, it will probably be sufficient to point out that that department already has, at the ports at which it will pay them to keep it, a separate staff for the performance of its own duties, except as regards the collection of light dues, which are, and always will be, collected more economically to the public, and more conveniently for the trader, at the Custom houses to which the captains of vessels must resort for other purposes. As to the Home Office and the Veterinary Department of the Privy Council, neither of them could possibly superintend as cheaply as the Customs officers, in conjunction with their other landing duties, do, the landing of cattle or the landing of and loading of explosives.

Such suggestions as these appear to us to be made in ignorance of the circumstances attending the several cases, and, if adopted, would involve a retrograde policy, under which each department would do its own work with a separate staff at every point in the United Kingdom, irrespective of the question whether the work was sufficient for the employment of one or more officers which would naturally lead to large additional expenditure.

The question as to the statistics of the import and export trade of the Kingdom is, we admit, an open one. The Board of Trade have desired to take it over, but on the occasion of the last inquiry on the subject, in 1882–83, the Treasury decided to leave the control with the Customs; but it is necessary to point out—what seems to have escaped the attention of Sir A. West—that, whether the control of the statistics is vested in the Customs or Board of Trade, the Customs officers are the only officers who can, cheaply and conveniently, collect them; that the whole of the import statistics, whether relating to dutiable or free goods, fall within the sphere of their necessary daily duty, and, of the exports, all that relate to dutiable goods. If therefore these statistics were collected by another department, there would, of course, be a large increase of expense; if, on the other hand, the collection of them was left with the Customs officers, but those officers, in the performance of their duty, were subjected to the daily control and interference of another department, we are of opinion that the statistics would become probably less accurate than they now are, because the officers collecting them would, in respect of this duty, cease to be under the immediate discipline of their own department, and be no longer working for the department to which they look for promotion.

We therefore consider the proposal of Sir A. West to disassociate the Customs from the work of other departments to be practically out of the question.

10. Sir A. West concludes by expressing the belief that public opinion is largely in favour of the amalgamation of the two departments. We are not aware of the existence of any such public opinion; the only public opinion which is likely to affect the question is that of the traders who come in contact with regulations touching their business. We know that all Revenue regulations must be more or less prejudicial to trade, but we know of no freedom which traders could gain under an amalgamated Board which they are not equally likely to gain under the separate Boards. In 1861 the traders were subjected to unnecessary inconveniences. Most, if not all, of those have long ago been removed, and we are not aware that, of recent years, the mercantile community have taken the slightest interest in the question of amalgamation. Such interest as the question may now possess we believe to be mainly, if not entirely, departmental.

CHARLES DU CANE.
H. MURRAY.
12th November 1888. HORACE SEYMOUR.

(5.)

MEMORANDUM upon the LEGAL ASPECT of the QUESTION of AMALGAMATION of the CUSTOMS and INLAND REVENUE.

The Board of Commissioners of Inland Revenue was formed in February 1849,* and represents the now obsolete Boards of "Commissioners of Excise for the United Kingdom" and "Commissioners of Stamps and Taxes," which last-mentioned Board had been formed in August 1834,† and represented the Commissioners of Stamps for the United Kingdom and the "Commissioners for the Affairs of Taxes in Great Britain." No difficulty appears to have arisen in amalgamating the duties of the two Boards, which were consolidated in 1834, but the duties of Excise and of Stamps and Taxes are totally different in their incidence and mode of collection, and there is much more affinity between Customs and Excise than there ever has been between Excise and Stamps and Taxes. Irrespective of other considerations which had weight, the consolidation of the Boards of Excise and Customs would have been more natural and feasible than that which was effected in 1849, and the duties of those two Boards, which are very homogeneous, would have been capable of easy assimilation with considerable economy and advantage to the public.

This can be readily shown by the necessity which has always existed of providing concurrent powers for the Commissioners and officers of Excise and the Commissioners and officers of Customs for the making of seizures and arrests in regard to goods subject to duties of Excise or Customs,‡ and, inasmuch as officers of Customs were usually stationed at the ports, and frauds upon the Customs were frequently detected at places inland at a distance from the ports, the powers of the Commissioners of Excise in relation to uncustomed goods were greater than the powers of the Commissioners of Customs in relation to exciseable goods, and included a power to sue for and recover as an Excise penalty or forfeiture any penalty or forfeiture incurred under any law of Customs.§ All these powers still exist.

Considerable progress towards an amalgamation of the collection of the duties of Customs and Excise has recently been made, as there is now a power of warehousing goods of every description liable to any duty of Excise or Customs in any warehouse approved for the purpose by the Commissioners of Inland Revenue or the Commissioners of Customs.

This power was conferred in 1881,* and has been used to a considerable extent, but the law relating to the warehousing and treatment of all goods, except spirits and wines,† is to be found solely in the Customs Acts, whilst different codes of law are applicable to spirits and wines according as they are warehoused in an Excise warehouse or in a Customs warehouse.‡

The present peculiar condition of law and practice in regard to British and Foreign goods is made clear at once by reference to the several classes of goods in respect of which duties of Inland Revenue or Customs are charged.

Beer.

The duty on beer, whether brewed at home or abroad, is charged upon the barrel of 36 gallons of a specific gravity of 1,057 degrees. The duty of Excise is 6*s.* 3*d.* per barrel,§ and the duty of Customs is 6*s.* 6*d.* per barrel.‖ The additional rate of Customs duty in this and other cases represents the surtax as an equivalent for expense incident to Excise supervision. A drawback equivalent to the duty of Excise is allowed upon the exportation of either home-made¶ or imported** beer.

Beer can only be sold under an Excise licence and upon premises subject to Excise supervision.

Cards.

Playing cards, whether manufactured at home or abroad, are subject to a duty. The duty on home-made

* 44 & 45 Vict. c. 12. s. 18.
† See—as to Spirits—43 & 44 Vict. c. 24. ss. 49–85; and—as to Wines—44 & 45 Vict. c. 12. s. 17.
‡ See 43 & 44 Vict. c. 24. s. 85. § 43 & 44 Vict. c. 20. s. 11.
‖ 44 & 45 Vict. c. 12. s. 3. ¶ 43 & 44 Vict. c. 20. s. 36.
** 44 & 45 Vict. c. 12. s. 4.

cards is a stamp duty of 3*d.* per pack,* and on imported cards is a Customs duty of 3*s.* 9*d.* per dozen packs.† Both duties are denoted by wrappers provided by the Commissioners of Inland Revenue.‡

Chicory.

A duty is charged upon chicory whether home grown or imported. The duty on home-grown chicory is an Excise duty at the rate of 12*s.* 1*d.* per cwt.,§ and the duty on imported chicory is a Customs duty of 13*s.* 3*d.* per cwt. for raw or kiln-dried chicory, and of 2*d.* per lb. for roasted or ground chicory.†

Chicory or Coffee mixed with other substances.

An Excise duty of one halfpenny per ¼ lb. is payable upon mixtures of this description, whether imported or mixed in this country.‖ This duty is denoted by a label provided by the Commissioners of Inland Revenue.

Medicines.

The charge of stamp duty on medicines embraces in addition to medicines made in this country "Foreign medicines of all kinds except drugs."¶ This duty is denoted by a label provided by the Commissioners of Inland Revenue.** The sale of medicines liable to duty can only be effected under an Excise licence.

Plate.

Gold and silver plate, whether made in this country or imported, is liable to duty. The duty is the same in either case, viz., 17*s.* per oz. for gold and 1*s.* 6*d.* per oz. for silver, but is a stamp duty†† or a Customs duty† according to the place of manufacture. The duty is collected at the Assay offices in different towns of the United Kingdom, and is denoted by an impression called a hall mark. The sale of plate can only be effected under an Excise licence.

Spirits.

The duty on spirits, whether British or foreign, is charged upon the gallon at proof. In the case of British spirits the duty is 10*s.* per gallon,‡‡ and in the case of ordinary foreign spirits the duty is 10*s.* 4*d.* per gallon.§§

When foreign spirits have been delivered upon payment of the duty of Customs they are treated as British spirits, and, subject to the payment of the surtax, may be methylated or exported upon the same terms as British spirits, when therefore a duty of Customs has been paid upon foreign spirits which are afterwards methylated or exported, the drawback allowed on methylation or exportation is paid out of the Excise revenue. The separate accounts of the revenue received by the Inland Revenue and the Customs are not, from this reason, quite to be relied upon as showing accurately the amounts received for British and foreign spirits, inasmuch as duty paid to the customs is not infrequently repaid by the Excise as a drawback. The removal of spirits, whether British or foreign, is subject to stringent Excise regulations, and spirits can only be sold under an Excise licence and upon premises subject to Excise supervision.

Tobacco.

The duty on tobacco is a duty of Customs‖‖ and the growth of tobacco in the United Kingdom is prohibited. Tobacco has, however, in recent years been grown for experimental purposes in this country, under the sanction of the Treasury, and a duty equivalent to the duty of Customs is paid thereon, and is brought to account as a duty of Excise. The manufacture and sale of tobacco can, however, only be effected under an Excise license, and upon premises subject to Excise supervision.

* 25 & 26 Vict. c. 22. Sched. † 39 & 40 Vict. c. 35. Sched.
‡ 25 & 26 Vict. c. 22. ss. 28–37; 16 & 17 Vict. c. 107. ss. 114–116.
§ 35 & 36 Vict. c. 20. s. 5. ‖ 45 & 46 Vict. c. 41. s. 5.
¶ 52 Geo. III. c. 150. Sched. ** 42 Geo. III. c. 56. ss. 10 and 11.
†† 55 Geo. III. c. 185.; 5 & 6 Vict. c. 82. s. 2.
‡‡ 23 & 24 Vict. c. 129. s. 1. §§ 44 & 45 Vict. c. 12. s. 7.
‖‖ 50 & 51 Vict. c. 15. s. 3.

Vinegar.

The manufacture of vinegar in this country can only be effected under an Excise licence and upon premises subject to Excise supervision.* Until the year 1880 there was a duty of Customs on imported vinegar, but this duty ceased with the repeal of the duty on malt.

Wine.

The duty on wine is a duty of Customs, but wine can only be sold under an Excise licence, and upon premises subject to Excise supervision.

It will be seen from the above statement that beer, plate, spirits, tobacco, and wine, upon which duties of Customs are charged, can only be sold under Excise licenses, and subject to Excise supervision, that the duty on imported plate is collected in the same manner as the duty on home-manufactured plate, and that the duties on imported cards, chicory, or coffee mixtures, and medicines are collected by wrappers or labels supplied by the Commissioners of Inland Revenue.

It is manifest, therefore, that the collection of the duties might be made throughout by one set of officers subject to the control of one central authority, and that, if this were done, the separate codes of law relating to the duties and regulations for British and foreign goods which are due to the existence of the two Boards of Inland Revenue and Customs might be consolidated and simplified, and the assimilation thereby effected would of necessity involve the abolition of the friction occasionally caused by differences of practice. The duties also might, subject to any necessary surtax on imported goods by way of compensation for Excise supervision, be made absolutely uniform, and an importer for sale might be treated in precisely the same manner as a manufacturer for sale. If this were done no distinction need any longer be drawn between articles—*e.g.*, spirits, whether British or foreign, and generally the simplification of the law and practice would doubtless prove to be a great public advantage.

There can also be no doubt that the control of the collection of all the duties by one central authority would result in benefit to the Revenue, as an absolute uniformity of practice would tend to prevent evasion of duties properly payable, and it is not to be anticipated that there would be any loss of security in the detection of frauds, as the distinction between the landing and removal of uncustomed goods, and the illicit manufacture and removal of exciseable goods, is little more than nominal. One code of law, instead of the two existing codes of law, would also be sufficient in relation to the warehousing and the exportation of goods, the seizure of forfeited goods, whether British or foreign, and the mode of proceeding for penalties.

In conclusion, it may be stated that a practical amalgamation of the two Boards of Commissioners of Customs and Commissioners of Inland Revenue could be effected by appointing one set of Commissioners for both purposes pending the passing of an Act of Parliament such as was passed upon the formation of the Board of Commissioners of Inland Revenue in 1849.†

W. H. Melvill.

* 7 & 8 Geo. IV. c. 25. ss. 2-4. † 12 & 13 Vict. c. 1.

(6.)

Report by Dr. Bell, Principal of the Inland Revenue Laboratory.

It has been necessary for many years past to employ a staff of chemists and a considerable number of specially trained officers, to assist in assessing and protecting the duties of Customs and Excise on beer, spirits, wine, tobacco, coffee, &c. &c.

Besides two chief and controlling laboratories in London—one belonging to each Department—there are duplicate laboratories at nine out-ports, viz., Belfast, Bristol, Cork, Dublin, Glasgow, Leith, Liverpool, Newhaven, and Southampton.

The laboratory officers of the Customs Department are engaged exclusively upon the examination of dutiable commodities, such as the determination of the amount of spirit in wines and various spirit compounds, the obscuration of rums and brandies. the original gravity of imported beers, and also the analysis of teas and tobaccos suspected to be adulterated.

The work of the Inland Revenue chemists includes all such kinds of commodities as are analysed by the Customs, but has a much wider range, and embraces

Appendix.

many hundreds of other kinds of articles for the India Office, Admiralty, Board of Trade, and other Government Departments, as well as reference samples under the Sale of Food and Drugs Acts.

With one or two exceptions in London, all the laboratory officials of the Customs Department are ordinary outdoor officers who have only been instructed in simple routine modes of distillation, whereas all those of the Inland Revenue have had two or more years' chemical training; and as, with the exception of the fixed staff at Somerset House, they return to the surveying branch after a few years' experience in the chemical work, the Department becomes permeated with officers whose chemical knowledge and training prove of signal advantage to the revenue.

An amalgamation of the laboratory departments would result in greater economy of working, increased efficiency, and public convenience.

Economy of working would be secured at those ports where there are duplicate establishments by a diminution of the expense of supervision, by the introduction of the Inland Revenue system generally of performing routine work by junior trained assistants at comparatively low salaries, instead of by older officers at a higher rate of pay; and by the abolition of all necessity for the duplication of experimental investigations.

The Treasury have decided that it is absolutely necessary for the security of the revenue that the Inland Revenue chemists who so largely control the manufacture of tobacco in this country, and protect the Customs duty thereon from fraud, should analyse and assess for drawback all samples taken from tobacco and snuff entered for exportation, or abandoned to be destroyed, on the ground that the analyses of such samples have an important bearing upon the discovery and detection of fraud through the practice of adulteration by the manufacturers.

This arrangement, together with other regulations made for the sake of economy, causes a large number of samples of tobacco, snuff, beer, liqueurs, &c. to be taken by the officers of Customs, which have to be analysed by the Inland Revenue chemists, and it is obvious that with a union of the two Departments under one Board increased efficiency would naturally result from the freer intercourse and more direct communication between the analytical and sampling officers. Such a union would also obviate the inconvenience which sometimes arises from having to communicate through the respective Boards upon questions which might be easily settled without such a formality, if the officials were acting under one executive Board.

It also sometimes happens that goods, free from duty themselves, are imported for the sole purpose of adulterating dutiable commodities, and the suppression of such adulteration would be greatly facilitated if these goods could be followed up and traced to their ultimate destination, as would doubtless often be done if all the officers concerned were under the control of one Board.

With one executive Board the convenience of the public would be increased by the avoidance of the annoyance and loss of time which now occur when a question is at issue which concerns the two Departments, by the adoption of uniform methods of analysis, and of the same standard instruments; and by the prevention of opposite decisions on questions of revenue

A case which occurred two or three years ago illustrates the advantage of having uniform standards.

In consequence of complaints from the trade as to there being a difference between the strength of the same spirit as shown by the hydrometers used by the Inland Revenue and Customs respectively, the Treasury directed that one standard instrument should be used for the two Departments, and that this standard should be kept in the Inland Revenue laboratory at Somerset House. The Customs' standard has been brought periodically as directed by the Treasury to be compared therewith, and from the inauguration of this system all complaints from the trade have ceased.

With regard to the prevention of opposite decisions on questions of revenue, it has unfortunately been necessary on several occasions, much to the astonishment and confusion of the trade, for the Inland Revenue chemists to seize manufactured tobacco on which the Customs had accepted the duty, but which contained ingredients prohibited by law, except under conditions which had not been complied with.

It must be remembered that, as already indicated, although the tobacco duty is collected by the Customs Department the entire control of its manufacture in this country, as well as the prevention of fraud by adulteration, devolves upon the Inland Revenue, and it would obviously be to the interests of the country if the manufactured tobacco imported were controlled by the Inland Revenue chemists and other officers who are in intimate association with the home manufacture of tobacco, and who have a thorough knowledge of the laws and regulations relating thereto.

It may be useful to briefly refer to some of the disadvantages attaching to the existence of two sets of laboratories under different Boards.

1st. The probability of different methods of analysis being applied to the same class of work, and the danger of inconvenience and annoyance to traders when discrepancies occur in results, as, for instance, in the amount of obscuration when foreign spirits are re-tested on receipt by the Inland Revenue from the Customs.

2nd. The anomaly of two Government Departments independently solving analytical difficulties relating to the same kind of work, with the possible result of arriving at different conclusions.

At present, processes of analysis may be in operation in one Department which are entirely unknown in the other, and questions unsolved in one laboratory may have been cleared up years before in the other.

As an illustration of the latter hypothesis may be cited the action of the officers of Customs when in the year 1883 they detained a quantity of cigarettes on the ground that they contained a foreign ingredient, which, however, had been known by the Inland Revenue chemists for many years to be a natural constituent of that class of tobacco, and when the matter came before them they reported to that effect. Notwithstanding this, the officers of Customs maintained the correctness of their view, and in the end the Treasury had to nominate, at considerable expense, an independent chemist of repute to investigate the whole subject, with the result that he confirmed in an unqualified way the decision of the Inland Revenue chemists. Pending the investigation, which occupied several months, the cigarettes were under detention, and I understand damages to the extent of 400*l.* had to be paid by the Customs Department to the importer.

3rd. The public scandal of one Department seizing goods on which duty had been accepted by the other.

A few recent cases of this description will suffice to show the hardship and irritation which are undoubtedly produced in the trade by these occurrences.

In December 1886* several seizures of cigarettes containing glycerine and liquorice were made in Glasgow; these were subsequently given up to the importer, and allowed by the Customs to be re-shipped abroad.

In June 1888† a considerable quantity of Cut Cavendish tobacco in packets, and containing liquorice, was allowed to go into consumption unlabelled, and on payment of too low a rate of duty. The tobacco was subsequently allowed to be returned to the Customs for payment at the higher rate of duty, and for the packets to be duly labelled.

In September 1888 about 200 lbs. of packet tobaccos and cigarettes containing coca leaves were seized at a dealer's shop in London. The packets were marked "Coca tobacco" and "Coca cigarettes" respectively, but had nevertheless been allowed by the Customs to pass into consumption, although tobacco containing foreign leaves is illegal in this country under any circumstances. This case is at present under the consideration of the Board of Customs and Inland Revenue.

It is not intended to suggest that samples in all such cases had been examined and passed by the laboratory officers of Customs, but simply that such tobacco would have been far less likely to have been allowed to go into consumption if the officers at the port of entry had been in touch with the home manufacture.

4th. The absence of control by the Inland Revenue chemists over the mode of sampling when done by Customs officers.

In the case of offal snuff, for instance, deposited for drawback, one sample may represent 20 or more bags, but the difficulty of getting an average sample is one which is but rarely appreciated except by persons accustomed to the minute accuracy of chemical analysis.

As an illustration of the advantages which result

* Papers $\frac{24,843}{86}$ J. † Papers O $\frac{6970}{88}$

from the sampling and analytical officers being brought into personal intercourse may be cited, the inspection of lime and lemon juice which is done by the Inland Revenue Department for the Board of Trade. When this duty was first undertaken by the Inland Revenue analysts, the sampling of the juice and its admixture with spirit were entirely in the hands of the Customs officers. The system, however, did not work satisfactorily, and the Board of Trade found it necessary to give the inspectors at Somerset House some control over the mode of sampling, and to arrange for investing them with power to inspect the warehouses, and to advise with the sampling officers as to the best methods to be followed.

The visits to the warehouses, made in pursuance of this arrangement, having brought the inspectors in personal contact with the Customs officers, have proved of the greatest advantage, and have resulted from time to time in the adoption of improved arrangements, and the removal of a number of irregularities which would otherwise have continued to exist.

In my opinion it is obvious, from what has been stated, that the nation will never reap all the advantages which might be derived from the services of its laboratory officers until the duplicate revenue laboratories are abolished, and until uniformity of practice is ensured by the various officers concerned being brought under the direction of one Board.

Appendix.

WM. DICK,
Accountant and Controller-General.

(9.)

Paper handed in by Mr. Murray.—(See Question No. 21,797.)

A STATEMENT of the DUTIES performed by CUSTOMS OFFICERS as SUPERINTENDENTS of MERCANTILE MARINE.

1. The engagement and discharge of the crews of foreign-going British ships, including the settlement of disputed points respecting wages, discipline, &c.
2. The issue of conveyance passes home to seamen desirous of proceeding without waiting for discharge.
3. The investigation of all cases of death at sea, from whatever cause.
4. The examination of the accounts of wages and effects of all deceased seamen, and of the claims of relatives to the proceeds.
5. The examination and payment of all claims for the conveyance from abroad of distressed British seamen.
6. The issue of allotment notes (monthly half-pay) to seamen's relatives.
7. The examination of the lists of the crews and of agreements for home-trade ships, and the issue of certificates that the law has been complied with.
8. The administration of the Acts for regulating the relations between the skippers and the crews of sea-fishing boats.
9. The issue and payment of seamen's money orders.
10. The delivery of certificates of competency to masters, mates, and engineers.
11. The reporting of offences committed by such certificated officers.
12. The preparation and registry of sea apprentices' indentures.
13. The discovery of persons entitled to rewards for bravery and special services at sea, and the payment of such rewards, as fixed by the Board of Trade.
14. Answering inquiries respecting missing seamen, and tracing them from ship to ship.
15. The examination of claims for pensions from the Merchant Seamens' Fund and the Greenwich Sixpences Fund.
16. The examination and payment of coastguard claims for exercising the life-saving apparatus, whether at quarterly practice or in cases of wreck.
17. The receipt of fees and expenses in connexion with the tonnage measurement of ships, and relative payments to surveyors.
18. The receipt of fees and expenses incurred in the administration of the Passengers' Act, and the payment of salaries, &c. to emigration officers and medical inspectors.
19. Acting as local agents for the Board of Trade in the collection of statistics respecting all shipping interests, in ascertaining the views of the seafaring community on proposed changes, in apprising the local public of all new official regulations and recommendations required to be publicly known, and generally in serving as a medium of communication between the Board of Trade and the superintendent's district.

Note.—The principal Customs officer, who is a superintendent of mercantile marine, is required, in virtue of that office, to perform the duties of Registrar of Royal Naval Reserve, which has now reached a strength of 16,091 volunteers. These duties include the persuasion and enlistment of seamen and firemen as volunteers; keeping the enrolment register; the issue of conveyance passes to drill; the payment of quarterly retainers and other charges; registering the names and the voyages of vessels in which volunteers are successively employed, so as to secure their attendance on emergency; giving advice and directions to volunteers as to periods of drill, and as to the voyages competent for them to make, and generally supervising them, from the Board of Trade side of the regulations, during the 11 months of the year when the men are not under the charge of the naval officers, who drill each seaman 28 days per annum.

A STATEMENT of the DUTIES performed by CUSTOMS OFFICERS as RECEIVERS of WRECK.

1. Receiving, checking, and registering reports of all wrecked property.
2. Taking possession of all such property, and disposing of the same, whether by sale or by restoration to owners sometimes involving the settlement of conflicting claims.
3. Conducting prosecutions in cases of concealed or stolen wreck.
4. Settlement of the claims of lords of manors to wreck washed ashore.
5. Taking personal command (when present) of all persons engaged in saving life and protecting property from wrecked vessels.
6. Payment of all expenses and fees arising from the custody and disposal of wrecked goods, including the scrutiny of coastguard charges, and the decision and payment of salvage claims.
7. The examination (on oath, when necessary) of masters and others respecting wrecks and casualties to vessels, and the preparation of confidential opinions on the causes thereof.
8. The tracing of witnesses required for Wreck Commissioner's inquiries, and the preliminary examination of these witnesses on behalf of the Board of Trade solicitor.
9. Payment of expenses incurred in such inquiries, including subsistence allowances to witnesses pending proceedings.
10. Payment and recovery of expenses in the burial of carcases washed ashore.
11. Reporting encroachments on the foreshore, and other interferences with the rights of navigation.
12. Acting as local inspectors of the Board of Trade in respect of these and cognate matters, regarding which inquiry may be deemed necessary, *e.g.*, the sufficiency of the coastguard staff for watching wrecked goods, the protection of Crown rights in the seashore on the introduction of Parliamentary bills for the formation of new coast railways, &c.

(10.)

(Paper handed in by Mr. Hunter.—See Question No. 25,073.)

TABLE of COMPARISONS between INLAND REVENUE INDOOR OFFICIALS and OUTDOOR OFFICIALS, with the percentages of Higher Grade Appointments open to each.

INLAND REVENUE.—Names of Office, &c.	Total Number of Persons employed.	Total Number of Persons who attain to Salaries of 400*l.* a year and upwards.	Per-centage of the whole who attain to Salaries of 400*l.* a year and upwards.
1. Secretary's - - -	100	43	43·0
2. Accountant and Controller-General's.	84	38	45·2
3. Receiver-General's - -	13	5	38·4
4. Controller of Stamps nd Stores.	57	20	35·0
5. Excise Outdoor - -	3,728	107	2·8

Note.—The Offices, Nos. 1, 2, and 3 were reorganised in 1887, No. 4 in 1888, No. 5 partially in 1887. In comparing Nos. 4 and 5, the following points of difference are observable:—

CONTROLLER OF STAMPS AND STORES.

	£	£	£
4th Class Clerks	70 by	5 *annually to*	140
3rd „	150 „	10 „	240
2nd „	250 „	12 „	300
1st „	310 „	15 „	400
Senior „	410 „	20 „	480
Principal „	520 „	20 „	620

EXCISE OUTDOOR SERVICE.

Assistants £50 + £30 officiating allowance to £65 + £30 by two *triennial increments of* - - - - - - - - £7 10*s.*

	£	£	£
2nd Class Officers	115 by	5 annually to - -	140
1st „	155 „	5 to £170, and then by £7 10*s.* annually to - - -	220
2nd Class Supervisors	240 „	10 annually to - - -	280
1st „	300 „	10 „ - - -	350
2nd Class Inspectors	380 „	10 „ - - -	400
3rd Class Collectors	450 „	10 „ - - -	500

Classifications of Districts.

The following changes made in the status of districts in recent years are instanced in support of the contention that the present classification should be abolished. As a rule the changes were made without addition to or reduction from the work of the districts in question:—

Brighton	raised from	2nd to 1st Class	for present	Supervisor.
Guildford	„ „	2nd to 1st „	previous	„
Do.	reduced „	1st to 2nd „	present	„
Canterbury	raised „	2nd to 1st „	previous	„
Do.	reduced „	1st to 2nd „	present	„
Hastings	raised „	2nd to 1st „	„	„
Chester, 1st	„ „	2nd to 1st „	„	„
Chester, 2nd	„ „	2nd to 1st „	„	„
Wrexham	„ „	2nd to 1st „	„	„
Romford	„ „	2nd to 1st „	„	„
Bury St. Edmunds	„ „	2nd to 1st „	a previous	„
Do.	reduced „	1st to 2nd „	next	„
Lynn	raised „	2nd to 1st „	present	„
Wavertree	„ „	2nd to 1st „	„	„
Watford	„ „	2nd to 1st „	„	„
Banbury	„ „	2nd to 1st „	„	„
Southampton	reduced „	1st to 2nd „	„	„
Macclesfield	raised „	2nd to 1st „	„	„
Dudley, 2nd	reduced „	1st to 2nd „	„	„
Do., afterwards	raised „	2nd to 1st „	„	„
Aberdeen	reduced „	1st to 2nd „	„	„
Stirling	raised „	2nd to 1st „	„	„
Tullamore	„ „	2nd to 1st „	„	„
Reading, 1st	„ „	2nd to 1st „	„	„

Other cases similar in character could be instanced. Further, when the matter is examined from the point of view of revenue collected, the anomalies of the classification are as apparent, as the following instances will show:—

	Total Duties collected, excluding Establishment and Dog Licences.
	£
Guildford, recently reduced from the 1st to the 2nd Class	46,000
Yarmouth, continued as 2nd Class	62,000
Bury St. Edmunds, recently reduced from 1st to 2nd Class	32,000
Reigate, continued as 2nd Class	37,000
Hastings, recently raised from 2nd to 1st Class	23,000
Wrexham, recently raised from 2nd to 1st Class	30,000
Macclesfield, recently raised from 2nd to 1st Class	24,000
Dudley, 2nd, recently raised from 2nd to 1st Class	21,000

Numerous other instances of the same nature could be quoted.

An instance showing a Repayment of Duty on Beer lost by the Vessel containing the same having accidentally fallen from its position, and the contents, over 2,000 Gallons of Beer, lost.

The course followed in this case was as follows:—The brewer made formal application through the supervisor at Reigate, who reported upon the application, described the nature of the accident, and estimated the quantity of beer on which the trader was entitled to repayment upon, giving data and reasons for the estimate. The Board agreed with the figures suggested by the supervisor, and made the following order:—

12*th November* 1887.

"On your report of the 25th ultimo, the Board direct that the duty be remitted, by deduction from the current month's charge against Mr.————, of————, on 2,119 net gallons of beer.

"*To the Supervisor, Reigate.*"

The above repayment represented over 18*l.*

An instance of a Repayment on 15·8 Proof Gallons to a Bonded Warehouse Proprietor, which was found to be short on a vatting operation in Warehouse. The Repayment amounted to 8l. 3s. 10d.

The trader applied, through the supervisor at Reigate, who reported as follows:—

"I beg leave to hand you herewith an application from Mr.————, requesting to be repaid duty on 15·8 gallons at proof of foreign spirits, which were charged as an excess deficiency on a vatting of rum on 18th May 1887. The accounts both before and after vatting were taken by myself, and I append a copy of the same taken from the Operations Register."

On Mr.———— being called upon to pay duty upon the above excess of deficiency he requested me ocheck the contents of the original casks by measuring the same, and which I did, with the following result:—

"The result of the measuring by me showed that the original quantity shown by gauge in the casks exceeded the measure by over eight gallons."

On the above report the Board made the following Order, allowing the repayment:—

"I am directed by the Board of Inland Revenue to inform you that the duty on the chargeable deficiency of 15·8 proof gallons of rum, which resulted from the racking of rum in question, will be remitted."

Report against a Brewer of Beer for sale, for using a larger quantity of Sugar than that entered, or in other words a breach of the law.

"Reigate, 10/9/87.

"I beg leave to hand you herewith a report against Mr. ————, brewer of beer for sale at ————, for having used 112 lbs. of sugar over the quantity entered on 16th August 1887.

"I saw Mr. ————, and asked him if he wished to offer any explanation of the matter. He distinctly denies having used the extra quantity above stated. In the face of the private stock of sugar kept by the officer, and checked by me on various occasions, I cannot do otherwise than disbelieve Mr. ———— –'s statement.

"For some time past I have been dissatisfied with Mr. ————'s mode of working. The malt used was as a rule inferior, and frequently ground very fine, the brewings were not properly attended to, and I observed losses from leakage, and yet charges arose from worts, and not as I thought they should, from materials.

"I commenced checking the stock of glucose, some time ago, and on several occasions I noticed that one bag or 112 lbs. extra was used. This, as a rule, was the case when stout and strong ales were brewed, but as time went on the practice became more general."

Some technical details are then given and the report continues as follows:—

"I made, in company with the officer, and on several occasions without him, most minute examinations of the premises, and took steps to satisfy myself that wort was not being concealed or robbed, and with the result that I am satisfied that such practices were not carried on. I believe that the brewer, from the causes which I indicated at the commencement of this report, used extra glucose to prevent charges from materials, but without further fraudulent intention.

"I believe that if a sugar stock is directed to be kept upon Mr.———— that it will effectually put a stop to the practices referred to.

"I may add that the officer has given a large amount of time and attention to this case, and he has acted under my directions to the best of his ability with the view to putting a stop to the illegal transactions of this trader.

"I am, &c.

"————————

"*Supervisor, Reigate District.*"

The following order was made by the Board, on the above case:—

"31/10/87.

"Sir,—With reference to your report of————, the Board direct that you cause the enclosed informations to be exhibited against Mr.————."

The case was thus referred to the magistrates for adjudication, the supervisor at Reigate conducting the legal proceedings to a close.

Appendix.

An instance showing the course adopted when an application is made for the return of License Duty purported to have been paid in error. The application in the first instance was sent to the Repayments Division, Somerset House, and from thence referred to the Supervisor, Reigate, for report.

The supervisor at Reigate reported as follows on 16th February 1889:—

"With reference to the annexed application made by ——— on behalf of ———, I beg leave to state that I have made inquiries respecting the matter, and I find that a dog was kept by ———, during the month of January, in the present year. The dog, I believe, died on the 1st instant, but under the circumstances I beg to submit that this is not a case for repayment."

The Board reply on 28th February 1889, and made the following order on the supervisor's report:—

"With reference to your report of the 16th instant, the Board direct that you inform ——— that no repayment can be granted in respect of the enclosed license taken out by ———.

"I am, &c.,

"———

"*To the Supervisor, Reigate.*"

(Correspondence between the Excise Out-door Officers and Board of Inland Revenue, handed in by Mr. Cunningham. See Question No. 25,150.)

To the HONOURABLE the COMMISSIONERS OF INLAND REVENUE.

HONOURABLE SIRS,

THE supervisors, officers, and assistants of Inland Revenue, after careful study of the results of recent Departmental changes, and in view of their ultimate effects, most respectfully approach your Honours with the following statement of unredressed grievances, in the earnest hope that a due consideration of the whole case will lead you to exert your best influence to bring about their speedy removal, and, by conferring that equality with other and similar Departments for which these officials have so long sought, put an end to the discontent which, unfortunately, has so long prevailed.

On behalf of the service, which we represent, we desire to express our grateful recognition of the efforts which your Honours have already made in the direction of amelioration, and we most respectfully request your patient attention to the views of the service on the existing conditions of salaries, promotion, allowances, and leave.

The main grievances of which we complain are:—Inadequate salaries, loss of prospects, insufficient allowances for horsekeep, travelling, and office accommodation, and insufficient leave.

Salaries.—The supervisors feel that their salaries are inadequate when considered in relation to the value of the services rendered, and also when compared with the salaries of officials performing similar duties in other Departments. The work of supervisors is clearly of the nature laid down by the Playfair Commission as pertaining to the Upper Division and we therefore respectfully submit that the rate of remuneration ought to accord with the work, and reach, as in the Higher Division, a maximum of 400*l.* per annum. We further respectfully submit that the present division into two classes is not defensible upon the ground of any difference in the nature of the work of a first class district as compared with that of a second class district, and that the classification ought, therefore, to disappear, and the maximum salary of the grade be open to all without break or barrier, save the test of fitness hereinafter suggested.

Officers of the first class are dissatisfied with their present salaries upon similar grounds; their duties are admittedly of a much more responsible nature than those of the Lower Division clerks, their hours of work are longer, and the nature of their duties not only demands the highest degree of integrity, but requires also the exercise of considerable mental ability and tact, as well as a large amount of physical endurance. Yet the maximum salary of a Lower Division clerk is 250*l.* per annum, while that of a first class officer is 220*l.* Again, the clerk is probably never required to change his residence, while the officer may frequently be removed, as the exigencies of the service demand; the clerk has the opportunity of forming friendships and starting his family advantageously in life, while the officer is at a great disadvantage in this respect, not merely by reason of changes of residence, but also by the very nature of his duties.

Officers of the second class complain of the inadequacy of their salaries on the ground that there is no essential difference between their duties and those of the first class officers. We respectfully submit that the division into two classes ought to cease, and that, subject only to the test herein-after suggested, salaries ought to proceed, by annual increments, to the maximum claimed for first class officers.

We beg to point out that, under the present arrangements, many officers of the second class, upon reaching the maximum for their grade, will be kept for a period of at least four years without any increment; this period of stagnation occurs at a time when the officers' family expenses begin to be most severely felt.

We also beg to state that many of those now receiving the present maximum were kept at the late maximum for periods ranging from two to four years.

We respectfully submit that the case of assistants is one of peculiar hardship, and calls for special and early consideration. Many of the officials in this grade have now entered upon their eighth, and some upon their ninth, year of service, and are in receipt of only 95*l.* per annum. We consider this remuneration quite inadequate, when their age and experience are taken into account, and we cannot refrain from pointing out that Lower Division clerks under the age of 18 are receiving exactly the same salary as assistants who have served over seven years, and whose ages range between 26 and 30. In this connexion we also respectfully point out that in a Treasury letter to the Civil Service Commissioners (17th March 1885), the entrance examination for assistants of Excise is stated to be "practically of the same standard" as that for the Lower Division clerkship. Assistants being largely employed as a "relief" staff, are subjected to frequent changes of residence, and, as a consequence, incur expenses of which the Lower Division clerks, whose location is usually unchanged, have little or no experience. We respectfully submit that the assistants ought to receive remuneration at least equal to that granted to the clerks of the Lower Division, and we further respectfully submit that, as their duties and responsibilities are in the main the same as those of fixed officers, the present distinction between assistants and officers ought to be abolished, and the salaries proceed from the initial salary to the maximum for officers, subject only to the conditions hereinafter suggested.

We also respectfully submit that so long as permanent assistancies are maintained, assistants ought to be appointed thereto in order of seniority, so as to avoid the anomaly whereby a senior assistant may be continually removed from station to station, while a junior may be for many consecutive months attached to one station

It cannot be too strongly urged that nothing less than a maximum of 400*l. per annum for supervisors, and* 250*l. for officers (including assistants), will effectually remove the discontent now felt upon the ground of slow promotion from grade to grade. The maximum of each grade to be attainable by all its members without classification.*

We respectfully submit that the following scale of salaries is one which would give satisfaction to the Department, viz.:—Officers, 80*l.* by 5*l.* per annum to 100*l.* Upon reaching 100*l.* per annum, a certificate of fitness for further advancement might be required, upon the issue of which the officer's income should proceed by annual increments of 7*l.* 10*s.* to 190*l.* Upon reaching 190*l.* a test of fitness for further advancement in that grade might be applied, similar to that now in force on the promotion of an officer from the second to the first class, and upon the result being found satisfactory the officer's salary should proceed by annual increments of 10*l.* to 250*l.*, the maximum claimed for the grade.

We submit that the minimum salary for an officer upon his appointment to a station should be 120*l.* per annum, and that, if his salary has not reached that amount by the time he is placed in charge of a station, it ought to be immediately raised thereto.

We also submit that the advancement of officials beyond the suggested limits of 100*l.* and 190*l.* *should depend solely upon their fitness and not upon the existence of vacancies.*

For examiners and supervisors, we submit the following scale, viz.:—Examiners and supervisors, 280*l.* by 10*l.* to 350*l.* Upon reaching 350*l.* the supervisor's fitness for further advancement in that grade might be tested, and if the result be found satisfactory the salary should advance by annual increments of 12*l.* 10*s.* to 400*l.*

In this case also we respectfully submit that advancement beyond the limit of 350*l.* *should depend solely upon the official's fitness and not upon the existence of a vacancy.*

We respectfully suggest that the officials now designated assistants, shall, for the future, be styled unattached officers, and that examiners be henceforth styled unattached supervisors.

We believe that the limitations suggested in connexion with the foregoing scale of salaries will be found to leave in your Honour's hands guarantees for the maintenance of discipline at least as valuable as those now afforded by the system of classification; and that the efficiency of the Department will be increased by the knowledge that advancement in each of the proposed grades will depend entirely upon individual fitness, and that diligent performance of duty will ensure steady progress to the maximum of the grade, instead of such progress being, as at present, interrupted by periods of stagnation occurring between arrival at the maximum of one class and promotion to the next.

Appendix

Loss of Prospects.—As a consequence of reorganisation, and reduction in the number of higher appointments, supervisors, officers, and assistants have all suffered considerably in their prospects of promotion. The following figures will show how serious the retardation of promotion in the various grades has become since 1874. It was then officially stated to the Playfair Commission on behalf of the Board of Inland Revenue that the average service in the grade of assistant, ride officer, and division officer was as follows:—Assistant, 4 years; ride officer, 5 years; division officer, if selected for examiner, 5 years. The corresponding figures at the present time are:—Assistant, 8 years; second class officer, 9 years; first class officer, 9 years.

In 1874 the service of junior inspectors ranged from 20 to 22 years, in 1888 the junior inspectors of the second class have served upwards of 30 years.

It is respectfully submitted that the retardation of promotion revealed by the foregoing figures is not by any means compensated for by the increases which have taken place in salaries.

The officials affected do not expect that higher appointments shall be either created or maintained merely to provide a flow of promotion, but it is respectfully submitted that in dealing with the question of salaries, the loss of prospects ought to be taken into consideration. That this suggestion involves no new principle is manifest from the fact that the Revenue Estimates for 1888–89 show a provision for "compensation for loss of prospects" in the case of senior registrars in the Legacy and Succession Duty Department. The same principle has been admitted in the case of lieutenants in the Navy; the Navy Estimates for 1888–89 provide for an increase in the pay of those officers, and the memorandum issued by the First Lord of the Admiralty observes, "If the promotion of "lieutenants is retarded on grounds of public policy, "it seemed only just that after a certain length of "service their pay should be increased."

Allowances.—*Horse-keep.*—The allowances for horse-keep were fixed at the present amounts at a period when the malt tax was in existence. Malting was usually suspended during the summer months, and as officials had an opportunity of putting their horses out to grass, they were enabled not only to allow them to obtain rest and renewed vigour, but also to keep them at a less cost during the "silent" season. At the present time, and ever since the imposition of the beer duty, journeys are as frequent during the summer as during the rest of the year, so that not only is the expense of keeping the horse increased, but the animal's endurance is subjected to a more severe strain, with the inevitable result of diminishing its selling value. Further, the area of stations and districts has, in most instances, been considerably enlarged by the reorganisation of September, 1887; thus the work of the official's horse has been still further increased, and it is respectfully submitted that the sum which barely sufficed to cover the cost of horse-keep in the days of the malt tax, is quite inadequate for that purpose under present conditions.

Travelling.—It is respectfully submitted that in fixing the present allowances sufficient consideration has not always been given to the increased distances resulting from the reorganisation of last year. It is also respectfully submitted that in a large number of first class stations, the officers are obliged to use public conveyances, it being impossible to travel on foot the distances which their duties compel them to go, as the time occupied in walking would seriously encroach upon that necessary for sufficient attention to the interests of the revenue.

Attention is respectfully directed also to the pecuniary loss suffered by senior assistants when placed in charge of second class stations. An allowance for travelling being immediately necessary in the case of the fixed officer of such a station, we submit that the officiator, who has to perform all the officer's duties in his absence, ought to be enabled to do the necessary travelling without having to trench upon his small salary for that purpose.

It is respectfully submitted as a general principle *that no official should be required to travel at his own cost when such travelling is necessary in the interets of the Revenue.*

Office Accommodation.—In the majority of cases the sums allowed to officials are considerably less than those for which similar accommodation could be obtained elsewhere in the same locality. An annual allowance of 5*l.* for the use of a room in suburban London, in Manchester, or in Birmingham is certainly far below the value of the accommodation afforded, and it is felt by supervisors and officers that they should not be compelled by reason of their position, to give up a portion of their homes for less than the fair value, as determined by the circumstances of the neighbourhood.

Leave.—The present amount of annual leave is felt by both supervisors and officers to be insufficient for recruiting the energies which are so heavily taxed by the unremitting round of duties devolving upon them. We respectfully submit the following as an equitable scale, viz.:—

For officials under 10 years' service 21 days.
For officials over 10 years' service - 28 days.

In conclusion we hope that the foregoing statement of the views of the ranks we represent will not be regarded as exhibiting any want of recognition of the improvements already effected, but rather as a respectful restatement of the claim for equality so long preferred, and advocated by the mass of the service; and we beg to reiterate our earnest hope that your Honours may succeed in securing the speedy fulfilment of our long-cherished desire, and thus restore to a department whose members have been stated upon high authority to be "second to none in intelligence, in assiduity, and in attention to their duties," that feeling of contentment which is essential to the development of the highest efficiency.

We remain, Honourable Sirs,
Your faithful Servants,

Executive Committee of Supervisors, Officers, and Assistants.

London,
November 1888.

Inland Revenue,
Somerset House, W.C.,
Sir, 26th November 1888.

The Board have carefully considered a memorial which has recently been addressed to them signed by several supervisors, officers, and assistants on the subject of the existing conditions of salaries, promotion, allowances, and leave, which has been forwarded to the Board by Mr. J. G. Cunningham, Officer of Islington, 3 Station (1st Class).

The Board observe that the principal request urged by the Memoralists is for a general increase of salaries and allowances to an extent of about 150,000*l.* on the mean, and 300,000*l.* on the maximum cost of the present Outdoor Excise Branch of the establishment.

The Board cannot refrain from expressing their regret that such a request should have been made. In their opinion it is one which no Government would be likely to entertain, and certainly one which the Board are quite unable to recommend.

The Board must remind the Memorialists of the numerous and great advantages which have been conferred upon the Service during the last few years, and by which so much of what has been asked for by them in former years has been granted. In the year 1881 Supervisors of the 1st Class had their salaries raised from—

260*l.* by 10*l.* to 300*l.* to 280*l.* by 10*l.* to 320*l.*

Supervisors of the 2nd Class from—
230*l.* by 10*l.* to 250*l.* to 230*l.* by 10*l.* to 270*l.*

In 1884, Division Officers, whose salaries previously were 140*l.* by 5*l.* to 200*l.*, were granted the following scale of salary:—

155*l.*, after 4 years by 5*l.* to 170*l.*; thence by 7*l.* 10*s.* to 200*l.*

In 1886, Division Officers were granted a salary of 155*l.* by 5*l.* to 170*l.*; thence by 7*l.* 10*s.* to 200*l.*

In February 1887, Examiners were granted a salary of 220*l.*, and Expectant Examiners 200*l.*, while in September 1887, the last increase given to officers of the classes of the Memorialists was from the previous rate as follows:—

	£	£	s.	£
Supervisors, 1st Class -	300 by	10	0 to	350
,, 2nd ,, -	240 by	10	0 to	280
Expectant Examiners -	220			
Officers, 1st Class -	155 by	5	0 to	170
then	170 by	7	10 to	220
,, 2nd ,, -	115 by	5	0 to	140

In 1882, private leave was increased from 14 to 21 days per annum in the case of all Officers after five years' service.

In November 1883, allowances were granted to supervisors and officers for the partial use of a room in their houses as an office in places where public office accommodation was not provided. The allowances were:—

Supervisors	- - -	7*l.* per annum.
Officers	- - -	5*l.* ,,

The Board desire to distinctly inform the Memorialists that after these liberal concessions, which were granted by the Lords of the Treasury on the recommendation of the Board, after prolonged and earnest inquiry, it is impossible for them to propose or support any further general scheme for the revision of Salaries and Allowances.

As regards the slowness of promotion of late years, of which the Memorialists complain, and which has been mainly caused by the introduction of the Beer Duty, and the temporary increase in the number of the officers which that measure rendered necessary, the Board have only to observe that they have already endeavoured, and will continue to endeavour, to meet the difficulties that have arisen in every legitimate manner within their power.

It is, however, obvious that in all services promotion may at times be unusually slow or unusually rapid, and that all Civil Servants must be prepared for such contingencies; and it cannot be admitted that any abnormal slowness of promotion furnishes a ground of claim for compensation. So far as promotions have been retarded by the recent re-organisation, the Board are of opinion that the improvements in the Scales of Salaries have compensated the Service generally for any loss of prospects caused thereby.

The Board must inform the Memorialists that in fixing the present allowances for travelling the increased distances resulting from re-organisation were most carefully considered.

The Board are quite prepared as far as possible to place senior assistants in collections in which it will not be necessary for them to take charge of Second Class Stations, and to mitigate as far as lies in their power the inconvenience which has arisen from the delay which has taken place in their promotion.

The Board, in conclusion, regret that they do not at present see their way to an extension of the amount of annual leave, which has already been increased from 14 to 21 days, without adding considerably to the expense.

You will acquaint Mr. Cunningham accordingly.

I am, Sir,
Your obedient servant,
(Signed) Robert Micks.

The Collector of Inland Revenue,
London, North.

The Honourable the Commissioners of Inland Revenue,
Somerset House, W.C.

Inland Revenue Office,
30, Compton Terrace,
Islington, N.
29th December 1888.

Honourable Sirs,

With reference to your Honours' reply to the petition recently submitted on behalf of the supervisors, officers, and assistants of Inland Revenue, I have been requested by my colleagues on the Executive Committee to ask your Honour's patient attention to the following observations.

It is most respectfully submitted that careful calculation of the probable addition to expenditure which would be involved by granting the increase of salaries and allowances asked for, leads the Committee to conclude that the amount required would probably never reach 150,000*l.* per annum, and that several years must elapse before the annual cost would be incressed by anything like that sum.

It is believed that the amount mentioned would not only be ample to provide for the increase of salaries, &c., but would also suffice for a proportionate increase in the non-effective charges. It is submitted that less than 20,000*l.* would meet the claims of the service for the first year, and that the subsequent addition would not exceed 15,000*l.* per annum, even assuming no further diminution in the number of officials employed. The tendency to reduction appears to be a constant factor, and it is submitted, keeping that tendency in view, that the annual addition to the Estimates would not be a large sum, and that, probably within a short time, no further addition would be necessary.

It is, further, most respectfully submitted whether the cost of satisfying the claims preferred should not be a consideration of secondary importance, and whether the question primarily to be considered is not, "Are "the services rendered by the petitioners of value "equivalent to the salaries for which they ask?" Upon this subject it is most respectfully submitted that the Department itself furnishes evidence that the claims preferred are strictly moderate and reasonable. In connexion with the question of salaries it is also respectfully submitted that the total cost of collection now is 3*l.* 8*s.* per cent., being one per cent. less than it was 40 years ago; that the addition of the whole sum of 150,000*l.*, if so large an amount were needed, would raise the cost by ·6 per cent. only, and that the addition for the first year would not be ·08 per cent., and in subsequent years would be less than ·06 per cent.

For the purpose of comparison, the case of clerks in collectors' offices at once suggests itself. Several of the members of the executive committee have served as clerks, and are therefore well fitted to form an opinion as to the relative value of the services rendered by clerks and officers respectively. They have no doubt that any person conversant with the duties of both classes of officials must admit that the duties of an officer are quite as responsible as those of a first class clerk, and that the officers' dealings with all classes of the public call for the exercise of at least as much tact and patience as is required by the clerk in his transactions with the public. Yet the maximum salary of a first class clerk now reaches 280*l.*, while that of a first class officer reaches only 220*l.* The clerk also proceeds by regular increments to 220*l.*, without "break or barrier," and the increment of 7*l.* 10*s.* commences when the salary of 140*l.* is reached, after eight years' service as clerk. On the other hand, the officer remains for at least three years at the salary of 140*l.*, and does not receive any higher increment than 5*l.* per annum until the salary of 170*l.* is reached; and at the present time there are officers who have served upwards of 17 years, and have not yet begun to receive the 7*l.* 10*s.* increment. Taking all these facts into consideration, your petitioners feel that in asking for a maximum salary of 250*l.* per annum for officers, they are advancing a claim which is based upon equitable grounds.

The maximum salary of a superintending clerk is now 350*l.* per annum; that is, it equals that of a first class supervisor. Those acquainted with the duties performed by these officials respectively must allow that the duties of the supervisor are much more onerous in point of responsibility, time, and conditions of labour, and call for the exercise of more discrimination than those of the superintending clerk. It is impossible, therefore, to avoid the conclusion that the supervisor is considerably underpaid as compared with the superintending clerk.

Another branch of the Department, the office of the Controller of Stamps and Stores, has recently been classified. The salary of a clerk of the first class commences at 310*l.*, and proceeds, by annual increments of 15*l.*, to 400*l.* It is most respectfully submitted that the duties performed by Supervisors of Inland Revenue are as responsible, and as valuable as those performed by first class clerks in the Controller's office. Yet, whilst the clerk in the Controller's office can reach 400*l* per annum without passing any examination, the Supervisor of the first class, whose books have been subjected to three severe tests, and whose personal qualifications have been subjected to a searching trial before his promotion from the rank of officer, can look forward, with certainty, to 350*l.* per annum only. Unless it could be assumed that the duties of a first class clerk in the Controller's office are of a more responsible nature than those of a supervisor, the conclusion is inevitable that the supervisor's salary is not commensurate with the value of his work.

The salaries of clerks of the fourth class in the Controller's office commence at 70*l.*, and proceed, by 5*l.* per annum, to 140*l.*; and the salaries of third class clerks commence at 150*l.*, and proceed, by 10*l.* per annum, to 240*l.* It is most respectfully submitted that the duties performed by these officials are not of so responsible a nature as those performed by assistants and officers of Inland Revenue. The work of the clerks is performed under favourable circumstances,

Appendix.

and, as a rule, does not occupy more than seven hours daily, while Excise officials have usually to perform their duties under unfavourable circumstances, and the hours are unlimited and, generally, irregular; yet the clerk's salary goes steadily on by annual increments, while the assistant's salary is increased by two triennial increments only, of 7*l.* 10*s.* each, and even this meagre increment accrues only to the juniors, who form not quite one-third of the whole class. The seniors, some of whom have completed, and many of whom have entered upon their eighth year of service, have practically received no increment during their whole career. In the case of the clerk in the Controller's office, the increment is raised to 10*l.* upon his entering the third class, while the highest increment at present received by any officer is but 7*l.* 10*s.*

It is respectfully submitted that the comparison instituted with clerks in Collectors' offices, and with clerks in the office of the Controller of Stamps and Stores —the two branches of the Inland Revenue Department in which salaries have very recently been revised— clearly shows that the claims preferred by the supervisors, officers, and assistants are, as has already been stated, moderate and reasonable. It is, therefore, most respectfully asked that the recent petition should receive your Honours' sympathetic reconsideration.

The various concessions enumerated in your Honours reply have been most gratefully accepted by the Out-door Branch of the Department, but they have been regarded as instalments of justice, and the committee can only respectfully repeat the statement of the petition as to the measures which would restore a feeling of satisfaction to the Department. While the improvements in the scales of salaries, as set forth in your Honours' reply, are gladly admitted, justice to the Out-door Branch demands that attention should be drawn to the effect of retarded promotion in preventing individual possession of apparent advantages.

Upon the question of slowness of promotion, the committee most respectfully beg to remind your Honours that the petition points out a means whereby remuneration for services rendered would be less liable to fluctuate with fiscal changes or with reorganisation.

With regard to allowances for travelling and horse-keep, it is respectfully pointed out that, while improved allowances have been granted for travelling, the allowance for horse-keep has not been increased, although the distances to be travelled have been augumented, firstly, by the transfer of the duty from malt to beer, and, secondly, by the reorganisation of September 1887.

As regards Senior Assistants, the Committee very respectfully express a hope that immediate steps will be taken by your Honours to place these officers in collections where it will be necessary for them to take charge of second class stations.

On behalf of assistants, it is submitted that the "inconvenience" of deferred promotion and loss of salary is not one which will terminate upon appointment to a fixed station. It will remain attached to the individual during the whole of his official career.

It is with a view to prevent the continuance and recurrence of such circumstances that the committee ask your Honours to grant a service scale of pay. The result of fiscal changes, or departmental reorganisations, would then cease to operate as heavy pecuniary penalties on sections of the service.

The extension of leave from 14 to 21 days annually has been most gratefully acknowledged by the Out-door Branch, and it is still hoped that your Honours will admit that the claims of an officer of 10 years' service to 28 days' leave to be quite as good as those of a clerk of like service.

I am, Honourable Sirs,
Your obedient servant,
JOHN G. CUNNINGHAM, Officer,
Islington 3 Station,
(*1st Class*).

Inland Revenue,
247, Hampstead Road, N.W.,
SIR, 11th January 1889.

WITH reference to your letter to the Board of the 29th ultimo, the Board direct me to acquaint you that they have nothing to add to their former letter on the subject of the existing conditions of salaries, promotion, &c. in this Department.

I am, Sir,
Your obedient servant,
(Signed) SAMUEL M. BALLS.

Mr. J. G. Cunningham,
Islington 3 Station.

(*Paper handed in by Mr. Crowe.—See Question No.* 25,213.)

ALLOWANCE for HORSE-KEEP.

It has been thought advisable to supplement the remarks made respecting the allowances for horse-keep in the "Amended Statement" already submitted, by a more detailed account of the expenses incurred, and the losses sustained in keeping horses for official purposes. The allowances are 55*l.* per annum for supervisors, and 40*l.* for second-class officers; and when it is remembered that these respective amounts are intended to cover the cost of the purchase of horse, trap, harness, &c., of feeding, stabling, grooming, shoeing, and all other incidental expenses, as well as to provide for losses, from accidents and wear-and-tear, it cannot but be admitted that they are very meagre indeed, especially in the case of the officers. When the present allowances were fixed the officers' horses, in most instances, had to work only nine months in the year, and were generally put out to grass for the other three, during which the cost of the keep was comparatively small, while the rest had a reinvigorating effect upon them. At the present time the work is continuous, and the mileage has been so much increased by re-scheming, more particularly in September 1887, that the horses have to be kept in good, hard condition from year's end to year's end; and, even then, many officers find it necessary to hire occasionally to keep their horses on their legs.

An officer in Cambridge Collection writes to say:—

"I have now kept a horse for more than eight years and my experience satisfies me that the present allowance is totally insufficient. Were it not that I have been accustomed to handle horses since my boyhood, I should have been a very great sufferer. Taking one year with another, no officer can provide and keep a useful horse on 40*l.*, unless he is exceptionally fortunate. The present allowance implies that the officer must, with his other accomplishments, be an expert groom, and on this account it is looked upon by many as a veiled insult to the whole out-door department. Since the re-scheming of September 1887, the work of many of the stations is too much for an ordinary horse, indeed, during the winter of 1887–88 I had to keep two horses myself. I have since sold one at a loss of 3*l.* and six months' keep. Still I have been more fortunate than others. The officer of an adjoining station, when coming from Wales, as the result of re-scheming some two or three years ago, to take up his appointment, had the misfortune to have his horse's neck broken in the railway horse-box. The railway company and the Board expressed their regret, but did nothing to compensate him for his loss. He then applied for the usual advance of 20*l.*, and bought another, a young one, which cost, when 'broken,' about 25*l.* He also last year bought a bicycle, which he frequently used that he might rest his horse. About three months ago, when out on survey, he met with an accident; the shafts of his trap were broken; he and his child were thrown violently out on the road, and narrowly escaped with their lives; and the horse ran away and broke its knees. It was in the veterinary's hands for some time, and it is not now worth much more than half what he paid for it. In another adjoining station, the officer's

horse dropped dead in the stable yard, breaking one of the shafts of the trap in its fall. The officer petitioned the Board to be allowed the original cost; but though his application was strongly supported by his collector, and by his supervisor who witnessed the occurrence, he was informed in reply, that 'they (the Board) were 'very sorry for his misfortune, but they had no funds 'at their disposal to make good the loss.' An officer in a station adjoining his lost a valuable horse about the same time. It shied, and jumped into a Fen dyke, and was drowned before help came. These cases have all occurred in the course of a few years, and in the same neighbourhood.

"The following is a list of the average weekly expenses incurred in keeping an ordinary horse:—

	s.	d.
Hay (6 stones)	4	0
Oats (1½ bushels)	5	0
Straw	0	9
Bran and chaff	1	3
Stable and coach-house	2	6
Shoeing and clipping	0	9
Washing and cleaning trap and harness	1	0
Shoeing wheels and keeping trap and harness in general repair	1	0
Putting up and holding horse when out on survey	1	0
Interest on money sunk in horse and trap, &c.	0	6
Total	17	9

"This does not take into account the grooming of the horse, nor does it make any provision for ordinary wear-and-tear, or veterinary's charges. There should be a margin of at least 5*s.* a week for these purposes, making in all 1*l.* 2*s.* 9*d.* a week, while the allowance is only 15*s.* 4*d.*!"

An officer in Nottingham Collection states, respecting losses incurred by him from depreciation in value alone while he was compelled to keep a horse for revenue business:—

"The first horse I had cost me 35*l.* After having it a year it went lame. I turned it out till it recovered; and fearing it would go lame again, the vet. advised me to sell it. I sent it to the nearest repository where it fetched 17*l.* 17*s.*—

	£	s.	d.
The expenses of sale, &c. were 1*l.* 4*s.*, I consequently lost	18	7	0
"The second horse I bought cost me 30*l.* This one also after two years became lame and never recovered, and was only fit to work on land, and I had to sell it for 5*l.* The expenses connected with its lameness amounted to 4*l.* 18*s.* 6*d.* My loss on this horse was	29	18	6
"The loss I sustained on sale of trap when proceeding to my first class station was	10	10	0
Loss on harness	1	12	6
Loss on bridle and saddle	2	5	0
Total	62	13	0"

It is only, however, when we compare the allowances of supervisors and officers with those granted to superintendents and inspectors of police that their inadequacy becomes fully apparent. In the case of the police, the allowances are fixed by the magistrates at quarter sessions, and are paid by the respective counties. These gentlemen are generally well acquainted with the expenses incurred in keeping horses, and, being large ratepayers themselves, they are not likely to be extravagant. Yet the usual allowance granted to superintendents and inspectors when they provide and keep horse, trap, &c. is 60*l.* a year. The following are the allowances granted in the undermentioned counties, and they may be taken as fairly representative cases:—

Cambridgeshire and Huntingdonshire:—Horses, carts, harness, stabling, &c. provided. Allowance for forage, 2*s.* 3*d.* a day.

Leicestershire:—60*l.* for forage and farriery; but horses, carts, and harness provided by county.

Lincolnshire:—50*l.* yearly to provide and keep horses. Carts, harness, &c. provided by county.

Northamptonshire:—50*l.* yearly for forage. Horses, carts, &c. provided.

Staffordshire:—60*l.* a year for purchase and keep of horses; but carts and harness, &c. are provided by the county.

R. Crowe.
Second Class Officer.

J. N. Stickland.
Second Class Officer

March 1889.

Appendix.

(14.)

(*Paper handed in by Mr. Symons.—See Question No.* 25,612.)

To the Honourable the Commissioners of Her Majesty's Customs.

Honourable Sirs,

We, the undersigned Examining Officers of the Port of London, feel that the time has arrived when we are compelled to approach your Honours with regard to the heavy expenses incurred in travelling to and from our duties.

Before London became so extended, and when officers were less liable to changes of stations, little difficulty was found in providing dwellings within walking distances of our places of employment, but at present it is almost impossible for any officer to reside in a locality whence he can reach his place of employment without incurring travelling expenses.

We would respectfully submit that under existing regulations your Honours admit the principle of recouping officers for expenses incurred in travelling by granting allowances to officers employed at Royal Victoria and Royal Albert Docks. These regulations, however, present an indefensible anomaly in exempting officers living in one locality while including those living in another, thus conferring advantages on residence in particular districts.

We would further submit that our position in this matter is unfavourable when compared with that of officers at outports who can reside within walking distance of their stations, thereby rendering travelling expenses unnecessary.

In asking for these allowances your Petitioners are encouraged by the following opinion expressed in the Third Report of the Playfair Commission:—

> "We are clearly of opinion that no officer should be out of pocket by reason of extraordinary expenses for official purposes, except where the salary may have been fixed with a special view of including such expenses."

In submitting this petition to your honourable Board we would respectfully point out that a strong feeling exists in London on the question, as shown by the number of applications from London officers for transfer to outports.

We are convinced that your Honours are animated by a desire to deal equitably with your officers, and it is therefore with confidence we ask your favourable consideration of our petition.

We have the honour to be,
&c

The Examining Officers and Out-door Officers ask for an annual allowance for travelling expenses.

B. O. 24th October 1888 on 29380 and 29,381
1888.

"The Board cannot entertain these requests."

(Signed) H. M.

Appendix.

(15.)

(Paper handed in by Mr. Symons.—See Question No. 25,612.)

To the Lords Commissioners of Her Majesty's Treasury.

Custom House, London.
September 1888.

The memorial of the officers of Her Majesty's Customs in the Port of London, humbly showeth—

That your memorialists have been led to believe it is contemplated to increase their hours of labour, (1) from the following answer of your Lordships' Financial Secretary to a question in the House of Commons on the 1st March 1888.

> "There had been several schemes submitted to the Treasury, and which were now under consideration, and he hoped to be able to find some means without unduly enlarging the expense which would fall upon the Department to either extend the hours of Custom House officers or to modify the overtime charge, or to do both in the interests of merchants."

(2.) From the following reply of the Right Hon. the Chancellor of the Exchequer to a deputation from the Chamber of Shipping and the Associated Chambers of Commerce on the 10th April 1888.

> "With regard to an extension of the hours during which the landing of duty-paying articles might take place, he thought he should be able to meet to some extent the views of the shipowners. The matter had been under consideration, and he thought the extension would be effected, though whether only experimentally at first he could not say."

That the hours of labour of Customs officers in London are:—

(1.) On the waterguard:—1st day from 8 or 9 a.m. till dusk, 2nd day for 24 consecutive hours, 3rd day off duty, and so on, Sundays and Bank holidays being included, while on some stations officers are required to be on duty without sleep every alternate 24 hours. (2.) On duties in connexion with the landing and clearing of free goods, from 6 a.m. to 6 p.m. for eight months, and from 9 a.m. to 4 p.m. for four months. (3.) On all other duties from 8 a.m. to 4 p.m. for eight months, and from 9 a.m. till 4 p.m. for four months.

That the Report of the Commissioners of Customs for 1852 stated:—

> "When it is considered that even under the present hours the officers are compelled to be up every morning by 6 o'clock to enable them to breakfast and reach their respective stations by 8 o'clock, that from that hour to 4 p.m. they are continuously employed, that the nature of their duties subjects them to exposure on open quays in all weather, and that few can reach their homes before 5 o'clock after an absence of 10 hours, we think they are entitled to assume that there is no class of Government officials of the same standing on whom such arduous duties are imposed."

That owing to the extension of the Port and the more frequent changes of officers from one station to another, the time spent away from home has of late years been considerably increased.

That the hours of labour in the Customs out-door Department are much longer than in any other department of the Civil Service.

That the Horsfall Committee in 1862 strongly recommended that officers of Customs should not be employed for more than eight hours per day without additional remuneration.

Your memorialists therefore pray that your Lordships may favourably consider the facts embodied in this memorial and decline to sanction any scheme for increasing their hours of labour. They also pray that, as their hours are often excessive, your Lordships may be pleased to direct that eight hours per day shall be the maximum service required without additional remuneration, and that less than eight hours per day shall be required when officers attend before 8 a.m. or after 4 p.m.

And your memorialists will ever pray.

Signed by 728 officers.

Treasury Chambers,
23rd January 1889.

Gentlemen,

The Lords Commissioners of Her Majesty's Treasury have had before them a memorial from certain examining and other officers of the Port of London urging that no extension should be made in their hours of labour in the event of the hours within which goods may be landed and shipped in the Port, being prolonged.

My Lords understand that you have already informed the applicants that it is not in contemplation, in any extension of facilities that may be granted to shipowners for the landing and shipping of cargo, to add to the total number of hours per man per day now required to be given by officers of the Department when employed on that duty. Their Lordships have nothing to add to that assurance, and I am to desire that you will so inform the memorialists.

I am, &c.,
(Signed) R. E. Welby.

The Commissioners of Customs.

(Paper handed in by Sir R. Welby.—See Question 22,164.)

CORRESPONDENCE between the INLAND REVENUE, the TREASURY, and the CUSTOMS, arising out of a proposal by the Customs to take over certain Bonded Warehouses within the Ports of London, Dublin, and Cork, now under the Inland Revenue.

Treasury, 15205.

MEM. SIR R. WELBY, September 19th, 1888.

THE Customs having suggested to the Inland Revenue that the bonding arrangements at London, Dublin, and Cork, should be reviewed, the former by a joint committee of the two Boards, the two latter by the local officers working in concert, the Inland Revenue object to the proposal, though they would welcome a re-appointment of the Treasury Warehousing Committee, with the view of considering generally the arrangements at the 42 places not yet dealt with, and, if necessary, reviewing those previously settled.

I think we should hear what the Customs have to say to this suggestion and in support of their own.

G.G. 22/9/88.

Refer to the Commissioners of Customs.

(Signed) G. GLEADOWE.

22/9/88.

Secretary, Customs, No. 28565/1888.

Inland Revenue, Somerset House, W.C.,
September 18th, 1888.

MAY IT PLEASE YOUR LORDSHIPS,

WE are in receipt of a letter from the Board of Customs, in which they propose that the bonding arrangements in London, Dublin, and Cork should be reconsidered, with a view to certain warehouses which are now under the control of this Board being transferred to the Customs.

With regard to Dublin and Cork, the Board of Customs state their opinion that their local officers would be probably capable of reporting jointly on the subject, so as to come to a satisfactory result.

And with regard to London, the Board of Customs propose a joint inquiry by the two Boards.

We consider that the principle raised in these proposals is so important as to render it necessary that we should submit the matter for the instructions of your Lordships; and in doing so it appears to us desirable to place before your Lordships a *resumé* of the manner in which the existing bonding arrangements have been adopted.

The numbers quoted in the margin of this report refer to the pages in the printed correspondence relative to warehouses. 20909 80.

In the year 1880 a Treasury Committee was appointed to inquire into the whole bonding system in Customs and Inland Revenue Warehouses. 20218 80.

This committee consisted of one of the Lords of the Treasury and the chairmen of the two Revenue Boards.

In February 1881 the committee recommended that, in districts where there are duplicate establishments, all of them should, as far as practicable, be transferred to one Revenue Board. They further recommended the appointment of a sub-committee, who should confer and draw up a scheme for carrying this proposal into effect, and submit if for the consideration of the committee. Page 4. 4162 81.

Your Lordships adopted the committee's recommendation, and a sub-committee, consisting of two officers from each department, and, at first, one of the principal clerks in the Treasury, was accordingly appointed. Page 4.

In March 1883 the Treasury Committee made a further recommendation that a sub-committee should be employed in reporting on the steps to be taken for transferring to this Board bonded warehouses at minor Customs ports, in which it might appear that such transfer would be desirable. Page 155.

The necessary local inquiries extended over more than two years, during which the Treasury Committee made from time to time various recommendations, which were adopted by your Lordships.

As the result of these recommendations, the number of duplicate warehousing establishments was reduced from 35 to 7, exclusive of Limerick, where the Crown warehouse remains under this Board, and all the other warehouses are under the Customs; and also exclusive of a few warehouses occupied by distillers, and the bonded warehouses at 41 minor Customs ports, were transferred to this Board.

In the 11th report of the Treasury Committee, dated 16th November 1883, they reported that a saving of Page 209.

Appendix.

15,000*l.* per annum had been effected by these arrangements "without any diminution whatever of the facilities "given to the public, but rather, if we may judge from "the reports which reach us, to the satisfaction of all "concerned."

The committee further added:—

"There remain a large number of places (61) at which warehousing business is still performed by the Board of Customs. Of these places we append a list, from which it will be seen that at only 19 places is the business extensive, while we are strongly of opinion that at the other ports (42) in the list, investigation by the practical officers of the two Revenue Boards would show that the work could be more economically performed by the Board of Inland Revenue."

The committee accordingly recommended that your Lordships should issue instructions to both Boards to bring about a transfer of business in the lines thus indicated.

Page 205. 19421/83.

This recommendation was adopted by your Lordships on the 17th December 1883, but the transfer was stayed in the following year by the Chancellor of the Exchequer.

Having thus put before your Lordships the general position of the question, we beg to state that we should welcome with satisfaction the re-appointment of the Treasury Warehousing Committee, with a view to the consideration of the places not hitherto dealt with, and, at the same time, if deemed expedient, of reviewing any settlements which were previously made.

But we desire to deprecate in the strongest manner the dealing with this important subject piecemeal, and we, therefore, cannot concur in the proposal of the Board of Customs for the departmental reconsideration of the present arrangements in London, Dublin, and Cork.

These being our views, we do not propose at present, pending any further instructions from your Lordships, to offer any observations on the merits of the Customs proposal, but merely to point out that the arrangements which it is now proposed to alter were made in each case after a very careful consideration of all the circumstances.

We have, &c

(Signed) ALGERNON WEST.
F. LACY ROBINSON.
SIDNEY F OSBORNE.

Secretary, Customs, No. 28565/1888.

TO THE LORDS COMMISSIONERS OF HER MAJESTY'S TREASURY,

Treasury, 16205/1888.

YOUR Lordships have referred to us the annexed report from the Board of Inland Revenue, dated the 18th ultimo, on the subject of a proposal made by this Board for a reconsideration, departmentally, of the bonding arrangements at the ports of London, Dublin, and Cork, with a view to a possible transfer to the Customs of certain warehouses within those ports which are now under Inland Revenue control.

The Commissioners of Inland Revenue state that, whilst they deprecate dealing with the subject piecemeal, they would welcome, with satisfaction, the re-appointment of the Treasury Bonded Warehouse Committee, with a view to the consideration of the places not hitherto dealt with, which would include London, and, at the same time, if deemed expedient, of reviewing any settlements previously made.

In their report, the Board of Inland Revenue recapitulate the circumstances attending the formation of the Treasury Bonding Warehouse Committee in 1880, and the recommendations made during the three subsequent years by that committee.

The policy adopted in pursuance of those recommendations will be within the knowledge of your Lordships, and it is not our purpose, therefore, to refer to them at length in the present report. We may, however, observe that previously to the appointment of that Committee, we had already taken the initiative in drawing attention to the subject of bonding arrangements, and in recommending the reduction of the number of Customs bonded warehouses in the United Kingdom. In our report to your Lordships, dated 8th September 1880, No. 306, we submitted the withdrawal of bonding privileges at Gainsborough, Woodbridge, and Maldon, for reasons which we set forth in detail; and we stated that we proposed to bring under your Lordships' notice subsequently the position of several other of the minor warehousing ports which we considered might be similarly dealt with. Your Lordships, by your Order of the 24th September 1880, No. 16099, approved of our proposal with respect to these three ports (in two of which, however, viz., Woodbridge and Gainsborough, bonding privileges were subsequently restored by the Inland Revenue) and of the extension of the principle on which the reduction of them was made to others similarly circumstanced.

On the 23rd November 1880, and the 7th January, 1881, we transmitted a list and full details of the business of 14 other small warehousing ports which we proposed for reduction, and your Lordships were pleased to approve of our recommendations. Bonding privileges were accordingly withdrawn from these ports also at a mean annual saving on establishments of 3,355*l.*

At the close of 1880 the Treasury Bonded Warehouse Committee was appointed by your Lordships, and the guiding principles laid down by the committee were (1) the assimilation of the bonding regulations in the two departments; (2) that at ports where there were duplicate establishments of Excise and Customs, the control of them should, as far as practicable, be transferred to one or other Revenue board; and (3) that the number of bonded warehouses should be reduced to the actual requirements of the trade of the port or district.

These principles were, to some extent, modified in the further report of the committee, dated the 8th of August 1881—a modification which bears directly on the question now at issue—and it was recommended (*a*) that in the case of ports at which there were bonded warehouses under each of the two departments, all the warehouses which were situated at, or in close proximity to, the quay or harbour, should, as a general rule, be placed under the Customs, and the warehouses in other parts of the town under the Excise; (*b*) that no new warehouses should be approved unless, in the case of ports, the Commissioners of Customs and Inland Revenue alike concur in the desirability of increased bonding accommodation. This principle, we may remark in passing, has lately been extended by your Lordships (letter to Customs, 15th October 1888, No. 14959/1888), so far as to make it necessary for both departments to concur in proposed extensions of bonding accommodation *at any place* in the United Kingdom, the effect of which direction will, as we understand it, be to make it necessary for the Board of Inland Revenue to consult this board as to proposed extensions of Excise bonded warehouses at any inland place, as well as at any port, this board continuing to consult the Board of Inland Revenue as to any proposed extensions of Customs bonding accommodation at ports, whether there are already Excise warehouses at such ports or not.

The recommendations of the Bonded Warehouse Committee received the approval of your Lordships, were duly communicated to us, and, since the receipt thereof, we have steadily endeavoured to give effect to your Lordships' instructions in dealing with applications for the extension of bonding accommodation, not sanctioning such extensions until we have become fully satisfied of the necessity for them, and making it our rule to consult the Board of Inland Revenue when such extensions have been sought at ports at which both departments have bonded warehouses under their control; and, if we have omitted in any such case to consult the Board of Inland Revenue, the omission has resulted from inadvertence, and we have lost no time in endeavouring to repair such omission by immediately communicating with that department.

We assume that Inland Revenue procedure in such a matter has been, in the main, based on the same principle. Cases have, however, come under our notice in which that board omitted to communicate with us before approving additional warehouses at ports at which there are bonded warehouses under each department. The cases referred to occurred at the ports of Glasgow and Dublin.

Since the receipt of your Lordships' final instructions and the dissolution of the committee, we have lost no opportunity of closing warehouses which appeared either to be defective, or in excess of the requirements of the port, and, in some cases, we have withdrawn bonding privileges from certain of the smaller ports (Fleetwood and Ramsey, being cases in point), at which economy of management would result from such a course, and the result has been, as stated in our report to your Lordships of the 17th July last, No. 16495/1888, that a net reduction of 133 has been made in the number of Customs' warehouses since May 1884, 170 old warehouses having been closed, against 37 new ones approved.

The cases at Dublin and Cork, in which we proposed to the Board of Inland Revenue to consider the question of transferring some Excise bonded premises to Customs supervision, arose on an inspection last year of those ports by a member of the Board. He reported that certain warehouses at these ports should (from their close proximity to warehouses under our supervision, and the probability that, as we have also necessarily to keep up a considerable staff of officers at these ports for preventive and other Customs purposes, they could be more economically supervised by

us than by the Excise) have been handed over to the Customs at the time when the Treasury Bonding Committee reported as to the warehouses which ought to be transferred from one or other Revenue Department; and, as it appeared to us that certain Excise warehouses within the port of London were also similarly situated in relation to Customs warehouses, we deemed it our duty to communicate with the Board of Inland Revenue on the subject. We expressed our opinion that the care of the specified warehouses at Cork and Dublin could be undertaken by this department, without any addition to the present cost of the Customs establishment, and, therefore, should, in accordance with the principles laid down by the late Treasury Bonded Warehouse Committee, and approved by your Lordships, be handed over to our control, thus permitting of the withdrawal of any Excise force specially or partially detailed for duty thereat. We suggested that the question of transfer could, as regards the warehouses at Cork and Dublin, be considered by the principal officers of the two departments at those ports, and that, with reference to the warehouses in London, inquiry by the two departments should be instituted with a view to ascertaining whether it would not be more economical if those warehouses were taken over by this board. These warehouses either adjoin, or are in close proximity to, large Customs bonded warehouses, which, in London, are mostly, if not entirely, places of deposit for dutiable goods imported directly into the port, and, therefore, bonded warehouses in the strictest sense of the term, and according to the original intention and meaning of the institution, as distinguished from bonded warehouses which are merely places of receipt for goods on removal under bond from other ports or places.

The following are the particulars of the warehouses in question.

Lapps Quay.

Cork.

This warehouse is 250 yards only from the Custom House, and is situated about half way between the Custom House and the Customs warehouse in Smith Street—200 yards distant, beyond Lapps Quay—and must, therefore, necessarily be passed by the officers of this department when proceeding to their station in Smith Street. It is near the water's edge, and, therefore, falls within the scope of the recommendation of the committee that warehouses in close proximity to the quay or harbour should, as a general rule, be placed under this department.

We are informed by the Board of Inland Revenue that the sub-committee decided to continue this warehouse as an Excise warehouse, under the supervision of that department, as it was found that nine tenths of the spirit in it at that time was British spirit, belonging to the Cork Distillery Company.

This circumstance, however, would hardly, in itself, justify the retention of the warehouse by the Excise at a Customs port, and in close proximity to a Customs station, unless it could be shown also that the spirit, or the bulk of it, had actually been distilled on the premises, and this we believe not to have been the case, seeing that, if we are correctly informed, there has been no distillery on the spot within the past 20 years.

But, even admitting the soundness of this argument for its retention by the Excise, it would not now hold good, seeing that since 1882, as we are informed, the business of this warehouse has quite changed its character, being no longer limited, for the most part, to the stock of any one firm or company, but being made use of by the general public for the bonding of all wines and spirits generally; and our collector reports that, as the warehouse is so near the Custom House, he could work it without any additional expense to his establishment. For the above reasons, therefore, it would appear that this warehouse ought properly to be under Customs control, and that economy would result if the transfer were effected.

Queen's Excise Warehouse, and No. 5, North Wall.

Dublin.

These warehouses are close to the Customs warehouses of the Port and Dock Board. They are distant respectively 566 and 522 yards from the Custom House. Practically they are on the river Liffey. They are passed twice a day by a Customs' surveyor on his round of duty in connexion with shipping and warehousing business, and could certainly be worked and supervised by the officers of this Board without any increase to the present cost of the port, as their distance from the nearest Customs warehouse, Stack T, is only 166 and 116 yards respectively.

London.

Appendix.

The following is a list of the Excise warehouses in London to which, as before mentioned, we drew the attention of the Board of Inland Revenue, viz.:—

1. Dean Street, Tooley Street.
2. Hermitage Wharf.
3. Carron Wharf.
4. Haydon Square.
5. Commercial Street, Whitechapel.
6. St. Katharine Docks.

These warehouses are in close proximity respectively to the following Customs stations, viz.:—Depôt, Colonial Wharf, London and Continental Wharf, Crescent Vaults, Minories, Commercial Road Warehouse, and London Docks.

The situation of these premises is, as above described, in the immediate vicinity of Customs bonded warehouses of direct receipt of stock on importation, and at which, therefore, a considerable Customs force must in any case be maintained, and the conditions of business in them (so far as we are informed on the subject) have led us to the conclusion that appreciable economy would result from the change suggested by us to the Inland Revenue.

We would beg special attention to the cases of the warehouses in Haydon Square and Commercial Street. The former is a station of considerable importance, and is practically surrounded by Customs warehouses, such as Cutler Street, Commercial Road, and Metropolitan Vaults, while the latter warehouse lies on the side of Whitechapel opposite to the side in which Haydon Square is situated, and is in the immediate neighbourhood of the extensive Customs premises at Cutler Street.

So far as we are able, on the information available to us, to estimate the cost of the Excise establishment for these warehouses we place it at something approaching 4,000*l.* per annum. Probably some of these officers may have other duties in the neighbourhood which might render it difficult to remove them altogether. But, allowing for considerations of this character, we believe that considerable economy would result from the transfer of these warehouses to the Customs, for, if this transfer were effected, the inspection and survey of them could be undertaken by the existing Customs staff without increased charge on those accounts, and that, by working them as far as possible in conjunction with the neighbouring warehouses, we should be able to provide in a very economical manner for the ordinary daily charge and account-keeping of the stock in them. Hence our proposal to the Inland Revenue for a joint inquiry by the two departments into the subject of these Excise warehouses in London, with a view to determining whether, in accordance with the principles defined by the late Treasury Bonded Warehouse Committee, approved by your Lordships, and by which we have since been guided, they might not with advantage, as regards public expense, be transferred to the care of this department.

In reply to our representations, the Board of Inland Revenue informed us that they were unable to accede to our recommendations that the warehouses referred to at Cork and Dublin should be handed over to the management of this department, and as to the specified Excise warehouses within the port of London, that they had referred the matter to your Lordships.

It is hardly necessary to point out to your Lordships that it is by the application to such cases as these of the main principles laid down by the Treasury Bonding Committee in relation to the supervision of the bonded warehouses at places at which both Revenue departments are fully represented by establishments—principles by which we have endeavoured in all our subsequent action to govern ourselves—that the most economical supervision over the bonded warehouses can be obtained; and we felt that we had no alternative, on becoming aware of the facts, but to draw the attention of the Board of Inland Revenue to the cases in question. We should, in the same manner, have been prepared to consider any similar representations which might have been made to us by that Board in regard to any warehouses under our supervision, which, from an Inland Revenue point of view, might more properly be under Excise supervision; and, as the comparative expense of working the warehouses on behalf of the Revenue is the chief element to be considered in these matters, we cannot but express our regret that the Board of Inland Revenue should, with reference to the cases under notice, have declined to entertain a proposal made with the sole object of securing economy, and should have thought it necessary to trouble your Lordships on a simple matter of administrative business, which we think could have been easily disposed of by the two departments on

Appendix.

principles already well determined, approved of by your Lordships, and successfully applied at various ports. We are, therefore, of opinion that the questions raised by us may be satisfactorily settled between the two departments in the manner proposed by this Board, and that there is no occasion to revive the Treasury Bonded Warehouse Committee for this purpose.

Thus far as to the immediate points at issue, with respect to which we await your Lordships' directions.

We observe, however, that in their report to your Lordships, the Board of Inland Revenue refer to the opinion expressed by the Treasury Committee in their final report, that the warehousing business at 43 ports—a list of which will be found at page 204 of the printed correspondence relating to bonded warehouses — could be more economically supervised by the Inland Revenue than by the Customs Department, and they specially urge the re-appointment of the Treasury bonded warehouse committee to consider this subject.

Presuming that your Lordships, notwithstanding that the question is outside the subject immediately under notice, would wish us to offer observations on this proposal, we would point out that this recommendation of the committee was made before the new uniform system of warehousing accounts (as approved by your Lordships on earlier recommendations of that committee) had been introduced at the Customs outports generally, and before it could be seen to what extent that change would affect Customs establishments at those ports. As a matter of fact, as the new system came to be gradually introduced according to the circumstances of each port, we were enabled by consequent re-adjustments of the duties of officers, and in other ways, to affect at many of the warehousing ports considerable reductions of establishment, the particulars whereof were, from time to time, reported by us to your Lordships. So far, therefore, as greater economy of management was the object desired, the recommendations of the committee were met, and even in some cases, anticipated, though whether, by handing the whole or any portion of the ports in reference over to the care of the Inland Revenue Department as regards the bonding arrangements thereat, a greater degree of economy would have ensued, is a matter on which we should not venture to give a general opinion. Judging, however, from the following *resumé* of proceedings between your Lordships and ourselves, with reference to this expression of the opinion of the bonded warehouse committee, it will be seen that, as far as it was tested at some of the ports scheduled, that opinion was erroneous.

The final report of the Treasury Committee, containing the recommendation in question, was transmitted to us by Mr. Courtney's letter of the 17th December 1883, No. 19424/1883. In that letter Mr. Courtney stated that your Lordships desired that a further departmental inquiry should be undertaken, with the view of ascertaining whether the warehousing business at the 43 ports could be more economically performed by the Board of Inland Revenue than by ourselves, and that, if the result of such inquiry confirmed the opinion expressed by the committee, the two Boards should consult, and report, from time to time, when they were prepared to make the actual changes of administration

Communications thereupon took place between the chairman of the two Boards, who came to the conclusion that it would be advisable to deal first with certain ports at which it was estimated by the Inland Revenue that a direct saving would be effected by the transfer of the Customs bonded warehouses to that department. These ports were:—

Exeter.	Portsmouth.
Limerick.	Sunderland.
Londonderry.	Waterford.
Newry.	Whitehaven.
Plymouth.	

These were all included in the list of ports appended to the final report of the committee, pages 203 and 204 of the printed correspondence.

At some of these ports the new warehousing system had not been introduced when the discussion commenced, but shortly after revised establishments were fixed by us for each port, and sanctioned by your Lordships.

In our report to your Lordships of the 26th February 1885, we transmitted a statement showing the cost of the warehousing staff at each of these nine ports, as then recently approved, and also the cost as estimated by the Inland Revenue, if the warehouses at these ports were transferred to that department; and we showed that whereas the cost of working the warehouses by the Inland Revenue was estimated by that department at 6,650*l.*, the actual cost of their administration by this board was 5,771*l.* per annum, and under these circumstances we requested to be informed whether any further steps should be taken to transfer the warehouses at these ports to the Inland Revenue.

In reply, your Lordships were pleased to acquaint us, by letter dated the 6th March following, No. 3598/1885, that you were of opinion that until experience had been obtained of the working of the new system at these ports, the question of transferring more warehouses to the Inland Revenue might remain in abeyance. That experience has now been gained, with the result that at some of these ports still further reductions of expenditure have been effected, or are in course of consideration.

Subsequently, having noticed in the 28th annual report of the Board of Inland Revenue some observations in respect to the recommendations of the bonded warehouse committee as to this list of ports on pages 203 and 204 of the printed correspondence before alluded to, and not concurring in the views therein expressed by that Board, we, on the 31st July 1885 addressed a further report to your Lordships, in which, after referring to the result of the inquiry as to the relative cost of working the revenue business at the nine ports before-mentioned, we referred to our confidential report to your Lordships of the 5th June 1884 in which we pointed out:—

1st. That the gross average sum set down in the estimates, per officer, was greater in the Excise branch of the Inland Revenue Department than in the Customs.

2nd. That the average mean salary of an officer of Excise was higher than that of an officer of Customs, and

3rd. That the rate of collection of the Excise Revenue was, we believed, greater than that for the Customs.

Your Lordships were pleased, by letter of the 12th September following, to transmit to us copy of a letter which you had caused to be addressed to the Board of Inland Revenue, recapitulating the exact position of the question in regard to the proposed transfer of the bonding business at the 43 ports mentioned by the Treasury committee, and requesting that the Board of Inland Revenue would take early steps to issue an amended statement in reference thereto.

We have now only to add, in conclusion, that as the test inquiry instituted at the nine ports was exhaustive, and resulted in showing that no advantage would be obtained by transferring the warehousing business conducted thereat to the Inland Revenue, but rather the contrary; and, as these ports were not selected arbitrarily, but may be considered to be fairly representative of the ports proposed for transfer, we see no reason for the reappointment of the Treasury Bonded Warehouse Committee; either for the reconsideration of the question, so far as these nine ports are concerned, or "with a view to the "consideration of the other ports in the list not hitherto "dealt with."

With respect to any of those ports, we fully understand, and are prepared still to act upon, the suggestion in your Lordship's order of the 17th December 1883 to consider whether, by a revision of the warehousing arrangements, or in any other way, greater economy may be brought about.

(Signed) H. Murray.

CORRESPONDENCE WITH TRADERS.

Copy of Letter addressed to Messrs. Kinahan and Co., Dublin.

Royal Commission on Civil Establishments,
7, Whitehall Place, S.W.,
February 1889.

Gentlemen,

The Civil Establishments Commission are at present considering the question whether it is, or is not, desirable to amalgamate the Customs and Inland Revenue Departments, and I am desired to inquire whether you would wish to make any observations in writing, or otherwise, to the Commission with reference to any difficulties or inconveniences which you may experience in dealing with the two Departments, and which you think might be remedied by the suggested amalgamation.

I am, Gentlemen,
Your obedient Servant,
(Signed) Horace Walpole.

Letters to a similar effect were addressed to:—

No reply was received from the other firms.

Secretary's Office, Liverpool,
Sir, 13th February 1889.

In answer to your letter of the 11th instant, inquiring if the Mersey Docks and Harbour Board are willing to depute someone to give evidence before the Civil Establishments Commission in relation to the proposed amalgamation of the Customs and Inland Revenue Departments, I beg to state that the Board's business is of such a nature that the transaction of it has not enabled any of their officers to obtain a practical knowledge of the working of the two Departments referred to, so far as to give value to any opinion that they might express as to the expediency, or otherwise, of the amalgamation in question.

As, for this reason, the evidence of any of the officers on the subject would not be of any service to the Commission, it is not proposed to depute anyone to appear before the Commission on behalf of the Board.

I am, Sir,
Your obedient Servant,
Edw. Gittins,
Horace Walpole, Esq. C.B., Secretary.

9, Vernon Street, Liverpool,
Sir, 18th February, 1889.

We duly received your form of 15th instant, and as we are perfectly satisfied with the general working of the Customs in relation to imports, exports, coastwise and our bonded system, and of the Excise in our rectifying department and our duty-paid trade, it is quite impossible for us to say whether the respective departments of our business would be better administered under an amalgamated service, whether it be by the absorption of the Customs by the Excise, or of the Excise by the Customs. We would therefore prefer their remaining separate as at present, and as we could say no more on the question, perhaps you will not think it worth while our attending before the Commissioners, otherwise one of our firm will be happy to go in the week you name.

Yours faithfully,
Robert Preston & Co.

Horace Walpole, Esq.

Allhallows Lane,
Upper Thames Street,
London, E.C.,
Dear Sir, 25th February 1889.

In reply to your letter of 21st inst., we beg to state that our business is carried on under both the Customs and Inland Revenue Departments. We have, however, no reason to wish for amalgamation of the same, for the rules of each, being well understood, admit of smooth working, and such a change would of necessity involve many new regulations and cause friction and delays for a considerable time after its introduction.

The statistics of each department, so valuable to traders, would probably not be continued and published in the present forms, and their usefulness to all engaged in conducting the commerce of the country would accordingly be reduced or destroyed.

So far, therefore, as our experience, wishes, or opinions are concerned they are not in favour of amalgamation.

We are, Dear Sir,
Your obedient Servants,
Horace Walpole, Esq., Boord and Son,
7, Whitehall Place. pro. H. Farmer.

Sir, Dublin, 25th February 1889.

In reply to your circular letter, we desire to state that in the course of our business we find in the Excise Department less complex arrangements than in the Customs, and we work as much as we can under that branch of the service.

We are, Sir,
Your obedient Servants,
Kinahan and Sons,
Horace Walpole, Esq., C.B., T. Kinahan.
Secretary,
Royal Commission on
Civil Establishments,
7, Whitehall Place, S.W.

MEMORIALS RECEIVED FROM VARIOUS GRADES

IN

THE INLAND REVENUE AND CUSTOMS DEPARTMENTS.

STATEMENT BY EXCISE OUTDOOR SERVICE.

Organisation and Salaries.

In consequence of the partial reorganisation of the Excise Outdoor Department the statement prepared at the close of 1886, and submitted to the Royal Commission, has been modified to some extent. An amended statement, embodying the changes up to the present time, is now submitted.

The organisation of the Excise Branch of the Inland Revenue Department is now, and probably has been from the earliest times, modelled, in its main features, upon lines closely approximate to the proposals of the Playfair Commission for the Civil Service generally. It possesses a lower grade, actually engaged in the charging of the Revenue; a higher grade to supervise and check the charging officers, and certain staff officers who control the whole. The lines of demarcation are most clearly defined, and in no case is there any overlapping or indefiniteness as to where the duties of one grade end and those of the other begin. Each official must commence at the bottom of the official ladder, and so each superior officer has a practical knowledge of the details of the whole of the work of those over whom he may be placed. The numbers in the upper grades are strictly limited to the actual requirements of the work, and as they form but a very small proportion of the whole Service, by far the greater number of the entrants cannot rise out of the lower grade, the maximum salary of which is 220*l.* The selection of officials for promotion is made through the medium of departmental examinations, and only those who reach a certain standard of competency are promoted.

So far, in theory, the organisation of the Excise would appear to be such as would conduce to the highest efficiency and economy, but in practice there is much to militate against this, and the object the officers of the department have now in view is to point out the drawbacks, and to submit for the consideration of the Commission certain proposals which, if adopted, would, in their opinion, be beneficial alike to the State, to the department, and to themseves.

The lower, or charging grade, is unnecessarily divided into three classes, promotion from one to the other being by seniority. The first appointment upon entering the Excise is that of assistant. Officials in this class are employed principally as a "relief" staff, to do duty for absent first and second class officers. Whilst so employed their work and responsibility are the same as in the case of fixed officials, and they frequently reside some miles from any other officer and from the supervisor. A proportion of the senior assistants are attached to important stations, nominally to assist the fixed officers, but, as a matter of fact, they usually perform the same work and are burdened with the same responsibility as their older colleagues. The initial salary of an assistant is 50*l.* per annum, after three years it is raised to 57*l.* 10*s.*, and after six years to 65*l.* In addition, when actively employed in the manner before stated, he has an "officiating" allowance of 2*s.* per day, amounting on an average to about 30*l.* per annum. A further sum of 1*s.* per day is granted to cover the expenses of travelling incurred in country stations of wide area. The Service salary of 50*l.* was fixed in 1885; previously the amount was 60*l.* (authorised in 1858), and nearly three-fourths of the present assistants entered the Department upon the higher scale of pay. To these officials only *one* increment of 5*l.* is given, and that after *six years'* service. The seniors, usually attached to important stations, and formerly termed first class assistants, have a fixed salary of 95*l.* per annum, without increments, no matter what period may be spent in this rank.

During the twenty-nine years from 1858 to 1887, the only alteration in the pay of the assistants was the *reduction* of the service salary for future entrants from 60*l.* to 50*l.* in 1885, and the granting in 1870 of an allowance of 1*s.* per day to cover the cost of travelling in stations of wide area. In 1874, the Board of Inland Revenue stated to the Playfair Commission that "a "slight increase in the fixed salary of the latter" (first class assistants, 95*l.*) "has become necessary." No increase "in the fixed salary" was then or since given, although the service as assistant has been increased from four to eight years, and is likely to become still further prolonged.

Owing to the extremely slow rate of promotion now current, to the consequent pecuniary loss already suffered by many, and to the similar but increased loss in prospect for the remainder, assistants complain most bitterly of their being compelled to serve so long with so little increase of salary, and as the employment of the majority is intermittent, and may fluctuate considerably, many may be actually receiving less total remuneration year by year. As a natural result of such complaints being unheeded, the young officers are becoming soured and discontented at the outset of their official career, which, from a Revenue point of view, is highly unsatisfactory, as seeds of dissatisfaction so early sown, tend to sap the springs of industry and to lead to lifelong absence of zeal.

In turn, the assistant is appointed second class officer, *i.e.*, he is made responsible for the proper ingathering of the Revenue, within the limits of an area of country, mainly rural, which from its extent may necessitate the keeping of a horse for the due performance of the work. An allowance—too generally inadequate—is made for horse keep, but, wherever it is possible to do so, a horse is dispensed with, and a lump sum granted to cover railway fares or other travelling expenses. A second class officer has an initial salary of 115*l.*, rising, by annual increments of 5*l.*, to 140*l.* From the number of the increments it might be inferred that after six years in the second class the officer might expect to be passed into the first class, but promotion has become so slow—and the rate appears likely to be still further retarded—that nine years now elapse before the step is obtained. This means that, under the present classification, the officer receives no advance of salary after his sixth year in the second class, though yearly increasing in experience and value, and in the full vigour of active life. If married, his family expenses will be increasing more and more, and the absence of salary increments at this period is most keenly felt. It is submitted that the cessation of increments at this stage of an officer's career, entirely owing to the present classification and slow rate of promotion, is illogical, and as it most assuredly produces a feeling of discontent, it tends to impair efficiency, which in its turn may involve a loss of Revenue.

By seniority the second class officer is appointed to the first class; that is to a "station" of less area, but more populous. The work generally is of precisely the same character as that in a second class station, but can, it is assumed, be done on foot. The salary ranges from 155*l.* by 5*l.* to 170*l.*, and thence by 7*l.* 10*s.* to 220*l.* A first class officer therefore receives ten annual increments—though why they should vary in amount is a matter of mystery. *The time when the maximum of 220l. may be reached may vary considerably, being dependent upon the rate of promotion from class to class, and not upon age, years of service, or experience.*

The higher or supervising grade is sub-divided into three classes, termed respectively expectant supervisors and second and first class supervisors. The expectant supervisors are employed to perform the duties of absent supervisors in the vicinity of their own homes. They receive a fixed salary of 220*l.*, irrespective of length of service in the class, and, when acting as supervisors, certain allowances depending upon the kind of "district."

An idea of the official's position as supervisor of a second class district may be the more readily comprehended, if a particular case is instanced. For example, take the Isle of Wight, the supervisor of which resides at Newport. He is, jointly with the charging officers over whom he is placed, held responsible for the whole of the Excise revenue arising from every source within the limits of his district—that is, the whole of the island. The salary of a second class supervisor ranges from 240*l.* by 10*l.* to 280*l.*, and he receives in addition certain allowances to cover travelling expenses, and for subsistence during absence from home. In districts where horses have to be kept a fixed allowance of 55*l.* per annum is granted.

A first class supervisor's salary commences at 300*l.* and proceeds by annual increments of 10*l.* to 350*l.* He is appointed from the ranks of the second class, and does similar work. The division into two classes is purely artificial and arbitrary, and is productive of much heartburning and dissatisfaction, and there being

Memorials.

but 20*l.* difference between the maximum of one class and the minimum of the other, promotion, involving as it does a change of residence, usually means actual loss of money.

On an average, some five or six supervisors, not necessarily of the first class, are promoted annually to the rank of second class inspector. Those recently appointed were supervisors for upwards of eight years, and the method of selection is by departmental examination, which, for men approaching or beyond 50 years of age, is, perhaps, unique. The second class inspectors are employed at Somerset House, dealing with official correspondence relating to technical questions, the consideration of which needs a practical acquaintance with every detail of Excise work. They are also sent on tours of inspection throughout the kingdom, and they officiate for absent collectors. The salary is 380*l.* by 10*l.* to 400*l.*, and after about three years the second class inspectors become collectors or first class inspectors, the latter being permanently retained at the chief office to advise the Board on intricate questions of Revenue practice. The second class inspectors have a very unsettled life, and are very inadequately remunerated.

Collectors are the chief provincial revenue officials; they have an office in some large town, and receive, with few exceptions, the whole of the revenue from excise, stamps, and taxes which accrues within the limits of their collections. A "collection" consists of several "districts," which together may comprise several counties, or one large town only (for instance, Birmingham) and the collector exercises a general supervision over the whole of the Excise staff therein. Collectors are divided, arbitrarily, into three classes; they are usually promoted from class to class by seniority, and their duties are for every practical purpose identical. The initial salary in the third class is 450*l.*; the maximum of the first class, 800*l.*

Each collector has a staff of clerks to assist him in the receipt and disbursement of Revenue money, and the keeping of the necessary accounts. The clerks are appointed from the junior classes of the Surveying Department at their own request, and may return to it at any time, but after a certain number of years only at a loss of seniority and salary. As clerks they have a separate and distinct classification.

From the foregoing it will be gathered that the Excise Department suffers from excessive sub-division into unnecessary classes in each of the three grades. Assistants, second class officers, and first class officers are all engaged upon similar duties, and an assistancy to-day may be a "first class station" to-morrow, or *vice versâ;* and in like manner a "first class station" may become a "second class station," or a "second class station" a "first class station," and so on. The maintenance of such a classification is entirely opposed to the principle enunciated by the Playfair Commission (Third Report, page iii.), "*that for duties similar in kind and responsibility there should be no artificial division into classes carrying different rates of pay,*" and is one of the principal causes of the intense dissatisfaction so unhappily prevalent, and more especially in the lower classes. The present system often occasions much hardship to individual officers, for not only does promotion from class to class necessitate a change of residence, but every re-arrangement, by which a "station" or "district" is advanced or reduced in status, means the breaking up of homes, and entails positive pecuniary loss, besides social disadvantages, to the unfortunate officials. The actual expenses of such removals are borne by the Department, but the amounts so paid do not represent the whole cost—far from it in too many cases. *By merging the classes in each grade into one, and by the adoption of service scales of salary under which the emoluments of office would increase year by year according to length of service and experience, and irrespective of fiscal changes, all discontent on the ground of slow promotion within the classification of any grade would be removed.*

The Inland Revenue Officers desire to point out that while a youth of 17 is deemed able to perform the ordinary clerical duties of the Civil Service, no one under 19 is eligible for the Excise. As regards the respective entrance examinations it is stated in a Treasury letter (17th March 1885) to the Civil Service Commissioners that "The subjects of examination for lower division clerkships and for assistants of Excise respectively are not quite identical, but are practically of the same standard. The present examination, however, answers its purpose for the Excise, and is so far on a level with that for the lower division as to make the choice between the two, when confined to that Service, a matter of indifference."

It is further stated, presumably as the reason for a more mature age for entrants in the Excise, that "Officers of the latter class have frequently to act by themselves in immediate contact with the public."

It is therefore submitted that the average initial emoluments of an assistant of Excise should at least equal, if not exceed, the highest initial salary of a lower division clerk; for, in addition to being, on an average, two years older, and being engaged during a longer official day upon more responsible work, the young officer's expenses are greater (his duties as one of a "relief" staff necessitating constant changes of location), and, by reason of his highly responsible duties, he should be enabled to maintain himself in a respectable and independent position.

The rank of first class officer is the highest attainable by six-sevenths of the entrants, and therefore the question of the maximum salary and the period at which it can be reached is of the greatest moment to the bulk of the Service. The possibility of making accurate comparisons of work and pay between the various classes of Civil Servants has been made easy since the reports of the Playfair Commission became public property, and wherever inequalities are apparent it becomes inevitable that those who consider themselves unfairly dealt with, will never rest contented until something like equality is effected. From all the evidence than can be collected, it appears to the Inland Revenue officers that they have good and sufficient grounds for serious complaint and dissatisfaction. The duties performed by the lower division clerks are admittedly inferior to those appertaining to a Revenue officer, the circumstances under which much of the work has to be done will bear no comparison, and the clerks' hours of labour are considerably less, and are confined within certain ordinary working limits; yet, while for seven hours' daily duty, every lower division clerk may look forward to attaining 250*l.* ultimately, without cessation of increment, or change of residence, a first class officer cannot get more than 220*l.* after a somewhat chequered career. This gross inequality has sunk so deeply into the minds of the Revenue officers, that they find it impossible to believe that there could have been any proper inquiry into the comparative value of the services rendered when the respective maxima were fixed. As all the lower division clerks in seven-hour offices can uninterruptedly proceed to a maximum salary of 250*l.*, the Inland Revenue officers submit that in all fairness, justice, and equity, they should *all* be able to look forward to no less a maximum, and that by annual increments on such a scale that the full amount should be attainable soon after the age of 45, and certainly before 50, by which period of life official experience ought to be quite ripe, and family expenses would, in general, have reached their highest point.

As regards supervisors, it is submitted that the present sub-division is indefensible, and that there should be but one class, and that, as their duties are essentially those of a higher grade, as defined by the Playfair Commission, they should have no less a maximum than their more favoured and less burthened clerical *confrères*, viz., 400*l.*, and that this should be attainable by annual increments. The supervisors are the picked men of the department; by a rigid departmental examination they have to prove themselves superior to the general body, and their duties are so important and multifarious that under the regulations of the department no officer is considered even *eligible* for promotion to the rank until he has served seven years at least, and, as matters now are, just about 22 years have to be served before a "district" is to be had. In the Taxes Department, the surveyors hold a practically analogous rank, attained after a very much shorter period, and they may proceed to a maximum of 600*l.* The analogous officials in the Customs are the surveyors; their salaries are very much higher, and they have shorter official days than supervisors. The glaring anomaly exists, that while a supervisor can under no circumstances receive, as salary, more than 350*l.*, a lower division clerk in a seven-hour office may, with duty pay, earn an equal sum for work of infinitely less importance, with less labour and less responsibility and in face of all this is it to be expected that the supervisors can feel contented? Beyond the supervisorship very few men can get, and the maximum of this grade really represents the highest salary attainable

by men of more than average ability, an amount very far below the actual and comparative value of their services, and much less than the majority of them would be receiving earlier in life, and with infinitely less toil, trouble, and responsibility, had they chosen a commercial career.

One extraordinary feature of the present classification cannot be passed without comment, and this is the excessive number of increments in the staff grade. Between the lowest salary of a third class collector and the highest of a first class there are no less than 16 increments. To this number add the increments provided for from the initial salary of a second class inspector, and the total for the grade becomes 19. Yet officials are now upwards of 50 years old before they become collectors! On the other hand the supervisors —taking both classes—have but 10 increments; or, including the expectant supervisors, 11. The first class officers have 10, and second class officers five, and the whole lower grade, taken together, only 17. The very large difference actually and proportionately between the collectors' minimum and maximum (450*l.*—800*l.*) is noticeable, the more especially when compared with the 240*l.* and 350*l.* of supervisors. It is worthy of notice that the difference between the maximum salary of an officer (220*l.*), and the minimum of a supervisor (240*l.*) is but 20*l.*, a sum altogether disproportionate to the relative value of the duties of the respective positions. Between the supervisor's maximum and a collector's minimum (350*l.* and 450*l.*) there is a difference of 100*l.*!

It is respectfully submitted on behalf of the supervisors, officers, and assistants of Inland Revenue, that the adoption of the following suggestions will remove the discontent now existing upon the ground of slow promotion from class to class within the same grade.

1st. The abolition of the classification of supervisors; the abolition of the classification of officers, and of the existing distinction between officers and assistants, and the substitution of the designation "Unattached "Officer" for "assistant."

2nd. The granting of the following scale of salaries, viz.:—

Officers 80*l.* by 5*l.* per annum to 100*l.*
,, 100*l.* by 7*l.* 10*s.* per annum to 190*l.*
,, 190*l.* by 10*l.* per annum to 250*l.*,

provided that the salary of an officer in charge of a station shall be at least 120*l.* Supervisors 280*l.* by 10*l.* per annum to 350*l.*, and thence by 12*l.* 10*s.* per annum to 400*l.* In the case of unattached officers and expectant supervisors suitable allowances should be given when those officials respectively are employed in stations or districts in which travelling allowances are granted.

The advancement of an officer's salary beyond 100*l.* might be made conditional upon his obtaining a certificate of fitness for such advancement. Upon an officer reaching the salary of 190*l.* a test might be applied similar to that now in force in the case of an officer passing from the second to the first class, and, upon the result being found satisfactory, the officer's salary should proceed without further test to the maximum asked for the grade, viz., 250*l.*

The advancement of a supervisor's salary beyond 350*l.* might also be made conditional upon his successfully passing a test similar to that now applied in the case of a supervisor passing from the second to the first class.

It is further respectfully submitted that no limit should be placed upon the number of officials progressing to the maximum for the grades of supervisor and officer respectively, *and that advancement to the respective maxima should depend solely upon personal fitness.*

Work and Hours of Labour.

For Revenue purposes, the whole of the kingdom is parcelled out into what are called "stations," the limits of which vary considerably. In each station there is at least one officer, and for an average of every six or seven officers there is a supervisor, and the aggregation of stations under his supervision is officially known as a "district." These two grades of officials are responsible for the charging and securing of all the duties of Excise, and the Revenue brought to account by them is received by another official called a collector; a certain number of districts, say six, as an average, being grouped together to form a "collection."

The average annual sum for which each one of the lower grade, or charging officers, is responsible, amounts to upwards of 8,000*l.*, the total Excise revenue being about 25,500,000*l.* In order to prevent or detect fraudulent practices, the officers must be conversant with the operations of distillers, brewers, tobacco and snuff manufacturers, rectifiers, and some cognate traders. They must also have a knowledge of possible or likely methods of fraud, and be ever on the alert to observe deviations from customary manufacturing processes, which might offer fresh facilities for illicit proceedings. They must be familiar with the multifarious licence duties, with their train of exceptions and exemptions, and be able at all times to afford information to the public on any and every matter connected with the revenue.

A considerable amount of training and application is necessary to make an officer thoroughly efficient, and owing to the continual advance in manufacturing processes, and the ever-recurring changes in the Revenue laws and regulations, he should be constantly adding to his information, and, as he must be ready at any moment to perform any branch of Revenue work, no point can be neglected. He must be well versed in the principles of mensuration, and be able, at any moment, to practically apply them to the gauging of vessels of various shapes. With the requisite technical knowledge of a specialist, the officer must combine all that makes a good clerk, for he should be a fair correspondent, an accurate book-keeper, and an expert accountant.

Many of the accounts are very intricate: for instance, those in connexion with goods in bonded warehouses. Evidence of this was laid before the Playfair Commission by witnesses from the sister Revenue department—the Customs—who stated "that the duties of "the warehouse department are as complicated as any "duties can well be, and that they require not only "intelligence but entail a great deal of personal "responsibility. Upon the accuracy which exists "amongst us, it depends whether the revenue is "correctly collected or not." Commenting upon this evidence, the then chairman of the Board of Customs said, "the description of the nature and importance of "the duties devolving upon the warehousing depart- "ment is correct." This, however, had reference only to the clerical work subsequent to, and based upon, the data forming the actual ground work of the charge for duty, and it must therefore follow that those who are responsible for both original and subsequent entries have still more responsibility and need even greater accuracy.

The original entries in the official books may be said in general to require an expert to make or verify them, and this has to be done at the time and place when and where the duty accrues, at distilleries, warehouses, and breweries, amid noxious gases and with surroundings and under difficulties altogether absent from ordinary clerical labour. Any carelessness, incorrectness, or laxity would entail an actual loss of revenue, not always discoverable or capable of subsequent rectification, as is the case with purely clerical mistakes.

For the bulk of the charging officers there are no fixed hours of labour, which in many cases are very prolonged Under the present regulations for securing the Beer Duty, an officer who may commence his outdoor duties before 4 a.m. may not have completed them until after 9 p.m. The whole of this intervening time may be occupied with official work, and most of it will be in any case. At no hour of the day can the officer of a station, with general Excise business, consider himself free from official duties, cares, and calls, and his work may be well described as piece work of a character which never permits him to say or feel that everything is done. He is supposed to know the number of taxable articles kept by everyone residing within the limits of his "station," and is primarily responsible that the proper licences are taken out, and in the interests of the revenue, very delicate, disagreeable, and troublesome inquiries have constantly to be made. At distilleries, where attendance is continuous day and night, the officers relieve one another every eight hours, and this may be regarded as the *minimum* number of hours constituting an official day. Under the reorganisation of September, 1887, many stations and districts were "broken," the areas of those remaining being largely increased, entailing, necessarily, additional work and longer journeys, and leaving the officials even less leisure than heretofore.

The supervisor has to supervise, examine, check, and often duplicate the work of the officers in his district, and, being held jointly responsible with them for the accuracy of the accounts and the general security of

Memorials.

the revenue, he must prove the correctness of *every* calculation made by *every* one of his officers. In addition to all the knowledge an officer should possess, the supervisor must be sufficiently familiar with legal procedure to be able, as a solicitor, to conduct prosecutions in revenue cases; he has often to value house property for revenue purposes, must be well acquainted with the circumstances of all the sureties to the Crown within the limits of his district, and he acts generally as local adviser to the Board. He is "*held responsible* "*for the proper superintendence of his district, irre-* "*spective of any limitation as to business hours,*" and practically has few leisure moments for study, recreation, or the amenities of social life. He has been termed by the Board "one of our most important "officials," and there can be no doubt that his duties are those defined by the Playfair Commission as appertaining to "the Upper Division."

As a whole, the work of the department is officially admitted to be irksome, laborious, difficult, and responsible; a considerable amount of tact and discretion is necessary in dealing with the public, and the officials come personally in contact with all sorts and conditions of people, from peasant to peer. Owing to their very general isolation, and consequent inability to consult with official colleagues when occasion calls for prompt action, the officers must be self-reliant. The Revenue officials occupy positions of great trust; they necessarily become acquainted with the extent of many traders' businesses and trade secrets, and they are ever exposed to the temptations to laxity which many traders are ready to offer. It has been openly stated by gentlemen in high positions that the officials are "second to none in intelligence, in assiduity, and in "attention to their duties," that by their own work they had placed the department "on a level with other "branches of the public service," and that recent fiscal changes "had imposed a severe strain upon the "staff in every grade, and the work of transition— "from the Malt Tax to the Beer Duty—had called for "the exercise of qualities of a very high order."

NOTE.—A detailed account of the work of the staff officers and collectors' clerks has not been given, as this paper emanates only from the supervising and charging grades.

Work done by the Excise for other Branches or Departments of the Public Service.

In addition to purely Excise work the officers are often called upon to do work which does not properly appertain to them, and it is felt that whenever this is so, the officers should be recompensed for their labour by the department concerned, which is now only rarely the case. In market towns, the local officer is inspector of corn returns for the Board of Trade, which may occupy several hours per week, and for which no remuneration is given.

In connexion with the Legacy and Succession Department, numerous and delicate inquiries, often necessitating long journeys, and the expenditure of much time, are directed to be made, but no remuneration is granted. Very recently, by an alteration in the probate law, Revenue officials in all parts of the country have been appointed to receive notices of application for grants of probate and letters of administration. This is work of a semi-legal character, and, as in the majority of the cases dealt with, the executors are persons of indifferent education, a very great deal of time is taken up in every instance; yet this work was imposed upon supervisors without anything to compensate them for it.

On behalf of the Post Office, supervisors have to certify to the position of those who are sureties for sub-postmasters.

Promotion.

At no period of Excise history has there been so much discontent on the ground of slow promotion as now exists. The substitution of first class officers for assistants who are permanently employed on responsible work in important stations would do something to accelerate promotion from the ranks of second class officer and assistant, but as far as the charging grade as a whole is concerned, the adoption of a service scale of pay is the only remedy which would entirely remove the prevailing discontent, and the question of promotion would then be confined to that from grade to grade.

Assistants.—In 1874 the Board of Inland Revenue stated to the "Playfair" Commission that the average service (in both classes) of an assistant was *four years*, and on the 12th April 1886, it was given by the Financial Secretary to the Treasury as five years. In the 10 years from 1874 to 1884 the average service as assistant was slightly less than four and a half years, but since 1884 the term has been rapidly lengthening, until it is now nearly double that officially estimated in 1874, and upwards of 500 of the present assistants have served from five years to eight years without promotion. Calculations, based upon the probable number of promotions (as estimated from those that have actually occurred during the past 10 years), show that the average service of the present staff of assistants must exceed nine years before the rank of second class officer is reached.

As an illustration of the manner in which promotion is affected by fiscal alterations or departmental reorganisations it may be mentioned that shortly after the imposition of the Beer Duty, in place of the Malt Tax, an increase in the number of official stations took place, and *seventy-five* assistants were promoted in *one week* (September, 1880). On the other hand, by the re-organisation of the Inland Revenue Department, which took effect on the 1st September 1887, a large decrease in numbers was made, and, owing to the redundant officials thus created, but one *promotion* from the rank of assistant took place for more than *twelve months* (April 1887 to May 1888).

In January 1882, assistants were promoted in 3¼ years; in November 1888, there are 100 who have served 7½ years and upwards without promotion. In August 1885, an assistant, who entered the department after the examination held in May 1880, was promoted in five years; in November 1888, an assistant, who entered the Service only six months subsequently, has already served 7½ years, and, as he is still 100 on the list, he must serve a further period of from 1½ to 2 years before being promoted.

Second Class Officers.—The time spent in this class, before promotion to the first class, stated by the Board of Inland Revenue to be five years in 1874, has now become extended to nine years, and it would seem that this limit must become increased to 10 or even 12 years. Officers of this class are now being promoted to the first class after 14 years' service as against nine years in 1874.

First Class Officers.—The period given in 1874 for an officer to serve in this class before selection as expectant supervisor was five years, but present candidates for the supervising grade are nine years in their rank before being "called up" for examination. The comparison of the average length of service in each class, as officially given in 1874, with the period now spent in each class, is as follows:—

1874.		1888.	
Assistant - -	4	Assistant - -	8
Ride officer - -	5	Second class officer -	9
Division officer, if selected for examiner	5	First „ „ -	9
	14		26

The official regulations say that no one of less than seven years' service is eligible to apply for promotion to the supervising grade, and under the Playfair Scheme 10 years in the lower division was recommended as the minimum limit before a transfer to the higher division should be allowed. The seven year minimum in the Excise has now become 20, and it would appear that those at present in the rank of assistant must serve from 25 to 30 years before the opportunity of promotion to the supervising grade arrives. The officials who are now reaching that grade at about 20 years' service passed a comparatively short time in the ranks of assistant and second class officer.

Supervisors.—Promotion to the staff grade from the supervisorship, formerly obtained in 25 years, is not now reached till after 28 years' service, and this period must become considerably extended, as the number of appointments has been largely reduced in recent years, notably at the last re-organisation of 1887.

That the greatly deferred promotion in every class throughout the service inflicts serious pecuniary loss upon the officials is clearly evident. An assistant, by having his service before promotion to the second

class lengthened to even as little as eight years, suffers, during the four years' delay, an immediate loss of 110*l.*, and a further average annual loss of upwards of 23*l.* for the 17 succeeding years. That this loss is not recouped, even in the case of the few officers who reach 40 years' service, by the slightly increased maximum salaries of second and first class officers is clearly shown by the tabulated comparison furnished at the end of this statement.

The principle of compensation for loss of prospects is recognised and provided for in the Estimates for 1888-89. In the case of senior registrars in the Legacy and Succession Duty Department, Inland Revenue, it is stated in the Revenue Estimates, p. 30 :—"Six of "these officers rise to 580*l.* (personal) as compensation "for loss of prospects." The maximum salary of these officials would otherwise be 550*l.*

Lieutenants in the Navy.—In a memorandum explanatory of the Navy Estimates, 1888-89, issued by the First Lord of the Admiralty, the following observations are made :—"The condition of the lieutenants' "list, and the very slow promotion to the higher "grades which an investigation revealed, induced the "Board to consider what steps could be taken to "ameliorate their prospects without detriment to the "Service generally."

"Their present position is one of undoubted hardship. The number of lieutenants required to officer the ships in commission in peace, still more in the eventuality of war, is far in excess of the number required in the higher grades of commander and captain. The number of each rank is fixed with regard to the requirements of the service, and the intake into the rank of lieutenant must necessarily be far in excess of the outlet by promotion. . . . . If it is inadmissible that the establishment above the rank of lieutenant should be increased, and if the promotion of lieutenants is retarded on grounds of public policy, it seemed only just that after a certain length of service their pay should be increased."

The case of the Excise officials is on all fours with that of the lieutenants of the Navy. Only one-seventh of their number can rise above the rank of first class officer, and but three per cent. can reach the staff grade.

Since the inquiry by the Playfair Commission in 1874 the length of service in every rank beneath that of expectant supervisor has been increased from 80 to 100 per cent., and must become still further extended.

If the principle of compensation for loss of prospects is equitable in one case, then it may fairly be contended that it should also be recognised in the similar case of the Excise officials by granting them a service scale of pay, commencing from the date of entry into the service, as in both lower division and higher division clerkships, with a maximum of 250*l.* for officers and 400*l.* for supervisors.

Allowances for Horse Keep and Office Accommodation.

Supervisors and officers who are required to keep horses receive fixed annual allowances of 55*l.* and 40*l.* respectively. They have to purchase their own horses and bear all losses incidental to them. In some few places the officials may be fortunate enough to make the allowance cover the annual cost, but in the generality of cases it is the reverse, and as the horses are kept *solely* in the interests of the revenue, in all fairness no official should be mulcted by reason of the insufficiency of the allowance. The present allowances were fixed during the existence of the malt tax and before the imposition of the beer duty, and the low sum of 40*l.* granted to second-class officers is probably due to the fact that, as malting was rarely carried on during the summer months, the horses could be put out to grass for the time and so kept cheaply. Under the beer duty this is no longer possible, brewing operations being carried on all the year round, and so in equity an increased allowance should now be given. The Board of Inland Revenue, in their letter to the Treasury, 8th February 1883, stated, "Of course in a service so "large as the Excise, individual cases of hardship may "occur where an officer may be unlucky in the death "or sickness of his horse." They thus admitted that the allowance did not provide for so possible a contingency as the "death or sickness" of their officers' horses, but no revision of this allowance has been made, and losses arising from such causes are still borne by the officials themselves. In addition, the mileage of many of the country stations has been very materially increased by the reorganisation of September 1887, and the work the horses are called upon to perform is proportionately greater.

Officers and supervisors are obliged to purchase horses within 28 days of taking up an appointment; and being strangers in the locality and generally without knowledge of horses, they are frequently made to pay the highest price for an animal, which, after being worked for a short period, is found unsuitable and has to be disposed of at a loss. Similarly, when an officer or supervisor, on account of promotion or through a re-arrangement of official work, is obliged to remove, he is compelled to part with his horse and vehicle, usually at a considerable sacrifice. Pecuniary loss is thus entailed upon the officials both in the purchase and sale of a horse kept *solely* for the revenue service.

If it is not convenient for the department to provide horses and vehicles, at least no official should suffer loss by having to provide them; the allowance should be sufficient to meet average losses, and in the case of losses through forced sales, by reason of promotion or re-arrangement of duties, it is submitted that these should be refunded by the department.

Upon application to the Commissioners of Inland Revenue an advance of 20*l.* for officers and of 30*l.* for supervisors is made for the purchase of a horse and vehicle, but, as these sums have to be repaid within a year, the salaries of the officials for the first year are correspondingly reduced. The advance made is generally insufficient to purchase suitable animals, &c., and the officials are usually compelled to supplement it from their meagre salaries. In commercial firms, wherever the employés have to use horses for the performance of their work, the employers find the horse and bear all charges. In the county police the inspectors and superintendents have their horses provided, stabled, kept, and groomed for them at the expense of the county. The Inland Revenue officials, therefore, are at a loss to understand why they alone should be differently treated.

With respect to office accommodation, the Treasury recently consented to give supervisors and officers an allowance for the partial use of a room as an office in the official's own house wherever there may not be a public office. The allowances are to cover use of furniture, light, fuel, and cleaning, and the average amounts were fixed at 7*l.* and 5*l.* for the respective grades. These sums appear to be regarded by the Board not as average amounts but as maximum allowances. In the majority of cases these average amounts are very far below those at which similar accommodation could be obtained in other people's houses, and it is submitted that no Inland Revenue official should be compelled, by reason of his position, to accept a sum below the market value of the accommodation, as determined by the circumstances of the locality.

Leave of Absence.

Uniformity in respect to leave of absence is unfortunately wanting. Officials with less than five years' service are allowed 14 days, the other officers and the supervisors 21 days, and the staff officers and *some* of the collectors' clerks 28. Many of those who are not allowed the maximum stand most in need of it, notably those who are employed day by day in ill-ventilated, damp, and unwholesome bonded warehouses and distilleries. An annual allowance of 21 days for officials with less than 10 years' service and 28 days for officials with 10 years' service or upwards would afford general satisfaction.

Discipline, Punishments, and Rewards.

From the important nature of the work it is imperative that the discipline should be strict, for negligence involves loss of revenue. The punishments are often very heavy, and vary considerably in their incidence. A punishment may involve the stoppage of an increment to salary, or promotion for a time, or altogether; or in addition to one or the other, or both, actual pecuniary loss by enforced removal. The latter is a most severe punishment, unknown in ordinary clerical branches of the Civil Service, and may be cited as further indirect evidence of the exceptional character of the work of the department.

The more vigilant and efficient an officer is—unless his efforts are confined to the discovery of actual frauds—the more to his disadvantage; the more tact he displays, the more painstaking and thorough he is, the more likely is he to be called upon to undertake

Memorials.

delicate and troublesome inquiries without any compensating advantage; and some officers bitterly complain that after having expended time and labour beyond the ordinary in the endeavour to attain the highest degree of efficiency, they not only obtain no benefit, but may actually suffer a loss. The punishments are sure, but there is no merit class or reward for good service.

Disadvantages.

The disadvantages which are incidental to the position of an Inland Revenue officer should be taken into account in assessing the comparative value of labour in the various departments of the State, as these disadvantages have a money value. The very prolonged hours of labour make it almost impossible for any officer to supplement his salary by work of any other description, even if he were not debarred from so doing by one of the regulations of the department; but neither the one nor the other affects the general body of Civil Servants. And by reason of the work the officials have to do, certain occupations would, under any circumstances, have to be forbidden.

The non-permanence of residence, and the obligation of having to live in particular localities for revenue purposes, are serious disadvantages, for the continual removals mean ever-recurring household refits; the absence of choice of locality renders it often very difficult to obtain suitable houses at reasonable rents, and as an officer is usually compelled to take some house off-hand, he very possibly has to pay more rent than he can properly afford, and being, perhaps, unable to make sufficient inquiry, may find it necessary, owing to sanitary defects, or other causes, to move into another house shortly afterwards. The possibility of removal at any time precludes most officers from taking advantage of the benefits offered by such associations as building societies for purchasing desirable houses, and few even venture to take their houses on lease, though by so doing they would generally have to pay less rent. The constant removals seriously hamper men with families. At one period the children's education may suffer by changing schools, and later on, when school age is past, there is very great difficulty in finding suitable employments, as the official is a comparative stranger, having no local connexions, and liable to removal far away at any moment. When the Beer Duty took the place of the Malt Tax, a large number of elderly officials who had settled down, and started their children in various businesses, had suddenly to face the alternative of re-starting their children somewhere else, or of having to incur the unlooked for and additional expense of maintaining them away from home for some years.

If a man is in business, or in the employ of a joint-stock company or large private undertaking, he can generally manage to get his sons into the same, or he is enabled to form friendships, or trade connexions, which are of considerable advantage in this matter. In former times, a proportion of the Excise appointments were set apart for the sons of officers, but for many years past this has ceased to be, and now very few officers wish their sons to try to enter the service, or their daughters to marry Excise officers, and this is fair evidence that the present officials are intensely disappointed and dissatisfied with their position and prospects.

Pensions.

As superannuation is a matter affecting the whole of the Civil Service, little need be said here upon the general principle, but it is debatable whether many of the larger commercial undertakings are not more liberal in this respect than the State. It is certain that, as a rule, the families of deceased *employés* receive a consideration in commercial life which is unknown in the Civil Service, and this raises the question whether superannuation is really "deferred pay," as is sometimes stated. If superannuation be really "deferred pay" an official should, upon his retirement, have the option of receiving either the total of his "deferred pay" or a life annuity. In the event of an official dying in the service, his executors, administrators, or assigns, it is submitted, should be entitled to his "deferred pay," so that the widow and orphans, or dependent relatives, should not, as is now too frequently the case, be left destitute. The present scale of salaries in the Excise Department renders it almost impossible to make adequate provision by saving a portion of the income, or even by life assurance. That the difficulties just mentioned are by no means fanciful is but too clearly and painfully evidenced by the sad appeals made from time to time to the members of the Excise Department for aid to the destitute widows and families of officials who have died "in harness."

It may be worth noting that the public protest occasionally made against pensions is not against those paid to the ordinary Civil Servant who has served the State for a lifetime, and who, without a pension, might be destitute, but rather against the heavy diplomatic and political pensions, and those granted to men who are compulsorily retired in the prime of life instead of being absorbed into other departments when office staffs are reduced through reorganisation. There is most assuredly a very strong feeling that no pension should exceed a certain fixed and moderate sum.

Concluding Observations.

In concluding these observations on the condition of the Excise Service, reference must be made to the extent and depth of the discontent in the Department.

In 1882, a petition for redress of grievances was forwarded, through the Board of Inland Revenue, to the Treasury, bearing the unprecedented number of 3,660 signatures, and representing upwards of 95 per cent. of the officers and supervisors. The desired ameliorations having been refused, nearly 400 separate petitions, bearing in the aggregate some 3,400 names, were presented in the House of Commons, in the Session of 1884, praying for the appointment of a Committee to inquire into the causes of dissatisfaction in the department. Consequent upon the recent reduction in the classes above them, the assistants, whose promotion had for some years previously been much retarded, have had their promotion and future prospects most seriously and materially impaired. During the past year they have made fruitless representations thereon to the Chairman of the Board of Inland Revenue and to the Lords of the Treasury, and it is respectfully submitted that the deplorable condition of these officers deserves special consideration and amelioration. It would be impossible for the officers as loyal and responsible servants of the State to demonstrate more clearly and conclusively in a legitimate, constitutional, and orderly way, their feelings and wishes.

The officers—young and old—are thoroughly imbued with the belief that they are treated unjustly, and this feeling will not be removed until the opposite is proved to them, or the desired readjustments effected. The officers have for some time past been struggling to do their duty with faithfulness and diligence against adverse circumstances, but it is impossible to prevent a gradual lack of interest in one's work if the feeling is ever present that fair and just remuneration is withheld. As regards officers charged with the collection of the revenue, any lack of interest or vigilance means a loss to the Exchequer, and any additional charge upon the Estimates necessary to induce contentment in the minds of the officials would be recouped many times over by the prevention of loss to the revenue, for discontent most unquestionably tends to a perfunctory performance of work. In every station there is a certain amount of revenue which is, or is not, brought to account, as the officer may be energetic or not, and the total of these amounts would represent a very large proportion of the cost of the establishment. No matter what the regulations may be, the Excise revenue, from its nature, must, to a very appreciable extent, depend upon the probity and vigilance of the individual officers. With discontent and dissatisfaction permeating the service from end to end, the highest efficiency must be wanting, and, without thorough efficiency, no revenue department is economically administered as the receipts are not at the maximum.

The officers allege that the introduction of the Beer Duty very materially and detrimentally affected their position, and, that for the additional labour, responsibility, and general prolongation of the daily hours of labour, no adequate recompense has been received. On the general question of official *versus* commercial salaries, they would point out that the Government avowedly endeavours, by severe open competition, to obtain the *élits* of the labour market of the whole of the United Kingdom, and, by very strict inquiries as to health and personal character, confine the selection to the *very* best men offering themselves, and, this being so, the selected men expect as much as they would naturally obtain in other walks of life, be it public or private, and are not likely to remain con-

tented with less, or with even the average emoluments of their *beaten* competitors in commercial employ.

STATEMENT OF THE CASE OF THE ASSISTANTS OF EXCISE.

To Sir Matthew White Ridley, Bart, M.P., Chairman of the Royal Commission on Civil Establishments.

Inland Revenue Office,
8, Southampton Street,
Bloomsbury, W.C.,
6th March 1889.

Sir,

On behalf of the Assistants of Excise, Inland Revenue (Out-door) Department, I beg to submit the following statement of their position and prospects for the consideration of the Royal Commission :—

Numbers.—The present number of these officials is from 700 to 750; the estimates for the Inland Revenue Department, 1888–89, provided for 824.

Salaries.—In September 1887 the distinction between the two classes of Assistants then existing (First and Second Class) was abolished, but there still remain in force three different scales of salary :—

(1.) Fixed salary of 95*l.*, without increments,

(2.) 60*l.*, rising to 65*l.* after six year's service, plus an "officiating" allowance of 2*s.* per day when actively employed.

(3.) 50*l.*, with two triennial increments of 7*l.* 10*s.*, plus the officiating allowance of 2*s.* per day. This scale applies only to those assistants who entered the Department since 1885, when the initial salary was reduced from 60*l.* to 50*l.*

The gross sums obtainable are, under—

(2.) 96*l.* 10*s.*, and after six years, 101*l.* 10*s.*

(3.) 86*l.* 10*s.*, rising to 94*l.* after three, and 101*l.* 10*s.* after six years.

It rarely happens, however, that an assistant is fully employed throughout the year, and the average amount earned by the "officiating" pay, in addition to the "service" salary, is about 30*l.*

Promotion.—The first promotion is to the rank of second class officer (115*l.*), and this step brings an increase of 20*l.* As this is the first real increase of salary for two-thirds of the assistants, the length of service after which this promotion is obtainable is a matter of serious moment to the officials concerned.

Length of Service formerly usual.

It was stated, in a letter addressed to the Civil Service Enquiry Commission (1874) by Mr. Adam Young, one of the secretaries of the Board of Inland Revenue, that the average term served before promotion to the rank of ride officer (now called second class) was four years.

In the ten years subsequent to the report by that Commission the average period, after which an assistant received such promotion, was slightly less than 4½ years, while the maximum limit reached during that decade was 5¾ years.

Length of Service after which present Assistants are promoted.

Since 1884 the period spent in the rank of assistant has been rapidly lengthening until at the present time upwards of eight years must be passed before the first promotion and real increase of pay is received. Of the officials now in this grade no less than 470 have served five years and upwards, the actual service being as follows :—

About	65	8 years
„	150	7½ „
„	70	7 „
„	75	6½ „
„	65	6 „
„	25	5½ „
„	20	5 „
Total -	470	

The average number of yearly promotions during the last five years has been about 70, and the highest possible average number of vacancies that can occur from all causes (death, superannuation, resignation, &c.) during the next six years is about 80. It must inevitably happen, therefore, that many of the foregoing 470 assistants will have to pass from 10 to 12 years before receiving the first promotion and appreciable increase of pay. The only increase they will receive during the whole of this period is the single increment of 5*l.* after six years' service.

Memorials.

The two triennial increments of 7*l.* 10*s.* given to the juniors (one-third of the present grade) are the only instances of this kind of increment in the whole Inland Revenue (Out-door) Department.

This increase is only half that given to the present Lower Division clerks, is equivalent to one-fourth that recommended for the clerks of the Second Division, and is not equal to one-half the amount (1*s.* per week per year = 2*l.* 12*s.* per annum) granted to boy clerks of 15 years of age.

Loss of Prospects.—An assistant by having his service before promotion to the rank of second class officer lengthened to even so little as eight years, suffers, during the four years' delay, an immediate loss of 110*l.*, and a further average annual loss of upwards of 23*l.* for the succeeding 17 years. This loss is not recouped by the increased maxima granted to the first and second class officers in 1887, even if he reaches the full limit of 40 years' service, and should he die or superannuate before that term is reached the loss sustained is proportionately greater. After 40 years the sum amounts to 252*l.* 10*s.*, but as the average service does not exceed 30 years, the loss, on the average, will reach to as much as 452*l.* 10*s.* (*vide* Table appended to the Amended Statement of Supervisors and Officers).

A comparision of the scale of salaries sanctioned in 1876 (after the Third Report of the "Playfair" Civil Service Enquiry Commission) with that in force at the present time shows that the 1876 scale, with the promotion which then obtained, was considerably better than the scale now in force, with the rate of promotion at present prevalent.

An assistant who then obtained the promotion as second class officer in four years, and first class officer in 11 years would have received, even if no alteration in the scale of salaries had subsequently been made, 327*l.* 10*s.* more, after 30 years, than an assistant now promoted to the first rank after eight years and with a prospect of, at least, a further 10 (18 in all) before he will receive the second promotion formerly gained in 10 or 11 years.

Work.—The work upon which the assistants are employed may be divided into two classes—

(1.) Permanent. (2.) "Officiating."

Permanent.—A considerable proportion of the senior assistants are attached to the more important stations (distillery, bonded warehouse, or brewery) nominally to assist the senior officers, but as a matter of fact they usually perform similar work and are burdened with a similar responsibility to that of their older colleagues. They charge the duty on the spirits manufactured at distilleries, on the beer brewed at breweries, and on the spirits and wines delivered from duty free warehouses. They also check the operations carried on by the various traders in the same manner as the first class officers attached to the stations. It is submitted that, in cases where the duties are practically identical, officers should be substituted for the assistants. Thirty such appointments have recently been made by the Board of Inland Revenue, and during the last few years officers have in other instances, from time to time, replaced assistants.

In Scotland and Ireland many assistants are employed from six to nine months consecutively at the distilleries charging the duty on the spirits manufactured and checking the operations of the traders, and their duties are usually similar to those of the officers employed at the same place.

"*Officiating.*"—The majority of the assistants are employed as a "relief" staff to officiate for first and second class officers during their absence on private or sick leave or from other causes. Whilst so employed their work and responsibility are the same as in the case of the fixed officers. They often reside some miles from any other officer and from the supervisor, and "have frequently to act by themselves in immediate contact with the public" (Treasury letter, 17th March 1885, to the Civil Service Commissioners).

These assistants charge the duty on spirits or beer manufactured, and the licences arising within the bounds of the station. In second class stations they also perform exactly similar journeys to those of the officers. They may be sent at a few hours' notice to any station within the collection to which they are attached, and they may be in charge of such station from a few days only to several months. As an illustration of the work of these officials it may be mentioned that during the latter half of 1888 an assistant was in charge of a first class station—14 miles from the supervisor and eight miles from the nearest officer—for four months consecutively. During this period he was solely responsible for charging the duty on spirits, beer, and licences amounting to upwards of 3,200*l.*, in addition to keeping and preparing the books and accounts in connexion therewith.

Compulsory Un-employment.

From the nature of the work it frequently follows that the services of an assistant are temporarily not required. Officers are usually absent on their annual leave during the summer and autumn months, and it is chiefly in the winter and spring that assistants are compulsorily idle. At these periods of the year an assistant may be, and sometimes is, unemployed for six or eight weeks at a time, and whenever not employed he received only the "service" pay of 60*l.* or 50*l.* The following cases of long periods of enforced idleness, of individual assistants, occurred during the 12 months subsequent to the re-organisation of the Department on the 1st September 1887.

During a large portion of this period many assistants were employed in the offices of Surveyors of Taxes to assist in the clerical work in connexion with the triennial assessment, Schedules A and B, for income tax; in an ordinary year the amount of non-employment would be very considerably extended.

* This assistant was unemployed 97 days out of 198 days in Liverpool and Shrewsbury Collections.

It is submitted that the enforced idleness of any Government servant is an anomaly which should not exist. It is a system which cannot conduce to his efficiency as an officer, or to his morality as a man, and it is calculated to convey to the public mind a wrong impression of the duties and responsibilities attaching to an official holding a Government appointment by the authority of a certificate from the Civil Service Commissioners. An income dependent upon the variable amount of active employment is necessarily a fluctuating one, and an assistant may actually receive a less amount in his fifth or sixth year than he obtained during his first year's service. The regulations of the department preclude an official from adding to his income by other occupation, and the unsettled nature of an assistant's life would do so in his case, even if no regulation of the kind existed.

A fixed salary, rising by a fair annual increment, with provision for employment of a permanent nature, is felt to be the only true solution of this difficulty.

Travelling Allowances.—Officers of the second class are in charge of stations embracing a large area of country, and are in receipt of an allowance for horse-keep or a varying sum to cover railway fares or other expenses. Those assistants paid a "service" salary, with "officiating" allowance of 2*s.* per day, receive, when employed for the second class officers before referred to, a further sum of 1*s.* per day to cover the cost of travelling expenses. This sum is found to be often inadequate for the purpose, especially in those stations where, from the absence of railway facilities, the work must be done by hiring, and in others where the area of the station is so great that the officer receives an allowance considerably in excess of that paid to the assistant.

It is, however, in the case of the senior assistants paid the fixed salary of 95*l.* (about 40 per cent. of the whole grade) that the absence of proper allowances is most keenly felt. These assistants, when in charge of second class stations, receive no travelling allowances whatever, and thus, while a second class officer (with a salary of 115*l.*, rising by 5*l.* to 140*l.*) is often in receipt of an allowance ranging from 20*l.* to 50*l.* in addition to his salary, the assistant is compelled to defray his necessary travelling expenses out of his salary of 95*l.*

It is submitted that, as an allowance is admittedly necessary for the officer, the assistant, who has to perform all the officer's duties in his absence, is equally entitled to a similar sum, and he should not be required to travel at his own cost when such travelling is necessary in the interests of the revenue. The principle laid down by the "Playfair" Civil Service Enquiry Commission that "no officer should be out of pocket by "reason of extraordinary expenditure, except where the "salary may have been fixed with a special view of "including such expenses," is felt to be peculiarly applicable in this case.

The Board of Inland Revenue have twice directed that these senior assistants should be employed in the closer stations as much as possible, but, from the large number of these officials, and from the fact that in many collections the second class stations largely outnumber the first class, the orders have unavoidably been often inoperative.

The following individual instances of such senior assistants being compelled to defray the cost of their own travelling expenses, whilst in charge of second class stations, occurred during the twelve months from 1st September 1887 to 31st August 1888.

* This assistant was employed 127 days in second class stations out of 134 days in Colchester Collection, from July to November 1888.

The scale of salaries suggested in the amended statement submitted by the supervisors and officers is one which would, if adopted, in a large measure remedy the grievances of the assistants.

The chief complaint which the senior of these officials have to make, is that of extreme slowness of promotion, and this is the more acutely felt because of the absence of increments whilst such an assistant remains in that grade.

That an official should remain for eight years, and probably in the near future 10 or even 12 years, at practically his initial salary is a fact that is, perhaps, unique in the history of any Government department. If the annual increment of 5*l.* recommended for the clerks of the Second Division is a fair one, it is submitted that an assistant of Excise, whose entrance examination is "practically identical," whose work is certainly of equal importance, and who is usually two years older, is not adequately remunerated by a single increment of 5*l.* after six years' service.

I have, &c.,
(Signed) W. H. Webster.

STATEMENT OF THE CASE OF INLAND REVENUE INSPECTORS, 2ND CLASS.

Duties, Salaries, and Organisation.

The following statement by the 2nd class inspectors of Inland Revenue is intended to show that the salaries which they receive have not been fixed with a due regard to the character and quality of the services they render, and that the recognised principle that salary should be commensurate with the character of work performed, has not been applied in their case. On the contrary, persons under the same Board as themselves are receiving very much higher salaries for the performance of duties of less importance.

The 2nd class inspectors have approached their Board on several occasions for the purpose of obtaining a fair remuneration for the duties they fulfil, but they have failed to obtain that recognition to which they feel they are justly entitled.

Under these circumstances they are compelled—though reluctantly—to bring their case under the notice of your Honourable Commission.

The 2nd class inspector is selected from the grade of supervisor, after an examination calculated to test his general acquirements, and particularly his practical knowledge of Revenue matters. If this examination be satisfactory, the books of the district under his supervision are carefully scrutinised; and, if from such scrutiny it be shown that he is of industrious habits, apt and punctual in business, accurate in his calculations, and, in fact, that he has proved himself to be an efficient supervisor, he is promoted to the rank of 2nd class inspector.

Previous, however, to the attainment of that rank, he must have passed through each of the inferior grades of the service, and has become necessarily conversant with the various operations of traders subject to Excise survey, the laws and regulations bearing thereon, and has acquired such a fund of technical knowledge and experience as renders his services most valuable.

The duties of the 2nd class inspectors are most varied and important. They report upon questions raised by traders subject to Excise duties when doubts arise as to the construction or intention of the law; they report as to the practical working of the laws, and propose amendments if amendments are required; they consider and report on proposals from the traders, also, for amendments or alterations in the laws and regulations for charging and securing duties; they revise and re-allot the business of every officer as changes become necessary, either from alterations in the law, repeal of duties, or imposition of fresh duties, and fulfil important functions in relation to the discipline of the department. A number of them at certain periods of the year visit the traders throughout the United Kingdom, inspect their premises, and check the local officers; others visit, as occasions require, all parts of the Kingdom to inquire into complaints either against officers or traders; they officiate for sick or absent collectors, and are appointed to the office of collector as vacancies occur. They must have a practical knowledge of the working of every branch of the Excise department.

The average number of years which must elapse before the rank of 2nd class inspector can be attained is, at present, over 28. His position is one of great discomfort. He is frequently absent from his home, sometimes for months. His duties require great care and discretion, and entail much thought and anxiety. The only satisfaction that he can derive is from the hope that at no very distant time he will reach the position of collector; but, through the abolition of so many collections in the years 1886 and 1887, such hope is now deferred, and the present 2nd class inspectors

Memorials.

will not probably be appointed to collections until they have been upwards of 33 years in the service, although formerly that position was obtainable in from 20 to 23 years' service. This being the case, the 2nd class inspectors feel it incumbent upon them to use every legitimate means for the improvement of their position as inspectors. Most of them entered the service upwards of 28 years ago, and at that time had the prospect of reaching the collectorship in less than 23 years.

By well-directed effort, by study, fidelity, and good conduct, they qualified themselves for the post in question; they passed the recognised tests, and were selected as competent. Men who have thus acquitted themselves are certainly entitled to a higher salary than that which they at present receive, which is a less remuneration than that awarded to many of the officials in Somerset House, who perform merely routine work, and is totally inadequate to meet the expenditure necessary to sustain that social position in London which it is desirable that an important officer of a large Revenue department should occupy.

The salary of an assistant inspector in the Customs department, whose duties are somewhat analogous, and certainly not more important than those of a 2nd class inspector of Inland Revenue, is 560*l.* per annum, rising by yearly increments of 15*l.* to a maximum of 590*l.*, while the salary of the latter is only 380*l.* per annum, rising by yearly increments of 10*l.* to 400*l.* Further, the salary of a 1st class surveyor of Customs, whose duties are in every respect subordinate to those of inspectors, is 490*l.* per annum; and even the maximum yearly salary of a Customs surveyor of the 3rd class is 20*l.* greater than the maximum of a 2nd class inspector. Again, an assistant surveyor of the Post Office, whose duties may be taken as very similar in character, and not more responsible than the duties of a 2nd class inspector of Inland Revenue, receives a salary of 400*l.*, rising by 20*l.* annual increments to 500*l.* per annum.

There can be no valid reason for the difference in salaries between the officers in question.

Many of the officials in the Secretary's department receive much higher salaries than those awarded to the 2nd class inspectors. The department in question has been recently re-organised, and in lieu of the six superior officials who were attached thereto, whose salaries were 700*l.* per annum respectively, eleven superior officials were established with salaries varying from 600*l.* to 800*l.* per annum. These officials, not having had a practical out-door training, are in consequence unacquainted with the operations and requirements of Excise traders, and an inquiry into this matter would, it is believed, disclose the fact that important papers relating to Excise business are dealt with by the 2nd class inspectors, who are in receipt of salaries of from 380*l.* to 400*l.* per annum, whereas routine papers in connexion therewith are dealt with by officials receiving salaries of from 600*l.* to 800*l.* per annum.

On 23rd March last the 1st and 2nd class inspectors submitted a joint memorandum to the Board—to which your honourable Commission may be referred—in relation to reorganisation of the work, giving suggestions, in outline, which if adopted would, it is believed, very much simplify the existing methods of dealing with Excise papers; would result in greater accuracy, economy, and promptitude in the despatch of business; would give the Board a fuller and readier advantage of the inspectors' technical training and experience; and would effect a saving more than sufficient to provide the 2nd class inspectors with salaries commensurate with the duties they perform.

During recent years the Board have departed from a practice which formerly obtained by surrounding themselves with principal officers who have not had any practical experince in Excise business other than clerical and substantially routine work to the exclusion of their practical officers. There is no intention to criticise the course the Board have been pleased to pursue in this matter, but with feelings of perfect respect and loyalty it may be stated that the operations and interests of traders under Excise regulation are now vastly more complex than they were when a former Commission expressed so forcibly the opinion that:—"The secretary and all the principal officers of "the Indoor Department should be selected from "Excise officers who have gone through the several "gradations of office. Unless this rule be adopted and "rigidly acted upon, we are strongly of opinion that "the great expense and the various defects of the "present system will never be corrected."

STATEMENT OF SURVEYOR S OF TAXES.

The surveyors of taxes in England and Ireland venture to make the following statement, in the hope that it may tend to both efficiency and economy, and to the improvement of their position. The information given applies generally to the United Kingdom. There are, however, certain differences of detail in regard to Scotland and Ireland, though not of sufficient importance to affect the main issue.

It is the duty of surveyors, under the direction of the Board of Inland Revenue, to superintend the assessment and collection of the income tax and inhabited house duty, and, in a minor degree, the land tax; and to furnish the various departmental accounts and statistics. The staff consists of surveyors, who are responsible for the work of a certain area, called a survey or district; of assistant surveyors, who are attached to some of the more important districts, and are promoted in turn to surveyorships; and of lower division clerks, classed under the Playfair system, who also assist in the heavier districts.

In addition, a considerable number of private clerks, not on the establishment, are employed in surveyor's offices, at wages from about 8*s.* to a maximum of 30*s.* a week, who can leave or be discharged on a week's notice.

Until the year 1842 the duties of surveyors were confined to the supervision of the assessed taxes on servants, carriages, horses, dogs, &c., and the land tax. When the income tax was re-imposed in that year, being looked upon as a temporary impost, it was placed under the charge of surveyors, as an addition to their other duties, to which it was for many years practically regarded as of subsidiary importance. In 1868 and 1869 the assessed taxes, with the exception of the

inhabited house duty, were converted into licenses, and transferred to the management of the Excise Department, when a reduction in the number of surveyors and their clerks was made. This reduction, it is held, has proved by experience to have been excessive, and productive of chronic difficulty in the department.

It was only after the transfer of the assessed taxes that the importance and difficulty of the income tax appeared to be realised, and that serious efforts were made to improve the system of working. Since that date great improvements have been introduced, and the official requirements, especially in recent years, largely increased, adding much to its productiveness, and, consequently, to the labours and responsibilities of surveyors. Notwithstanding these heavy additions to their duties, the great increase in population, and the number of persons assessed, the constant changes in, and the fresh forms of, financial, commercial, manufacturing, and agricultural activity, the number of surveyors is less now than after the great reduction of 1870. This has caused an amount of oppressive overwork among surveyors probably unequalled in any public department, which it is believed has affected injuriously the productiveness of the income tax, as well as its universal and impartial incidence.

Theoretically, the local commissioners and the officers appointed by them, are mainly responsible for the assessment, and in England for the collection also, of the income tax and inhabited house duty. In practice, however, these duties, or at all events the most important of them, have gradually devolved upon surveyors. The local commissioners, an unpaid body of gentlemen acting for each division, appoint a clerk, generally a solicitor, who advises them on appeals, &c., and in whose office a large part of the merely clerical work is performed. This work has, however, to be revised by the surveyors, who are held responsible for its being done punctually and correctly. The remuneration of the clerks to commissioners, according to the Estimates for 1887–88, was 101,050*l.*

The local commissioners appoint annually assessors under Schedules D. and E. and for the assessment of the profits of all trades, public companies, &c., and employments; and under Schedules A. and B., which embrace the assessment on all houses and lands, and for the inhabited house duty, once in three years, except in the metropolis, Scotland, and Ireland, where, owing to different methods of arriving at the annual value, the surveyors act as assessors. The great majority of these assessors, except in the large towns, are farmers and tradesmen, and, as they frequently change office, their work is practically confined to the delivery to the taxpayers of notice papers, which are afterwards returned to the commissioners; but they no doubt also give valuable local information. Since, however, the proper assessment of income tax under the various schedules requires much legal and technical knowledge, the real labour and responsibility fall chiefly upon the surveyors.

New assessments of property under Schedules A. and B. and inhabited house duty are made triennially, when every house and every holding of land have to be revalued, and the income of every person assessed, who claims to be exempt or to be entitled to the abatement allowed on incomes under 400*l.* a year, has to be investigated. The value of each house of 20*l.* a year or upwards has also to be ascertained for the purpose of inhabited house duty, and its liability, or title to exemption, determined according to the numerous enactments regulating this tax. Each surveyor has now on an average more thon 45,000 of such assessments under his care upon which duty is charged, in addition to, on an average, several thousands more where he has been satisfied of the right to exemption; and when it is borne in mind that surveyors have to examine every return of rent or annual value, and consider in every case the annual value to be charged, a duty requiring much discrimination and judgment, some estimate of the enormous labour involved may be formed.

In each second and third year after these triennial assessments are made, the surveyors, in addition to their other duties, act as assessors in all the numerous cases of new properties, and give effect to the many instances of reduction in value, &c.

New assessments under Schedules D. and E. are made every year, each surveyor being responsible on an average for about 2,300 cases under Schedule D. and 700 under Schedule E. The actual numbers under Schedule D. vary from about 500 to nearly 7,000, those under Schedule E. from about 100 to 5,000. In addition to these cases in which duty is charged, there are many more under both schedules where persons are entitled to exemption; but all require separate investigation. The duties of assessors under Schedule D. are confined to issuing the various forms of return to the public, and to some extent giving their opinion as to the liability of persons chargeable. Under Schedule E. they are supposed, in addition, to make the assessments; every case, however, being afterwards examined and considered by the surveyors. The tax upon business profits, Schedule D., being probably the most difficult, delicate, and invidious of existing revenue imposts, its administration requires on the part of the surveyors the greatest tact, discretion, and ability. They have annually to examine each person's return, to make inquiries, gather evidence or information, especially in the numerous cases where the public fail to make returns, and to assist and advise the Commissioners in every case in finally deciding upon the amount to be assessed. They have to obtain and examine the accounts of every joint stock company and public concern, numbering in some districts many hundreds, and often of the most intricate and varied character; and to advise and examine the accounts of the numerous persons who call upon them for assistance in making their returns.

After the notices of assessment are issued, the surveyors have to deal with the many objections and complaints made by the public, to give information as to alleged overcharges, to examine claims of exemption or abatement, and the numerous statements of accounts produced to them, with the view of settling as many cases as possible with the least trouble to the taxpayer. They have also to appear for the Crown in all cases of appeal to the Commissioners, where frequently the most intricate questions of law and fact have to be considered; and they have to exercise a large amount of discrimination in deciding in what instances they should express dissatisfaction with the decision of the Commissioners, with a view to an appeal to the High Court on points of law.

When the assessments have been completed, the necessary books delivered to the collectors, and the collection of the duties begins, the surveyors in England and Wales have to watch over and superintend the collection, to keep a ledger account against each collector, to attend to the numerous cases where from death, removal, bankruptcy, or change in circumstances, there is dispute as to liability, or difficulty in recovery. They have also to account in detail for every single item in the assessments in which the duty has not been paid, a task in itself involving great labour.

An important and laborious part of the work of surveyors is the examination of all claims for the repayment of income tax. Owing to the principle of assessing all income at its source, the great increase in joint stock enterprise and in various forms of investments, the raising of the point of liability from 100*l.* to 150*l.*, and of the abatement to 400*l.*, the number of these claims has been enormously increased, one surveyor having, not unfrequently, to deal with more than 1,000 each year. In some cases the number exceeds 1,500. Of late years a great addition has been made to the work and responsibility of surveyors in connexion with these claims. Formerly many inquiries were made from Somerset House which are now required to be made by the surveyors, so that practically the responsibility for all amounts repaid to persons claiming for the first time has been placed upon the surveyors.

Other work, at one time performed by the Indoor Department at Somerset House, has, in recent years, been transferred to surveyors. Certificates of removal, numbering many thousands in a year, were formerly all transmitted through the head office, where each document was registered. They are now sent direct from one surveyor to another, and, while the change has added to the labours of the surveyors, it has resulted in a large saving of work at Somerset House. No objection is made to this change; on the contrary, it is admitted to be a great improvement, and has led to a reduction in the number of clerks at the head office, and an increase in the salaries of those retained. No corresponding benefit has, however, accrued to surveyors, notwithstanding the increased work.

Some of the most important causes of the excessive work and responsibility thrown upon surveyors have been the changes in making assessments under Schedule D., and as to appeals generally. Prior to the year 1870 the examination of the accounts of joint stock companies, in order to secure correct assess-

Memorials.

ments, was hardly known, and the usual course under Schedule D. generally was for the local commissioners to make numerous increased assessments, often in an arbitrary manner, which could only be corrected on a personal appeal to the Commissioners, as in all other cases of presumed overcharge. This led to much dissatisfaction, and was the cause of the great agitation against the tax in 1871–72. Business men resented these numerous surcharges, and protested against the loss of time and the exposure of their affairs to their neighbours—the Local Commissioners—involved in attending crowded appeal meetings. Surveyors were in consequence instructed to examine the accounts of all public companies previous to the assessments being made, and, in other cases where the amounts returned seemed open to doubt, to see the persons and try to obtain the necessary explanations. They have also been required to deal generally with all cases of appeal, by seeing intending appellants, and obtaining from them accounts or other evidence, afterwards submitting the settlement for the sanction of the Commissioners. By this addition to the ordinary duties of surveyors the administration of the tax has been attended with much less friction, the number of persons actually appealing before the Commissioners having been reduced to a minimum. Very large sums of unassessed duty for former years have been recovered by surveyors through this altered mode of procedure. The saving of poundage under this head in 1884–85 was about 3,000*l.*

From the foregoing sketch an idea may be formed of the peculiar delicacy and difficulty attending the working of the income tax, and of the highly important duties that surveyors are called upon to discharge. It may be said, without exaggeration, that the whole income tax system centres in these officers. They have constantly to exercise quasi-judicial functions, in which, if they are to be successful, the greatest patience, tact, and legal and technical knowledge are required. An oversight, an error of judgment, a want of discrimination, may entail serious loss of revenue; while, on the other hand, the care, keen observation, and vigilance of a surveyor may be productive of great benefit to the National Exchequer. The position of surveyors differs so greatly from that of most other civil servants that no definite rule can be laid down for their guidance; no hard-and-fast line can be drawn from which they are not allowed to deviate on the one side or the other; a wide discretion must be allowed to them if they are to perform their duties in a manner satisfactory alike to the public and to the revenue. They come into daily personal contact with all classes, including the most able business and professional men, and, owing to their generally isolated position, unlike most other public officials, they cannot, as a rule, obtain the advice and assistance of others, but must rely, in no ordinary degree, on their own judgment. Again, officials entrusted with the supervision of others have, in most public departments, to deal with trained and responsible officers, while surveyors have, for the most part, to guide officials who are not only untrained, but are not responsible to them; and in the exercise of their authority, the greatest care is necessary to avoid the appearance of too openly assuming functions, which the Acts of Parliament, when passed, did not contemplate, but which the lapse of time and the force of circumstances compel them to perform.

Upon the importance and difficulty of their duties, and of the income tax generally, no better evidence can be adduced than that of the Commissioners of Inland Revenue. In their twentieth annual report (1877) they state:—"The duties of surveyors are so "important, and have to be exercised for the most "part so independently of immediate control, that "they must be recognised as belonging entirely to the "higher division, and that the same scale of service "pay should be assigned to them as to higher division "clerks." And in their twenty-eighth report (1885) they remark:—"Of all the taxes under the control of "this Board, there is none which can compare with "the property and income tax, or, as it is properly "called, the income tax, in respect of the difficult "questions which arise in its administration."

"The tax affects a much greater number of persons "than any other direct tax, and, as the charges im"posed by it are so heavy, it is no wonder that they "are keenly scrutinized."

In these circumstances it is contended that the proper performance of the delicate, difficult, responsible, and even harassing duties of a surveyor requires more ability, more tact, more patience, more discretion, than the duties performed by almost any other servants of the Crown; and surveyors are of opinion that their remuneration is so inadequate in the more important districts as to exercise a most discouraging influence upon them.

The surveyors further contend that, for years past, they have been called upon to perform an amount of work which has been, not only disproportionate to their pay, and has impaired the efficiency of the department and the yield of the taxes under their charge, but has also been productive of an excessive strain, injury to health, and hardship generally to the officers themselves. They draw attention to this as a fact, without presuming to attach any special responsibility for this state of things. They are of opinion that an unfortunate, and, no doubt, unforeseen error, difficult to retrace, was made in the excessive reduction of their staff in 1870–71, consequent on the transfer of a comparatively unimportant and easily-managed part of their duties. They consider that this was intensified by the simultaneous inauguration of a series of improvements in the working of the income tax, which, while greatly benefiting the revenue and ministering to the convenience of the public, have added enormously to the labours of the surveyors. A further reduction in their numbers was also made in 1877, when the department was last reorganised according to the Playfair system, on the assumption that the increase in the point of incidence of the income tax from 100*l.* to 150*l.* would lighten the work of surveyors. But this is not so. The result of the extension of the limit of exemption and abatement has been to largely increase the duties of surveyors in regard to claims for repayment. Representations on this question of overwork and inadequate pay have been, from time to time, made to the Commissioners of Inland Revenue, but have met with only partial success.

As some evidences of the correctness of the foregoing statements, attention is asked to the subjoined statistics, which show the number of assessments and the annual value or profits charged to duty in each of the years 1868–69, 1871–72, 1875–76, 1876–77, and 1885–86. The year 1868–69 is chosen because it is the last year in which all the assessed taxes were under the control of the surveyors; 1871–72 as the first year after they had been completely relieved of them; 1875–76 as the last year when the point of incidence of the income tax was 100*l.*; 1876–77 as the year when the point of incidence was raised to 150*l.*, and the abatement raised from 80*l.* to 120*l.*, and extended to incomes under 400*l.* per annum; 1885–86 as the last year for which statistics are available.

NUMBERS OF ASSESSMENTS.

„ E	22,110,858	25,391,653	28,118,985	24,326,818	30,290,853
Inhabited House Duty.	37,165,389	41,416,978	45,697,974	50,386,599	62,166,843
	391,796,271	437,573,520	507,717,293	500,763,328	549,491,087

The numbers under Schedule D. are partly estimated for 1868–69 and 1871–72.

The amount allowed for the year 1868, in respect of the abatement of 60*l.* from incomes between 100*l.* and 200*l.* per annum, was 14,947,000*l.*; in 1885, the amount allowed in respect of the abatement of 120*l.* from incomes between 150*l.* and 400*l.* per annum was 50,484,191*l.*, an increase of 35,537,191, which for the purpose of comparison must be added to the figures for 1885–86.

The following is the net yield of each penny of income tax in the years named, the year 1884 being the last published.

1868–69.	1871–72.	1875–76.	1876–77.	1884–85.
£	£	£	£	£
1,435,887	1,654,277	1,978,084	1,904,770	2,002,222

It will thus be seen that, notwithstanding the large increase in the abatements, and other deductions allowed by statute from the gross assessments, the raising of the point of incidence from 100*l.* to 150*l.*, and the serious depression in trade, and almost unprecedented depression in agriculture, the productiveness of the income tax has largely and steadily increased, the increase exceeding 38 per cent. in 17 years. The surveyors venture to submit that no small part of this increase has been due to their untiring efforts.

The account below shows the total amount of income tax and of assessed taxes paid to the revenue in 1868, and of income tax and inhabited house duty in the other years named, the income tax, for the purpose of comparison, being stated at the equivalent rate of 6*d.* in the pound. The numbers and cost of surveyors, assistant surveyors, and lower division clerks, and the per-centage of cost to the revenue raised are also given. In the item of assessed taxes for 1868–69, the duty from dogs is taken as a complete year at 231,630*l.*, the same as in 1866–67, and the revenue for 1887–88 is an estimate only. Six surveyors have been added to the establishment for 1888–89, owing to the creation of six new districts at a minimum cost of 1,200*l.*

Year.	——	Amount paid to Revenue.	Rate of Duty.	Equivalent at 6*d.*	Number of Officers.			Cost.	Percentage of Cost to	
					Surveyors.	Assistant Surveyors.	L.D.C.		Income Tax.	Total Revenue.
		£	*d.*	£				£		
1868	Income Tax	8,615,325	6	8,615,325	304	73		103,790	1·2	·93
	Assessed Taxes	2,528,198		2,528,198						
		11,143,523		11,143,523						
1871	Income Tax	9,925,664	6	9,925,664	247	63		86,995	·876	·777
	Inhabited House Duty	1,262,611		1,262,611						
		11,188,275		11,188,275

		7,355,023		13,038,040						
1887	Income Tax	14,000,000	7	12,000,000	228	45	54	94,125	·784	·674
	Inhabited House Duty	1,954,000		1,954,000						
		15,954,000		13,954,000						

This statement shows that, in spite of the enormous increase in population and of persons and profits assessed, and the great additional labour, as before mentioned, imposed upon surveyors by the many improvements introduced between 1871 and 1887, the number of surveyors has been reduced. The number of assessments for which each surveyor is, on an average, responsible, increased from 34,000 in 1871, to 50,000 in 1885.

It is right to state that the cost of clerical assistance has somewhat increased in recent years, but the details are not obtainable from the estimates or reports of the Commissioners of Inland Revenue, to which reference has been made for the information given. Surveyors have also, of late years, at times of excessive pressure, been granted the temporary help of assistants of Excise; but as these officers have seldom any previous experience of tax work, or local knowledge, the duties they can perform are purely clerical.

In the matter of leave of absence, the surveyors of taxes are placed at a serious disadvantage as compared with members of the in-door departments. In the latter 42 days a year are allowed to officials, who, for the most part, are not subject to the same continuous strain, and have not the same responsibility, as surveyors, to whom 28 days only are granted. Moreover, even the leave they are entitled to can be obtained only under conditions which rob it of much of its value. Except for special reasons, not more than 14 days are allowed at one time. In the great majority of cases the surveyor's work accumulates during his absence, and such is the dread of this, combined with the constant pressure, that surveyors have frequently to forego the whole or part of the holiday to which they have a right.

Surveyors of taxes entered the service on the understanding that the time they were expected to devote to their duties was six hours a day. In the year 1876 their department was reorganised in accordance with the Playfair Scheme, and placed in the higher division. It appears clear that the service intended to be required from officials, under that scheme, was six hours a day; but the great majority of surveyors are compelled to work seven hours or more; and in years when new assessments of property are made, or, in the Metropolis, new quinquennial valuation lists, there is practically no limit to the demands upon a surveyor's time. This is admitted by the Commissioners of Inland Revenue in a circular to surveyors, dated 9th June 1882, on the subject of lower division clerks, who are paid on the seven-hours' scale. In addition to surveyors having to give more than seven hours a day, the working of the Playfair Scheme has given rise to complaints of serious inequalities and hardship. Comparatively young surveyors are placed in large and expensive towns, in charge of heavy districts, on salaries not commensurate with the importance of the districts. No doubt the chief cause of this evil is the totally inadequate amount of duty pay granted to the department, and the consequent inability of the Commissioners of Inland Revenue, with a service scale of pay, to remunerate surveyors in proportion to the duties they are called

Memorials.

upon to perform. Considering the arduous and responsible nature of surveyors' duties, it is contended that many of them are much underpaid. The maximum service pay of surveyors under the Playfair system is 400*l.*, and of 234 surveyors, three only receive the maximum amount of duty pay of 200*l.*, making their total emoluments 600*l.* per annum. More than 50 of their number, with over 25 years' service, in charge of most important districts, have an average of less than 500*l.* a year. If a comparison be made with the salaries of clerks in many of the in-door departments, whose duties are not of a more responsible character than those of surveyors, it will be found to be greatly in favour of those indoors. On this point, as well as on that of leave of absence, surveyors venture to urge their claim to at least equality of treatment with the members of the in-door branches. If, again, a comparison be instituted between the emoluments of surveyors and those of officials, with no greater responsibility, in large commercial establishments, as, for instance, banks, railways, and insurance companies, it will be seen that the latter are far better paid.

It is doubtful whether the Playfair System can, with any degree of fairness or satisfaction, be regarded as suitable to a department like that of surveyors of taxes; but, if it can be held to be applicable, it is submitted that it can only be carried out with anything like an approach to justice by granting a much larger amount of duty pay to the more important districts. The relative duty pay granted to the departments of the secretary, controller of legacy duty, and accountant and controller-general, according to the estimates for 1887-88, is nearly double that granted to surveyors of taxes, the figures being nearly 14 and 7·1 per cent. respectively.

The following figures relating to the out-door establishments of Customs, Excise, and Taxes, taken from the Estimates speak for themselves. They show the cost of assessing and collecting the revenue from Customs to be 3·91, Excise, 3·53, and Taxes, 2·5 per cent.:—

Customs.

	£	£
Revenue - -	19,630,000	
Establishment, Port of London - -		247,870
,, Liverpool - - -		96,640
,, Districts other than London and Liverpool - -		307,870
Superannuation, debiting half the amount paid to clerks - - - - -		115,843
Total cost -		768,223

Cost of collection to revenue, 3·91 per cent.
Superannuation ,, ·59 ,,

Excise.

	£	£
Revenue - -	25,620,000	
Chief Inspector's Office - - -		15,939
Effective Out-door Establishment - -		761,204
Superannuation - - - -		127,255
Total cost -		904,398

Cost of collection to revenue, 3·53 per cent.
Superannuation ,, ·496 ,,

Taxes.

	£	£
Revenue - -	17,410,000	
Special Commissioners' Office - -		5,657
Chief Inspector's Office - - -		9,350
Surveyors and Assistant Surveyors - -		98,668
Clerks to Surveyors - - - -		19,700
Clerks to Commissioners - - -		101,050
Poundage to Assessors and Collectors -		193,500
Superannuation - - - -		8,062
Total cost -		435,987

Cost of collection to revenue, 2·5 per cent.
Superannuation ,, ·0046 ,,

It will be observed that, much as the total proportionate cost of the Tax Branch is below that of the Customs and Excise, the cost of superannuation is far lower still, the figures being:—

Customs - - -	·59	per cent.
Excise - - -	·496	,,
Taxes - - -	·0046	,,

The foregoing information will, it is hoped, show that the present condition of surveyors of taxes is far from satisfactory. An attempt will now be made to indicate how this may be improved. It is, at once, admitted that this improvement would entail increased expenditure, but it is believed to be neither to the interest of the revenue, nor conducive to true economy, that a body of public servants, charged with such delicate and important duties, should be overworked and underpaid. Moreover, there appears to be little doubt that this increased expenditure could be met by certain changes within the Department, which would result in a saving.

The position of a surveyor of taxes must at all times and in all circumstances involve anxiety and responsibility since every complaint, every correction, every explanation, must pass through his hands; but much of the worry of which surveyors complain might be avoided or lessened by giving them more efficient clerical assistance. Many surveyors have no other help than that which they are able to obtain locally for a few shillings a week, the maximum wages in the most important districts in the large towns being 30*s.* a week, and many clerks have used the surveyor's office, and the training they have received there, as a stepping stone to something better. Having been engaged all day in dealing with the public, either personally or by letter, surveyors have had, not unfrequently, night after night, and week after week, to take home work, which could be done by a clerk, or return to their offices to do it: and instances are not wanting where a surveyor has paid or supplemented a clerk's wages out of his own pocket. It is open to question whether clerks, subject to a week's notice, should be employed at all, or at any rate so largely in offices where the work is of such a delicate and confidential character; but, if they are employed, it is submitted that some inducement should be held out to them to remain. On this point it is suggested whether the most deserving of them should not, after a certain number of years' service, be put upon the Establishment under special terms and conditions. Boy clerks have in some cases been found most useful, and it is thought that a greater number of them might be employed with advantage.

At the present time what are known as "Parochial Ledgers" are and must be kept in the office of each surveyor, while a staff of clerks is also employed at Somerset House in keeping duplicates of them. The work is thus done twice. The surveyor is, however, the only person really responsible for the balancing of the ledgers, or who can indeed, in many instances, balance them. A check must, of course, be kept against each surveyor, but for all practical purposes it would be sufficient to raise a charge at the head office against each division or part of a division under his care, consisting in some cases of over 50 parishes, instead of against each parish, posting the payments in the aggregate to the credit of the division and not of each parish, and leaving the surveyor to keep an account against each collector. The control, it is held, would be as complete and effectual by this method as under the existing system of giving to the Accountant and Controller-General the nominal, but only nominal, power to adjust accounts which do not, so to speak, balance themselves since he is practically bound to adopt the suggestion of the surveyor.

With regard to the departments of the Secretary and the Chief Inspector it appears that by the present plan much unnecessary routine is entailed which would be avoided if the Chief Inspector, who must be an official of great experience, were left free to deal with all matters properly belonging to the executive. According to the existing practice papers may be referred by the Secretary to the Chief Inspector, and the report of the latter may be subject to review by a comparatively junior clerk; and if not actually so reviewed the work of the said clerk is purely formal, no practical responsibility resting upon him. It is submitted that the better course would be for the Chief Inspector to deal directly with the Board instead of through the medium of a committee clerk in another branch, leaving the orders of the Board, so far as they necessitate correspondence with the public or formal letters to surveyors, to be carried out in the Secretary's Office. It is considered that references to surveyors

on the papers themselves might be made by the Chief Inspector. It is further submitted that officials at the head office called upon to deal with practical questions should be appointed from inspectors of taxes or the more experienced surveyors. The difficulty of Income Tax administration being admitted, practical as well as theoretical knowledge in these cases would seem desirable, if not necessary. In support of these suggestions reference is again made to banks, railways, insurance companies, &c., where the officials entrusted with executive duties have power to carry them out independently of officials in the Secretary's branch.

Certain documents are in use known as "Forms, 48, &c.," relating to persons who reside in one district, but state they are assessed elsewhere, and to persons who have been assessed in one surveyor's district and have removed to another. These have to be sent by the surveyor to Somerset House, where a staff of clerks is kept for the purpose of registering them and sending them to other surveyors, who have to return them to Somerset House with their reports, or for inquiry, whence they are again sent to the issuing surveyor to be noted, and sent once more to Somerset House. This routine may have to be repeated several times with the same document. And not only so, if a form has to be sent, say, from London to Glasgow, the issuing surveyor must first send it to Somerset House, whence it is forwarded to Edinburgh, then, in turn, to Glasgow, any inquiry having to be made through the same circuitous channel, and in some cases, frequently repeated. It is submitted that if these forms, as well as all papers relating to certificates of removal, were sent direct from one surveyor to another, in any part of the United Kingdom, a considerable saving would be effected at the head office in London, and at Edinburgh and Dublin. In cases where instructions might be required, reference could be made direct to Somerset House, none of these forms being transmitted through either Edinburgh or Dublin.*

Other documents, called "Reports on Schedules" of defaulters and discharges, have to be prepared annually by surveyors. Reports on defaulters relate to cases where the duties assessed have not been paid, but where a legal liability remains, warranting proceedings for recovery. It is not proposed to interfere with these necessary documents. Reports on discharges consist of cases in which the surveyor has satisfied himself that there is no legal liability for the duties assessed. These are chiefly cases of empty houses, assessments discharged or abated on the ground of incomes being under 150*l.* or 400*l.* a year, reliefs on appeal, errors, &c. Until 1881 every one of such cases had to be reported on in *detail*; but in that year the system was so far modified that surveyors were allowed to report the *totals* only of empty houses for each parish. It is submitted that, under proper regulations, much unnecessary labour would be saved by extending to all cases of discharge the principle adopted in 1881. Thus, instead of the voluminous reports, extending, not unfrequently, to many hundreds of lines, the totals only of each of the eight classes of discharge would be given, with a grand summary of the whole. Considering the wide discretion necessarily allowed to surveyors in making the assessments and obtaining alteration of the same before the books are closed, it is maintained that, subject to proper checks, they may be safely granted the further discretion suggested in regard to these reports and Forms 48, &c.

Memorials.

The alterations pointed out in the foregoing suggestions would not require legislative sanction; the following would.

The mode of arriving at the annual value of property in England, outside the Metropolis, is antiquated and cumbersome, and the assessment does not, in many cases, correspond with the local rating. The extension of the Metropolitan Valuation Act to the whole country would remedy this, and save the poundage paid every third year to assessors under Schedules A and B, and Inhabited House Duty.

With regard to the assessment of the profits and officials of joint stock companies, corporations, &c., under Schedules D and E, the work of the assessors is practically limited to delivering certain forms of return papers, and the liability is ascertained by the surveyors, who examine the accounts of the various companies. The local knowledge of the assessors, which is often valuable in other cases, is evidently of no use in these. It is therefore suggested that the services of the assessors should be dispensed with in connexion with these companies, &c., and that the assessments on them should be made by the surveyors, in the same way that the assessments under Schedule A and Inhabited House Duty in the Metropolis are made, giving them power, in regard to Schedule D, to perform the duties and exercise the functions of Additional Commissioners. This would effect a saving of more than 20,000*l.* a year.

The total estimated saving which would ultimately result from the adoption of these suggestions is between 30,000*l.* and 40,000*l.* a year. This would suffice to meet the claims of surveyors and still leave a substantial balance.

It is contended that the adoption of the suggestions set forth in this statement would conduce to—

1. Economy.
2. Simplicity and efficiency.
3. Removal of the ground for the complaints made by a body of Civil servants engaged in the performance of most responsible, delicate, difficult, and arduous duties.

A copy of the petition presented to the Commissioners of Inland Revenue, on the 30th July 1887, accompanies this Statement.

* This suggestion was in the original draft of this statement; but, since the draft was written, instructions have been issued to send all "Forms 48, &c.," in the first instance direct from one surveyor to another. This will increase the labour of surveyors, but it will relieve the officials at Somerset House.

TO THE HONOURABLE THE COMMISSIONERS OF INLAND REVENUE.

The Petition of the Surveyors and Assistant Surveyors of Taxes whose names are hereunder written,

Humbly showeth:—

That the practical work connected with the assessment of the income tax and inhabited house duty devolves chiefly upon surveyors of taxes, who have to perform their duties under circumstances of peculiar individual responsibility. They are thus compelled to rely to a great extent upon their own judgment, and to their tact and discretion the security of the revenue is in no slight degree due. In theory, the district commissioners decide cases of disputed liability, but in practice, as is well known, the surveyors in many districts settle the great majority of such cases; and, in many other instances, the liability is ascertained by personal investigation, and a settlement arrived at before an assessment is made. The delicate nature of these investigations will be readily understood; but the demands they make upon the time and energy of surveyors, especially in the heavy Schedule D. districts, may not be so easily or fully appreciated.

That in the years 1876–77 and 1884–85 the respective numbers of separate properties assessed under Schedule A. were 6,919,849 and 7,783,576, being an increase of 863,727, or nearly 12½ per cent. For the same years the numbers of persons charged under Schedule D. and E. were 586,970 and 702,887 respectively, showing an increase of 115,917, or more than 19½ per cent. The numbers of houses charged to inhabited house duty were 944,809 in 1876–77, and 1,176,387 in 1884–85, an increase of 231,578, or more than 24½ per cent. These large increases indicate a corresponding augmentation in the work of surveyors, and, apart

Memorials.

from the exceptional difficulties in connexion with Schedules A. and B. during the last eight years, point to a reasonable expectation of an addition to the expense of the department. But, beyond this, the conditions under which the income tax is now administered are much more onerous than formerly, requiring not only more time, but greater care: and the increase under Schedules D. and E. may, in great measure, be fairly attributed to the exertions of surveyors. In 1876–77, the year in which the point of incidence was raised to 150*l.*, the amount realised for each penny of income tax was 1,904,770*l.*, and in 1883–84, the last year for which the figures are published, 2,016,785*l.*; and this increase was obtained in spite of an almost unprecedented depression in trade and a high rate of duty.

That your petitioners venture also to point out that the last reorganisation of the department in 1876 took place when the rate of duty had for some years been exceptionally low, and that the increase in the rate has added greatly to the labour of surveyors, as proved by the large addition to the number of claims of repayment, as well as of cases of appeal and disputed liability.

That the Playfair system has now been in operation for more than 10 years, and has resulted in what are looked upon as great inequalities. But if it be deemed imperative that this system should be retained, it is humbly submitted that your petitioners are entitled to a considerable increase in the duty pay assigned to them. It is suggested, with the utmost deference, that an increase from 6,300*l.* allocated to 76 districts, to 12,000*l.* allotted to 100 districts, would be fair and reasonable, and likely to give general satisfaction.

That if, however, it should be decided to amend the Playfair system, your petitioners venture to express the belief that it would be practicable, at no greater additional cost than is indicated above, to frame a scheme which, while paying due regard to existing interests, and avoiding the evils of the former method of classification, would remedy the anomalies of the present organisation, and improve the position of surveyors generally.

That at the last general reorganisation in 1876 the Department was placed under the Playfair system in the first grade, and on a six hours' scale. It is now understood that where seven hours' work is given a title to increased remuneration is recognised; and, as surveyors of taxes are required to work, on an average, at least seven hours a day, they venture to refer to this fact as an additional reason for pressing their claim to a revision of salaries.

That, in addition to inadequate remuneration, surveyors suffer, in many instances, from overwork, the result, in great measure, especially in rural districts, of inefficient and insufficient assistance. The pressure, at all times great, is so intensified in years of new assessments under Schedules A. and B. as to entail serious difficulty and suffering. Your petitioners gratefully recognise that something has of late years been effected to meet this hardship by the creation of new districts, and they earnestly hope that more may be done in the same direction by reducing the area of those surveys which may still be found too large for proper management. The difficulty as to private clerks has long been a cause of severe overwork and worry to many surveyors. The wages allowed are too often not sufficient to retain useful clerks, whose experience is thus prematurely lost; and the time spent in training and examining the work of a succession of fresh ones is a serious addition to the labours and anxieties of many of your petitioners. It is believed that if the maximum wages were raised from 30*s.* to 40*s.* per week, and other allowances in proportion, surveyors would be in a position not only to secure, but to retain, more efficient help. This would in many cases relieve the undue strain, and, coupled with the creation of a certain number of new districts, would go far to redress this grievance. It is also urged that it would be productive of true economy, as well as of positive benefit to the revenue, as surveyors would thereby have more time to devote to their more important duties, and the necessity for the employment of established officers might be to some extent diminished.

That it appears that the statutory poundage alone to local officers on the sums annually recovered, largely by the efforts of surveyors, in respect of duty unassessed, would represent a considerable amount; that the abolition of receipts and the substitution of weekly payments, while increasing the work of many surveyors, has resulted in a saving; and your petitioners venture to submit that these savings might be appropriated to meet the increased expenditure which the adoption of their suggestions would involve, especially as the awards for the recovery of unassessed duty have been discontinued.

That it is humbly but confidently urged, without invidiously specifying particular cases, that the work of surveyors of taxes will bear favourable comparison with that, not only of any body of officials under your Honourable Board, but of the superior officers in mercantile and other establishments, whose emoluments are considerably higher. As stated by your Honourable Board in your twenty-eighth annual report:—"Of all "the taxes under the control of this Board, there is "none which can compare with the Property and "Income Tax, or as it is popularly called the Income "Tax, in respect of the difficult questions which arise "in its administration. The tax affects a much greater "number of persons than any other direct tax, and as "the charges imposed by it are so heavy, it is no "wonder that they are keenly scrutinised." The daily duties of surveyors require them to exercise quasi-judicial functions; difficult and delicate questions of law and practice have frequently to be decided by them on their own responsibility; they come into contact with all classes of the community; they are expected to be, and, if successful, must be able to deal with the arguments and objections of the shrewdest professional and business men, often without previous notice or special preparation; while most other civil servants perform their duties within reach of those to whom they can apply for advice and assistance.

That, while acknowledging with gratitude all that has been done in the past to redress their grievances and improve their position, your Petitioners feel, nevertheless, that their claims to more favourable treatment merit further recognition; and, relying on the desire of your Honourable Board to do justice, they venture to express a confident hope that their prayer will be granted.

And your Petitioners, as in duty bound, will ever pray.

STATEMENT OF THE EXAMINING OFFICERS OF H. M. CUSTOMS IN THE PORT OF LONDON.

To Sir Matthew White Ridley, Bart., M.P., Chairman, and the Members of the Royal Commission on Civil Establishments.

1. In accordance with the terms of a circular letter issued by the honourable Board of Customs, on instructions received from the Royal Commission on Civil Establishments, we beg to submit the following statement of the examining officers of the Port of London.

2. Previous to June, 1882, the various duties upon which examining officers are now employed pertained to two distinct departments, viz., the out-door department, and the warehousing branches of the indoor department. At that date, however, an amalgamation of these two departments was effected, and the following classification issued by the honourable Board of Customs, with the approval of the lords of the Treasury:

	£	£	s.	£
1 controller - - -	700	by 25	0	to 800
4 inspectors general - -	600	,, 20	0	,, 650
1 assistant inspector general -	560	,, 15	0	,, 590
15 first class surveyors -	490	,, 15	0	,, 550
20 second ,, ,, - -	430	,, 15	0	,, 480
40 third ,, ,, - -	350	,, 15	0	,, 420
120 first class examining officers	230	,, 10	0	,, 300
430 second ,, ,, - -	110	,, 7	10	,, 220

3. This classification, although unfavourably affecting the members of the above mentioned departments, as compared with their previous positions, was generally accepted as a permanent measure; but during the last six years the superior appointments have been considerably reduced, and the present classification is as under:—

	£	£	s.	£
5 inspectors - - -	600	by 20	0	to 650
1 assistant - - -	560	,, 15	0	,, 590
10 first class surveyors -	490	,, 15	0	,, 550
17 second ,, ,, - -	430	,, 15	0	,, 480
33 third ,, ,, - -	350	,, 15	0	,, 420
120 first class examining officers	230	,, 10	0	,, 300
302 second ,, ,, ,, -	110	,, 7	10	,, 220
160 assistant ,, ,, -	100	,, 3	0	,, 150

4. We submit that these reductions are unjust to the examining officers by rendering a large number of them redundant in their respective classes, thereby preventing promotion; and that the present pay and prospects of the examining officers are not commensurate with their great responsibilities, arduous duties, and long hours of labour. We therefore suggest that the minimum salary of the grade should be 110*l.* as at present. That the increment should be 10*l.* annually. That should an officer reach 220*l.*—the maximum of the 2nd class—before a vacancy shall have occurred in the 1st class, he should continue to to receive his increment of 10*l.* until a maximum of 350*l.* be reached: provided that a thoroughly satisfactory report be made by his superiors as to his character, diligence, and competence to perform all the duties relating to the position of examining officers of the 1st class.

These recommendations are on the lines of paragraphs 41 to 50 in the second report of your Commission with reference to clerks of the proposed second division. We have suggested an annual increment of 10*l.* instead of 7*l.* 10*s.* from 110*l.* to 220*l.*; first, because either a long period of approved service, or success in a competitive examination following several years good service, is necessary before an officer is promoted to the position of examining officer, and secondly, because the duties of an examining officer are no less important, are more arduous, and extend over more hours per day than those of the great majority of Civil Service clerks.

5. Since the amalgamation of the waterguard, landing, gauging, and clerical sections of the service, in 1882, additional individual responsility has become attached to the position of examining officer, for whereas previous to that time efficiency in any one of these sections was sufficient to insure promotion, it is now necessary, by the orders of the Board, to possess the combined qualifications of efficiency in all, before promotion even from class to class can be obtained.

6. On the waterguard examining officers are required to take all steps necessary for the prevention of smuggling, to enforce the laws and regulations relating to quarantine and explosives, and to carry into effect the many orders issued from time to time by the Privy Council relative to the importation of cattle, &c. from foreign countries from which infectious diseases might be introduced into the United Kingdom. The measurement of deck cargoes for Board of Trade purposes, the rummaging and clearing of vessels, and the general supervision of the immense trade of the Thames, foreign and coastwise, are also included in the duties of the waterguard. The performance of these duties requires a great amount of tact and discrimination.

7. On landing duties examining officers estimate for duty all dry goods on importation or delivery, examine passengers' baggage and goods ariving through the Parcels Post, taking the duties in connection therewith, and superintend the landing and the delivery of the cargoes of all vessels from foreign ports, seeing that before passing out of charge of the Customs every package imported is accounted for, and subjected to such examination as guarantees the legitimacy of trade, and the proper protection of the Revenue. In connexion with the examination of free goods these officers are responsible for the application of the prohibitive and restrictive laws pertaining to the importation of copyright works, indecent prints and literature, counterfeit coins, and goods of foreign manufacture coming within the provisions of the Merchandise Marks Act, 1887, duties of the utmost importance in the interest of the manufacturers and general public of this country.

8. The statistics of all goods imported are prepared for the Board of Trade by the Customs department. But although these statistics are compiled in the Statistical department, the examining officers are held responsible for the accuracy of the quantities, values, and description of the goods as entered by the merchants.

9. On Export duty they examine and certify to the shipment of all bonded and transhipment goods and goods entitled to drawback, such as tobacco, snuff, gold and silver plate, and also beer received from the Excise.

10. Examining officers gauge, test, and bring to account all wines, spirits, and beer imported, and spirits of British manufacture removed to Customs warehouses. They analyse beer, test spirits for obscuration, and wines, liqueurs, and preparations containing spirit for alcoholic strength; superintend the operations on wet goods in bond, such as vatting, blending, mixing, fortifying, bottling, &c.; re-gauge all casks on delivery from warehouse, fixing the quantity for duty; and compute and allow losses in warehouse in accordance with an approved scale. In this branch of their duties much discretionary power is vested in the examining officers, and great ability, care, and technical knowledge are necessary. The Wine Duty Act, 1888, imposed *ad valorem* duties, and has complicated the work and increased the responsibility of the officers. The contents of casks are now gauged to the quart instead of to the gallon, and the liquid quantity being calculated to the tenth of a gallon, losses to the Revenue must inevitably occur unless much greater care and accuracy be shown than were necessary under previous regulations.

11. Examining officers now perform the clerical work in connexion with all dutiable goods received into, and delivered from, the various Customs vaults and warehouses in the Port of London. They raise accounts of importations and of receipts under bond from the Excise; compute and assess duties which amount, in London, to over 10,000,000*l.* annually; issue certificates for the return of money overpaid, and for the payment of drawbacks and allowances on British spirits exported; control all operation accounts, and sign the orders necessary for all deliveries, whether for home consumption, removal, or exportation. This work is of a far more responsible nature than that upon which higher division clerks are engaged in many departments of the Civil Service, as the delivery of all bonded goods is practically without control—solely in the hands of the examining officers, whose signatures are the only authority for such deliveries. Under the system which existed previous to June 1882, the delivery order was signed by the clerk keeping the accounts, countersigned by a higher division clerk with duty pay, or a principal clerk with a maximum of 620*l.*, and finally, the signature of the officer in charge of the warehouse was necessary before a package could be delivered.

12. The hours of labour for officers on gauging, clerical, and landing duties, are from 8 to 4 for eight months, and 9 to 4 for four months of the year, thus giving an average of 7⅔ hours per day; but officers superintending the discharge and loading of vessels have been required to be in attendance under certain circumstances from 6 a.m. to 6 p.m. during the summer, and from 8 a.m. to 4 p.m during the winter.

13. We desire to call particular attention to the number of hours during which officers on waterguard duty are employed, which very considerably exceed those of any other civil servants. On some stations they are required to be on duty without sleep for every alternate 24 hours during the year; on others, the attendance required is, on one day, from 8 or 9 a.m. till dusk; on the second day, for 24 consecutive hours, the third day off, and so on. The officers are thus employed on Sundays and bank holidays as on week days, the hours of labour averaging from 75 to 84 per week. With reference to these hours, we submit the following extract from the report of the Horsfall Committee of the House of Commons in 1862, c. 58:—

> "With regard to the official hours of attendance, your Committee deem it right to remark that they consider eight consecutive hours per day during the summer months sufficient; recently, however, the examining or landing officers of the Customs Department have very frequently been compelled to attend during 12 consecutive hours without any interval for rest or meals, and without extra remuneration. This is a great hardship. Those officers' homes are several miles distant from their places of business, and, in order that they may be in attendance at

Memorials.

" 6 a.m. they must rise at 4 a.m., for they must " breakfast before they leave. In addition, they " are compelled to make occasional night and " Sunday visits to the docks; moreover, while so " much additional work has been thrown upon " them, their pecuniary prospects have been very " much reduced. Your Committee are of opinion " that this is a case well worthy the consideration " of the Government. The officers ought not to " be compelled to be in attendance longer than " eight hours per day, and they should be relieved " of night and Sunday visits; where such atten- " dance is absolutely necessary, other arrange- " ments should be made in order to provide for it. " The cost will be trifling when compared with " the injury inflicted on an already overworked " body of officers."

Although the practice of employing officers for more than eight hours per day was thus condemned, not only does this practice still exist, but alternate 24 hours' stations have been introduced and the number increased within the last few years.

14. The enumeration of examining officers' duties without some reference to the conditions under which they are performed, would convey but an inadequate idea of their difficult and onerous nature. On the waterguard the officers are subjected to exposure, both by night and day, in open boats on the river, and are required to examine goods in barges, and to board vessels, often under dangerous circumstances.

15. On landing duty the officers examine and weigh goods on quays, wharves, and in open sheds; and on gauging duty, not only are the officers similarly exposed, but a great part of the work is performed in damp, badly-ventilated warehouses and underground vaults, where the atmosphere is vitiated with noxious gases, and where artificial light is in constant use, much to the detriment of the health and to the injury of the eyesight of the officers employed. The clerical duties of examining officers are also frequently discharged under conditions incompatible with comfort and dangerous to health. On the introduction of the new system in 1882, the clerical work of the warehousing departments was transferred from the Custom House to offices in connexion with the various bonded warehouses. These offices were approved without due regard to the health of officers, the convenience of merchants, or the safety of official books. Since that time, in consequence of numerous complaints, often taking the form of petitions to the authorities, a considerable number of these offices have either been enlarged, or abandoned for more suitable premises. Notwithstanding the fact that a question was asked in the House of Commons by Mr. Lawson on 4th June 1886, and the unsatisfactory nature of the accommodation admitted, many offices are still in existence which are unfit for occupation.

16. Promotion to the position of examining officer takes places partly by selection and partly by departmental competitive examination, but advancement from the 2nd to the 1st class in the grade is wholly by selection, some regard being paid to seniority. The lists of officers, however, are now arranged alphabetically, and it is feared that this affords some facility for favouritism as regards promotion. This fear is increased by the fact that each officer receives his character from the inspector of his district, with whom he seldom comes in contact, and who is therefore almost wholly dependent on the surveyor under whom the officer serves for the knowledge upon which the character is founded. We would therefore suggest that an officer's character should be fixed, as heretofore, by the vote of all the superiors who may have a knowledge of him during some period of his official career. If, under this system, the officer should receive an unfavourable character, the fact should be communicated to him, in order that he may have an opportunity of explaining any unfair circumstance that may have militated against him.

17. Since 1882 a considerable number of 2nd class examining officers from the outports have been promoted to the 1st class in London, while only one similar promotion has taken place from London to the outports. This departure from the previous system under which the higher positions in London were reserved for the officers of the port will, if continued, unfairly lessen their prospects of promotion. Should it be considered desirable, however, for promotion to be general throughout the United Kingdom, we would submit that the London officers should either receive higher salaries, or such travelling allowances as would at least place them on an equality with examining officers at the outports.

18. The various offices and bonded warehouses of the port of London are spread over a very wide area, lying between Victoria Station and the Royal Albert Docks (a distance of 14 miles), and as officers are often removed from one station to another, from one to two or more hours daily are necessarily spent in travelling. This is but one of the numerous disadvantages under which London examining officers suffer, and for which they receive no compensation whatever, notwithstanding the following principle laid down by the Playfair Commission in their third Report:—". . . we are " clearly of opinion that no officer should be out of " pocket by reason of extraordinary expenditure for " official purposes, except where the salary may have " been fixed with a special view of including such " expenses."

19. The salary of a 2nd class examining officer in London can hardly have been fixed with a special view of including additional expenses, for although the minimum salaries of surveyors and 1st class examining officers are higher in London than at the outports, the salary of a 2nd class examining officer is exactly the same throughout the United Kingdom. Until recent years the London 2nd class examining officers had a higher minimum salary, and we strongly contend that these officers are entitled to increased remuneration in consideration of the higher rents and travelling expenses involved in residence in London.

20. With reference to the system of promotion, it should be stated that considerable discontent exists throughout the service in consequence of the reduction of the surveyorships. The following tabular statement will show the extent of this reduction:

I.—Classification in January 1882, prior to the new system—		
Superior positions equivalent to surveyorships.		46
Positions equivalent to examining officerships.		286
or a proportion of 1 to 6·2.		
II.—Classification approved in March 1882—		
Surveyorships - - -		75
Examining officers, 1st class	120	
Do. 2nd class	430	
		550
or a proportion of 1 to 7·3.		
III.—Present classification—		
Surveyors - - - -		60
1st class examining officers -	120	
2nd class do. -	302	
Assistant do. -	160	
		582
or a proportion of 1 to 9·7.		

21. The above figures cannot fail to illustrate the great injury inflicted on the prospects of the examining officers, by the considerable departure from the classification of 1882, which we presume was approved with due attention to the requirements and efficiency of the department. We contend that such a reduction, for which no compensation has been given, practically amounts to a breach of faith with the officers. A memorial with reference to this grievance was forwarded to the Lords Commissioners of Her Majesty's Treasury in July 1885. The reply received was to the effect that no definite answer to the memorial could be given, as the subject would shortly be considered by the Royal Commission on Civil Establishments. This serious reduction has almost brought promotion to a standstill, and, while lessening control, has considerably increased the responsibilities of examining officers, many of whom are employed without additional salary on work of supervision to which higher division clerks with duty pay were appointed under the recommendation of the Playfair Commission, and to which surveyors were appointed in 1882.

22. As evidence of inadequate control, we may mention the failure to arrive at a satisfactory result in the attempt at stocktaking in 1885. The numerous errors then discovered in the accounts were due partly to the insufficient check exercised over the work of the officers, and partly to the fact that in many of the offices the staff was not large enough to do the work efficiently. Again, on the rummaging or waterguard duty, the staff is, we contend, altogether unequal to the amount and importance of the duties to be performed. One of the consequences of this is that a perfect rummage of every ship arriving in port is an utter impossibility, a

fact which demands serious attention, seeing that upon this rummage largely depends the security of the revenue. On gauging duty, where dutiable goods alone are dealt with, the deficiency of control is still more serious, as undiscovered errors in determining the quantity for duty, would directly affect the revenue. The necessity for complete supervision on operation floors, where there are many opportunities for fraud, is also unquestionable.

23. It is desirable, in the interests of the public service, that attention should be drawn to the fact that in the Customs Department practical officers are debarred from rising to collectorships.

24. In the Excise the collectorships belong exclusively to the out-door service, a system approved by the Playfair Commission in their Third Report, which states that "the office of collector requires a practical "knowledge and experience of duties which clerks "who have not passed through the various ranks in the "out-door branch have no opportunity of obtaining." In the same report the aforesaid Commissioners recommend the adoption of a similar system in the Customs. "We think, for instance, that it well deserves consider- "ration whether the important office of collector "should not be opened to the whole service, out-door "as well as in-door, in the same manner as post- "masterships above a certain value are thrown open "to the whole of the Post Office service;" and further, that such a course "would enable the Commissioners of "Customs to select from a larger body of experienced "officers the persons suited for the more important "posts."

25. Mr. Goulburn, a former chairman of the Board of Customs, in his evidence before that Commission, speaking of surveyors, stated that "some of them no "doubt would make good collectors, but they would "require to learn the bookwork." This objection cannot now be urged, as surveyors and examining officers are employed on clerical as well as practical duties.

26. The surveyors-general are almost exclusively drawn from the out-door department, so that it is an anomaly that officers in a grade superior to collectors, and having jurisdiction over them, should be drawn from a branch distinct from that which furnishes collectors.

27. Again, while instances may be cited of commis-missioners and secretaries in the Inland Revenue rising from the junior ranks, no like instances can be quoted in the Customs Service. We would submit that the practical officers of this department should not be debarred from rising to high offices of control, more especially as the great majority of the Board's decisions are based on reports from such officers.

28. Another defect incident to the present system of promotion is the retention of officers, chiefly in the higher positions of the service, to an age much beyond that recommended by the Commission of 1857 as a maximum for active service, As a result of this, important posts are often held by men who are incapacitated from age from occupying them to the public advantage; and further, legimitate promotion being greatly retarded, the chief stimulus to zeal and industry is kept at a minimum, much to the disadvantage of the department as a whole. The present system of superannuation was adopted on the Report of the Commission of 1857, and we would submit that the recommendation of that Commission to the effect that superannuation should be general at 60, and compulsory at 65 years of age, should be rigidly adhered to in the Customs Department.

29. As superannuation allowances are practically deferred pay, we would also suggest that the widows, children, or other dependants of those officers who die during active service, should be entitled to a gratuity or allowance, estimated on the salary received and the period of service.

In conclusion, we beg to submit a summary of this statement.

(1.) That the salaries of examining officers should rise from 110*l.* by 10*l.* per annum to 350*l.*, but that no officer should attain to a higher salary than 220*l.* without fully satisfying the requirements specified in paragraph 4 of this statement.

(2.) That when an examining officer performs the duties of a higher grade he should receive compensation for his increased responsibility.

(3.) That examining officers in London should receive higher salaries or travelling allowances, in order to place them upon an equality with those at the outports.

(4.) That examining officers should in no case be employed for more than eight hours per day without additional remuneration.

(5.) That the collectorships of customs should be thrown open to the out-door department.

(6.) That retirement should be general at 60, and compulsory at 65 years of age.

(7.) That the Superannuation Act of 1859 be modified to provide for the widows or other dependants of officers who die during active service.

We respectfully submit this statement for the consideration of your Commission, and shall be prepared to support and amplify the same by the evidence of our representatives.

November 1888.

Committee.

CUSTOMS DEPARTMENT.

Out-door Officers.

A Statement prepared by the Out-door Officers Central Committee, respectfully submitted for the consideration of the Civil Establishments Inquiry Commission.

Classification and salaries prior to Parliamentary Inquiry of 1881:—

London and Liverpool:—
First class, 438 - - 85*l.* by 1*l.* 10*s.* to 100*l.*
Second Class, 586 - 70*l.* by 1*l.* to 80*l.*
Outports:—
First Class, 377 - - 75*l.* by 1*l.* to 85*l.*
Second Class, 740 - 55*l.* by 1*l.* to 65*l.*

Mr. Norwood's Committee, appointed in May of that year, recommended a uniform scale of pay throughout the kingdom, and the salaries were readjusted as shown in the following table:—

Establishment and salaries for the financial year 1888–89:—
First Class, 548 - - 85*l.* by 1*l.* 10*s.* to 100*l.*
Second Class, 821 - - 55*l.* by 1*l.* 10*s.* to 80*l.*

As it is difficult for any one unacquainted with the work of the Customs Out-door Department to form a just estimate of the nature and importance of the services rendered by Out-door Officers, and as the representations made by the late Chairman of the Board in evidence before the Playfair Commission are misleading and tend to depreciate the value of these services, we venture to submit a detailed statement of the duties of the Out-door Officers in the Port of London, which, as "the duties and responsi- "bilities of these Officers are substantially the same, "whether stationed in London, Liverpool, or the out- "ports,"* may be taken as representative.

The London staff is divided into two sections, Gravesend and London proper.

Gravesend is the boarding station for the port, and about 30 per cent. of the Officers are attached to it. Though the nominal residence is at Gravesend, very little of the Officer's time is spent there, and he is frequently absent on duty for days, and even weeks at a time. Under the most

* Report of Mr. Norwood's Committee.

Memorials.

favourable circumstances he has not the privilege of spending the night at home until he has been 24 hours on duty, and even then he is liable to be called upon if required. He is principally occupied in guarding vessels in transit up and down the river, or in taking account of cargoes as they are shipped or unshipped.

On the arrival of a vessel at Gravesend from foreign (say a steamer from Hamburg or Rotterdam) two or three Officers are sent on board. Their charge is "to prevent "any goods being unshipped without proper authority." They are required to be continually on the alert; to check all goods delivered with their delivery orders, and to make out the necessary documents to accompany them to the various stations for which they are entered (except in the case of such free goods as are examined and cleared alongside, such goods being in charge of the officer until cleared by the visiting examining officer); to record the required tally account; to obtain the lightermen's signatures; and to prevent any unentered goods from being illicitly delivered. The efficient performance of this duty requires attention, quickness, and tact, and its importance will be apparent when it is borne in mind that unentered packages, if once allowed by the inattention of the Officers to be delivered into craft, which are usually in charge of the lightermen only, may easily escape without detection. In the case also of dutiable goods for landing, goods for transhipment, and goods exported under bond, the safety of the revenue is largely dependent on the correctness of the boarded Officer's account.

The hours of these Officers are longer than those of any other servants of the Crown. The legal time for the discharge of vessels during eight months of the year is from 6 a.m. to 6 p.m., and after 12 hours' active work the Officers (if two or three) are required to keep watch in turn during the night; thus the day's work of a boarded Officer is very frequently from 16 to 18 hours. Even the nominally shorter hours for discharging during the winter four months are very little relief, as the regulations require all the Officers to be on deck from 6 to 6, even when the vessel is not working, and to keep watch during the night as before stated. They are also compelled to remain on duty nearly every Sunday, and 1s. is the only additional remuneration they receive for that day's service.

We would respectfully beg to call the attention of your Commission to the fact that, in the opinion of every superior Officer who has any practical knowledge of the boarding duty, and of the hardships and inconveniences which it entails, the Crown, apart from the question of salary, exacts more from the Out-door Officers than can be reasonably expected. Mr. Hunt (late Surveyor-General) candidly admitted this in his evidence before the Norwood Committee.

With a view to remedy this hardship, we beg respectfully to suggest that, when practicable, the night watch be kept by extra Out-door Officers, the established Out-door Officers still remaining on board, and, therefore, available for the due protection of the revenue, should the necessity arise.

We now come to describe the duties of the Out-door Officers stationed at the various docks, wharves, and warehouses, and commonly known as London Officers.

The several docks and wharves are for Customs purposes divided into stations, each under the supervision of a special Examining Officer. These stations are subdivided into smaller ones in charge of Out-door Officers, who are responsible for carrying out the regulations of the service, in so far as the landing and immediate removal of goods are concerned. The extent of this removal business may be judged from the fact that teas are never brought to account in the lower docks, and yet the landing of from 20,000 to 40,000 packages in a couple of days is quite a common occurrence. In conformity with sec. 50 of the Customs Consolidation Act, every ship bringing goods to the United Kingdom must be reported at the Custom House. The report, according to the Revenue Code, par. 232, "contains particulars of the entire cargo and is "the foundation of all Customs accounts." It is filed in the Long Room and a certified copy issued for the information and use of the Officers. The consignees of goods are also compelled to make entry of the same before delivery. This entry gives the marks, numbers, and description of packages and goods, with their value, and, in most instances, the weight. It is sent to the station where the vessel is discharging, and is the Examining Officer's authority for dealing with the goods specified therein; a copy of this entry, in the shape of a landing or delivery order, addressed to the Out-door Officer, is issued in most instances. The copy of report, with the free entries, and delivery orders, are for the most part in the custody of the station Out-door Officer. He compares the entries or delivery orders with the items on the report, noting their number and date and any discrepancies; informs the weighing or gauging Examining Officer at the station where duty goods specified in the delivery orders are to be brought to account whether they agree with the report (if not they are liable to detention); issues the necessary documents to accompany all goods removed to other stations or for transhipment, and countersigns the warehouse-keeper's passes; checks the weights on free entries with those furnished by the dock companies, and prepares amended returns for statistical purposes, if necessary.

When the Examining Officer has completed his examination of the free goods, and particulars of the dutiable goods brought to account are to hand, the station Officer finally checks the report and tabulates the discrepancies, bringing them under the notice of the special Examining Officer and Surveyor, who, if not satisfied, call upon the brokers to amend their report. Having collected all the books and papers connected with the ship and properly arranged them, they are transmitted to the Custom House for final jerquing.

In the export work of the port the duties devolving upon the Out-door Officers are even more important than those already described. Examining Officers employed on this duty are termed "searchers," and an Out-door Officer, called assistant searcher, is stationed in each searcher's office. His duties are to receive and keep an account of all export documents, and when complete to forward them to the proper departments in the Custom House. In the absence of the searcher he examines dutiable goods for ships' stores, and is responsible for the custody of all samples of beer and other drawback goods drawn on behalf of the Inland Revenue Department. Evidence of the due shipment of such goods, as well as all removals under bond, is for the most part supplied by Out-door Officers, who, in addition to keeping an account of tobacco, spirits, and transhipments, are to scrutinize cargo books, brokers' and dock companies' sheets, as a check upon the shipment of all dutiable goods, procuring and countersigning the mate's receipt for each parcel. It will, therefore, be seen that in practice (apart from the examination of goods) the bulk of the current work, whether on import or export stations, is performed by Out-door Officers.

In addition to the duties enumerated, the whole sampling accounts of tobacco in London are kept by Out-door Officers, and by them furnished to the Clerical Examining Officers. All but a small proportion of samples are drawn by their authority, and they are solely responsible that before a second or subsequent sample is drawn the previous one, if not duty paid, is returned and reweighed. The important nature of this work will become apparent when the duty involved in these transactions reaches a daily average of 200*l.* in the Victoria Dock alone.

A small per-centage of the staff, mostly men of long service, are employed as lockers; their chief duties consist of locking and unlocking the various bonded vaults and warehouses and in checking receipts and deliveries. In addition, about 70 are performing the duties of Examining Officers more or less continuously.

In his evidence before the Playfair Commission, the then Chairman of the Board summarised these duties as follows:—

"Except when acting in a superior capacity, Out-door Officers are subject to the constant check and supervision of Examining Officers, and their duties are simple and easily performed."

Again,

"The principal duty of an Out-door Officer is simply the protection of the revenue; when entrusted with higher duties he is either acting in a superior capacity or subject to the constant check and supervision of a superior officer."

Presumably, the salary is based upon the official estimate, and, such being the case, we submit that it is not commensurate with the duties performed.

The increment received by Out-door Officers is unquestionably very small, and it is in this direction that we would beg the consideration of your Commission. Under the present system it takes 27 years to reach the maximum salary, even if no stoppage occurs by reason of the classification; and when the smallness of this maximum is borne in mind it compares very unfavourably with every other section of the Civil Service to which admission is obtained by open competition.

The proposal we venture to submit is—(1) That the annual increment be increased to 3*l.* (2) That classification be abolished in accordance with the recommendation of the Playfair Commission, and the views expressed by Mr. Hunt before the Norwood Committee.

Attempts have been made to justify the classification on the ground that it tends to promote zeal, and thereby to

increase the efficiency of the service. We submit that this argument is wholly baseless, and that an artificial barrier which retards the advancement of the zealous and indifferent alike, produces the very opposite result. Further, the Board reserve to themselves the right of stopping an Officer's increment at any time, and can in this very effectual manner express their disapproval of negligence and misconduct.

With regard to the promotion more immediately open to our grade, we beg to submit the following table, showing a marked diminution in the number and value of appointments. This table may perhaps contain some slight inaccuracies which our Honourable Board, from their more exact sources of information, may be in a position to correct.

Year.	To Out-door Officer 1st Class.	To Assistant Examining Officer.	To Examining Officer 2nd Class.
1883	52	—	61
1884	24	—	59
1885	22	—	26
1886	56	61	28*
1887	92	68	22†
1888	17	42	7

* Includes 2 promotions from Assistant Class.
† Includes 6 promotions from Assistant Class.

So late as 1885 the only channel of promotion open to Out-door Officers was to the grade of Examining Officer, salary 110*l.* to 300*l.* In that year a new intermediate class was created, styled "Assistant Examining Officer," salary 100*l.* to 150*l.* The creation of this new class has already caused a very material reduction in the number of Second Class Examining Officers, and the encroachments appear likely to continue for a considerable period. We would respectfully direct attention to the serious injury which this change inflicts on the prospects of Out-door Officers, who on entering the service confidently looked forward to obtaining the appointment of Second Class Examining Officer in the ordinary course. This latter class is recruited half by competition and half by selection, a system we consider on the whole satisfactory, but we are of opinion that the result of such examinations, together with the marks obtained in each subject, should be notified to every candidate, so that those who were unsuccessful could direct their future studies accordingly. While we are unable to see that the interests of the public service could be thereby in any way jeopardised, such a concession would remove the considerable dissatisfaction engendered by the present system of withholding this information.

With regard to the Assistant Class, which is at present filled by selection alone, we would respectfully suggest that such selection be governed by seniority coupled with fitness.

The dearth of promotion in the Department seems to have occupied the attention of the Playfair Commission, inasmuch as they recommended that "advantage should "be taken of every opportunity to widen its area." A very gratifying step in this direction was taken in 1886 by our Honourable Board in the opening up of 20 of the vacancies for out-port clerk to the subordinate Officers by means of a limited competition With a view to its further extension, we have recently memorialised their Honours that all vacancies in the clerical establishment of the Department may be filled in the same manner. A copy of this memorial, and of the Board's reply, is enclosed for the information of your Commission. It may not be out of place to here advert to the fact that a number of Copyists, who are required to pass a more elementary entrance examination than Out-door Officers, have recently received appointments as Out-port Clerks, and, as far as we are aware, without further examination.

It has long been the practice throughout the United Kingdom to employ Out-door Officers in the capacity of Examining Officers for very lengthened periods, as much as 10 or 12 years in some instances, additional remuneration at the rate of 2*d.* an hour, but not exceeding 1*s.* per day, being allowed in most instances when so employed. The mobility attaching to this system probably gives it some advantages over the new assistant class. Its manifest unfairness, however, renders its abolition highly desirable. At the present time there are Officers of comparatively short service who are employed as "Acting Examining Officers," while their seniors, men of equal capacity, are shut out, simply because the exigencies of the port at which an Officer is stationed practically determine whether he be so employed, utterly irrespective of his relative capabilities. We would urge that acting men be merged in the assistant class, and that in the event of exceptional pressure at any time arising, such, for instance, as might occur in London in the height of the tea or dried fruit season, Out-door Officers perform so much of the scale work on their respective stations as may be requisite to relieve such pressure, and as a purely temporary expedient.

As the hours of employment vary considerably at different ports, those at water-guard stations being very irregular and often prolonged to extremes, we would venture to suggest that Officers be afforded an opportunity of removing at their own request and expense, from water-guard to warehousing ports, where the hours are usually fairly regular. This concession, while conferring a substantial boon upon the Officers, would undoubtedly tend to increase the efficiency of the service.

The area of such regular employment might be extended by gradually discontinuing the employment of copyists throughout the Department and substituting Out-door Officers.

We trust that your Commission will consider the advisability of recommending the compulsory retirement of all Officers at 60 years of age, and that as the salaries are assessed with due regard to superannuation allowances, the question of making provision for the wives and families of Officers dying in harness, proportionate to the accumulation of their deferred pay, may receive your attention.

The final point we venture to submit for consideration, should it fall within the scope of your Commission, is the system under which the characters assigned to Out-door Officers are determined. In the evidence adduced before the Playfair Commission it is set forth as follows: "The "Board take the matter into consideration every year; "each Officer's name is brought up in turn, and his "character and conduct during the 12 months are discussed, and the Surveyor under whom he has served is "held responsible for the character he gives," concerning which absolute secrecy is observed. Such character may possibly be "unsatisfactory," and yet the Officer remains in utter ignorance. As a rule, it is only when he applies for permission to attend some departmental competition that the information is communicated. In a mercantile or banking house an employée who failed to give satisfaction would be cautioned forthwith, and we venture to hope that this principle may be introduced into the Customs service. If deemed expedient, a plan analogous to the Excise system might be adopted. Let every Officer be supplied with a journal similar to those issued in London and Liverpool, and let all derelictions of duty be noted therein, copies of such notifications being sent to the Board at the time. All charges, whether investigated by their Honours or not, to be deemed substantiated unless appealed against by the Officer; the period during which such cautions, censures, or reprimands be deemed a bar to promotion not to exceed two years. We are constrained to make this last proposal in the belief that penal and indefinite disability, precluding all reasonable hope of advancement, tends to demoralise the officer and reacts to the detriment of the public service.

In conclusion, we beg to restate briefly the views we advocate:

I. That the salary is not assessed on a fair estimate of the duties performed; that it be increased by raising the annual increment to 3*l.*; and that classification be abolished.

II. That promotion to the rank of Second Class Examining Officer be half by competition and half by selection; that the clerical staff be recruited by competition alone; that promotion to the new assistant class be by selection governed by seniority and fitness.

III. That the system of employing Out-door Officers as Examining Officers for lengthened periods when the pressure of work is only normal is manifestly unfair, and as a system, should be discontinued, and such employment only resorted to to meet a temporary pressure.

IV. That Officers serving at boarding or patrol stations be afforded facilities for removing to warehousing ports as vacancies occur, and at their own expense, and that the employment of Copyists be gradually discontinued.

V. That retirement at the age of 60 be compulsory, and that some provision be made for the wives and families of men dying in harness.

VI. That any alteration in our hours of labour shall be in the nature of a reduction of those hours where they are excessive.

VII. That the system of awarding characters be modified and assimilated with the practice prevailing in the Excise and other Government Departments.

Memorials.

Copy of Petition to the Honourable Board praying that Vacancies in the Clerical Establishment of the Department may be filled by Limited Competition amongst the Subordinate Officers.

We, the undersigned Out-door Officers of Customs, respectfully request that your Honours will be pleased to take into your favourable consideration the advisability of filling the vacancies in the Clerical Establishment of the Department by limited competition amongst the subordinate Officers.

Under the present organisation the number of subordinate Officers is about 2,428, and the number of superior appointments (Examining Officers and Surveyors) to which they are eligible for promotion, 1,438, thus rendering it inevitable that the greater part of a lifetime must elapse before, in the ordinary course of service, a subordinate can attain to any superior position.

We would venture to call your Honours' attention to the fact that in the Inland Revenue Department, where the number of subordinate Officers is about 900, and the number of superiors 3,435, the Commissioners have already obtained the sanction of the Treasury to a similar scheme.

We are aware that it has been urged that the subordinate Officers of the Out-door Department are not possessed of the necessary educational qualifications for the efficient discharge of the responsible duties required from the superiors of the In-door Branch, but we would respectfully submit that this argument does not apply to those Officers who have entered the Service by competitive examination. The men who at present enter the Service are, in the main, drawn from the same ranks of society that supply candidates for Lower Division Clerkships and Assistants of Excise, and the fact that the entrance examination is more elementary does not by any means prove that the men are intellectually inferior. Men present themselves as candidates for appointments in the Customs with the understanding that after three years they will be afforded an opportunity to compete for appointments superior in remuneration to those obtainable in the Lower Division or Inland Revenue after a like period of service. Many of these, on discovering their mistake, successfully compete both for the Excise and Lower Division, thereby proving the truth of our statement, and it may be pointed out that the reason these transfers are not more frequent is owing to the fact that the men are disqualified on account of age.

The result of the examination for 30 out-port clerkships, 20 of which were, through the kind intervention of your Honours, reserved for limited competition amongst the subordinate Officers of the Out-door Department, is a further proof of the truth of our contention. Comparing the aggregate number of marks obtained by the 10 successful candidates in the open competition with those awarded to the first 10 in the limited competition, it will be seen that the former have the advantage; a further scrutiny, however, will reveal the fact that in those subjects which require most general intelligence, such as English composition and indexing, the Out-door Officers have the advantage. The falling off of the aggregate of the marks obtained by the Out-door Officers is accounted for by the fact that such subjects as copying manuscript and book-keeping, in which the candidates for the open competition had the advantage of a careful course of training, did not form part of the only departmental examination open to subordinate Officers, and the time between the announcement and the holding of the examination was too short to enable them to attain the necessary proficiency. It is also obvious that an Out-door Officer, whose ordinary duties often occupy 12 hours per day, is placed at a decided disadvantage in competing with a youth who has been devoting his whole time to preparation.

We submit that the knowledge of the working of the Department acquired by an Officer in the course of five or six years' service would enable him to perform the ordinary duties of a clerk more efficiently than a youth fresh from school, who would necessarily require some time to enable him to grasp the nature of the matters with which he would have to deal.

If proof be needed of the ability of the Out-door Officers to perform clerical work we may cite the fact that men who were formally Out-door Officers are now performing the greater part of the clerical work done by Lower Division Clerks prior to the re-organisation of 1882, and are giving entire satisfaction.

We wish to impress upon your Honours that we are prepared to qualify ourselves to reach any educational standard that may be thought necessary, and that in the event of the requisite number failing to reach this standard we shall be quite satisfied that the system of open competition be resorted to in filling the remaining vacancies.

In conclusion, we submit that the opening of this new channel of promotion would in a measure tend to allay the existing discontent, and conduce to the greater efficiency of the service.

Reply.

Board's Order, 5th February 1887.

"The Office Inspector will cause the applicants to be informed that, whilst the Board do not admit the accuracy of some of the statements and figures contained in the memorial, the Board are in accord with the general tenour of its prayer, as is shown by the action of the Board in regard to recent clerical vacancies at the out-ports, which resulted in 20 out of 30 of such vacancies being placed by the Lords of the Treasury at the disposal of the Board, and by such places being finally filled by successful competitors from the ranks of Out-door Officers.

"The Inspector will further inform the memoralists that in their report of last year to the Treasury the Board made reference to their then previously made proposals in favour of recruiting the clerical out-ports service to some extent from the out-door ranks, and that as vacancies of second class clerk become available the Board will take the question again into consideration."

CUSTOMS DEPARTMENT.—OUTDOOR OFFICERS.

A Statement prepared by the Outdoor Officers stationed at the Port of Liverpool, respectfully submitted for the consideration of the Civil Establishments Inquiry Commission.

The situation of Outdoor Officer is filled up by competitive examination. Candidates must be over 19 and under 25 years of age, and it is necessary that they should have received a thorough English education, otherwise they would have but a small chance of success in these days of keen competition.

Salaries.

There are at present two classes of Outdoor Officers—the 2nd Class, commencing with a salary of 55*l.* per annum, and rising, by annual increments of 1*l.* 10*s.*, to 80*l.*; the 1st Class commencing at 85*l.*, and rising by 1*l.* 10*s.* to 100*l.*

As the services of Outdoor Officers have hitherto been undervalued, they having been described as irresponsible and "simple and easily performed" (see evidence of Chairman of Board before Playfair Commission), and as this has been put forward as a justification of the smallness of our salaries, we beg to submit the following brief statement of the duties performed by Outdoor Officers in Liverpool.

Our duties might conveniently be arranged under five heads, viz.—Boarding, Landing, Export, Warehousing, and Clerical.

Boarding duty.

On boarding duty about 35 of the junior officers are constantly employed. It is usual to place two officers on board of each vessel coming from foreign ports where tobacco and other high duty goods are easily obtainable. They are compelled to be continually on the alert, and to keep a vigilant watch on the ship's deck from 6 a.m. to 6 p.m. But their duty for the day does not end here, as each officer has further to perform six hours of a similar duty during the night, making a total of 18 hours' service out of every 24. Should the ship on which they are boarded enter dock during the night, both officers have to be on deck from the time she gets

under weigh until she is moored and the crew have gone on shore. It therefore often happens that they have to do about 40 hours' duty in 48 consecutive hours. The duration of an officer's detention on board varies from two to seven days, during which time there is no relaxation from duty, and the privilege of a night at home after many days' compulsory absence depends entirely upon the exigencies of the service. It is the duty of an outdoor officer boarded to examine all packages of seamen's effects about to be landed, with the view to the prevention of smuggling. When dutiable goods, especially tobacco or spirits, form part of the cargo, the boarded officers have to exercise great vigilance to prevent any tampering or undue interference with such goods in the ship's hold during discharge. They are compelled to be on duty every Sunday, and receive no extra remuneration for the day's service beyond the sum of one shilling. These officers are also unable to take advantage of the Bank Holidays allowed Civil servants by Act of Parliament.

We respectfully beg to submit that the number of hours' duty exacted from these officers is excessive, and that the small salary paid them is no adequate remuneration for the performance of such laborious duties at the risk of permanent injury to health. We are of opinion that the whole "boarding" system should be modified, with a view to removing the grievances complained of, and that the duty could be as efficiently and economically performed by a selected staff of naval pensioners, who, from the nature of their previous employment, would be better suited to the requirements of this duty than youths fresh from school.

arantine. In connexion with this branch of our duties might be mentioned the fact that a number of Outdoor Officers, stationed at the various Pierheads, are now entrusted with the important and responsible duty of enforcing the Quarantine regulations. Until recently only officers of superior grades have been considered competent to perform this duty.

ding export y. The duties of Landing and Export Officers are so closely allied that on many stations both duties are performed by the same officers.

Outdoor Officers employed upon landing duty are stationed at the sheds or discharging berths of import ships. They superintend the landing of cargoes, paying particular attention to the safe deposit of all dutiable goods in the transit sheds, the keys of which are under their charge. They also assist in the examination of free goods and check all deliveries to prevent the surreptitious removal of any packages that might be illicit, unentered, or unexamined. The safe custody of all dutiable goods, and the delivery of goods in transit, are entrusted to Outdoor Officers employed on this duty.

In connexion with the export department, Outdoor Officers take an account of all bonded and transit goods received for shipment. When these goods have been passed by the Examining Officer, who on this duty is termed a "Searcher," it is the duty of Outdoor Officers to see them duly shipped, and obtain a receipt from the master or mate for each parcel of such goods put on board. All ship's stores delivered from bond in this Port are examined and passed at the ship's side by an Outdoor Officer, and in case of no Examining Officer belonging to the Waterguard Department being able to immediately visit the ship the Outdoor Officer proceeds on board and places the stores under seal in some place of security.

Apart from the examination of goods, nearly all the work in connexion with imports and exports is performed by Outdoor Officers.

On the various dock stations Outdoor Officers are employed as Assistant-Registrars. Their duties in this capacity are purely clerical, and of a rather important nature. They book accounts of all overtime made on the station, keeping the amounts for each individual and each class separate. From these accounts they furnish a Quarterly Return of the overtime earnings of each officer for the purposes of Income-tax assessment. They book all ship's reports, and see that all entries, warrants, and other documents relating to the discharge of vessels are duly sent in and forwarded to the Custom House, besides much similar work of a purely clerical and technical nature. These duties were performed a few years ago by Registrars getting over 300*l.* per annum, and now created 3rd Class Surveyors.

The hours of officers employed on landing duty prior to 8th October last were from 8 a.m. to 4 p.m. from March 1st to October 31st, and from 9 a.m. to 4 p.m. during the four remaining months.

The hours of officers employed exclusively on export duty prior to 8th October last were from 9 a.m. to 5 p.m. in summer, and 9 a.m. to 4 p.m. in winter. On 24th September last an order was issued by the Hon. Board of Customs increasing our hours on these duties by 50 per cent. without any promise of extra remuneration. We beg to draw the attention of your Commission to the annexed Petition on the subject addressed to their Honours; and in accord with its argument and prayer, to submit that Outdoor Officers should not be employed for more than 8 hours per day in summer, and 7 hours per day in winter, without extra remuneration. Memorials.

Warehousing duty. The Outdoor Officers employed on this duty are placed in charge of groups of bonded warehouses. They are responsible for the safe custody and proper delivery of the goods warehoused, the duty value of which generally amounts to many thousands of pounds. Until recently, Outdoor Officers were put in charge of the warehouses where wines and spirits are bottled for exportation, and ship's stores. The duties of officers in such warehouses are very important, as they are held responsible for the proper balance of the accounts of wines and spirits operated upon. They prevent the improper labelling of bottles, see them duly packed in cases, and book all particulars in connection with each operation, These particulars are afterwards copied into the registers and form the basis of the future Customs account. Owing to recent alterations, by which an Outdoor Officer is put in charge of a group of warehouses instead of one only, these bottling operations are now performed under the supervision of "Acting Examining Officers," who are Outdoor Officers receiving one shilling per day extra remuneration for performing the duties of Examining Officers.

The hours of officers on warehousing duty were formerly from 8 a.m. to 4 p.m. in summer, and 9 a.m. to 4 p.m. in winter. A local order was issued a few years ago, extending the hours during the eight summer months to 5 p.m., an extension for which the officers have never yet received any compensation.

Clerical duty. Prior to 1882 the clerical work of this department in connexion with the warehousing and bonding of goods was performed by Lower Division Clerks. Owing to reorganisation in that year the duty was transferred to the Outdoor Department, and of this work Outdoor Officers now perform about one-half. Nearly all the ledgers are kept by them. They prepare for transmission to the Accountant and Controller-General a monthly return of all goods delivered out of bond for home consumption, specifying the amount of duty paid on each class of goods. They also furnish a return of British spirits duty paid out of Customs' warehouses for the information of the Accountant and Controller-General of Inland Revenue. All despatches for bonded goods removed are made out by Outdoor Officers, who also make out receipts for bonded goods received. The particulars of transactions relative to the removal of bonded goods from one warehouse to another are scheduled by Outdoor Officers, and forwarded for the information of the Statistical Department. An account of all goods removed under bond is also kept by Outdoor Officers, who from time to time check and compare all certificates of receipt with the advised quantities, and in case of the non-production of the goods, or of any excessive loss in transit, report the circumstances to their superior officer in order that immediate steps may be taken for the security of the revenue.

Of late another responsibility in connexion with this duty has been imposed upon Outdoor Officers, viz., taking stock in the various bonded vaults. This is one of the most important and responsible duties performed by officers of any grade in the whole Customs service. The particulars of the goods in stock have to be carefully extracted from the registers, and compared with the stock found in the warehouses, and any deficiency noted and reported. The registers and ledgers have then to be balanced, and to perform this duty correctly considerable ability is required.

For such services they receive no extra remuneration, although the work they are now performing is in reality the work of Examining Officers. In short, the tendency in this department at present is to take advantage of the abilities of competitive Outdoor Officers, and place them upon superior duty, alongside of, and doing the same work as, Examining Officers getting from twice to three times as much salary, without granting them any extra remuneration.

We confidently assert that these duties cannot be correctly described as "simple and easily performed;" that they are of great importance and responsibility; and that they are of a superior nature to those nominally allotted to our class when the present rate of salary was assessed.

Memorials.

Increment and classification.

We therefore beg to submit that our salary is not an adequate remuneration for the duties we perform. At the present rate of increment it takes 27 years to reach the maximum, even if no barrier existed by reason of classification. This stoppage for an indefinite period at 80*l.* per annum after 17 years' service is a grievous hardship.

The insufficiency of our salary was admitted by Sir C. Du Cane, Chairman of the Board of Customs, who, in evidence before Mr. Norwood's Committee, in 1881, urged that it should be increased by 10*l.* per annum. We beg reference to the evidence of Mr. Pagden, late Collector of Customs at Bristol, before the same Committee relative to the inadequacy of the pay of Outdoor Officers. On the same occasion Mr. Hunt, late Surveyor-General of Customs, advocated the abolition of classification.

We, therefore, fervently hope that your Commission will be pleased to recommend that our annual increment be increased to 3*l.*, and that classification be abolished.

Promotion.

To us as Outdoor Officers it is of supreme importance that our position with respect to the superior grades should retain those advantages which induced us to enter the service. Within the last few years, however, our prospects of promotion, which when most of us entered this department were fairly satisfactory, have by departmental reorganisations been comparatively ruined.

Assistant examining officers.

Until recently the legitimate line of promotion from the grade of Outdoor Officer was to that of Examining Officer, with a salary of 110*l.* rising to 300*l.* Since 1885, however, an intermediate grade has been created, called Assistant Examining Officer, with a salary of 100*l.* rising to 150*l.* The number of Examining Officerships is being very seriously reduced as this new class is being filled up. The following departmental changes have further seriously damaged our prospects of promotion by reducing the number of superior appointments:—

(1) The transfer of a large number of bonded warehouses from the Customs to the Inland Revenue Department.

(2) The transfer to Outdoor Officers of duties previously performed by Examining Officers.

(3) The constant employment of about 20 per cent. of our staff in a superior capacity.

"Acting" system.

To this last injustice of appointing Outdoor Officers to perform superior duty for lengthened periods, and under the pretence that they are qualifying for promotion to a higher grade, we beg to draw your attention. At this Port about 60 Outdoor Officers are approved for "acting," while about 40 of these have been employed for years constantly in a capacity superior to that of Outdoor Officer.

The gradual reduction in the number of promotions from Outdoor Officer to Second Class Examining Officer may be seen from the following table, which we believe to be approximately correct:—

In the United Kingdom there were in Year—	Promotions.
1883 - - -	70 from O.D.O. to E.O.
1884 - - -	62 ,, ,, ,,
1885 - - -	28 ,, ,, ,,
1886 - - -	29 ,, ,, ,,
1887 - - -	15 ,, ,, ,,
1888 (to October 31st) -	4 ,, ,, ,,

In addition to the above a number of Outdoor Officers have been promoted to the position of Assistant Examining Officer during the years 1886–88, but we beg to point out that the creation of these new appointments is no compensation for the permanent reduction in the number of Examining Officerships.

For all these discouraging curtailments of our reasonable prospects of promotion we have received nothing in the nature of compensation.

We, therefore, suggest as some relief of the present chronic stagnation of promotion—

(1.) That acting as a system be abolished.

(2.) That if, in cases of emergency, Outdoor Officers are required to act in a superior capacity, they be paid two shillings per day extra remuneration.

(3.) That all vacancies for the situation of clerk in this department be reserved for competition among Outdoor Officers.

(4.) That Officers of the Outdoor Department be eligible for promotion to the situations of Collector and Superintendent.

Examinations.

We desire to express our satisfaction with the system by which 50 per cent. of the promotions from this grade to that of Examining Officer are by competitive examination, but would strongly urge that the examinations be limited to departmental subjects, so that undue advantage be not given to officers of short service. In submitting this alteration we beg to express the opinion that the test imposed upon us at entrance is sufficient guarantee of our educational acquirements.

Compulsory retirement.

We hope that your Commission will recommend the advisability of compulsory retirement after 40 years' service, and also the adoption of some scheme whereby the wives and families of officers dying in harness shall receive some allowance proportionate to the length of service and rank of the officer.

Character.

If it be within the scope of your Commission, we beg your consideration of the existing mode of dealing with the characters of Outdoor Officers. Under the present system an officer's character may be seriously injured without his knowledge. We unanimously protest against the practice of preferring charges against an officer without his being made aware of the particulars, and being afforded an opportunity of defence.

We therefore respectfully submit that a system similar to that prevailing in the Inland Revenue Department be adopted. We would also urge that no offence be a bar to promotion for a longer period than two years.

Pension.

With reference to recent proposals as to modification of superannuation terms, we strongly protest against any alteration in the pension scheme under which we entered the service being made applicable to those at present in this department. In conclusion, we beg to recapitulate our proposals as follows:—

(1.) That Outdoor Officers be exempted from boarding duty; that it be performed by a selected staff of naval pensioners; and that a less number of hours of duty per day be required of those appointed to it.

(2.) That Outdoor Officers be not employed for more than 8 hours per day in summer and 7 hours per day in winter without extra remuneration.

(3.) That our increment be increased to 3*l.*, and that classification be abolished.

(4.) That the "acting" system be abolished.

(5.) That all vacancies for clerks in this department be reserved for competition among Outdoor Officers.

(6.) That Officers of the Outdoor Department be eligible for promotion to the situations of Collector and Superintendent.

(7.) That the system by which 50 per cent. of all promotions to the rank of Examining Officer are by competitive examination be continued, but that the examinations be limited to departmental subjects.

(8.) That retirement should be compulsory after 40 years' service.

(9.) That the wives and families of officers dying in harness should receive some allowance proportionate to the rank and service of the officer.

(10.) That the system prevailing in the Inland Revenue with reference to the recording of characters and preferring of charges be adopted; and that no offence be a barrier to promotion for a longer period than two years.

(11.) That no alteration in the pension scheme under which we entered the service be made applicable to those at present in this Department.

We respectfully submit this Statement for the consideration of your Commission, and shall be glad to be favoured with an opportunity of amplifying and supporting it by the evidence of our Representatives.

(Signed)

COMMITTEE { T. J. HUGHES, R. BLAIN, R. F. TOYE, G. W. GLEADHILL, J. H. COOKE, P. J. FURLONG, D. H. PORTLEY, J. E. GEORGE, G. M. SMITH, } Representatives.

Memorials.

HONOURABLE SIRS, Liverpool, October, 1888.

WE, the undersigned Commissioned Officers of H.M. Customs at this Port, having received instructions (a copy of which is annexed) based upon your Honours' Order, No. 21201, dated 24th September, 1888, respectfully request that your Honours will be pleased favourably to consider the following Statement and Petition.

The effect of that Order during the week ended the 13th instant, has been to relieve the shipowners from payment of the sum of 55*l.* (exclusive of the further sum which would have been payable to Glut Outdoor Officers), representing 1,057 hours of service given by Commissioned Officers between the hours six and eight a.m., and between the hours four and six p.m. For this extra service no remuneration has been received.

As the hours of dock labour at this Port are, and have been for many years, from seven a.m. to five p.m., it is obvious that the attendance of Officers will be required during these hours throughout the year, each week of which will demand a number of hours' service at other than the normal hours, not less than the number given during the week ended 13th instant. It may further be stated that the shipowners now frequently require the transit sheds to be opened at six a.m., to prepare for the general work which begins at seven a.m., and to remain open until six p.m. for shipment or delivery—practices which tend to become general, and will considerably increase the average weekly service given by officers at other than the normal hours.

With reference to paragraph five of the annexed instructions, we beg to point out that the proposed "consideration" in time, to be given "at times of less pressure," and conditionally on the "exigencies of the Service," is not always practicable; that it has not been extended to the majority of officers whose attendance has been enforced under these instructions; and that it is inadequate, since leave of absence granted when not specially desired, and during the normal hours of labour, cannot be a just equivalent for service rendered at inconvenient and undesirable hours of the day or night.

As the Liverpool Docks and Customs Stations extend for more than seven miles along the riverside, and suitable residences cannot be found near them, it follows that officers must frequently live at considerable distances from the various stations to which they may from time to time be appointed. Hitherto the travelling and subsistence expenses which are necessarily incurred under such conditions, have been met by the emoluments arising from overtime service; but should these emoluments be substantially reduced, the same expenditure will have to be borne by officers whose salaries in many cases are not adequate to meet a daily outlay of this nature.

We respectfully appeal to your Honourable Board that the relief now granted to the shipowning community be not accompanied by any unremunerated increase or alteration in the hours of labour of the Officers of your Department. Already our normal daily service is longer than that exacted in most other Civil Departments of the Crown Service. This fact, and the stressful nature of our duties, were recognised by the Honourable Commissioners of Customs in 1852 in their report on a petition from the mercantile community, for the extension of the hours in the Outdoor Department of H.M. Customs, which asserts that "there is no class of "Government Officials on whom such arduous duties are "imposed," and again, "an extension (of the hours) "would be the means of inflicting a grievous hardship "on the officers of this Department."—(Third Report of Civil Service Inquiry Commission 1875—page 18). We have also the honour to quote from the reply of the Lords of the Treasury: "My Lords could not expect "to establish any general increase in the hours of attend-"ance, without adding to the present emolument of the "different officers so affected."

We most respectfully state that a general increase has taken place in the hours of service given, without a corresponding increase of emolument, by Landing and Shipping Officers during the week ended 13th instant. We therefore humbly pray that your Honours will be pleased to direct that the normal hours of attendance, viz.:—from eight a.m. to four p.m. in summer, and from nine a.m. to four p.m. in winter, be not altered or extended, and that due payment be made at the authorised rates of overtime, for each hour of service given, or to be given, before or after the hours indicated.

And your Petitioners will ever pray.

To the Honourable Commissioners,
Her Majesty's Customs.

COPY OF INSPECTOR'S ORDER REFERRED TO IN PETITION.

The following Regulations are issued in pursuance of the directions of Board's Order, 24th September 1888, No. $\frac{21201}{1888}$, for giving effect to an Order of the Lords of the Treasury for the extension of the hours during which goods of all kinds may be landed and shipped and free goods may be delivered.

(1.) All goods may be landed on entry or sufferance and entered free goods in packages or otherwise may be examined and delivered between the hours of 6 a.m. and 6 p.m. throughout the year on any day not being a Sunday or Public Holiday without charge to the merchant for officer's attendance.

(2.) All goods may be shipped between the hours of 6 a.m. and 6 p.m. throughout the year, the proper officers attending when necessary within such hours for the examination and shipment of bonded transit or drawback goods without charge to the merchant; but any necessary attendance beyond such hours will be chargeable as heretofore.

(3.) Should the merchant require imported dutiable goods, not being transhipment goods, to be weighed, gauged, or examined before 8 a.m. in summer or 9 a.m. in winter, or after 4 p.m. throughout the year, overtime at the authorised rates will be chargeable to the merchant.

(4.) When unreported or unentered goods are landed on sufferance, either into transit sheds or on the open quays, between the hours of 6 p.m. and 6 a.m., the regulations (*a* to *e*) contained in the Inspector's Order of 18th April 1888, as applicable to "free goods only" will now apply to all goods, except such as may be known to consist chiefly or largely of spirits or tobacco to be landed within these hours, in which latter case the continuous attendance of an examining officer will still be necessary at the merchant's expense.

(5.) Under the Board's Order, as above quoted, the Inspector and Surveyors are authorised to allow any officer whose total daily attendance may be increased, such consideration as the exigencies of the Service at times of less pressure may admit.

These regulations are to take effect on and after the 8th instant.

(Signed) GEO. H. SCRIVENOR,
Custom House, Liverpool Inspector.
2nd October, 1888.

COPY OF RE-ISSUE OF INSPECTOR'S ORDER OF APRIL 18th, 1888.

Overtime Discharge of Free Goods.

(*a*) If at the Merchant's or Master Porter's request the discharge of such goods commences two hours before the legal hour, or is continued not later than 9 p.m., *no extra* visit will be necessary, an ordinary visit being made as near before 6 p.m. as practicable.

(*b*) If such discharge be continued after 9 p.m. or until midnight, or is arranged to commence from midnight, *One* visit to be made by the Examining Officer.

(*c*) If such discharge be continued throughout the whole night *One* visit before, and *One* visit after midnight, to be made at uncertain hours by an Examining Officer.

(*d*) The time allowed for such visits not in any case to exceed three hours, and the Examining Officer making such visits will not only see that the Outdoor officers on duty are sober and attentive, but will also satisfy himself that due precautions are being observed for the protection of the Revenue.

(*e*) The Surveyors will see that these regulations are duly enforced; and will in each case appoint the requisite number of Established *Outdoor Officers to supervise* at Merchant's expense *the landing and safe deposit of the goods*, to watch the same if upon the open quay, or if in an approved Transit Shed, to secure them under Crown lock until examined and passed by the Examining Officer.

(Signed) GEO. H. SCRIVENOR,
Custom House, Inspector.
April 18th, 1888.

Memorials.

STATEMENTS OF THE EXAMINING OFFICERS OF HER MAJESTY'S CUSTOMS IN THE PORT OF LIVERPOOL.

To Sir MATTHEW WHITE RIDLEY, Bart., M.P., Chairman, and the Members of the Royal Commission on Civil Establishments.

1. In accordance with the terms of a Circular Letter $\left(\frac{41}{10 \text{ Decr. } 1886}\right)$. issued by the Honourable Board of Customs, on instructions received from the Royal Commission on Civil Establishments, we beg to submit the following statement of the Examining and Assistant Examining Officers of the port of Liverpool.

Amalgamation of Warehousing Branches of Indoor Department with Outdoor Department.

2. Previous to May 1883, the various duties upon which Examining Officers are now employed pertained to two distinct Departments, viz.:—the Out-door Department, and the warehousing branches of the In-door Department. At that date, however, an amalgamation of these two Departments was effected, and a new classification issued by the Honourable Board of Customs with the approval of the Lords of the Treasury.

Comparison of Classification of 1883 with present Classification.

3. This classification, although unfavourably affecting the members of the above-mentioned Departments as compared with their previous position, was generally accepted as a permanent measure, but during the last four years the superior appointments have been considerably reduced, as the following table will show:—

Rank.	Classification of 1883.				Present Classification.				Reduction.
	Numbers.	Minimum Salary.	Increment.	Maximum Salary.	Numbers.	Minimum Salary.	Increment.	Maximum Salary.	
		£	£ s.	£		£	£ s.	£	
Inspector	1	600	25 0	700	1	600	25 0	700	—
Assistant Inspector	1	560	15 0	590	1	560	15 0	590	—
First Class Surveyors		490	15 0	550	3	490	15 0	550	—
Second " "		420	15 0	480	5	420	15 0	480	1
Third " "	10	350	15 0	410	8	350	15 0	410	2
First Class Examining Officers	43	220	10 0	300	38	220	10 0	300	5
Second " " "	150	110	7 10	220	92	110	7 10	220	58
Assistant " "	—	—	—	—	67	100	3 0	150	—

Delay in filling up vacancies.

It may be remarked that even under the recent classification above shown, there are at present vacancies for:—

1 First Class Surveyor,
1 Second Class ,,
1 Third Class ,,
2 First Class Examining Officers.

This delay in filling up vacancies still further accentuates the grievance caused by reductions.

Decrease of Promotions.

4. The reduction which has thus taken place in the number of superior appointments to which Examining Officers at the Out-ports may hope to obtain promotion is further illustrated by the following comparison:—

—	Year.		Decrease.
	1884-5.	1888-9.	
First Class Surveyors	24	17	7
Second " "	38	33	5
Third " "	66	61	5
First Class Examining Officers	243	226	17

Injurious effects of Reductions.

5. It is submitted that these reductions, involving as they do (1) the adoption to an undue extent of the "Acting" system, (2) the lessening of control, and (3) grave discontent among the Officers whose reasonable prospects of promotion are so injuriously affected, tend seriously to impair the efficiency and security of the Department.

The "Acting" system.

6. The systematic employment of officers, sometimes permanently, often for long periods, in a superior capacity to that for which they are paid, is, we submit, a practice both dangerous to the Department, and injurious to the Officers. It cannot tend to the best interests of the Service that an Officer should frequently be required during part of the year to supervise the Officers amongst whom he works on terms of equality during the remainder. And when it is added that in a large number of cases no extra remuneration, in other cases a most inadequate remuneration, is received by the Acting Officers for the superior duties required from them, the system can hardly be described otherwise than as unjust as well as injudicious.

Overtime remuneration of "Acting" Officers.

7. When an Officer is on duty for the convenience and at the expense of the merchant, he is remunerated by order of the Lords of the Treasury at the overtime rates provided to be paid for the duty which he performs. Thus an "Acting" Surveyor receives the same overtime payment as a Surveyor. It is contended that whenever it is absolutely necessary that "Acting" Officers be employed, the principle thus laid down should be carried to its legitimate issue, and that every Officer required to "act" in a superior capacity to that denoted by his rank, should receive for his services such average payment as would have been made to an Officer of the higher rank.

No. of Acting Officers.

8. The following table shows the number of Officers at this port "acting" in a capacity superior to their rank:—

Rank.	Acting as	Number.	Extra Payment.
First Class Examining Officers.	Surveyors	11	1, 40*l.* per an. 10, nil.
" "	"		
" "	Performing duties of supervision required by Code paras. 81-2, to be performed by Surveyors or Supervisors.	13	Nil.
Out-door Officers	Examining Officer	62	45, 1*s.* per day 17, nil.
Boatmen	"tide duty)." (on	13	11, 1*s.* per day, 2, nil.

Number of Acting Officers receiving no extra pay.

It will be seen from the above table that of the 11 Acting Surveyors only one receives any additional remuneration. The remaining 10, and the 13 Check Officers, together constituting half of the first class of Examining Officers, and many of whom have been employed for a number of years as Acting Surveyors, receive no extra payment whatever for the superior duties performed and heavier responsibilities incurred. The hope that the "Acting" position would be a stepping stone to promotion, has not been, and so long as the number of superior appointments is so inadequate can never be, realised. The above table also shows that there are 75 Out-door Officers and Boatmen acting as Examining Officers, the majority of whom are permanently employed in that capacity. Of these 19 receive no extra payment for their special services.

9. It is submitted that the extensive reductions in the number of superior or staff appointments, and the wholesale employment of Subordinate Officers to act in superior capacities, has rendered the control of the Department inefficient. In support of this position, we venture to institute the following comparison derived from the Revenue Estimates for the current year, between the number of Officers holding superior or staff appointments in the Outdoor Customs and Excise Departments respectively.

Departments.	Total Number of Officers.	Total Salaries.	Superior or Staff Appointments, viz., Inspectorships and Surveyorships of Customs, Inspectorships and Supervisorships of Excise (Collectors excluded).	Per-centage of Officials holding superior or Staff Appointments.	Per-centage of Total Salaries paid to Superior Officers.
		£			
Customs (Outdoor).	3,903	461,450	122	3·1	11·7
Excise - -	3,697	638,576	432	11·7	20·2

10. If the First Class Examining Officers acting in higher capacities be considered to hold superior or staff appointments, the above per-centage (3·1), will be slightly increased; but in any case the number of supervising officers in the Customs is strikingly small as compared with the Excise. The contrast is surely one which ought not to exist, and which calls for grave and immediate consideration; since it can scarcely be maintained that there is a necessity for greater accuracy or stricter control in one Department than in the other. Indeed, it may be here pointed out in illustration of the necessity for inquiry and reform, that one important branch of Warehousing work, the Clerical (common to both departments), which in the Excise is checked in detail by the Supervisor, is in the Customs relegated to the Examining Officers who receive no extra remuneration for supervising that duty. The far higher per-centage of superior or staff appointments in the Excise Department, has the effect of inducing many of the best and most capable of the Out-door Officers to compete for positions in that Department.

11. The comparison which has already been instituted between the Customs and Excise will, if continued in other directions, support the following new scheme of salaries which we now, after grave consideration, respectfully submit in the confident hope that it will be found to be thoroughly adapted to the requirements of the Revenue Service and of the various grades of officers concerned :—

Proposed New Scheme of Salaries.

Rank.	Minimum Salary.	Increment.	Maximum Salary.
	£	£	£
Assistant Surveyors (a new class to be formed from the present First Class Examining Officers).	250	10	350
Examining Officers - -	150	10	250
Assistant Examining Officers -	100	5	150

12. In support of this scheme we respectfully beg that reference may be made to the Statement by the Examining Officers in the port of London (paras. 6–11), addressed to your Honourable Commission, wherein the various duties of an Examining Officer are fully set forth. These multifarious and exacting duties, including clerical work formerly performed by Second Class and First Class Clerks and Lower Division Clerks (of whom a considerable number are now Examining Officers at this port), cannot be considered of a lighter or less responsible nature than those of the Lower Division Clerks or of the officers of Inland Revenue. They require the strictest integrity, the exercise of considerable mental ability and tact, as well as a large amount of physical endurance. We therefore submit that the scheme we have ventured to propose will be found to be fully in accord with the recommendations in respect of Lower Division Clerks contained in the last report of your Honourable Commission, and with the classification contended for by the Officers of Inland Revenue, in their statement to your Honourable Commission, to which also we beg that reference may be made.

Memorials

13. The anomalous position occupied by the First Class Examining Officers, one-half of whom are permanently employed in a superior capacity, has already been pointed out, and it is earnestly hoped that by the adoption of a scheme which will effectually supersede the pernicious "acting" system, while it offers a small compensation for the special services so long and faithfully rendered by this class without recognition, one of the leading causes of discontent throughout the Service, may be permanently removed.

Position of 1st Class Examining Officers. (Proposed new scheme of salaries, continued.)

14. Apart from all other considerations in favour of the above scheme of salaries, we beg to point out that the slight increase proposed in the maximum salary of both classes of Examining Officers is not more than a just equivalent for the serious loss of prospects sustained by them. That this suggestion involves no new principle is manifest from the fact that the Revenue Estimates for 1888–89 shew a provision for "compensation for loss of prospects" in the case of Senior Registrars in the Legacy and Succession Duty Department. The same principle has been admitted in the case of Lieutenants in the Navy; the Navy Estimates for 1888–89 provide for an increase in the pay of those officers, and the memo. issued by the First Lord of the Admiralty observes:—"If the promotion of "Lieutenants is retarded on grounds of public policy, it "seemed only just that after a certain length of service "their pay should be increased."

Compensation for loss of prospects. (Proposed new scheme of salaries continued.)

15. In order (1) to assimilate still further the Departments of Customs and Excise, (2) to carry out the recommendation of the Playfair Commission "that it well "deserves consideration whether the important office of "Collector should not be open to the whole Service, "Out-door as well In-door," and that such a course "would enable the Commissioners of Customs to select "from a large body of experienced officers, the persons "suited for the more important posts"; and since (3) Clerical work is now as much a branch of the Out-door as of the In-door Service, it is respectfully submitted that the positions of Collector and Superintendent should be thrown open to the Out-door Department.

Collectorships and Superintendentships.

16. With regard to the question of hours of labour, we beg to attach a copy of a petition addressed on the 26th ultimo to the Honourable Board of Customs on this subject, and to which no reply has yet been received.

Hours of labour: Petition to Honourable Board of Customs.

17. The Customs Consolidation Act, 1876, section 48, states distinctly that no goods, except diamonds, bullion, and fresh fish, shall be landed except between 8 a.m. and 4 p.m., from the 1st March to the 1st November, and between 9 a.m. and 4 p.m. during the remainder of the year. Although the same section gives the Commissioners of Customs power to alter these hours as they may think fit, its intention is clearly to confine the officers' working hours to 8 in summer and 7 in winter.

C. C. Act, 1876, s. 48.

18. We respectfully submit that the evident intention of this section of the Customs Consolidation Act was set aside by the Commissioners of Customs in the General Order $\frac{10}{1862}$, which permits the discharge of all entered free goods between the hours of 6 a.m. and 6 p.m.; and has been still further violated by the recent Inspectors' order (of which a copy is annexed), issued at this port, which practically extends the free hours of working to 12 per day.

Violation of the intention of the Customs Consolidation Act, 1876, s. 48. G.O. $\frac{10}{1862}$

Inspectors order

19. It has been recently stated in the House of Commons by the Secretary to the Treasury that "the actual work "(at Liverpool and other outports) is not more than can "be performed by the existing staff of officers working on "an average 8 hours a day. If the officers have a "grievance, their grievance is, not that they are going to "work more hours a day for the same remuneration, for "that is not the case, but that they lose the chance of "earning overtime." We respectfully state that since the promulgation of the new order, a large number of officers in this port have been required to work for "more hours a day for the same remuneration," and that up to the 17th instant 5,754 hours extra attendance has already been given by Commissioned Officers, for which no remuneration or compensation whatever has been received.

Statement in House of Commons.

20. We therefore respectfully claim that our grievance is not loss of "the chance of earning overtime," but long and inconvenient hours. We have no desire to work overtime, but we claim that we are justly entitled to extra remuneration if required to work before 8 a.m. or after

Statement of the Secretary to the Treasury controverted.

Memorials. Claim for extra remuneration.

4 p.m. in summer, or before 9 a.m. or after 4 p.m. in winter; and in support of this claim, we respectfully quote the second report of your Honourable Commission (para. 123), wherein the hope is expressed that "steps will "without delay be taken to carry out the recommendation "made in our first Report (para. 31), and repeated in our "present one, that the hours of service in *all* offices for "all classes should be fixed at 7."

Terms offered to Clerks on their acceptance of Examining Officerships not adhered to.

21. It may be pointed out in this connexion that there are at this port 14 Examining Officers who entered the Service as Clerks and who, in accepting the positions they now hold, did so on the most distinct understanding (B.O. 3,505 / 26,283); that they would not be required to work more than 8 hours during the summer and 7 hours during the winter. Indeed, an increase was made to their salaries calculated on the basis of the extra attendance involved by the above hours.

Inordinate hours of labour of the Waterguard.

22. With regard to the Waterguard Duty, which, under the present system, necessitates the continuous attendance of officers for 24 hours, it need scarcely be pointed out that such an abnormal period of service is as detrimental to the interests of the Department and dangerous to the Revenue, as it is injurious to the physical and mental welfare of the officers to whose unenviable lot it may fall to perform this duty. We lay this matter before your Honourable Commission in the confident hope that our hours of labour may be strictly limited to seven, or in some cases eight, as heretofore.

Sunday Duty.

23. On Sunday, 18th November 1888, the following officers were on duty at this port:—

10 Examining Officers.
11 Assistant Examining Officers.
45 Outdoor Officers.
56 Boatmen.

Claim for special remuneration on Sundays and Holidays.

Sunday and holiday attendance, necessary for the security of the Revenue and the protection of the public health, must always involve hardship and inconvenience. It is respectfully submitted, as a general principal, that it should never be exacted except when absolutely necessary; and if exacted, specially remunerated. This reasonable principle, so far from being rigidly adhered to, has been set aside for the benefit of the shipowners, and from motives of economy.

Provisions of C. C. Act 1876, sec. 48, with reference to Sunday and holiday attendance.

24. It is provided by the Customs Consolidation Act, 1876, section 48, that no goods shall be landed or put on shore on Sundays or holidays, except by special permission of the Commissioners of Customs. Under this clause vessels with foreign cattle on board have been allowed to report to the officers when necessary, to discharge the cattle, have their cattle-spaces measured, and undergo Rummage and Clearance on Sundays and holidays. The officers performing these duties were until recently paid by the shipowners at special rates for the services thus rendered on Sundays and holidays. But an Order issued about two years ago relieved the shipowners from payment for this abnormal and highly objectionable attendance given on their behalf. It may be added in support of our claim for special remuneration for Sunday duty, that in the Post Office, perhaps the only other Department in which Sunday attendance is regularly required, the officials receive special remuneration for that Duty.

Concession to shipowners.

Superannuation.

25. "Nothing in this Act shall be construed so as in any "way to interfere with the existing rights at the passing "of this Act of any Civil Servant then holding office." (Superannuation Act, 50 & 51 Vict., Ch. 67 clause 10.)

Pension Fund not Public Money.

26. It is submitted that the Fund from which pensions are derived cannot be justly described as public money. For many years a deduction of five per cent. was made from the salaries of Civil Servants towards a Superannuation Fund. But in 1859 it was found that a sufficient sum had accumulated to provide the necessary pensions without further contributions from Civil Servants. All Civil Servants have understood that in order to enable them to claim superannuation, their salaries have been assessed on a lower scale than would otherwise have been adopted.

Advantages of present system of Superannuation.

27. The advantages of the present system of Superannuation are too numerous to mention; but it may be particularly observed that by its means (1) better and more capable men are attracted to and retained in the Civil Service, (2) faithful service, good conduct, and good discipline are maintained, since reduction or dismissal means loss of pension as well as of salary. It may be added that the object of the present system of Superannuation could not be attained in any other way, since it provides for the Civil Servant from the moment at which he may be disabled as well as in other cases which could not be met by the ordinary methods of Insurance. We therefore respectfully submit that it is to the best interests both of the State and of its servants that a Superannuation allowance be paid as at present to the comparatively few who live to claim it, and that no further deduction from the salaries of the Officials be made in respect of it.

Objections to proposals in Second Report of Royal Commission.

28. With regard to the proposal in the Second Report of your Honourable Commission (para. 93) that every Civil Servant be required to contribute to a fund a sum of money which would be paid over on his decease to his representatives, we beg to point out that this scheme would not effect its purpose for two reasons. First, because no scheme of Life Insurance can be considered successful which does not relieve the insurer, from anxiety, as to the pecuniary position of his family on his decease; but under this scheme, a Civil Servant dying after having contributed only a few pounds to the proposed fund, would leave his family in poverty; whereas the same amount paid into an Insurance Office would secure to them a substantial sum on his decease, and so relieve him of all anxiety on their behalf during his lifetime. Secondly, the proposal would involve great hardship to those who have already made substantial provision for their families in the Customs or other Insurance Funds.

Retirement.

29. We respectfully protest against the retention of officers, chiefly in the higher positions of the Service, to an age much beyond that recommended by the Commission of 1857 as a maximum for active service. As a result of this, important posts are often held by men who are incapacitated by age from occupying them to the public advantage; and, further, legitimate promotion being greatly retarded, the chief stimulus to zeal and industry is kept at a minimum, much to the disadvantage of the Department as a whole. The present system of superannuation was adopted on the Report of the Commission of 1857, and we would submit that the recommendation of that Commission to the effect that superannuation should be general at 60, and compulsory at 65, years of age, should be rigidly adhered to in the Customs Department.

System of promotion.

30. Promotions from the Second to the First Class of Examining Officers are by selection, some regard being paid to seniority; but the officers do not know their positions in their respective classes, the published lists being alphabetical, and it is believed this system offers great facility for favouritism. We have no objection to the characters of the Officers being thoroughly inquired into, but we claim that in no case should a serious charge either as to character or ability be made by a superior Officer against a subordinate, unless an opportunity be afforded to the latter to defend himself, such as is provided by the Excise and Army Regulations.

Travelling expenses.

31. As the Liverpool Docks and Customs Stations extend for more than seven miles along the riverside, and suitable residences cannot be found near them, it follows that Officers must frequently live at considerable distances from the various stations to which they may from time to time be appointed. Were it possible to reside in the Custom House itself, considerable travelling expenses would still have to be incurred in reaching either the North or South Docks. Indeed, messengers travelling along the line of Docks already receive a small travelling allowance, as it would be impossible for them to cover the distances on foot.

Travelling expenses formerly met by overtime payments.

32. Hitherto the travelling and subsistence expenses which are necessarily incurred under such conditions have been met by the emoluments arising from overtime service; but now that these emoluments are substantially reduced, the same expenditure still has to be borne by Officers whose salaries, in many cases, are not adequate to meet a daily outlay of this nature.

Frequent changes of station.

33. Moreover, the system in operation at this port, under which an Officer of many years experience frequently finds the greatest difficulty in getting "minuted" for any station which would be convenient for him to reach from home, and a large number of Officers kept constantly moving from one station to another, is one which, if it be to the advantage of the Service, is unquestionably in the highest degree inconvenient and expensive to the Officers.

Claim for travelling allowance.

34. We therefore respectfully submit that a fair travelling allowance should be made to every Officer stationed at a considerable distance from the Custom House; and in support of this claim we beg to quote from the Third Report of the Playfair Commission, who state "We are clearly of "opinion that no Officer should be out of pocket by "reason of extraordinary expenditure for official pur-"poses."

nary.

35. In conclusion, we beg to submit a summary of the more important representations comprised in the foregoing statement :—

(1.) That the present First Class Examinining Officers form a new class of Assistant Surveyors with a salary of 250*l.*, rising by 10*l.* annually to 350*l.*

(2.) That the salary of Examining Officers be 150*l.*, rising by 10*l.* annually to 250*l.*

(3.) That the salary of Assistant Examining Officers be 100*l.*, rising by 5*l.* annually to 150*l.*

(4.) That no Officer be required to act permanently in a capacity superior to that for which he is paid; but if temporarily required so to act, that he receive additional remuneration according to the duty performed.

(5.) That the Collectorships and Superintendentships of Customs be thrown open to the Outdoor Department.

(6.) That Examining Officers be in no case employed for more than eight hours per day without additional remuneration.

(7.) That Sunday and holiday duty be never exacted except when absolutely necessary; and if exacted specially remunerated.

(8.) That the present system of Superannuation allowances may remain unaltered; and that a compulsory contribution to a new fund be not exacted.

(9.) That retirement be general at 60, and compulsory at 65, years of age.

(10.) That no accusation be made by a superior calculated to injure the prospects of a subordinate Officer, unless an opportunity be given to the latter to defend himself.

(11.) That travelling allowances be made to every Officer stationed at a distance from the Custom House.

36. We respectfully submit this statement for the consideration of your Honourable Commission, and shall be prepared to support and amplify the same by the evidence of our representatives.

To The HONOURABLE COMMISSIONERS,
HER MAJESTY'S CUSTOMS.

Liverpool October 26th 1888.

HONOURABLE SIRS,

WE, the undersigned Commissioned Officers of H.M. Customs at this port, having received instructions (a copy of which is annexed), based upon your Honours' Order, No. 21,201, dated 24th September 1888, respectfully request that your Honours will be pleased favourably to consider the following Statement and Petition.

The effect of that Order during the week ended the 13th instant, has been to relieve the shipowners from payment of the sum of 55*l.* (exclusive of the further sum which would have been payable to Glut Out-door Officers), representing 1,057 hours of service given by Commissioned Officers between the hours six and eight a.m., and between the hours four and six p.m. For this extra service no remuneration has been received.

As the hours of dock labour at this port are, and have been for many years, from seven a.m. to five p.m., it is obvious that the attendance of Officers will be required during these hours throughout the year, each week of which will demand a number of hours' service at other than the normal hours, not less than the number given during the week ended 13th instant. It may further be stated that the shipowners now frequently require the transit sheds to be opened at six a.m., to prepare for the general work which begins at seven a.m., and to remain open until six p.m. for shipment or delivery—practices which tend to become general, and will considerably increase the average weekly service given by Officers at other than the normal hours.

With reference to paragraph five of the annexed instructions, we beg to point out that the proposed "consideration" in time, to be given "at times of less pressure," and conditionally on the "exigencies of the Service," is not always practicable; that it has not been extended to the majority of Officers whose attendance has been enforced under these instructions; and that it is inadequate, since leave of absence granted when not specially desired, and during the normal hours of labour, cannot be a just equivalent for service rendered at inconvenient and undesirable hours of the day or night. Memorials.

As the Liverpool Docks and Customs Stations extend for more than seven miles along the riverside, and suitable residences cannot be found near them, it follows that Officers must frequently live at considerable distances from the various stations to which they may from time to time be appointed. Hitherto the travelling and subsistence expenses which are necessarily incurred under such conditions, have been met by the emoluments arising from overtime service; but should these emoluments be substantially reduced, the same expenditure will have to be borne by Officers whose salaries in many cases, are not adequate to meet a daily outlay of this nature

We respectfully appeal to your Honourable Board that the relief now granted to the shipowning community be not accompanied by any unremunerated increase or alteration in the hours of labour of the Officers of your Department. Already our normal daily service is longer than that exacted in most other Civil Departments of the Crown Service. This fact, and the stressful nature of our duties, were recognised by the Honourable Commissioners of Customs in 1852 in their report on a petition from the mercantile community, for the extension of the hours in the Out-door Department of H.M. Customs, which asserts that "there "is no class of Government Officials of the same standing "on whom such arduous duties are imposed," and again, "an extension (of the hours) would be the means of inflicting a grievious hardship on the Officers of this Department." (Appendix to Third Report of Civil Service Inquiry Commission 1875, page 18). We have also the honour to quote from the reply of the Lords of the Treasury: "My Lords could not expect to establish any general "increase in the hours of attendance, without adding "to the present emolument of the different Officers so "affected."

We most respectfully state that a general increase has taken place in the hours of service given, without a corresponding increase of emolument, by Landing and Shipping Officers during the week ended 13th instant. We therefore humbly pray that your Honours will be pleased to direct that the normal hours of attendance, viz:—from eight a.m. to four p.m. in summer, and from nine a.m. to four p.m. in winter, be not altered or extended, and that due payment be made at the authorised rates of overtime for each hour of service given, or to be given, before or after the hours indicated,

We are, Honourable Sirs,
Your obedient servants
Signed by 414 Officers.

Inspectors' Order.

The following regulations are issued in pursuance of the directions of B.O. $\frac{21,201}{24.9.88}$, for giving effect to an Order of the Lords of the Treasury for the extension of the hours during which goods of all kinds may be landed and shipped, and free goods may be delivered:

1. All goods may be landed on entry or sufferance, and entered free goods in packages or otherwise may be examined and delivered between the hours six a.m. and six p.m. throughout the year on any day, not being a Sunday or a Public Holiday, without charge to the merchant for Officers' attendance.

2. All goods may be shipped between the hours of six a.m. and six p.m. throughout the year, the proper Officers attending when necessary within such hours for the examination and shipment of bonded, transit, or drawback goods, without charge to the merchant; but any necessary attendance beyond such hours will be chargeable as heretofore.

3. Should the merchant require imported dutiable goods, not being transhipment goods, to be weighed, gauged, or examined before eight a.m. in summer or nine a.m. in winter, or after four p.m. throughout the year, overtime at the authorised rates will be chargeable to the merchant.

4. When unreported or unentered goods are landed on sufferance either into transit sheds or on the open quays between the hours of six p.m. and six a.m., the regulations (*a* to *e*) contained in the Inspectors' Order of the 18th April

Memorials.

1888 as applicable to "free goods only," will now apply to *all goods*, except such as may be known to consist chiefly or largely of Spirits or Tobacco, to be landed within these hours, in which latter case the continuous attendance of an Examining Officer will still be necessary at the merchant's expense.

5. Under the Board's Order as above quoted, the Inspectors and Surveyors are authorised to allow any officers whose total daily attendance may be increased, such consideration as the exigencies of the Service at times of less pressure may permit. These regulations are to take effect on and after the eighth instant.

(Signed) G. H. SCRIVENOR,
Inspector's Office, Inspector.
2nd October 1888.

Regulations *a*, *e*, having reference to free goods

(*a*.) If at the Merchant's or Master Porter's request the discharge of such goods commences two hours before the legal hour, or is continued not later than nine p.m., no extra visit will be necessary, an ordinary visit being made as near before six p.m. as practicable.

(*b*.) If such discharge be continued after nine p.m. or until midnight, or is arranged to commence from midnight, *one* visit to be made by the Examining Officer.

(*c*.) If such discharge be continued throughout the whole night, *one* visit before and *one* visit after midnigh to be made at uncertain hours by an Examining Officer.

(*d*.) The time allowed for such visits not in any case to exceed three hours, and the Examining Officer making such visits will not only see that the Out-door Officers on duty are sober and attentive, but will also satisfy himself that due precautions are being observed for the protection of the Revenue.

(*e*.) The Surveyors will see that these regulations are duly enforced, and will in each case appoint the requisite number of Established Out-door Officers to supervise, at merchant's expense, the landing and safe deposit of the goods; to watch the same if on the open quay; or if in an approved transit shed to secure them under Crown lock until examined and passed by the Examining Officer.

imported in bags, or such other packages as can be examined by spitting. (18th April 1888.)

STATEMENT OF THE EXAMINING OFFICERS OF HER MAJESTY'S CUSTOMS AT THE OUTPORTS.

To the SECRETARY, CIVIL SERVICE INQUIRY COMMISSION.

SIR,

THE Examining Officers of Her Majesty's Customs at the Outports desire most respectfully to lay before the Commissioners, as briefly as possible, the points on which they are anxious that evidence shall be received. We, signing on behalf of the whole body have drawn up, as under, those matters which involve concessions which we believe to be just and reasonable, and the granting of which would be beneficial both to the service and those employed in it.

We therefore submit,

1. That a considerable and altogether unexpected loss has been entailed in consequence of recent reductions in the number of superior appointments, and because of the concessions which have been made to shipping interests occasioning a most considerable diminution in the emoluments derived from Extra Attendance. This Extra Attendance has always been looked upon as part of the income obtainable by Examining Officers, on behalf of whom we attach hereto copies, with remarks, of the General Orders dealing with the matter. The following gives as nearly as possible the classifications as existing in the years 1884 and 1888.

See Appendix.

	1884.			1888.		
	London.	Liverpool.	Outports.	London.	Liverpool.	Outports.
Surveyors, 1st Class - -	15	3	6	10	3	4
„ 2nd „ - -	20	6	12	17	4	12
„ 3rd „ - -	40	10	16	33	8	19
Examining Officers, 1st Class	120	43	80	120	38	74

Whilst the Examining Officers do not presume to question the right of the Lords of the Treasury and of the Commissioners of Customs to effect these changes, they feel that, in consequence of them and for other reasons as presently stated, they are justified in praying for a recommendation for a revision of salaries as under:—

Rank.	Revised Salary.	Reasons.
Examining Officer, 2nd Class.	110*l*., increasing annually by 7*l*. 10*s*. for eight years, and then by 10*l*. annually to a maximum of 250*l*.	250*l*. is the maximum of a Lower Division Clerk in a 7-hours office. Besides the longer attendance given, the duties of an Examining Officer require judgment and great discretion, and are in every way more important and responsible than those of a Lower Division Clerk. The Examining Officer also provides a uniform.
Examining Officer, 1st Class.	260*l*., with an annual increment of 10*l*. to a maximum of 350*l*.	The Lower Division Clerk is able by means of Duty Pay to obtain 350*l*. Until the year 1880 the maximum of Customs 1st Class Clerks was 300*l*., the same as the then and present maximum of the 1st Class Examining Officer. In 1880 the maximum of the 1st Class Clerk, whose duties were certainly not more responsible than those of the 1st Class Examining Officer, was raised to 400*l*., reached by annual increments of 15*l*. Since that date the great warehousing system, with its accounts, has been taken from the Clerks and given to the Out-door Branch, and the duties and responsibilities have been consequently increased. The 1st Class Examining Officer provides uniform.
Surveyorships to be of two Classes.		
Surveyor, 2nd Class	360*l*., with an annual increment of 15*l*. to a maximum of 420*l*.	420*l*. and 550*l*. are at present the London and Liverpool maxima for the present 3rd and 1st Classes respectively.
Surveyor, 1st Class	430*l*., with annual increments of 20*l*. to 550*l*.	Surveyors duties are certainly as important and responsible as those of Principal and Duty Pay 1st Class Clerks. On Surveyors rest the whole responsibility as to the efficiency of the Out-door Staff. The attendance given is much longer than what is required from Clerks, and considering this, the cost of uniform, and the greater "wear and tear," the difference in maximum sought is not unreasonable. It is more especially on the Surveyorships that the loss of emoluments has fallen.

2. That the non-filling up of vacancies as they occur is a source of anxiety and worry to officers expecting promotion.

3. That the continuous employment of officers on work of supervision, properly pertaining to a higher rank than that of the officer performing the work, without extra remuneration in the form of Duty Pay, is not desirable nor judicious.

4. That it should be officially made known that as there is no difference in the requirements of the service, promotion should be general throughout the United Kingdom, London and Liverpool included The accompanying copy of General Order 95–1876 foreshadows such a system.

See Appendix.

5. That Examining Officers should not in any case be employed for more than eight hours per diem without additional remuneration.

6. That as the transfer of the warehousing accounts with the great resposibilities attached thereto, and the carrying out of the Merchandise Marks Act Regulations, have now without a doubt made the outdoor duties the most onerous in the service, the officers continually having to

exercise the utmost discretion, it is clear that the changes alluded to in Treasury Minute contained in General Order 95–1876, copy herewith, ought now to take place, and the collectorships and superintendencies should be thrown open to *all the Service*, promotion to the ranks of the 1st Class Examining Officer and Surveyor not being a bar to future selection for the higher ranks in the Collectorate. The changes herein sought were brought prominently before the Treasury and the public in the Third Report, dated 23rd June 1875, of the last Civil Service Inquiry Commission in these words, "We think, for instance, that it well "deserves consideration whether the important office of "Collector should not be opened to the whole Service "outdoor as well as indoor." The late respected Chairman of the Customs, F. Goulburn, Esq., C.B., in answers to questions Nos. 7289–94 as contained in the said Report, copies attached hereto, dealt with the matter, but was guided by circumstances altogether different from those that now exist. The transfer of the warehousing accounts and all responsibility as to the correctness of the revenue received have destroyed the effect of answer to 7289, and the answer to 7292 gives the admission that the knowledge acquired by the Outdoor Branch would be of some advantage in the Collectorate, whilst the fact that the members of the same have thoroughly mastered the details of the great warehousing system shows Mr. Goulburn's evidence as relates to their fitness or unfitness to be of no weight now. The answers to questions 7293–4 are not now applicable, as those who have successfully coped with the intricacies of the warehousing accounts could easily overcome the difficulties of the Collectorate and superintendencies. Although there is much work to be done for other Departments the regulations for the efficient performance of the duties are so clearly laid down that all that is needed is the application of a little discretion and common sense. A knowledge of much of the duties other than those properly Customs is already required in the Examining Officer. As answer to question 7,290 shows, the greater part of the collectorships carry the *joint offices* of collector and surveyor, and all the superintendencies though not in name yet *in actual fact* embody the duties of the Examining Officer. It is therefore manifestly unwise that the Outdoor Department should be excluded. Prior to the abolition of the old controllerships, which were the line to the collectorate, and the second positions at the ports, selections were made from the old landing waiters and the principal coast officers, members of the Out-door Department.

7. That, as a steady flow of promotion incites zeal and interest, and can only be ensured by regulated retirement, it is desirable that superannuation should be compulsory in all cases at 65 years of age, and if found to be in the interests of the Service at any time between 60 and 65.

8. That, as pensions must be described either as deferred pay or reward for services performed, it is only just and reasonable that widows should, with fair limitations, be entitled to a portion of the same, in like proportion as conceded to the widows of officers of the Army and Navy, and it is considered desirable that the Superannuation Act of 1859 should be amended so as to meet the case.

We have the honour to remain,
Your most obedient servants,
GEO. S. O'LOUGHLIN,
Examining Officer, 2nd Class, Limerick.
And 14 others.

APPENDIX.

ABSTRACT of GENERAL ORDERS of CUSTOMS, Nos. 41–1882, 23–1887, and 30–1887.

"When goods are landed into a shed, either before or "after legal hours, but not delivered, the attendance of a "Surveyor be dispensed with, unless the discharge be "continued during the whole night, in which latter event "two Surveyors' visits only are to be made, viz.:—One "before and one after midnight." The attendance of a Surveyor is not to be rendered in future when free goods in bulk only are being discharged in or out of legal hours. In cases where packages of free goods are examined and delivered before or after legal hours the continuous attendance of Surveyors is despensed with, and if the examination and delivery of the goods do not continue throughout the whole night, the visits to be at the rate of three or four per week and if such overtime is not frequent, one visit on each occasion is to be made. In cases of examination and delivery throughout the night, two visits only are to be made one before and one after midnight.

GENERAL ORDER, 23–1886.

Memorials.

These orders have caused some loss to both Examining officers and Surveyors.

All free goods which have been duly reported, and for which perfect entries have been passed, may be taken out of the importing vessel, and be examined and delivered from 6 a.m. to 6 p.m. from 1st March to 31st October, and from 8 a.m. to 4 p.m. during the remainder of the year, without any charge being made to the merchants for extra attendance, whether there are goods liable to duty on board or not, proper care being taken that the Revenue is duly protected.

CIRCULAR LETTER, 44–1885.

The Board direct that, whenever application is made for the clearance, out of official hours, of a vessel which has discharged her cargo under the provisions of General Order 75–1872, the expenses for the attendance of officers to give such clearance be borne by the merchant or shipowner, unless the cargo is all discharged and the ship ready for clearance at the time when, in the regular execution of his duty, a Waterguard Examining Officer may make his periodical visit. In that case, clearance, if requested, is to be granted without charge,

There are other General Orders, &c., all tending to curtail the extra attendance.

EVIDENCE BY MR. GOULBURN.

EXTRACTS from THIRD REPORT of the 1875 INQUIRY COMMISSION.

Proposition 6.

7289. Have you found a strong necessity for making a partition line between the two?—The indoor establishment is completely distinct from the outdoor establishment, and I do not think that it would be possible in any way to combine them, the indoor department being engaged almost entirely in matters connected with the collection of the revenue and the keeping of the books, and the majority of the outdoor department in the conduct of the business which has to be superintended by the officers who have to perform all the operations at the waterside and in the warehouses, with which the clerks would be totally unfamiliar and unacquainted.

The Outdoor Branch now deals with receipts of duty from passengers, &c., and keeps all warehouse books and forms.

7290. The Collector at the head of an outport. I suppose, would require to know the nature of the work both indoor and outdoor?—Yes, and at the small outports he combines *both branches*. When he passes to a higher outport there is a separate Officer to perform the outdoor work.

7291. Taking a Collector whose office extends over a large area, is it, in your opinion, quite necessary to maintain a separate staff to do the work which has to be done by the Collector and his Clerks?—I think that as long as there is so much work which must necessarily be performed, not merely for the Customs, but for so many other departments in the outports, it will afford ample occupation for all the Officers who are engaged upon it. There is the *great warehousing system* which involves the keeping of a number of books. This work is performed by the Clerks, and the Officers who are engaged on the quays, at the docks, and at the water side, could never spare the time for these other duties. They would perform them in the most perfunctory manner if they tried to perform both duties.

Now transferred to the outdoor department, and experience has proved that all difficulties in such book keeping can be overcome by the officers of the outdoor department.

7292. But would that apply to Officers in the Out-door Department qualifying themselves to be Collectors?—The knowledge acquired by an Officer of the Out-door Department would be of *some advantage* if he became a Collector, but I do not think that he would understand the In-door Department and the business connected with the books; he would not take to it readily. Considering that all the Examining Officers are now selected from the Out-door Officers, we should not have a sufficient number of perfectly eligible men to raise to be Collectors.

The officers' duties are now practical and clerical.

7293. "Relates to Out-door Officers being selected for Principal Coast Officerships, and the best of the Officers from the latter being further promoted to be Superintendents."

These answers are now not applicable in any way.

7294. Then, generally, it is your opinion that the training of the Out-door Officers is not such as to fit them for the duty of Collector?—No, I think not.

EXTRACT from TREASURY LETTER, 13th October 1876, GENERAL ORDER, 95–1876.

"You do not notice in your Report the *important suggestion* of the Commissioners to throw open the office of Collector to the *whole of the out-door service*. On this point, my Lords, notice the answers of your Chairman, 7294, 7356.* My Lords, however, do not desire to press

The answers are not now applicable.

* This second part is 7356, *i.e.* the substance of answer. The whole of the warehousing accounts now transferred, and clerks at the middle and larger ports have very little knowledge of the work in connexion therewith. These clerks have no experience of outdoor work.

Memorials.

Proposition 4. This principle should also be extended to the surveyorships, the salaries attached to which should be equalized.

changes of this kind upon you faster than you yourselves see reason to adopt them.

"The present system whereby the Collectorships are, in fact, filled up from Second Class Clerks, is stated to secure a sufficient amount of Out-door experience, and to give you the kind of men you require."

EXTRACT from TREASURY LETTER, 13th October 1876, GENERAL ORDER 95–1876.

"My Lords agree that, as a general rule *promotion should be general* . . . . . My Lords are of opinion that, while the existing practice of general promotion from grade to grade should not be interfered with, something more in the same direction may be effected not only by the adoption of your proposal to fill up vacancies in the first class of Examining Officers in London and Liverpool by the promotion of Second Class Officers from other ports, whenever you think it advisable, and by selecting generally for the first class at any port, from the whole body of the Second Class Examining Officers, — but also by extending the system of departmental examination."

STATEMENT OF THE ASSISTANT EXAMINING OFFICERS OF H. M. CUSTOMS.

To Sir Matthew White Ridley, Bart., M.P., Chairman, and the Members of the Royal Commission on Civil Establishments.

The class of assistant examining officers was formed from out-door officers of good conduct, ability, length of service, and who had qualified themselves by years of approved service as acting examining officers for the position of examining officers, to which rank they not only aspired, but were given to understand, should receive one half the vacancies in the latter class, the other half being reserved for competitors.

By circular letter $\frac{39}{1885}$, establishing the class of assistant examining officers, the nature of duties to be performed, salary for such office, and bond required were therein specified.

Recent general orders $\frac{54}{1887}$ and $\frac{90}{1888}$ have, however, so extended our duties as to be almost identical with those of examining officers, promotion to which class all of us looked forward to at no distant date; yet no additional remuneration has been made for the increased responsibilities imposed.

By the creation of the assistant examining officers' class, and a corresponding reduction of the examining officers, our promotion to that class appears to be indefinitely deferred.

At present it is a matter of daily recurrence that an examining officer, and an assistant examining officer are working together at the various offices, warehouses, and wharves, and while the latter is not only capable, *see* Circular Letter $\frac{38}{1886}$, but actually discharging the same duties, he has a much smaller salary, and yet in many instances much longer service than the former. It need not be pointed out how fatal such a humiliating position must be to the spirit of zeal amongst the assistants, especially, when they feel that this is due to rather than want of merit or ability.

We therefore submit that we receive the same consideration as to annual increments, and maximum salary as your Royal Commission have recommended in the case of the lower division clerks, namely 7*l.* 10*s.* per annum to maximum of 180*l.*, also that promotion to the grade of examining officer be made, half from the assistant chance, class, and half from competition.

Signed on behalf of the assistant examining officers throughout the United Kingdom.

J. F. HAWKESWORTH, London.
C. E. VAUX, Belfast.

18th February 1889.

STATEMENT OF THE EXTRA OUT-DOOR OFFICERS IN HER MAJESTY'S CUSTOMS.

Custom House,
April 30th, 1888.

HONOURABLE SIRS,

THE extra Out-door Officers employed in Her Majesty's Customs beg most respectfully the permission to lay before your Honours a statement showing our position in the Service, the unsatisfactory nature of which constitutes grievances which are keenly felt by us.

The duties of the extra Out-door Officers are of three distinct kinds, viz.:—Land duty, water-guard duty, and messenger duty.

The Officers employed on land duty are by far the largest portion of the extra staff, and their duties are of an arduous, responsible, and varied character, such as:—sampling wines and spirits, tallying ships' cargoes, the custody of goods in transit from one bonded warehouse to another, and the charge of bonded floors in warehouses, duties analogous to those of Established Officers.

The rate of pay to this class of extra Officers is 3*s.* per day when employed.

Most of these Officers have constant employment, but those who are not so fortunate must attend at the Custom House every morning, and remain in attendance in case they should be required for duty. In the event of their not being required they are not paid anything, although having remained all day in attendance.

No holidays are allowed, and on the occasion of Bank Holidays, and public festivals, their pay is stopped. They also lose their pay if sick.

They have no prospects of promotion, or opportunities of bettering their position, no matter how many their years of service may be, or how praiseworthy their conduct.

The pay of these extra Officers is far below that given to the extra staff in other Departments of the Civil Service, and they have none of the privileges which are allowed the latter class.

The majority of these extra Officers on land duty are young, active, and intelligent men, dependent on the small salary they receive from the Customs to keep themselves, and in many cases a wife and family.

The extra Officers acting as Messengers receive an additional 6*d.* per day when employed, by virtue of their having performed such duty continuously for over five years.

The Water-guard Staff of extra Officers is almost entirely composed of pensioners from the Army and Navy. They receive 3*s.* 6*d.* and 4*s.* per day when employed.

It will be observed that the extra Officers employed on land duty receive less salary than those Officers who are employed on the river, or as Messengers, although in many cases the duties of the former class of Officers are of a more important and responsible nature than those which are performed by the other two classes of Officers.

The Boy Messengers who were introduced into the Customs about four years ago (although not on the Establishment) are allowed an annual leave of 12 days, all Bank Holidays are paid when sick, have uniforms provided them, and receive a rising scale of salary.

If similar privileges to the above could be extended to the extra Out-door Officers, with an opportunity given of promotion to the Establishment, it would be a great boon to the large staff of extra Officers employed in the Customs' Service, who perform their duties with satisfaction, and are a source of economy to the Crown.

Should our attendance before the Royal Commission be required we would be most ready to give evidence regarding our position.

We have the honour to be,
Your Honours' most obedient servants,

EDWARD F. BAKER,
JOSEPH THOMAS POOLE,
EDMUND JAMES AUNING,
THOMAS GEORGE BARNES,
GEORGE YEOWELL.
} Extra Out-door Officers.

STATEMENT OF SURVEYORS OF CUSTOMS IN THE PORT OF LONDON

Her Majesty's Customs, London,
27th March 1889.

My Lords and Gentlemen,

We, the surveyors of the out-door department of the Customs in London, desire respectfully to draw your attention to the position in which we are placed at the present time in consequence of the great and continuous reduction in the numbers of our higher appointments.

In the year 1882 the old warehousing departments were abolished, and a new system was introduced by which the work connected with the warehousing accounts was transferred to the out-door department. This change involved the abolition of many valuable appointments, including three controllerships, with salaries rising from 700*l.* to 800*l.* per annum, 12 principal clerkships, with salaries rising from 520*l.* to 620*l.*, and a large number of upper division clerkships, with a maximum salary of 400*l.*, many of them having in addition duty pay attached in amounts varying from 25*l.* to 100*l.* per annum. In lieu of these positions others were created in the out-door department, for the most part much inferior in emolument. The new classification, which had been framed after careful consideration, was sanctioned by the Treasury and was accepted by all sections of the re-constituted out-door department as the scheme which was to govern their prospects in the service. Not the slightest doubt was ever felt by us or expressed by any person in authority as to the full benefits of that classification being given to us. On the contrary, as the portions of the work allotted under the new system to the higher officials proved to be even heavier than had been anticipated, an increase in their numbers might reasonably have been expected.

We have found, however, to our dismay, that as vacancies have occurred on the three classes of surveyors they have mostly been left unfilled, whilst a large proportion of the surveyors' work is relegated to first class examining officers, who perform it without extra remuneration, and see themselves at the same time deprived of the promotion they were led to expect.

The following table shows (1) the surveyorships of the three classes in June 1882 and (2) the surveyorships provided for in the Revenue Estimates for the year 1889–90 :—

—	Surveyors in June 1882.	Surveyors as per Estimates, 1889–90.
1st Class - - - - -	15	7
2nd „ - - - - -	20	16
3rd „ - - - - -	40	30
Total - -	75	53

It will be seen that in the course of seven years the numbers have been reduced by 22, or from 75 in 1882 to 53 in 1889. Every person, therefore, in our out-door department below the rank of a first class surveyor has thus been deprived, to the extent indicated, either of actual promotion or of vacancies which would have brought him nearer to it, and the sense of injury and the feeling of alarm are in consequence universal.

We have some reason to suppose that these reductions have been made mainly in consequence of statements which have been put forth on behalf of members of the Excise Department representing their rate of pay as inferior to ours. That this is by no means the case can be easily shown by the accompanying table, which consists of extracts from the revenue estimates for the current year, and which conclusively proves by the fairest of all tests, namely, by a comparison of the whole of the positions open to each of the two services and the sums voted by Parliament for their remuneration, that the Customs out-door service is, on the average, very much worse paid than that of the Excise.

The comparisons instituted by Excise officers between their service and ours have been quite fallacious, since they have compared the wrong classes of officers. They have, for instance, compared assistants of Excise with our examining officers, whereas the comparison ought properly to be made between their assistants and our much worse paid out-door officers, whose duties are quite as important and certainly far more laborious than those of assistants of Excise. Again, they have compared supervisors of Excise with surveyors of Customs, a comparison which the superior duties of the latter and their, for the most part, wholly different nature render altogether unfair, to say nothing of the fact that a surveyorship of Customs is usually attained much later in life and after a much longer service than a supervisorship of Inland Revenue. There are 409 supervisors of Inland Revenue, with 3,078 officers under them, being more than one supervisor to eight officers, whilst there are in London 53 surveyors of Customs, having 1,259 established officers and about 500 extra and glut officers to control, a proportion of only one surveyor to 33 officers. This disproportion alone would be sufficient to prove that there must be great differences in the nature of the work performed by the two classes. And it must not be overlooked that are 116 valuable positions above the rank of supervisor actually held by those who have risen from the junior ranks of the Excise Department or open to their out-door officers, whilst in the whole of the kingdom there are only 11 posts above that of surveyor to which members of the Customs out-door department can aspire. The valuable collectorships of Inland Revenue —more valuable on the average and much more numerous than the collectorships of Customs—are exclusively open to the out-door branch of the Excise. Officers of Customs in the out-door department have not hitherto, except in one instance, been permitted to rise to collectorships, and a surveyorship is practically the highest situation which the ablest man can hope to attain.

On a reference being made to the table of extracts from the estimates, the average pay per man in the Excise Department will be found to be 43*l.* higher than the average for the Customs out-door service, even when our watermen and boatmen are excluded from the comparison, and if they are included the difference rises to 60*l.* per annum.

If the positions in our department are still further depreciated in average value, the effect upon the quality of the candidates offering themselves for the Customs must be disastrous, for the better class of men will either seek situations in other branches of the Government service, or turn elsewhere for occupation.

As regards the per-centage cost of collecting the two revenues, the following remarks may not be out of place :—

1. The Excise revenue mainly comes from spirits, where the duty is high, and beer, where the assessments take place in large quantities at a time, whilst the charging and delivery of Customs dutiable goods involves a far greater number of distinct transactions. If each assistant and officer of Excise really performed work exactly analogous to that of one of our examining officers in a warehouse, and disposed of an equal number of transactions, there could not possibly be work for so large a number of Inland Revenue officers as are now employed.

2. The lowering of many Customs duties has naturally tended to raise the cost of collection to a higher per-centage than may at one time have been required. There is, for example, just the same amount of care and labour expended in collecting the duty on each pound of tea at 6*d.*, as was required to collect it when the duty was four times as great. A similar remark may be made concerning coffee, claret, champagne, &c.

3. But it would be wrong to suppose that the sole duty of Customs officers consists in assessing or collecting revenue. The examination of all free goods entering the country, questions connected with British trade marks and copyright, with the administration—a most difficult and complicated task—of the recently-passed Merchandise Marks Act, with the importation of dynamite and other explosives, with the provisions of the Foreign Enlistments Act as affecting vessels, with the prevention of smuggling, with the landing of cattle and rags which might introduce disease, with quarantine regulations and the provisions of the Public Health Acts, with the inspection and approval of tea upon importation, with the statistics of imports and exports, and with other matters important to the community, but not connected with the collection of revenue, occupy our time and attention nearly as much as the examination of dutiable articles.

4. With regard also to goods liable to Customs duties, the ships containing them may arrive at any moment, and the cargo may be of any description. The places where British spirits and beer are manufactured are fixed and known, hence they can be easily kept under supervision. Ships which are in port to-day and gone to-morrow are far more difficult to deal with.

5. The Customs Department has to bear the burden of protecting the Excise revenue by superintending and assuming the responsibility for the safe exportation of goods liable to duties of Excise, and preventing the illegitimate importation of spirits and other articles, which, if allowed to enter the country freely, would practically

Memorials.

destroy the Excise revenue. Indeed, if all Customs duties were abolished the Inland Revenue Department would at once have to create a very large staff of officers to perform services which are now thrown upon Customs officers, the expenditure being charged to the Customs Department.

Without entering into an elaborate comparison between all the kinds of work performed in the two departments, we venture to make a few observations. The nature and responsibility of our landing and examining work make it so wholly different from anything to be found in the Excise that comparison is out of the question. Our gauging, again, is a highly technical operation, where skill and judgment are imperatively required, since fraud or error, very hard to detect, would lead to disputes between the Customs officials and merchants, and possibly cause serious loss to the Revenue.

In the Excise Department there is no such duty. It is a comparatively mechanical matter to weigh an empty cask, fill it with spirits, re-weigh it, and arrive at the quantity by consulting a printed table. However accurate this cause may be, it would be impossible of adoption in the Customs. Spirits and wines cannot be turned out of the casks in which they are imported without most serious injury and loss to the mercantile community.

There is another feature of our duties specially distinct. Imported goods have frequently about them some amount of uncertainty as to character, and in a great many instances averages for tares have to be taken, the ascertaining of actual weights being too troublesome and expensive. In all these cases the decisions arrived at by the surveyors are of the utmost commercial importance, the goods being bought and sold on their quantities.

The only work in the Customs at all similar to that in the Excise is that connected with deliveries from a warehouse. But this does not form a large proportion of our work; and if it did, there are many circumstances to be remembered to enable a fair judgment to be formed upon the comparative importance of the warehouse work in the two departments. Our warehouses are usually very much larger than Excise warehouses, and contain a much greater variety of goods, and our transactions are infinitely more numerous than theirs.

A grievance to which we feel compelled to draw the attention of the Royal Commission is the fact that large numbers of our officers have continuously for years to perform duties assigned to officers of a rank higher than that to which they belong, generally receiving no additional remuneration for their greater responsibility. The out-door officer is required to act as an examining officer, receiving only a trivial allowance of 2*d.* an hour for doing so. The examining officer is called upon to do the work of a surveyor, and a surveyor that of an inspector, each being paid the salary of the lower rank, without any allowance of duty pay, and in the existing state of things, having but a slight prospect of promotion to the rank whose duties he is considered qualified to perform.

The circumstance above mentioned is also a plain proof that the officials of the higher ranks fixed by the classification of June 1882 were not too numerous in our department.

We may mention another fact that is worth noting. In the Gravesend Station there are about 200 officers with only one person of the actual rank of surveyor now between them and the inspector of the waterguard for the River Thames and the port of London; and, in fact, until quite recently this post was filled only by an examining officer acting as surveyor. Probably a parallel instance of the absence of superior appointments amongst so many officers performing equally responsible duties could not be found in the whole range of the Civil Service.

The injury complained of falls upon every class below those wherein the cancelled vacancies have arisen, since no corresponding addition is ever made to one of the intermediate classes, and owing to the division of the out-door department into a large number of classes, the cancelling of a single vacancy in one of the upper ranks deprives many individuals of promotion. The tendency in other branches of the Civil Service for many years has been to abolish distinctions of classes where men are performing the same kind of work, and to substitute a service scale. We have still three classes of surveyors, although no distinction can be made in the allotment of their duties, and the hardship is made worse by the fact that the reduction in the number of surveyors has been made in undue proportion in the two higher classes.

If after all we have said, it be still considered that the reductions which have been made in the number of surveyorships in the London Customs are necessary, we feel that it cannot be denied that we are distinctly entitled to compensation for the loss of prospects which were clearly held out to us in the surveyors classification promulgated in June 1882. It is entirely in accordance with precedents established over and over again in the Civil Service that such compensation should be given.

Considering the important and responsible nature of a surveyor's duties, the pay and prospects of the classification of June 1882 did not provide a fair set off against advantages which had been lost; but as the prospects then held out to us have been taken away we think that we are justly entitled to compensation for the losses we have suffered. When we repeat that we have now lost eight positions going to 550*l.* per annum and four going to 480*l.*, and that the surveyors have been reduced to two-thirds of the number fixed in 1882, it must be admitted that the loss is one that inflicts a cruel hardship upon us, especially considering that we have loyally done our duty in carrying out the new warehousing system established in June 1882, and have always faithfully and zealously performed the laborious, difficult, and complicated work of our branch of the Customs Department. During the last six years the estimates of the Customs Department have been reduced by a net amount of about 100,000*l.* a year. This saving is gratifying from a national point of view, but it has not been effected without great loss and suffering having fallen upon many deserving officials and their innocent families.

For the reasons given we respectfully ask the Royal Commission to recommend that, as a measure of compensation, the existing distinctions between classes of officers performing the same duties may be abolished, and that there may be in future only one class of surveyors rising to the maximum salary of 600*l.* formerly sanctioned for the surveyors class, and that some compensation should be given by way of immediate addition to the actual salary in the case of those who have reached the maximum emolument of their class. We also ask that the collectorships should be thrown open to members of the out-door department who must necessarily have obtained the most varied and general experience in the whole of the business of the Customs service.

We feel sure you will admit that it is very hard for men who have toiled many years in the hope of rising, probably late in life, to situations which at the best are by no means splendid, to find those situations suddenly swept away, and that it must be demoralizing to our department to be subject to the uncertainty which now always exists as to whether, upon the occurrence of any vacancy, it will be filled up, or cancelled, or, what is equivalent to cancelling, allowed silently to lapse.

We have the honour to be,
My Lords and Gentlemen,
Your obedient servants,
FRANCIS GEORGE HEATH,
WM. THOMSON.
J. G. ATKIN.

3,959	Average per man, 180*l.* 16*s.* 9*d.*				715,938

* Collectorships of Customs, numbering 54, with a total vote of 25,200*l.*, cannot be included in the calculation, as they have not been declared open to the Out-door Department. The great majority of these posts, however, are very far inferior in emolument to the collectorships of Inland Revenue, and their inclusion would only raise the average for the Customs by about 6*l.* per man.

STATEMENT OF BOATMEN OF HER MAJESTY'S CUSTOMS AT LIVERPOOL.

Port of Liverpool,
November 1886.

My Lords and Gentlemen,

We, the commissioned boatmen of H.M. Customs at this port, beg thankfully to avail ourselves of the privilege that your Royal Commission has extended to the various departments included within the scope of your inquiry, permitting them to place before that Commission such matter appertaining to their several departments as in the progress of that inquiry will necessarily form part of the deliberations of that Commission. And that in your own appointed time and by your direction representation of such various departments will be allowed.

Encouraged by these gracious concessions we beg most respectfully to submit, for the consideration of your Royal Commission, the following statement of our case:—

The Salary Question.

In approaching this most important part of our case we do so with a feeling of great anxiety, yet not without hope, believing that if we can but establish to the satisfaction of your Royal Commission that the salary awarded is not commensurate with the nature and importance of the duties performed, that your Royal Commission will not hesitate to point out the fact and suggest the necessary improvement.

Before stating in detail the duties we have to perform, we desire to make this general remark, that we have long ago been but too painfully made aware that the meagre salary given is totally inadequate to meet the many and varied requirements demanded in supporting in any way approaching respectability a wife and family.

The number of commissioned boatmen comprising the establishment of this port is 79, classified as follows:—

First class 26, second class 53, with salaries for first class, 70*l.* to 75*l.* per annum, second class, 55*l.* to 65*l.* per annum. Each class increases from its minimum to its maximum by an annual increment of 1*l.*

For this salary we make bold to affirm that some of the most arduous duties that comes within the range of the whole Civil Service falls to our lot.

There are more than three fourths of our number at this port who have an incessant run of duty for 365 days in the year—less the annual leave—and we desire here specially to point out that the peculiar hardship attaching to that continuity of duty is the amount of night-work involved.

At this juncture, with the permission of your Royal Commission, we beg to commend for your kindly perusal the annexed copy of a memorial on this subject addressed to the Honourable Commissioners of H.M. Customs, November 1884.

We believe that this course will obviate this paper becoming unduly lengthy, and, at the same time, will convey to your Royal Commission some real idea of the long hours, arduous toil, &c. entailed in the performance of boatmen's duty at the port of Liverpool.

Pardon us for daring by anticipation to assume that your Royal Commission having read the memorial referred to are at once struck by the marked contrast between the magnitude of the duty performed and the amount of remuneration awarded. We believe the inference inevitable.

We beg further to say that the statements therein made stand intact at the present day with one or two exceptions.

The principal exception it is imperative that we should at once explain.

The severity of river duty, as set forth in that memorial, has, in some measure, been mitigated by the substitution of two steam launches in lieu of rowing boat.

This boon, we regret to say, has not been an unmixed blessing, as by the change we have sustained a loss of 6*d.* per day, which amount was allowed as rowing money when river duty was performed by rowing boat.

The next part of our paper, as bearing a close relation to the question of salary, we devote to the subject of classification.

Classification.

The incidence of classification, as applied to our body, entails serious and grievous hardships, and, as a consequence, has engendered a strong conviction that nothing short of its total abolition, substituted by a system of yearly increments from the minimum to the maximum salary, will effect a fair and just settlement of this question.

In support of this contention we adduce the following example of the rate of progress from class to class for a decade; that is, from November 1876 to November 1886.

During that period the official return shows the number that has passed out of the second into the first class to be 29.

This, gives a yearly average of 2·9, the strength of the second class being 53, it follows that at this rate it will occupy 18·2 years to pass through that class.

This, again, looked at from a salary point of view, means that at the expiration of 11 years a boatman will have arrived at the maximum of the second-class salary, and will, therefore, receive no further increment for the ensuing 7·2 years, when, at such time, providing he shall have maintained an unblemished character, he will be rewarded by admittance into the first class.

A residue of the second class, numbering 34, entered the service at the initial salary of 60*l.* per annum, in their case, their maximum being 65*l.*, they will experience a cessation of increment for 12·2 years.

These statements being established, your Royal Commission will readily perceive that we can look with but little favour upon such a method of promotion, and this aversion becomes intensified when regard is had to the excessively low scale of pay attached to our position.

In February 1884 we addressed a memorial (annexed) to the Lords Commissioners of H.M. Treasury craving an improvement in salary, &c., the result of our efforts on that occasion being unsuccessful, we now beg respectfully to submit, for the favourable consideration of your Royal Commission, the following modified form of hat request:—

That instead of the present scale of pay and classification a boatman shall commence with a salary of 55*l.* per annum (as at present), and increase by a continuous yearly increment of 2*l.* to the maximum of 95*l.*

Taking into account the severity of the duties devolving upon us, together with the fact that more than three fourths of our number have to put in 73 and 80 hours per week, and that the greatest per-centage of that time is night duty, and also the importance of the Waterguard Department as guardian of one of the great branches of the National Revenue, we trust that the above request for an increase of salary will commend itself to your Royal Commission as being both fair and reasonable.

Promotion.

The subject of promotion to a higher grade forms an essential element in the well being of every department of the State, and without a due recognition of this principle no service can possibly be in a sound or healthy condition.

From some cause or other for a considerable time past the department to which we are attached appears to have lapsed into an unfavourable position in regard to this matter, as during the last 3½ years the total measure of promotion falling to the lot of boatmen at this port has been but two assistant examining officerships.

This we regard as abnormally low, and consequently has had not only a chilling effect upon the aspirations of those of our body who reasonably expected such reward, but also in this way has exercised a blighting influence on the rate of progress of the classes.

Having pointed out in this paper and by annexed memorials the excessively low scale of pay attached to our position, the adverse bearing upon us of the present system of classification, the exceedingly tardy rate of promotion to a higher grade, and the onerous, responsible, and severe nature of the duties we perform, we now anxiously leave the matter in your hands, my Lords and gentlemen, earnestly and hopefully trusting that each and every one of these important subjects may return again to us bearing the impress of amelioration as the outcome of your deliberations.

Such a realisation would indeed be a happy transformation from a condition of depression, overwork,

Memorials.

and discontent to all that is implied by the words gratitude and contentment.

We beg to subscribe ourselves,
My Lords and gentlemen,
Your obedient humble servants,

Signed on behalf of the body—
(Signed) Thomas Camm,
William Whiting,
Robert K. Martin,
William Harrison Jones,
Boatmen, H.M. Customs,
Liverpool.

(Copy.)

Port of Liverpool, November 1884.

To the Honourable the Commissioners of H.M. Customs.

Honourable Sirs,

The humble petition of the undersigned, the Commissioned Boatmen of H.M. Customs at this port,

Showeth,—

That your petitioners respectfully beg to draw your honours' attention to the all but unbearable severity of their situation by the introduction into the Waterguard Department of the present form of the "twenty-four" hours' movement.

That its introduction has involved to your petitioners very nearly double the hours of labour.

That this fact alone, coupled with the arduous, dangerous, and responsible character of their duties, has rendered their position, to use the mildest form of speech, pitiable in the extreme.

That your petitioners are persuaded that it is impossible for any but those having actual experience to form any adequate idea of the hardships entailed in the performance of boatmen's duty during the winter months on a wild, bleak, and tempestuous river such as is the Mersey.

That your petitioners desire to lay great stress on the fact that, prior to the introduction of the present scheme, when 24 hours' continuous duty in every fifth day was the rule on the river, your petitioners felt that even then, under that comparatively mild regulation, their constitutions were taxed to the utmost.

That as a result of their short experience of the present rigorous system, your petitioners feel compelled, on behalf of wives and families, as well as themselves, to state with great earnestness that a perpetuation of it must result in broken and shattered health.

That this will be obvious from the narration of the following pertinent facts your petitioners entertain no manner of doubt.

That in the performance of river duty it happens with great frequency, owing to the boisterous state of the river, accompanied, as is often the case, by a heavy downpour of rain, your petitioners get drenched to the skin, and, while in this dangerous condition, will be for hours exposed in going from ship to ship for the purpose of rummaging. And further, that whilst in this precarious state each boatman has in turn to take charge of the open boat (for it should be stated that, as a matter of fact, the steam launch is disabled about two-thirds of the winter) for as much as two hours at a time, whilst the remainder of the boat's crew are performing the rummage.

That this, your petitioners affirm, is often the case on the coldest and most bitter of winter nights.

Added to this, that the arduous nature of rummaging will in itself produce great heat and perspiration, therefore in the execution of such a duty your petitioners become unavoidably subjected to the dangers of alternate heat and cold, and often those dangers are aggravated by the addition of wet clothes.

That under this state of things your petitioners feel assured that your honours will readily perceive that a system like the present, which exacts 24 hours continuous duty, followed by 24 hours off, for four days alternately, with but one day of day duty in every five, cannot be applied to a river like the Mersey without incurring the penalty previously stated.

That the duties at the docks, though dissimilar in many respects, are, under the new regulations, but slightly less severe.

That the hours of labour are the same on the principal stations.

That in the case of one station every alternate 24 hours' duty is imposed (Sundays and holidays are included in all cases).

That the relative situation of the residential parts of the city to the extensive line of docks (seven miles) is peculiarly unfavourable, and necessitates the greater part of your petitioners to travel distances ranging from three to seven miles in order to reach their respective places of duty.

That in the case of those boatmen who have to travel the longer distance, and have to perform 24 hours' hard duty, it becomes necessary to resort to the accommodation afforded by 'bus, and they thus become subjected to the very serious drawback of being mulcted in an expenditure on this account of 1*s.* 8*d.* weekly, a deduction at once so important from wages ranging from 21*s.* to 25*s.* a week becomes very serious, and the gravity is still more increased when regard is had to the providing for the various wants of a family, in many cases six or seven in number.

That, touching the immediate duties of the docks, your petitioners desire to state that the most severe and harassing feature imposed, and the most prejudicial to health, is the keeping of patrol watch, that is, after toiling hard all day and nature well nigh exhausted, the night being divided into three watches, each boatman is allotted a watch.

That, should any vessel arrive direct from sea during night tide, which in a port like Liverpool is of very frequent occurrence, all hands proceed to the rummage. This duty, as we have previously intimated, can be done at no time without the exercise of great exertion, and, consequently, by the time the rummage or rummages are completed the boatmen engaged in it are reduced to a state of excessive heat; particularly will this be so in the case of steamers whose engine-rooms at such times are in a great glow of heat.

That, under these circumstances, and in this peculiarly dangerous condition resulting from such rummages, to be immediately subjected to keep a patrol watch on cold, bleak, and draughty quays in an inclement climate such as this your petitioners feel that such a proceeding is neither just nor humane, and that, sooner or later, if continued, must end, to many of them, in very serious physical consequences.

That your petitioners desire further to point out that, in addition to the foregoing facts, the introduction of the 24 hours' scheme has very injuriously affected them in a pecuniary aspect.

That prior to its enforcement those of your petitioners who were engaged on dock duty had an opportunity of participating, in a small degree, in the overtime that accrued from the discharging of vessels during the night, watching bonded goods on the quays, &c., &c., whereas by the operation of the present scheme they are debarred the available opportunity for such remunerative employment.

That side by side with this serious pecuniary loss there is the additional expense, incurred by this 24 hours' continuous duty, of having to provide for the maintenance of *two* tables.

That such a concurrence of unfavourable financial circumstances your petitioners need hardly assure your honours is already causing very real and tangible distress in their home affairs.

That your petitioners desire to assure your honourable board that, as a body, they entertain a great reluctance to assuming the rôle of complainers, but the intense hardships that have devolved upon them, both of a physical and financial character, by the action of the 24 hours' movement, they must plead as their justification in their departure from that rule in the present instance.

That your petitioners express an earnest hope that your honours may be pleased to take into your kind and favourable consideration their many and serious grievances, as set forth in the present memorial.

And your petitioners will ever pray, &c., &c.

Here follow the names of the boatmen.

(Copy.)

Port of Liverpool, February 1884.

To the Honourable the Lords Commissioners of Her Majesty's Treasury.

The humble petition of the undersigned, the Commissioned Boatmen of Her Majesty's Customs at Liverpool,

Showeth,—

That your petitioners, who comprise the body of commissioned boatmen of this port, very respectfully beg to draw your Lordships' attention to the following facts, and pray that you may be pleased to take them into your kind and favourable consideration, with a view to the amelioration of their condition:—

That the body when at its full strength numbers 79, and is classified as follows, viz.:—

First class 26, second class 53, with salaries ranging, first class, 70*l.* to 75*l.* per annum, second class, 55*l.* to 65*l.* per annum, each class increasing from its minimum to its maximum salary at the rate of 1*l.* per year.

That those boatmen who came into the service on the 60*l.* scale find that when they attain to the maximum of the second class they are stationary for about eight years (this is an error and should have been 12·2 years) before a vacancy occurs to enable them to enter the first class.

That about two thirds of your petitioners have to do duty 365 days in the year, less their annual leave.

That the duties of your petitioners are laborious, dangerous, and responsible, they having to board and rummage vessels lying in the river in all weathers, many of the vessels are of great size, and afford facilities for concealing contraband goods in a special degree, particularly in such places as the engine-room and coal bunkers, and which call for great exertion in the rummage, resulting in heavy wear and tear.

That the position of your petitioners is one of great trust and responsibility will be obvious, for by the nature and construction of the present day of gigantic vessels, a great amount of the duties must necessarily be performed without direct supervision, as it is impossible for the superior officer to be at all the various places during the rummage.

That your petitioners believe that upon their diligence, tact, zeal, and practical knowledge depends to a great extent the discovery and suppression of smuggling.

That your petitioners, in appealing to your Lordships to improve their position, would very humbly, but very earnestly, suggest the following amended salary scale, viz.:—

Second class commence at 60*l.* per annum and increased by an annual increment of 30*s.* to the maximum of 75*l.*

First class to commence at 80*l.* per annum and increased by a similar increment to the maximum of 95*l.*

That instead of the present division of classes, the following may be adopted in lieu thereof:—

First class to number 32; second class to number 47; thus curtailing the long and wearisome period that at present intervenes from the time your petitioners arrive at the maximum of the second class and their entrance into the first.

That in support of the prayer of your petitioners, they, in addition to the general merits of their case, would earnestly urge the following plea:—

That nearly all your petitioners are married and have families to provide for, which means, with their low scale of pay and the excessively high rents, cost of education, clothing, provisions, &c. in a city like Liverpool, their circumstances are straitened indeed, and they are oftentimes reduced to serious embarrassment.

That your petitioners would reiterate the hope that your Lordships may be pleased to give to their humble prayer your favourable consideration and so meet their very anxious wishes.

And your petitioners will ever pray, &c.

Here follow the names of the boatmen.

STATEMENT OF THE COMMISSIONED BOATMEN OF HER MAJESTY'S CUSTOMS AT THE PORT OF HARWICH.

The Petition of the Commissioned Boatmen of Her Majesty's Customs at the Port of Harwich,

Humbly showeth:—

That your petitioners, in describing their qualifications, the nature and hours of their duties, their remuneration, and course of advancement, are humbly confident of showing that they labour under great grievances.

That boatmen must, on entering the service, be under 30 years of age, and pass a strict medical examination, and a Civil Service examination in handwriting, orthography, and arithmetic.

That your petitioners discharge duties of an arduous nature, their boating duties in the harbour, their rummaging and boarding duties, and their patrol duties involving a vast amount of physical labour and endurance, exposure to weather by day and by night, and danger to life and limb; their intercourse with all classes of society rendering the tact and discretion of each individual officer essential to the dignity of the Department, and the detection and prevention of smuggling demanding an equal amount of individual zeal and intelligence.

That the educational examination undergone by boatmen proves their fitness for all clerical duties performed by subordinate officers of the Out-door Department.

That your petitioners are on duty every Sunday and every night in consequence of the time of arrival (2 to 3 o'clock a.m.) of the passenger steamers from Antwerp and Rotterdam, belonging to the Great Eastern Railway Company; and the patrol watch at the harbour, for which duty they receive no extra pay.

That, for an average of 12 hours, Sunday duty, your petitioners receive the scanty pay of 1*s.*

That, considering their great amount of physical labour and exposure, their present allowance of uniform clothing—a suit per annum and a monkey-jacket triennially—is insufficient.

That boatmen, while possessing educational fitness and a thorough practical knowledge of the duties of the service such as merit promotion, are placed at a disadvantage in an educational competition with out-door officers.

That boatmen are divided into two classes, the salaries of the first varying from 70*l.* to 75*l.*, and those of the second from 55*l.* to 65*l.* per annum.

That there exists a system of private investigation of character, whereby any officer may be under a charge without having an opportunity of defending himself. That boatmen have to serve 40 years before being entitled to their full superannuation allowance.

That in the event of an officer's death, his widow and children receive no provision from the service, and are often left destitute.

That your petitioners humbly believe the foregoing facts sufficient to show forth the painful truth that their incomes are—irrespective of their evidently being less than a fair remuneration for boatmen's duties—inadequate to supply the necessaries of life, much less the expenses entailed by sickness, and that their means of advancement, both in position and salary, are insufficient.

Therefore, your petitioners humbly pray—

That classification should be abolished.

That boatmen should receive an initial salary of 65*l.*, rising by 2*l.* per annum to 75*l.*, thence by 3*l.* per annum to 95*l.*

That Sunday and Bank Holiday pay should be proportionate to salary for the rest of the year.

That overtime pay should be increased to 1*s.* per hour, and that overtime should be paid for all duties performed in connexion with vessels discharging foreign cargoes before and after legal hours.

That the supply of uniform should be increased by the grant of another pair of trousers per annum, and a long overcoat and long oilskin or waterproof coat biennially.

That your petitioners should, in common with the boatmen of other ports, have a short and long watch alternately.

That all waterguard clerical duties should be performed by boatmen.

Memorials.

That a more liberal proportion of promotions, by selection, to the rank of examining officer and assistant examining officer should be granted to boatmen.

That no charge should be recorded against any officer unless he shall have been afforded an opportunity of defending himself.

That 30 years should qualify for the full superannuation allowance, or that elderly boatmen should discharge the less laborious duties of the service.

That from the death of an officer his widow or children should be granted the superannuation allowance, to which he was entitled at the time of his decease.

That a delegate be allowed to represent your petitioners.

Finally, though your petitioners are humbly conscious that they merit and enjoy the confidence of their superiors, they yet think that efficient service should be rewarded, not by the minimum salary which will obtain sufficient candidates for the service, but by such remuneration for, and incentives to, efficiency as will ensure comfort and contentment.

Therefore, your petitioners again humbly solicit the just and reasonable concessions above submitted.

And your petitioners will ever pray.

(Signed) Joseph W. Helyer.

REMARKS ON EVIDENCE AND MEMORIALS.

REMARKS by SIR A. WEST upon the EVIDENCE given by SIR A. SLADE.

I have carefully read the evidence given by Sir Alfred Slade, and I propose to divide under two heads the remarks I have to make upon it:

A. The present work and organisation of the Receiver General's department.

B. The proposal to absorb into that department the whole of the work now done in the five London collections.

As regards A., I consider that Sir Alfred Slade exaggerates both the labour and the responsibility falling on his office. The magnitude of the figures quoted is no test of the labour involved. For many years prior to 1888 the office of the Receiver General was one of receipt and payment of money only; in fact, it performed the simple duty of a cashier's office in a bank.

Since the 1st April 1888 we have arranged that certain licenses should be issued to the public, but this in no way whatever imposes any work of a confidential character in connexion with any of the taxes collected.

Let me take an example: If a person or a firm takes the trouble for purposes of secrecy to be specially assessed for income tax under a number or a letter of the alphabet, it is exceedingly foolish of them to make the payment by means of their own cheque to persons who are not sworn to secrecy. It is open to them to pay in notes and coin or to get a banker's draft, and if they bring Sir Alfred Slade or his clerks their own cheque, I should say it was presumptive evidence that they care very little about the secrecy.

I desire to put this very plainly, as I fear that Sir Alfred Slade's evidence might lead some people to think that the provisions for secret assessment of income tax were illusory. This is not the case, and if the taxpayer takes ordinary precautions when paying his tax, he has absolute security for that secrecy which the law contemplated in allowing assessments to be made under a number or alphabetical letter.

As regards the heavy personal liability dwelt on by Sir Alfred Slade, I cannot but think that vigilance on his part in supervising the daily work of the office places him in a position of practical security.

I cannot for one moment admit that clerks, although called lower division clerks, entering the service under the Playfair Scheme, are "a dangerous class to employ as cashiers" (Q. 22,544). I would point out that all cash, cheques, &c. are taken from the Receiver General's office *daily* by the clerks from the Bank of England, and that he has the satisfaction of knowing at the close of each day that the transactions of the day have been verified by the Accountant General and his clerks.

On the question of organisation in this office, so long as it exists in its present form, I can agree with many of Sir Alfred Slade's opinions. I agree with him that all cashiers should give security, and that the appointment of Deputy Receiver General is now unnecessary; and on both these points our Board have so reported to the Treasury.

In justice, however, to our action in 1877 on the introduction of the Playfair Scheme, I should like to explain that the Board created no new office, but merely recommended that the then chief clerk, Mr. Rea, an officer of long service and experience, should, without any increase at all of salary, receive the title of Deputy Receiver General. It was a purely titular change, and did not affect any alteration in his previous duties as chief clerk. We never intended that the post should be continued to a successor; and when Mr. Rea retired at the end of last year we refused to fill it up.

The Receiver General's department was organised on the seven hours scale when this system, accompanied by the abolition of duty pay, was introduced in the other Inland Revenue departments at Somerset House.

As to the "receiver of fines and forfeitures," or "receiver of hereditary revenue," I was not aware, until reading this evidence, of the existence of such an officer, who is not in any way under our authority.

As regards B., I must at once say that Sir Alfred Slade's proposal to absorb into his department the whole of the work now done in the five London collections is quite impracticable, and it could only have been advanced under a misapprehension of the nature and quantity of the work involved.

In what he says of the duties of collectors, Sir Alfred Slade confines himself to their in-door work. Their out-door work is of a totally different character, and does not come under his cognizance. Indeed, I should wish to take this opportunity of saying that, though I gladly recognise Sir Alfred Slade as a high authority on the actual receipt of money, I cannot consider him an authority on other branches of the Inland Revenue administration, and I notice in his evidence statements which show his want of familiarity with the practice of the department.

The Excise staff alone in the five London collections consists of—

5	collectors.
31	collectors' clerks.
305	supervisors, surveying officers, and assistants.
341	

They prepared and issued, in 1887-8, 113,148 licenses; they surveyed and charged duty at 7 distilleries and at 159 breweries, and were in charge of 38 bonded warehouses, including some of the largest in the kingdom. The total gross duties received and accounted for in 1887-8 in these five London collections were 10,894,784*l.*; the payments for salaries and other charges were 161,783*l.*, and the payments for drawback and spirit allowances amounted to 405,601*l.*

To concentrate all this business at Somerset House would give rise to serious inconvenience and delay, not only to the traders and the public, but to all the out-door officers surveying in the more distant parts of the London collections. The present system of decentralisation of work is, I am satisfied, both the safest as regards the revenue, and the more economical.

Sir Alfred Slade passes by the most important duties of a collector, which are not the receipt, as a receiver, of Revenue money, but the discipline and due supervision of all the out-door surveying officers who raise the charge of duty, and replying to the questions raised—often highly technical questions—by distillers, brewers, and any excise traders within his collection. These duties would remain even if it were possible to transfer to Somerset House all receipt of money, and it is obvious that they can be more efficiently performed by officers on the spot than by those at one central office. To provide for them in the latter way, we should have to add to the inspectors at the chief office, who could not have the local knowledge of, or the same control as, collectors stationed in the midst of their collections.

Our policy is, indeed, the exact reverse of that suggested by Sir Alfred Slade. We are desirous of reducing the number of inspectors at Somerset House, and of fixing more responsibility as regards discipline and supervision upon the superior out-door officers in command of local areas. This is, I am sure, a more effective method of administration than centralising all control at head-quarters.

So far I have dealt only with the Excise business under the collectors. As regards Sir Alfred Slade's proposals that the collection of taxes in the metropolis should be accounted for direct to him instead of to the London collectors of inland revenue, there is not, in principle, the same objection. It is, in fact, merely a question of convenience. And here I would wish to clear up in the minds of the uninitiated the ambiguity attaching to the term "collector." The collector of taxes is not, as a rule, the collector of inland revenue. He is the collector appointed by the district commissioners of taxes to collect income tax and inhabited house duty; he is paid by poundage, not by salary; and is in no sense our officer. He must receive the taxes, as his receipt alone is a valid discharge to the person assessed; and then he must pay over to the Revenue the money so received.

In the city of London the 35 collectors of taxes pay over their collections daily to a bank (the National Provincial Bank of England), and a transfer is made once a week of the aggregate amount collected to the Inland Revenue account at the Bank of England. This is an excellent arrangement, and I hope to extend it to other parts of London. Whether the bank transfer, which the collector of taxes sends as evidence of his payment into Revenue be sent to the Receiver General or to the nearest collector of inland revenue is only a question of convenience; and I am inclined so far to agree with Sir Alfred Slade that, within a given radius of Somerset House, it would be better that these transfers should pass directly through his accounts instead of filtering through the accounts of the collectors of inland revenue. It would not, however, be desirable to adopt this course for the whole metropolitan area.

Remarks on Evidence and Memorials.

Sir Alfred Slade could scarcely have been aware that this area contains the districts of 42 tax surveyors, and that the number of separate assessments to be collected by the local collectors is 1,600,000. To focus all these payments in the Receiver General's accounts would necessitate a large increase of staff both in his office and in that of the Accountant General, and as collectors of inland revenue must be kept up for Excise business and Excise discipline, it is more convenient that the tax payments into Revenue should be distributed through their accounts.

Although we find it impossible, with due regard to the safety of the Revenue, to agree to the sweeping and somewhat crude suggestions of the Receiver General, we have carefully examined his proposals to see whether, though impossible in their entirety, they could with any advantage be partially adopted.

We readily recognise the willingness of Sir Alfred Slade to undertake additional work and responsibility, and we have found that it is, in our opinion, possible to a certain degree to utilise this willingness in a manner profitable to the Revenue. We have placed before the Treasury a scheme under which the Excise license duties within a given area round Somerset House, and the tax payments into Revenue within a larger area round Somerset House, should be paid to or through him. Assuming that his successor be a collector trained and experienced in Revenue law and practice, we can in this way by a re-arrangement abolish one of the present London collections, thus reducing the number of London collectors, other than the Receiver General, from five to four. This scheme, which would effect an immediate saving of about 800*l.* a year, is now awaiting consideration at the Treasury, and pending the report of the Royal Commission no decision will be arrived at.

It represents on our part the nearest approach which it is possible to make to Sir Alfred Slade's proposals, consistently with the safety of the Revenue and the convenience of the Excise traders and the general tax-paying public in the metropolitan area.

ALGERNON WEST.

Somerset House,
9th April 1889.

REMARKS by SIR A. WEST on the EVIDENCE given on behalf of the SECOND CLASS INSPECTORS OF EXCISE.

I HAVE read the evidence given on behalf of the second class inspectors of Excise, and regret the serious exaggerations in the statements made by Messrs. Fisher and Anderson.

Second class inspectors of Excise, when in Somerset House, perform duties of a purely subordinate character, all their work being checked and overlooked by superintending inspectors, and, except when officiating for collectors in the country, when extra allowances are granted to them, they have no direct responsibility.

It is incorrect to say that they draft the Board's letters, and really do the work of the assistant secretaries, the committee clerks, and the principal clerks. As a matter of fact, proportionately few of the papers received are referred from those officers to the inspector's department.

The work of the secretariat officers embraces very much more than Messrs. Anderson and Fisher appear even to know of, and their very erroneous description of some of the classes of papers must be attributed to their ignorance of them. In addition to Excise matters, the work of the secretariat includes questions of policy, practice, and law relating to stamps, legacy and succession duties, probate and account duty, corporation duty, land tax, income tax, and inhabited house duty, in none of which would a second class inspector of Excise be consulted for a moment. It is impossible for me in a short memorandum to meet the numerous misleading statements made by Messrs. Anderson and Fisher, but the Royal Commission must not suppose it is a fact that collectors or inspectors of Excise really do the difficult work in the collection of the income tax, or assess either taxes or stamp duties, or railway passenger duties, or that the credit of re-arranging the areas of districts in Ireland belongs to Mr. Fisher. That duty was entrusted by us to Mr. Micks, at the time our collector in Dublin, who admirably carried out our instructions, and to whom the chief credit is due. Mr. Fisher's employment was entirely subordinate, and he worked directly under Mr. Micks' personal direction. Nor is it accurate to say that questions of discipline are first referred to, or dealt with, by the inspectors. The most important complaints and questions of discipline are brought direct to the Board by the secretary, and are dealt with either by the chairman or deputy chairman. The less important complaints only are first sent to the second class inspectors that they may make a précis of the complaints for the convenience of the secretary or assistant secretary.

The main object of the existence of this class has been partly to assist the superintending inspectors, on whom devolve very important duties, and partly to give supervisors—from whom the second class inspectors are immediately recruited—an opportunity of learning the mode of business at the head office, with a view to their becoming at a future time more efficient collectors; but our Board has for some time had under consideration the question of abolishing this class as it at present exists, and of recruiting our collectors directly from the ranks of the supervisors, and if we can see our way to do this without injuring the prospects of promotion for the really hard working out-door Excise service, it is a reform which we shall certainly submit to the Treasury. It is certain that at present the second class inspectors appear to hold a very mistaken view of their relative importance in our service.

ALGERNON WEST.

Somerset House,
3rd April 1889.

REMARKS by SIR A. WEST on the EVIDENCE given on behalf of the SURVEYORS OF TAXES.

THE evidence of the surveyors of taxes (Mr. Blake and Mr. Gough) does not appear to me to call for comment, although I cannot altogether agree with what they say with regard to clerical assistance, reports on schedules, and ledger accounts.

We are pleased to note the satisfaction which is expressed at the late reorganisation, and we do most fully recognise the delicacy and the difficulty of the duties so well performed by them.

ALGERNON WEST.

3rd April 1889.

REMARKS by SIR A. WEST on the EVIDENCE given on behalf of the EXCISE OUT-DOOR SERVICE.

As regards the evidence given by Messrs. Hunter, Cunningham, Crowe, and Webster, I do not think I could with advantage add anything to what the Board of Inland Revenue have already said in the correspondence between themselves and the Excise out-door officers, which has been handed in to the Commission by Mr. Cunningham.

The subject of the positions, the salaries, and the allowances of the officers of Excise has been considered with the greatest possible care during the past eight years. There have been many communications between the Treasury and ourselves, and several papers have been presented to Parliament.

The views of the Board of Inland Revenue have been, in my opinion, most fully expressed, and I have only to say now that, recognising, as I have always done, the great value of the services performed by the officers of Excise, I cannot consider that they have established a claim to any increased salaries or allowances.

I do not attempt in this note to reply to the numerous statements given in evidence by the representatives of the Excise out-door service, but I trust that the Commission

will not assume that I admit their entire accuracy. If I were required to answer every point in detail, I think I should be obliged to ask the Commission to recall me for the purpose.

I am, however, content to admit that, generally speaking, the representatives have laid their case before the Commission in a manner to which no exception need be taken, though they have failed to convince me that their case is well founded.

Remarks on Evidence and Memorials.

ALGERNON WEST.

Somerset House,
3rd April 1889.

LONDON OUT-DOOR OFFICERS.

STATEMENT AND EVIDENCE.

The out-door officers complain of the large number of officers almost continually employed as acting examining officers, while they are paid at a lower rate than an examining officer.

2. Some of the business of the Customs Department is very intermittent, and a sufficient establishment of examining officers to do all the work at these seasons could not be maintained without making a considerable addition to the staff, which would be wasted when the time of pressure had passed. At such times it is reasonable that out-door officers should be employed as acting examining officers, and also (following the practice in other public departments) that they should be employed as such in the absence of examining officers on leave or sickness.

But employment beyond this is not reasonable, and the Board admit the validity of the complaint, that the practice has grown up of employing out-door officers in the acting capacity when it is not to be justified by either of the reasons given above; but it is no new practice, and it will be as well to state the steps which have of late years been taken to remedy it, and improve the position of the out-door officers.

3. In July 1881 a committee of the House of Commons, which was appointed to inquire into the conditions of service and rates of pay of the Customs out-door officers at the out-ports, reported "that it is of daily occurrence at "the out-ports that out-door officers of both classes "perform the duties of examining officers and (with the "exception of a few at the larger ports who receive 10*l.* "per annum) without any remuneration," and expressed the opinion that "extra pay as at present should be given "to all those out-door officers who discharge the duties of "gauger or examiner." At that time, out of

2,141 out-door officers and
422 boatmen

2,563

there were 505 employed on acting duty, of whom only 140 were in receipt of the 10*l.* allowance.

4. In consequence of the recommendations of the committee the whole of the out-door officers at the out-ports, who had previously been on a much lower scale of salary, were placed on the same scales as the London officers as to the maximum salary of each class, the initial salary being reduced to its present amount, and the annual increments of the two classes being raised from 1*l.* to 30*s.*, which was the increment of the 1st class in London. The immediate effect of this change was that the vote for the salaries of the out-door officers was increased by about 5,500*l.* a year.

5. The Treasury at the same time directed "that out-"door officers, passed as competent to be employed on "examining officers' duties should be paid, in addition to "the salaries of their class, at the rate of 2*d.* an hour, but "not more than 1*s.* a day, when so employed. All out-"door officers now in receipt of 10*l.* per annum as acting "examining officers shall continue to be paid on that "scale, if it is more advantageous for them."

6. The result was, that, in 1884–85, out of 2,393 out-door officers and boatmen (a smaller number than was in the service in 1882)—

21 men were in receipt of the 10*l.* allowance
and 441 „ „ 2*d.* rate

462 in all,

while the extra payments made to acting examining officers amounted to 4,332*l.* as against 1,226*l.* in 1881–82.

7. Though the position of the out-door officer acting as examining officer was thus to a considerable extent improved, the Board on a review of the duties performed by many of the 2nd class examining officers and the out-door officers acting as examining officers, did not consider that the 2*d.* rate of extra pay allowed was a satisfactory solution of the question either in the interest of the public or that of the officers.

It was known that while a considerable proportion of the 2nd class examining officers was continuously employed upon duties which did not require any high degree of educational attainments and practical competency, the possession of which was the justification for the salaries they received, a large number of out-door officers and boatmen were continuously employed on similar work with only the addition of 1*s* a day to their pay when so employed. It was considered that for the duties in question the 2nd class examining officer was paid at too high a rate while the out-door officer was paid at one too low.

8. The duties of the officers which were at the time under consideration were—

Quarantine and rummaging.
Copyists' work in the warehouses.
Weighing dry goods or tobacco.
Re-gauging wines.
Delivery of free goods in bulk or in packages as subordinates but not as chiefs.
Delivery of passengers' or seamen's baggage.

9. The Board accordingly applied to the Treasury to sanction the creation of an intermediate class to be called assistant examining officers, with a scale of salary from 100*l.* by 3*l.* a year to 150*l.* This class was originally to have consisted of 512 officers, and it was to be gradually formed by the reduction of—

339 places in the 2nd class of examining officer
and 173 „ out-door officer class.

512

This number of places fairly represented the number of 2nd class examining officers and out-door officers who were at that date found to be employed on duties of the description named above.

10. The Treasury assented to the arrangement in September 1885 on the conditions that the new class should be introduced gradually, every fresh appointment to it being met by the suppression of an existing place either in the class of 2nd class examining officer or in that of out-door officer, and of these 512 places, 218 have been since that date filled by the promotion of out-door officers and boatmen, these 218 places having been created by the reduction of—

119 places of 2nd class examining officer
99 „ out-door officer.

218

11. While the out-door officers and boatmen have thus lost the 119 places leading to a higher scale of salary, they have gained 218 places leading up to 150*l.* a year, and it must be borne in mind that many officers have thus received an improvement in position who would not have been considered fit for the full class, and who would not have been successful in competition. As vacancies occur the 291 remaining places in the class of assistant examining officer will be filled.

12. The result of the creation of this class upon the number of the officers receiving the acting allowances has been satisfactory. As stated above, in 1884–85, 462 officers out of 2,393 were in receipt on the 10*l.* allowance or the 2*d.* rate, there are now out of 2,190 officers—

7 in receipt of the 10*l.* allowance, and
231 „ „ 2*d.* rate,

338

thus showing a reduction of 124 in the number of acting officers while the number of the grades out of which they come has been reduced by 203.

13. The effect of the formation of this class is therefore with considerable rapidity diminishing the grievance of which the officers complain, and when the remaining 291 places on the class are filled it is expected that any reasonable grievance will be removed. But five or six years may

Remarks on Evidence and Memorials.

yet elapse before these 291 places are filled, and it is for consideration whether some temporary arrangement might not be sanctioned in order to remove the ground of complaint at the point where the grievance really exists.

14. The 2*d.* rate was presumably sanctioned by the Treasury on the supposition that, as a rule, only 1st class out-door officers would be employed as acting examining officers; but for sufficient reasons this is frequently not the case.

15. Officers intended to be employed on this acting duty are formally approved by the Board, and the number of officers at present approved to act is 338, viz.:—

Out-door Officers.

—	1st Class.	2nd Class.	Total.
London - -	46	19	65
Liverpool - -	26	22	48
Out-ports - -	94	80	174
	166	121	287

Boatmen.

—	1st Class.	2nd Class.	Total.
London - -	8	Nil	8
Liverpool - -	8	Nil	8
Out-ports - -	29	6	35
	45	6	51

16. The average salary and allowances received by the 1st class acting examining officer is nearly 107*l.*, which is 7*l.* in excess of the minimum salary of an assistant, and only 3*l.* less than the minimum of a 2nd class examining officer. It is not considered that these officers have much to complain of.

17. But the average salary and allowances received by the 2nd class out-door officer and by the boatmen of both classes acting as examining officers is only 87*l.*, and I do not think that this is a sufficient remuneration for the duties they perform.

18. The average *acting allowance* received by the 2nd class out-door officer when acting as examining officer is over 12*l.* a year and that received by boatmen when so acting exceeds 14*l.* a year.

19. The officers have suggested, as a remedy for their complaint, that the class of assistants should be at once filled up to its full number; but there are strong objections to such a course, it would upset the calculations which in the interest of the public were made at the time the class was formed, and by making the 220 officers of 2nd class examining officers, which are to be gradually absorbed in the assistant class, at once redundant, it would practically for a long time stop all promotion to that class.

20. But as a remedy for what is considered a reasonable complaint, I suggest, for the consideration of the Royal Commission, whether, pending the completion of the formation of the class of assistants, the 2*d.* rate might not be raised to 4*d.* in the case of 2nd class out-door officers and all boatmen employed as acting examining officers, but the allowance not to exceed 2*s.* a day. This would practically place them on an average at the minimum salary of the assistant class. The cost of such a scheme would be about 2,200*l.* the first year, but it would gradually decrease as the class of assistants is filled.

21. In reply to question number 25,649 the officers point out that out-door officers are frequently employed on superior duty, though they have not been approved by the Board to act, and are consequently not entitled to receive the acting allowance. The necessity for this frequently arises, and it would not be advisable to tie the hands of an administration in such a way that they could only employ officers on the particular duty to which they have been appointed. The responsibility for the employment of such "unapproved" officers rests solely on their superior officer at the station, and although the men who are required to perform the superior duty do not receive any extra payment they know that by such employment they earn character, and that by "acting" they are gaining proficiency in the duties of an examining officer, and thus qualifying themselves for promotion.

Officers at Goole.

22. It is stated, in reply to question number 25,627, that at Goole there is one man who has been continuously acting for 10 years and another for nine. In one of these cases the officer declined promotion at any other port, and he has lately been promoted to a vacancy at Goole; the other officer was passed over in 1886 as unfit for promotion.

Insufficiency of Salaries.

23. The out-door officers in London complain that their salaries are insufficient, and the Liverpool officers complain that the initial salary, 55*l.*, is too low, and ask for an immediate addition of 10*l.* (apparently) to the amount of which each officer is now in receipt.

24. The present scales of salary and increment were fixed by Treasury Minute of 2nd January 1882, in consequence of the report of the Committee of the House of Commons which specially inquired, in 1881, into the complaints of the out-door officers at the out-ports. That Committee, while it considered that the salaries then paid at the out-ports, 55*l.* to 85*l.*, were too low, and that there was no reason why there should be any difference between the London and the out-port scale, reported "that, having "regard to the abundant supply of young men as candi- "dates for the service, the initial salary should be paid at "a somewhat lesser sum than the 70*l.* paid in London, "and that the annual increment of 1*l.* should be increased." The Treasury accordingly gave the London maximum of 100*l.* to all 1st class officers, and they fixed the initial salary of the 2nd class at the old out-port rate, viz., 55*l.*, and they, at the same time, raised the annual increment of both classes to that of the London 1st class, viz., 30*s.*

25. Having thus been put on an equal footing at all the ports, an improvement in the initial salary is asked for by the Liverpool officers, and an improvement in the annual increment is asked for by the representatives from all the ports.

26. (*See* question No. 25,760.) The ground on which the improvement of the initial salary is asked for is stated to be the difficulty of supporting a family on the pay received: but it must be borne in mind that an out-door officer can enter between the ages of 19 to 25; that, in addition to his salary, uniform is given, and that the State can hardly be called upon to provide a scale of pay sufficient to meet the requirements of early and improvident marriages. Moreover, it may be observed that in condemning the boarding system on which young officers on first joining the Service are usually employed, one of the Liverpool officers practically admitted that the initial salary of which complaint is made, viz., 55*l.* a year with uniform, is paid to "young men mostly just from school." (*See* 25,781.)

Abolition of Grades in the Class and Increase of Increment.

27. The officers request the abolition of classification and the increase of the annual increment from 30*s.* to 3*l.*, so that every officer may advance without check to the maximum of 100*l.*; they claim this on the ground that the duty performed by both classes is the same.

28. It is not strictly accurate to say that the duties of the two classes are the same; the 2nd class are largely employed on water guard and landing duty, while the 1st class are generally employed in the warehouses where their duty is in some proportion to their higher rate of pay.

29. Though promotion from class to class is mainly dependent on seniority, providing that the officer's character is clear, the occasional exercise of the power of promotion by merit is believed to be beneficial to the Service, as it affords an opportunity of encouraging men of marked intelligence by bringing them at an earlier age into the 1st class from which promotions to the examining class are usually made. It is better that this power should continue, and the division into classes enables it. The extent to which it has been exercised may be judged by the following figures. In January 1887 there were 910 2nd class officers in the Service; since that date 117 have been promoted, 110 by seniority and 7 by merit.

30. Moreover, there are men in the Service who are amply paid at 80*l.* a year.

31. That no strong ground exists for merging the classes is shown by the following facts:—

1. Although it takes 17 years for an officer to attain the maximum of the 2nd class by the regular operation of annual increments, the average service of the last 12 who were promoted was only $11\frac{3}{12}$ years, and the average service of the 24 who stand next for promotion is $11\frac{4}{12}$ years.
2. Of the 790 officers now in the 2nd class only 50 are at their maximum; and of these 50 only five have

been at their maximum more than three years; of these five four are men who have in the course of their service been "reduced" for misconduct—one of the three at Liverpool no less than five times, and of the remainder, 19 others have also been charged or come under censure.

3. The fact of an officer being in the 2nd class does not bar him from promotion to the class of assistant examining officers. The formation of that class commenced in 1886; there are now 218 in it, and of these 41 were promoted from the 2nd class, viz., four in London, five in Liverpool, 32 at the outports.

COST OF THE PROPOSAL MADE BY THE OUT-DOOR OFFICERS.

32. The estimates for the current year give the following as the number of out-door officers on the establishment:—

—	1st Class.	2nd Class.	Total.
London - -	220	292	512
Liverpool - -	104	138	242
Out-ports - -	201	360	561
	525	790	1,315

The cost of this establishment at the present rates of salary is—

	£
At the maximum - - -	115,700
„ minimum - - -	88,075
„ mean - - - -	101,888

and the estimates of the current year provide 99,785*l.* as the sum required to defray the cost of the two classes.

The cost of an establishment, with the same number of officers, but with a scale of salary rising from 55*l.* to 100*l.*, without any break of class, would be as follows:—

	£
Maximum - - - -	131,500
Minimum - - - -	72,325
Mean - - - -	101,912

33. It thus appears that, apart from any question of an increased increment, the merging of the two classes into one would, probably, not result in any material increase in the cost at mean salaries. But the cost would be increased considerably (1) by the adoption of a higher rate of increment, and (2) if there should be such a diminution in the total number of superior offices to which out-door officers can now rise as would affect materially the number of promotions and lead to a larger number of the officers attaining the maximum of 100*l.* than is at present the case.

34. It is to be observed that if the increment is raised to 3*l.*, that of the assistant examining officers, which is at present at 3*l.*, will also have to be raised.

35. It is not easy to form any estimate of the actual cost to the public of the proposed increased increment, as it will depend on the average length of service after which an officer will be promoted; and though it has been shown that, at present, an officer is promoted after a little over 11 years' service, the length of service may, hereafter, be longer.

36. The tables following paragraph 40, however, show the gain to an officer by the substitution of the 3*l.* for the 30*s.* increment, at the end of each quinquennial period in a service of 30 years (which would be necessary before he reached the maximum of 100*l.*), and the total amount which he would gain in that period, viz., 337*l.* 10*s.*, or 11*l.* 7*s.* per annum.

37. If the average service, previous to promotion, remains as at present, it is estimated that the increased cost to the public in consequence of the increased increment would amount to over 9,000*l.* a year; but if it is extended to, say, 15 years the cost will exceed 13,000*l.*

38. But there is no proof that promotions will be much delayed.

There were in the service in 1881–82—

2,141 out-door officers,
422 boatmen,

2,563

and there were open to them on promotion the following number of places (excluding surveyorships):—

Examining officers, class 1 - - -	162
„ „ class 2 - - -	716
Total - - - -	878

There are now in the service—

1,315 out-door officers,
875 boatmen,

2,190

and there are open to them on promotion the following places:—

Examining officers, 1st class - -	223
„ „ 2nd class - -	635
„ „ assistant - -	512
Total - - - -	1,370

As a matter of fact, by far the largest number of promotions to the assistant class have been made from the ranks of the out-door officers; since out of the 218 officers now in the class, only 16 boatmen have been promoted to it as compared with 202 out-door officers.

39. But putting out of consideration the class of assistants to which the promotion of boatmen is mainly limited, it will be observed that whereas in 1882 there were only 878 places of examining officer, to which 2,141 out-door officers could aspire, there are now 858 places of that rank with only 1,315 out-door officers as candidates.

40. It cannot, therefore, be maintained with any semblance of accuracy that the prospects of the out-door officers are worse than they were in 1882.

		2,402 10 0
Gain to officer with 3*l.* increment at the end of his 30th year of service		337 10 0 or 11 5 per annum.

The general objections to a service scale are stated more fully in paragraph 70.

OUT-DOOR OFFICERS WHO ENTERED AT 70*l.*

41. Previous to the Report of the Committee of 1881 a 2nd class officer in London and Liverpool entered at 70*l.* a year, and under the Treasury Minute of 2nd January 1882 these officers were to continue to advance to the maximum of their class, 80*l.*, by the old annual increment of 1*l.*

There are 88 of these officers, but as they will attain their maximum after 11 years' service (and none can now have served less than 7 years), there does not seem any reason for making any change.

PROMOTION BY COMPETITION.

42. The officers claim that all promotion to the examining class should be made from a competitive list.

The present rule is that half the promotion is made by selection, and half from a competitive list, and it is not advisable that these proportions should be altered. Particular qualities are often required at particular places, and the officers have to be selected accordingly; and though the above rule is pretty closely adhered to, the exigencies of the service not unfrequently require that "selection" should be applied when the promotion is due to the competitive list, the debt due to that list being subsequently paid.

43. Examination papers are not the only test of a man's capacity for promotion, and the double system of promotion gives a fair field to the various qualities which officers possess, and especially to the older officers. On this subject the Committee of 1881 made the following remarks in its Report:—"It is a subject of complaint that the competitive examination for the grade of examiner operates unfavourably, inasmuch as young men of superior scholastic attainments enter the out-door service with the object of obtaining, at the earliest period that the regulations permit (three years), the superior grade of examiner which a competitive examination enables them to obtain over the heads of experienced officers—possibly of double their age—who may have, for many years, performed the duties of acting examiners."

44. It is to be observed also, that the Liverpool out-door officers do not, in their statement, join in making this claim, but urge that "the examinations should be limited to departmental subjects so that undue advantage may not be given to officers of short service."

MARKS AT EXAMINATION.

45. The officers ask that the marks obtained by each candidate at the competitive examinations may be communicated to him.

In July 1888 the Board were of opinion that the unsuccessful candidates should be informed of the marks obtained by them in the various subjects of examination, and they requested the Civil Service Commissioners, who conduct the examinations, to furnish the Board with the information in order that candidates might be acquainted accordingly. The Commissioners, however, stated in reply that it had been their practice to direct that when the complete failure of a candidate in some one of the subjects of the literary examination had been ascertained his remaining papers should not be examined or any mark assigned to them; and, in order to prevent the increase of expense, they deemed it desirable to continue the practice; they added, however, that they would be ready to inform the Board as to the particular subject in which any candidate has been found to have failed to reach the required standard, and the Board have agreed to this course being taken in future examinations.

CLERICAL VACANCIES AT OUT-PORTS.

46. The officers ask that all these vacancies may be filled by competition among the out-door officers.

As a general rule the Board see no objection to this course, and submitted a proposal to the Treasury to recruit the out-port clerical service from the out-door ranks.

47. The recent promotions of certain copyists to some of these vacancies were made under Treasury authority in connexion with inquiries recently instituted by the Treasury into the work on which copyists generally throughout the public service had been employed.

48. The promotion of a copyist at Cowes to the position of an out-door officer was a special arrangement sanctioned by the Treasury at the suggestion of the Board on account of peculiar qualifications which the copyist had shown.

COMPULSORY RETIREMENT AT 60.

49. It may be assumed that any rule which may be adopted for the rest of the public service will be applied to the Customs.

CHARACTERS (AGES AND CAPACITIES).

50. This question is fully dealt with in paragraph 85.

HOURS OF SERVICE.

51. This question is dealt with in the remarks upon the evidence given by the Liverpool officers.

QUEENSTOWN.

52. The collector at Cork states that there is no foundation for the statement made in answer to question No. 25,707.

LONDON EXAMINING OFFICERS.

Classifications of 1882 *and* 1889.

53. The examining officers in London commence their statement to the Commission by setting out the classification sanctioned by the Treasury in 1882 as compared with that set out in the estimates for 1888.

54. The main differences in this classification are—

(1.) The reduction in the number of surveyors.

(2.) The reduction in the number of 2nd class examining officers.

(3.) The formation of the class of assistant examining officers.

Number 1 only directly affects the examining officers, but it is right to state that it is also at present intended to reduce the number of 1st class examining officers to 108, and it is of such reductions that the officers mainly complain.

55. In view of the considerable reductions which either have been made or are contemplated, and of the statement by the officers in reply to question 25,511, that in 1882 "the "number of surveyors was increased by 25 on account of "so many officers from the indoor department coming "outside and holding certain posts inside, they received "certain posts outside of an equivalent value, which "posts are now being quietly withdrawn," it is necessary to explain the origin of the classification of 1882 and the causes which have led to the changes made in it since that date.

56. There is no question but that when the Inland Revenue system of keeping the warehouse accounts was adopted in 1882, the changes made were in opposition to the opinion of the majority of the Board of Customs. The staff considered at the time necessary for the purpose was fixed upon the recommendation of three officers selected by the Board to report upon the subject; but in forwarding it for the approval of the Treasury the Board expressly limited their responsibility for it to its transmission, observing that "We consider that neither the Committee "who express the opinion nor we, who are the medium of "its transmission for your Lordships' consideration, have "sufficient experience of the altered organisation necessary "for the transaction of the consolidated duties to enable "us or them to make a trustworthy forecast of the numbers and grades of the officers sufficient to attend to "them."

57. The recommendation sent in to the Treasury included the appointment of 46 surveyors for import and export duty and 29 surveyors for warehousing work.

The number of surveyors for warehousing work was recommended under the idea that under the new system it was necessary that every entry in the warehouse books should be checked by a surveyor, on the assumption, apparently, that that officer might be considered to rank with the supervisors in the inland revenue by whom the warehouse accounts in that department were checked. This "checking," so far as dry goods are concerned, resolves itself into seeing that a document is entered in the right book, and that the proper particulars are correctly recorded, and it can be done by an intelligent officer with but little previous training.

58. A short experience of the new system established the fact that it was impossible for the surveyors to keep pace with the work of the contemplated check, and it was pointed out that in the Inland Revenue the same work had been for years and was still done by the supervisors, who in their scales of pay approached much more nearly to the 1st class examining officers than to the surveyors.

In 1882 the scales of pay of the supervisors were as follows:—

	£	£
Supervisors, 1st class - -	280 to	320
„ 2nd „ - -	230 to	270
		£
Mean of 1st class - - - -		300
„ 2nd „ - - - -		250
„ both classes - - -		2)550
		275

Salary of 1st class examining officers, 220*l.* to 300*l.*
Mean salary, 260*l.*

Acting, therefore, on the advice of an officer of long experience in the warehouse accounts, who also was one of the officers who had advised the original classification, the Board in July 1882 reduced the check of the surveyors to 10 per cent. on the entries for tea, coffee, and cocoa, but left to them the full check on such high duty goods as wine, spirits, and tobacco. The detail check on the low duty goods has since that date been assigned to 1st class examining officers as their regular duty; they initial the documents in their capacity as examining officers and not as acting "pro-surveyor," as stated by the officers; the latter signature is only allowed when an examining officer is filling the place of a surveyor absent on leave or from sickness.

59. It may be here stated that in carrying out the new system at Liverpool and the out-ports the same rule was adopted with the approval of the Treasury.

60. As the detail check over the warehouse accounts was thus placed in the hands of officers whose scale of pay was very similar to that of the supervisors in the Inland Revenue, it may be useful to describe the duties which it is understood that a supervisor has to perform.

That officer is responsible for—

(1.) The survey of distilleries and breweries and the collection of all the Excise revenue in his district.

(2.) For the assessment of the license duty on public-houses and private brewers.

(3.) The checking of the stock of stamps in the hands of the distributors.

(4.) The conduct of, or responsibility for, the conduct of all proceedings of Excise officers before magistrates.

(5.) The discipline of officers within his district.

(6.) The examination of all warrants and books connected with the delivery of spirits from distilleries.

(7.) The checking of the warehouse accounts.

(8.) The conduct of all correspondence direct with the Board of Inland Revenue on questions of revenue within his district.

61. But there is also an important difference between the positions of a supervisor and an examining officer when checking the warehouse accounts.

The supervisor, as to warehouse accounts, is subject only to the occasional check of a travelling inspector, while in the Customs the proceedings of the examining officer are subject to the fixed check mentioned in paragraph 58.

It is, moreover, to be observed that in London and Liverpool the books are liable to a test check not less than once a month by the inspector of the district, and that the computations on every warrant under which dutiable goods are delivered at any of the ports are finally checked in the office of the Accountant and Controller General.

62. It will thus be seen that there is a more complete check over the proceedings of the examining officers employed on the delivery of dutiable goods warehoused than would appear from the evidence tendered to the Commission, whilst a supervisor in the Inland Revenue has a much wider range of responsibility in his every-day duty than an examining officer employed on warehouse duty.

63. It is held, therefore, that when an examining officer of the 1st class is performing the duty of checking warehouse accounts he is performing duty proper to his rank and not that of a higher grade, and that consequently no compensation is due to him "for his increased responsibility" as is claimed by the officers. Furthermore, the practice now in operation of requiring the senior 1st class officer on a station (if he is capable) to take without additional remuneration the place of the surveyor when that officer is absent on leave or sickness is similar to that which prevails generally in all other branches of the Civil Service, and there is no valid reason why any exception should be made in the Customs to this general practice, or why the old order of things should be reverted to for the sake of affording promotion to the officers.

Reduction in the Number of Surveyors.

64. The proper allocation of the "checking" duty led at once to the reconsideration of the number of surveyors requisite for the port of London, and the decision of the Board to divide the port into districts and place each district under an inspector, made this reconsideration the more necessary and the more frequent, as it was known when the districts were established that a reduction in the number of surveyors would almost inevitably follow.

65. The inspectors, being held responsible for the business within their districts, are required at the end of each year to send in to the Board the number of officers of each rank which they consider necessary for the proper working of their respective districts during the succeeding year, and the number submitted is almost invariably sanc-

Remarks on Evidence and Memorials.

tioned with little or no alteration. In this submission they are required to state the stations at which they consider 1st class examining officers should be placed.

66. It is in consequence of this systematic arrangement of the business of the port that the reductions of which the officers complain have been effected. These reductions have made officers redundant in their respective classes and so checked promotion, but it is evident that no other course could properly have been taken by the Board in the public interest. It is fully due, however, to the officers to state that while they admit that the new system "has "secured their co-operation, but not their goodwill," they have continued to discharge their duty carefully and efficiently.

These Reductions held to be a "Breach of Contract."

67. In reply to question number 25,540, the officers complain of these reductions "as a breach of contract," but it is a well understood rule in the Public Service that an officer has no legitimate claim to a higher scale than that of the class he may be in. Promotions can only be regulated in accordance with the requirements of the Public Service; and it cannot be admitted that reductions in offices which are not required are "unjust" to any grade of officer in the Public Service. It is also stated, in reply to the same question, and in support of the "breach of contract" theory, that many of the clerks who "came out" had the option of being transferred to other departments or of accepting the position they did in the out-door department. Such was not the case. As a matter of fact, the Treasury was strongly in favour of a system of transfer and did its best to carry it out, but absolute failure resulted, and on an appeal to the Treasury on the subject the Board were informed that "with senior men transfers "to other departments were not easy to effect, and they "could not undertake to impose them in cases where they "met with determined objection from responsible heads of "departments"; and that this was well known to the clerks in question is proved by their memorial to the Treasury of 13th March 1882, which commences with the statement "that it was understood that the only terms "open to them were acceptance of the out-door service or "retirement on pension"; and this was the choice which had to be finally given to a considerable number of those who "went out."

Appointment of Clerical Officers checked Promotion.

68. As to the complaint made in answer to question number 25,534, that the clerical officers were young, and therefore brought with them into the out-door department no prospective and early vacancies which would cause promotion, it is to be observed that in all cases of amalgamation the older officers are generally pensioned off, and that, in consequence of the men who are left being mostly of the same age, promotion is for a time necessarily checked.

SERVICE SCALE OF PAY.

69. The officers submit in paragraph 4 of their statement, and in answer to question 25,519, that, in consequence of the reductions which have been made, and because their present pay and prospects are not in their opinion adequate to their responsibilities, duties, and hours of labour, their present scale of salaries should be altered and a service scale given, the maximum of which should be 350*l.*, which should be attainable by every officer, provided that a thoroughly satisfactory character is given him by his superior officer. The suggestion that the duties of examining officers of Customs warrant the payment of a salary of from 110*l.* to 350*l.* is not held to be reasonable; many of the duties on which they are engaged being of no more responsible a nature than those which are performed by Lower Division clerks; the general body of examining officers are paid both in London, Liverpool, and the out-ports on a scale of 110*l.* by 7*l.* 10*s.* a year to 220*l.*, and above them there is a body of 1st class examining officers rising from 220*l.* to 300*l.* who are required to take the responsible duties at stations where the more important business is carried on, and to assist in any special duties.

In their evidence, 25,547, the officers state that they would not have made any claim for a new scale of salary if the old scale of the establishment had been kept up; and in answer to the questions 25,519 and 25,555 the claim appears to be advanced mainly on behalf of the officers who "came out." It would seem, therefore, that the claim is not made so much on account of the inadequacy of the present salaries for the work which has to be done as for the loss of the promotion consequent on the reductions which have been made. Reference has been already made in paragraph 67 to what is believed to be the rule in the Public Service as to compensation for loss of promotion and it may be observed that no inducement was held out to clerks who joined the out-door service in 1882 that the classification then given would be permanent. Those officers who had any choice in the matter threw in their lot with the branch of the department which they surmised would be of most advantage to them, and they received at the time immediate increases of salary, varying from 30*l.* to 120*l.* a year.

OBJECTIONS TO SERVICE SCALE.

70. A service scale in the department is not considered advisable in the interests of the public. Though the officers propose a check on an officer's progress through it, viz., "favourable report," it is well known that in practice any such check is not sufficient to prevent incompetent and undeserving officers from rising above their value in a class. In the Public Service, partly perhaps from good nature, and partly perhaps from the fact that what is gain to the officer whose salary is advanced is no personal loss to the officer who recommends it, as it would be in the case of a private employer of labour, it is found that a lenient view of an officer's merits is almost always taken when any question arises as to his claim to an annual increment. A service scale would in fact compel the Board to allow any examining officer who was recommended, it might be, by a lax superior officer, to proceed to 350*l.*—the present maximum of a 3rd class surveyor at the out-ports. Such a system would be almost certain to lead to favouritism and other abuses. Moreover, an officer who is apparently qualified for promotion frequently fails to come up to the expectations formed of him, and is found not to be equal to the efficient discharge of more important duties; sometimes he fails in energy, on account of illness or advancing years; sometimes, after the attainment of the position for which he exerted himself, he becomes slack and indifferent. It is therefore certainly desirable in the public interest that there should be distinct points in an officer's career at which, before he advances to a higher scale of pay, his capacity and conduct should be well weighed by those responsible for the administration of so large a department. The present classification gives the Board this opportunity, and it is very advisable that it should be continued.

17. It is not considered, and in fact, the officers appear to admit it in their answers to questions 25,519 and 25,555, that the present scale of pay of the examining officers is inadequate to the duty they have to perform. Though new duties have been imposed on the department since 1860, the revenue duties which they have now to perform will not compare in importance with those which had to be discharged by the landing officers when a large number of imports were subject to *ad valorem* duties according to quality, or with those which devolved on the water guard when many other articles subject to high duty gave wider scope to the smuggler.

But when *ad valorem* duties were in fashion, out of 147 landing officers in London only 42 were in receipt of salaries in excess of 300*l.*, and out of 70 gaugers only eight received more than that amount, while no water-guard officer (or tide surveyor as he was then called) was in receipt of a salary exceeding 250*l.* a year. It may be observed, too, that in the interval the prices of the necessaries of life have been in the main reduced.

72. The cost of the scheme submitted by the officers, if applied to all of the examining officers, would be as follows:—

There are at present upon the establishment sanctioned by the Treasury for the port of London—

119	examining officers,	1st class.
299	do.	2nd class.
418		

But it is at present proposed to reduce the 1st class of examining officers to 108; the total number of examining officers will then be 407.

The cost of such an establishment on the present scales would be as follows:—

	Maximum. £	£
108 of 1st class -	- 300 -	- 32,400
299 of 2nd class	- 220 -	- 65,780
		£98,180

	Minimum. £	£
108 of 1st class	- 230 -	- 24,840
299 of 2nd class	- 110 -	- 32,890
		£57,730

Mean.

	£	£
108 of 1st class	- 265 -	- 28,620
299 of 2nd class	- 165 -	- 49,335
		£77,955

73. In the summary of their statement on page 7, paragraph 1, the examining officers ask for an establishment rising from 110*l.* by 10*l.* per annum to 350*l.*, subject to a proviso that only capable officers should rise beyond 220*l.* For the purposes of any calculation it is assumed that *all* would be declared capable, there being no means of ascertaining the number of those who might be reported as "incapable." An establishment on this scale would cost:—

Maximum.

	£
407 officers at 350*l.* - - -	142,450

Minimum.

	£
407 officers at 110*l.* - - -	44,770

Mean.

	£
407 officers at 230*l.* - - -	93,610
or an increase, at mean salaries, on the present establishment of - -	15,655

74. But this method of comparison does not fully show the increased cost of the scheme, as it takes no account of the difference of increment (the scheme substituting an increment of 10*l.* for one of 7*l.* 10*s.*) during the early years of an officer's service in the grade of examining officer.

75. The following table shows the salary receivable by an officer in each year of service on a class rising from 110*l.* to 350*l.*, with increments (*a*) of 7*l.* 10*s.* for 16 years, and 10*l.* afterwards, or (*b*) of 10*l.* throughout.

Year.	With Increments of 7*l.* 10*s.* and 10*l.*	With Increment of 10*l.*	Gain to Officer.
	£ *s.* *d.*	£	£ *s.* *d.*
1st - -	110 0 0	110	—
2nd - -	117 10 0	120	2 10 0
3rd - -	125 0 0	130	5 0 0
4th - -	132 10 0	140	7 10 0
5th - -	140 0 0	150	10 0 0
6th - -	147 10 0	160	12 10 0
7th - -	155 0 0	170	15 0 0
8th - -	162 10 0	180	17 10 0
9th - -	170 0 0	190	20 0 0
10th - -	177 10 0	200	22 10 0
11th - -	185 0 0	210	25 0 0
12th - -	192 10 0	220	27 10 0
13th - -	200 0 0	230	30 0 0
14th - -	207 10 0	240	32 10 0
15th - -	215 0 0	250	35 0 0
16th - -	222 10 0	260	37 10 0
17th - -	230 0 0	270	40 0 0
18th - -	240 0 0	280	40 0 0
19th - -	250 0 0	290	40 0 0
20th - -	260 0 0	300	40 0 0
21st - -	270 0 0	310	40 0 0
22nd - -	280 0 0	320	40 0 0
23rd - -	290 0 0	330	40 0 0
24th - -	300 0 0	340	40 0 0
25th - -	310 0 0	350	40 0 0
26th - -	320 0 0		650 0 0
27th - -	330 0 0		Total gain to officer in 25 years, or 26*l.* per annum.
28th - -	340 0 0		
29th - -	350 0 0		

76. It will be seen from this table that with the present rates of increment an officer would attain the proposed maximum in his 29th year of service, but that the 10*l.* increment *throughout* would enable him to reach it in 24 years, and the difference of salary received by him up to the end of the 25th year, when he had been one year at the maximum, would amount to 650*l.*, being an average difference of 26*l.* per annum. To make, therefore, a fair comparison between the present establishment and the proposed scheme it becomes necessary to add to the increase in mean salaries the sum of 26*l.* per annum for each officer, or a total of 10,582*l.* per annum for the whole scheme. This brings the mean increase up to 26,237*l.* per annum for the 407 examining officers of the port of London, but any such scheme could not be limited to London, but would have to be also applied to the 446 other examining officers at Liverpool and the out-ports.

The estimated cost as given above is calculated on the number of examining officers who, so far as is at present known will be on the establishment when the class of assistant examining officers is filled up; if the scheme was brought into play at the present time, and before that class is filled up, it would apply to a considerably larger number of 2nd class examining officers, both in London, Liverpool, and the out-ports.

Proposal to limit the New Scale of Pay to those who "came out."

77. With reference to the proposal to raise the scale of salary to 350*l.*, but to limit it as suggested by the officers to those who "came out" (*see* 25,555), it is to be observed—

(1.) That in 1880, when the Playfair scheme was introduced into the department, the Treasury permitted a number of the redundant 2nd class clerks, on certain conditions, to advance to 340*l.*, the maximum of the old 1st class of clerks, and this privilege was carried with them by the redundant clerks who accepted service in the out-door department as 1st class examining officers.

(2.) That in 1882, in framing the new out-door staff, 58 new places on the 1st class of examining officers were created, and 208 new places on the 2nd class. Of the 58 places 32 were filled by redundant clerks, and of the 208, 37 were filled by Lower Division clerks, and 6 by out-port clerks, total 43.

(3.) That of the 32 redundant clerks who became in June 1882 1st class examining officers, 8 have already been promoted to be surveyors, and 16 out of the remaining 24 are already rising to the maximum of 340*l.* referred to in No. 1, but of the 43 Lower Division and out-port clerks who became 2nd class examining officers none have been as yet promoted.

(4.) That each redundant clerk and out-port clerk who joined the out-door service received an immediate addition to his salary of 30*l.*, on account of the increase in their official hours when employed in the warehouses, and their *liability* to be on duty from 6 a.m. to 6 p.m when employed on waterguard or landing duty. The Lower Division clerks did not receive any "bonus," but "went "out at salaries not less than the minimum of "the class to which they were posted or less than "the salaries they were receiving" as Lower Division clerks plus any portion of the triennial increment which they were held to have earned.

(5.) That while it takes a Lower Division clerk in a seven hours' office 36 years to attain the maximum of 250*l.*, which is the highest salary to which he is entitled to progress, the Lower Division clerks who went out will reach 220*l.*, the maximum of a 2nd class examining officer, in 16 years.

It appears, therefore, that the majority of the redundant clerks who "went out" as examining officers, and have not as yet obtained promotion are already on a scale very similar to that which is asked for, and though promotion may not have equalled their expectations it can hardly be said that any of these officers have as yet had cause to complain. Nor would it appear that the Lower Division clerks who went out have cause to complain considering the advantages they gained by being permitted to join the out-door service.

Stagnation in Promotion.

78. All classes of officers complain of the stagnation in promotion caused by the changes made in 1882–83.

The following tables show the number of promotions made to each rank in the service during each of the years from 1878 to 1888 inclusive. It can hardly be maintained after an examination of these tables that promotion has been checked in any remarkable degree since 1881–82, when the years of "plenty" are supposed to have ceased and those of "famine" to have commenced.

Remarks on Evidence and Memorial.

OUT-DOOR DEPARTMENT.

NOTE.—The number of appointments made from *the Clerical Staff* on the introduction of the assimilated Customs and Excise warehousing system (1882–84) *is not included* in these Returns.

RETURN SHOWING THE NUMBER OF PROMOTIONS MADE FROM 1878 TO 1888 INCLUSIVE, AS COMPARED WITH THE NUMBERS ON THE CLASS OR RANK FROM WHICH THE PROMOTIONS WERE MADE.

I.—NUMBER of PROMOTIONS made from INFERIOR OFFICERS to EXAMINING OFFICERS or GAUGERS, 2nd Class. From 1886–1888 the number of Assistant Examining Officers (a new Class introduced in 1886) is included.

Out-Ports	(No inspectors at out-ports.)										

Statements as to Duties performed by Examining Officers.

79. Some of the statements made in the memorandum by the officers as to their duties are inaccurate and (in some cases) rather misleading, as they would lead to the supposition that the officers are responsible without supervision. Such is not the case. The check which is exercised over officers employed on import gauging and the delivery of goods from the warehouses will be dealt with under the heading of alleged "insufficiency of control." As regards the statistics, all that is required of an examining officer is to see that on the entry the quantities and values stated have some fairly reasonable and probable relation to each other. The real check is applied later on in the statistical office when the statistics are compiled.

There are but two ports, London and Liverpool, at which gold and silver plate can be examined for exportation, and the examination for drawback is conducted in the presence of a surveyor.

The statement that the officers analyse beer, test spirits for obscuration, and wines, and liqueurs, and preparations containing spirit for alcoholic strength, would lead to the supposition that this was a duty of common occurrence among the officers. As a matter of fact, these duties are performed in the laboratories, in which in London 12 officers are employed.

As regards the operation of the Wine Act of 1888, the officers cannot pass any claim for the admission of wine at the lower rate of additional duty without the sanction of the Board; they have no discretion whatever given them on this point, their duty being confined to reporting facts.

General Duty.

80. In their statement to the Commission, paragraph 5, the officers refer to the fact that efficiency in all the four principal divisions of the service, viz., waterguard, landing, gauging, and warehousing, is now requisite to ensure promotion.

It is considered by responsible practical officers that the difficulties in connexion with the interchange of duties have been greatly magnified by the officers in their evidence. It enables officers to fill any post on an emergency (an advantage which will be easily recognised), and it fits them for the superior positions to which, without such interchange of duties, they could not expect to aspire. Equal efficiency in all four divisions of the service is not expected; but a competent knowledge of all four is required.

These four divisions of the service were formerly separate. They were gradually rolled into one, and, as a necessary consequence, a knowledge of the duties of all four is now required from the officers. But, as stated to the Commission in one of the memoranda put in by the Board on the subject of amalgamation of the two Revenue departments, a "good all-round officer is the exception and not the rule," and this fact was urged against the idea that in an amalgamation of the two departments the officers of each could adequately master the business of both departments. In practice, therefore, the Board, while adhering as far as possible to the requirement as to general efficiency, are unable strictly to keep to it. When the clerical officers were appointed in 1882 to the out-door service it was decided by the Board, with the cognisance of the Treasury, "that no officer employed on clerical duty should "be promoted unless he qualified himself for all the duties "of his office." In order, therefore, to give facilities to the clerical officers who desired to learn the out-door duty and so bring themselves into the line for promotion, they were allowed to acquire a knowledge of landing and gauging duties in the manner to which attention is drawn by the officers in answer to questions No. 25,522, &c., and being men of some capacity they have obtained knowledge sufficient in several cases to justify their promotion. No other course would have been fair to these officers, though it may not have been satisfactory to the old landing and gauging officers inasmuch as this infusion of new blood brought into the field a considerable number of intelligent competitors for promotion.

The statement made in reply to question 25,522 is incorrect, as every out-door officer employed on clerical work was instructed in his duties by the surveyor or 1st class examining officer at the clerical station to which he was put prior to his taking an active part in the duty; and the time of instruction was sufficiently long to enable the officer to perform his duty with fair efficiency; besides, at a clerical station there is a good deal of work which an officer could be put to do within a few hours of his joining the station.

Mode of Promotion.

81. The officers express fear that the alphabetical arrangement of the officers in the different classes may lead to favouritism.

The system under which promotion is made in London to the grades of 3rd class surveyor and 1st class examining officer is as follows:—

The inspectors are desired to send in separately to the Board the names of two or more officers whom they each consider—irrespective of seniority—most deserving of promotion on account of proficiency in all their duties. The inspectors are not restricted in their choice to the officers *at the time* serving under them; they can select from all the officers in the grade out of which the promotions are

Remarks on Evidence and Memorials.

to be made. The names thus sent in are referred by the Board to the Surveyors General, who are in many cases acquainted with the merits of the officers; by them the lists are carefully discussed, and names are finally submitted by them to the Board for selection. At this point, if the merit is reported as equal, the Board allow seniority to prevail; but they also take into consideration any knowledge they may have themselves obtained of the officers from the daily business of the office.

The inspectors are, with one exception, officers who have been trained in the port. They have necessarily, therefore, a personal knowledge of many of the examining officers, and they come, especially in the warehousing business, in much more frequent and close contact with them than the statement of the officers would lead the Commission to suppose.

It would not be easy to establish any system under which favouritism can less make itself felt, and the main fault which the Board have to find with its working is that, from long habit, seniority is still too much considered in the names which are submitted by the inspectors.

The result of the system under which promotions were made more dependent on the surveyors is certainly not such as to induce the Board to attempt its revival.

Whether the Old System should be restored under which there were distinct Classes of Officers for distinct Duties.

82. In reply to question 25,564 the officers express an opinion in favour of the system under which the specific duties of the different branches of the service were formerly performed by specific grades of officers; and they appear to advocate its restoration at the large ports.

The old system undoubtedly had its advantages, especially in the gauging line, but the officers admit that at the smaller ports "all-round duty" is a necessity, and now that promotion has been made general throughout the service, and is made as far as possible by "merit," it would not be easy to carry on the system if in some places the officers were restricted to one line of duty while at others they were able to acquire a wider knowledge of it. Under such a plan the officers at the larger ports who would be experienced in only one line of duty would very soon complain that all the promotion was gained by the officers at the smaller ports, who from the necessity of their position would have gained a wider and more general knowledge of the duties of the department. The old landing officers no doubt view the change of system with dislike, for it has brought in a larger number of competitors for service at the stations where considerable sums are earned at overtime.

As to the warehouse accounts at some of the large ports, especially London and Liverpool, the case is different. These accounts are to a considerable extent purely clerical, and would be better and more rapidly kept by clerks trained for the purpose. While retaining for the out-door department the supervision of the warehouse work it might be advisable that the Board should have authority to introduce such an amount of the purely clerical element in the warehouses as they may consider that the circumstances of each port would justify.

Promotions from the Out-ports to London.

83. In their statement the London officers complain that since 1882 a considerable number of 2nd class examining officers from the out-ports have been promoted to London, while only one similar promotion has been made from London to the outports. This is the truth, but not "the whole truth." It is the case that since 1882 15 2nd class examining officers from the out-ports have been made 1st class in London; and also that two out-port surveyors of the 1st class have been brought to London, where the scale of pay of the surveyors is higher, as 2nd class surveyors; but these last-named officers gained nothing in salary at the time, though their prospects were improved.

On the other hand, two 3rd class London surveyors have been promoted to be 1st class at the outports, and another has recently been made collector at Dundee. Five 1st class London examining officers have been promoted to be 3rd class surveyors at the outports. One 2nd class London examining officer has been promoted to the 1st class at Liverpool, and nine other officers have refused promotion to the outports.

It will thus be seen that though a smaller number of officers have been actually promoted from London, the promotions have been to the *higher class of appointments*; that others have refused promotion; and that if either side has any cause of complaint it is the out-port and not the London officers.

Claim to higher Scale of Salary because compelled to remain in London.

84. In answer to question No. 25,612, the London officers further claim that they should either receive higher pay to meet the expenses of living in London, or some travelling allowance, and they base this on the ground that being desirous of going to out-ports, they are unable to do so.

The claim for travelling allowances will be dealt with separately.

In answer to the statement that they are compelled to remain in London it may be stated that since 1882, as far as they can be traced, only 12 applications have been made by 2nd class examining officers for removal to the out-ports.

Of these—

Four were granted.

One will be granted on a vacancy arising at the port.

Two were refused because the places applied for had been abolished.

Five were refused for reasons considered sufficient.

During the same period nine London officers have refused promotion to the out-ports.

It certainly cannot be asserted with any semblance of accuracy that London officers are anxious for transfer to the out-ports. The reverse is more nearly the case.

Ages and Capacities. Characters.

85. The officers suggest that an officer's character should be fixed by the vote of all the superiors who may have had knowledge of him during some period of his official career, and that if an officer receives an unfavourable character he should be so informed, and an opportunity given him of explanation.

It is presumed that the officers refer to the character given of all officers in the annual return of ages, capacities, and conduct, and to carry out such a plan as that suggested by the officers, even if desirable, would be by no means easy.

By Orders dated 27th June 1884 and 20th February 1888, the collectors and other officers concerned were directed, in reporting upon the officers under their control, to confine themselves to one of the following classes of character:—

A. A zealous and attentive officer, with distinctly superior abilities.
B. Capable and attentive.
C. Not intelligent but attentive.
D. Capable but somewhat inattentive.
E. Not intelligent and inattentive.

The following are copies of these Orders:—

Circular Letter, 36/1884.

Custom House, London,
27th June 1884.

Sir,

The Board have had under their consideration the form of the annual return of the ages, capacities, and conduct of the several clerks and officers of the service issued in their General Order, No. 19/1870, and seeing that some of the information given in that form is unnecessary, and that some particulars thereof are already permanently recorded in the registers kept at head-quarters, the Board have approved of a revised form of return *for transmission* in future, a specimen of which is forwarded herewith, and you are to obtain a supply of this form in the usual manner, observing that the existing form is still to be kept as a complete record at the port for inspection by a commissioner or surveyor general.

In reporting upon the capacities and conduct of the several clerks and officers serving under your control in future, you are to confine yourself to one of the following classes of character, viz.:—

a. A zealous and attentive officer, with distinctly superior abilities.
b. Capable and attentive.
c. Of inferior capacity but attentive.
d. Capable but somewhat inattentive.
e. Of inferior capacity and inattentive.

In assigning the above characters you are to observe the following rules:—

Character *a*. is to be given only of an officer who, in addition to possessing a complete practical knowledge of the various duties of his grade, is conspicuous in point of capability, and can be thoroughly relied on for zeal, energy, and prudence in any emergency.

Character *b*. is to be given only of an officer who, by qualification and conduct, is entirely satisfactory in his present position.

Character *c.* is to be given only of an officer who performs the duties of his present office in a manner which evinces no intelligence, but nevertheless industriously.

Character *d.* is to be given only of an officer whose ability is satisfactory in his present position, but who performs his work carelessly.

Whilst you are to assign one of the above characters to every clerk and officer serving under your control, you are not debarred from adding thereto any special remarks which may in your opinion be absolutely necessary in any particular case.

I am,
Sir,
Your obedient Servant,
E. Goodwyn.

The Collector at

General Order, 19/1888.

Custom House, London,
Sir, 20th February 1888.

The Board having had under their consideration the propriety of the course which in some instances has been adopted of assigning to certain officers—in the returns of character and conduct—the character C. as set out in Circular Letter 36/1884; and it appearing possible that such character may, by misapprehension, be given to officers whose capacity or incapacity has, through no fault of their own, not been proved:—

The Board now direct that the Heads C. and E. of the Circular Letter be altered as follows, viz.:—

Instead of

C. Of inferior capacity but attentive,

that that heading be

C. Not intelligent, but attentive;

and that instead of

E. Of inferior capacity and inattentive,

that heading shall read

E. Not intelligent and inattentive.

I am,
Sir,
Your obedient Servant,
E. Goodwyn.

To the Collector

In practice there is no occasion to take immediate notice of the officers whose characters are given under A., B., and C.; and it is obvious that the officers themselves are not the proper persons to form any opinion on the points to which these characters refer. Officers to whom character D. is given are *always* "cautioned to be more attentive." E. is seldom given.

A. and B. are distinctly considered by the Board when the time comes for making promotions; but so far from any tendency on the part of reporting officers to depreciate character, the Board have frequent occasion to remark on the strong tendency in the opposite direction. On a recent occasion an A. character was given to all, except two, of the 53 surveyors in London—a character which, in some cases, is certainly open to question, and quite lately it was found on further inquiry that an out-door officer at Liverpool, to whom, out of good nature, an A character had been given, required "nursing" in the performance of his ordinary duty. It is suggested by the officers that the Inland Revenue practice should be established, though they were unable to state what it was. On inquiry it appears to be much the same as that described above. The character given to an officer is not communicated to him unless it is necessary for the Board to take some action upon it, in which case the officer is acquainted with the terms of the Collectors' Report, and given an opportunity of making his own explanation. In the case of D. in the Customs the officer is practically informed of his fault by the terms of the caution, and inattention is not a fault which can be "explained" by any remarks of the officer considered guilty of it.

The regulation in the army as to character of officers is not applicable to the Customs Service; the reports in the army evidently enter into much greater detail than those in the Customs. It is clear that as compared with those receiving A. and B., no officer in receipt of C. merits promotion, and the course taken with those receiving D. exactly corresponds with that prescribed in the Army Regulation, that, "if an officer is reported for reasons which "may be removed by amendment, he will be cautioned, "and when more favourably reported on his claims may "be reconsidered."

It would not be advisable to make any alteration in the system under which these annual characters are given except in the direction of greater strictness on the part of the reporting officers.

"Charges" are never preferred against an officer without his being made aware of the particulars and opportunity afforded of defence at first in writing and subsequently at an inquiry in which the evidence is taken on oath. The accused has full liberty to cross-examine the hostile witnesses and to call witnesses in his defence. If the witnesses for the defence are not in the public service any reasonable claim they may make for loss of time is satisfied out of public funds.

It may be added that special reports, which are not confidential, are frequently called for when the conduct of an officer is not satisfactory.

Waterguard Hours.

86. The officers in their statement refer to these hours as "inordinate, and speak of the officers being "employed without sleep" for every alternate 24 hours, the hours of "labour" averaging 75 to 84 a week. The statement is exaggerated, and the terms "employed" and "labour" are misleading. The service should rather be described as "in attendance for such duty as may be required," and it is to be remembered that in London the waterguard duties are mostly dependent on the tide. When on duty for 24 hours the officers are allowed time for meals, and for such rest and sleep as the service will permit, and for this purpose bedding, cooking utensils, &c. are supplied at the public expense. The extent of actual work varies with each station, and it not infrequently happens that at some of them no arrivals take place for 24 hours.

As many of the officers reside at a considerable distance from their duty, the 24 hours' system halves the time and expense in coming from and returning to their homes, and the inspector of the waterguard in London—an experienced officer who has spent his official life on waterguard duty—reports "that the majority of the officers prefer the present system of working."

It is the case that officers have to be "in attendance" on Sundays and Bank Holidays. Vessels have free access to the port on every day throughout the year, and it is obvious that if the Revenue is to be protected the waterguard arrangements must be as continuous as the freedom of access to the river.

These waterguard hours will be found more fully explained in the remarks upon the statements put in by the boatmen, and the question of Sunday duty will be found more fully dealt with in the remarks upon the evidence of the Liverpool examining officer.

Travelling Allowances.

87. The officers claim that they ought to receive a travelling allowance, or a higher rate of pay, than the out-port officers in order to meet the expense to which they are put in reaching the stations at which they are employed; and in support of this claim they state that Victoria Railway Station and Albert Docks, the two extreme stations at which they are employed, lie 14 miles apart.

This statement is only, and perhaps wisely, referred to in the evidence in answer to Question No. 25,585; but it is misleading, as it implies not only that no travelling allowances are at present paid, but also that the officers are employed, to an extent sufficient to make it costly to them, west of the Custom House as far as Victoria Station. As matters of fact, travelling allowances are at present in operation in certain cases, as will be presently shown, and with the exception of the few officers employed on baggage duty at Charing Cross and Victoria, the rest of the stations at which officers are employed west of the Custom House are not half a mile distant from it.

In considering the means of access of the officers to their stations the Custom House is still taken as the centre of duty, and it is held that all officers are bound to live at such a distance only from it as will not interfere with their duty. The network of railways in the East of London, and the residential conveniences which have followed its formation, afford the officers ample opportunity of complying with this condition as regards most of the stations in the docks at which they are employed, unless for their own convenience and comfort they elect to occupy suburban residences at a greater distance.

As to most of the docks, it is considered that the officers have no more difficulty in getting to their stations

Remarks on Evidence and Memorials.

than other civil servants have in getting to their offices, but there are the following exceptions, viz. :—

Victoria Dock,
Albert Dock,
Victoria and Charing Cross Railway Stations,
Mount Pleasant Station,

and in respect of these travelling allowances are paid. In the case of the Victoria and Albert Docks, which are respectively distant five and six miles from the Custom House, travelling allowances have always been paid, and for the last four years have been paid on the following principle :—

The station nearest the officer's residence is taken as the starting point: the residence being assumed to be within a reasonable distance from the Custom House, to which the officer is bound to pay his own way, if the fares from this station to the docks in question exceeds the fares from the station to the Custom House the officer is paid the excess fare. There are minor rules, but the above is the leading principle, and it is considered that it meets any reasonable claim an officer can advance.

Similarly, arrangements are in operation under which the officers employed in connexion with the parcels post at Mount Pleasant, and the few who are detached from it for baggage duty at Charing Cross and Victoria Railway Stations are relieved from any expense they may be put to in reaching their stations beyond what they would be put to in reaching the Custom House.

It has also been the practice, under Treasury Minute of 25 June 1881, to allow officers who have to attend at the docks or stations in London before 6 a.m., or who have to return home after midnight, the following allowances for cab-hire—

	s.	d.
Surveyors - - - -	5	0
Examining officers - - -	3	0
Out-door officers - - -	1	6

and the officers claiming this cab-hire are not required to prove the expenditure of all or any part of it; the rates were graduated owing to the fact that officers of superior rank usually reside at greater distances from their work than out-door officers.

It has been already stated that the London officers are, as a rule, unwilling to accept transfer to the out-ports. It must, therefore, be assumed that either residence or service in London carries with it greater advantages than service at the out-ports, and there seems no sufficient reason why this claim of the London officers should be admitted.

Insufficient Supervision and Control.

88. In paragraph 22 of their statement the officers allege that the existing supervision is insufficient, and in support of this statement they assert—

(1) that the stock-taking in 1885 was a failure;
(2) that the staff employed on waterguard and rummage duty is insufficient;
(3) that officers employed on gauging duty are insufficiently controlled; and
(4) that operation floors are insufficiently controlled.

These would be serious allegations if well founded, or shared in by the responsible officers of the port.

It is presumed that the officers compare the present system with that which existed previous to 1882.

Stock-taking in 1885.

89. Many errors and discrepancies were, no doubt, brought to light at that time, but they were attributable mainly to the great changes made in the warehousing system in 1882, and to the novelty of the duties which many of the officers had to perform during the earlier working of the system. The improvement in the manner the warehouse registers are now kept is shown by the few errors which are now found, as compared with an earlier period, by the itinerant officers whose sole duty it is to challenge the stock in the warehouses.

It may be observed that the stock-taking in 1885 was complete in all cases in which the quantities in a warehouse were of manageable dimensions; but it was intentionally, only partial in those cases in which it was practically impossible to verify every detail except at immense inconvenience to the merchants interested in the stock, and at a cost to the public greatly disproportionate to the result; but the control was sufficient.

Insufficiency of Staff employed on Waterguard and Rummage Duty.

90. On this point the following opinion, given by Mr. Hinks, the experienced head of the waterguard in London, in answer to the observations of the officers, is submitted for the consideration of the Royal Commission :—

"There are 49 crews, numbering 150 men, available for rummaging duty; of which 43 crews, numbering 130 men, have this as their first duty. It is true that occasionally, after foggy or stormy weather, we have large fleets of arrivals, and our staff for a few hours are severely taxed; but we do not consider it imperative, indeed it is impossible, to rummage every vessel immediately on arrival. After the crews' and passengers' baggage have been passed, stores enumerated, addressed packages secured or sent to the baggage warehouse, and engine spaces allowed to cool down, our rummage and re-rummage crews can attack the craft in detail. Sometimes three or four crews are brought to bear on a large steamer at one and the same time. Formerly, ships in the lower river were only subjected to rummage for eight hours out of the 24; now the work is continuous, and steam launches, re-rummage crews, and detective staffs are pressed into the work of detection. The question arises, What is the test of efficient rummage? If the number of detections, they have risen from 350 in 1882 to 1,000 per annum, and the nature of these will show how exhaustive, as a rule, the search has been.

"The responsibility for the vague statements contained in the memorandum must be laid to the door of officers who have no practical knowledge of waterguard duties and never did a day's rummage.

"I am of opinion that, with a due regard to efficiency and economy, the waterguard staff of the port is fully equal to the amount and importance of the duties to be performed."

91. The test suggested by Mr. Hinks, when applied to the waterguard at all the ports, gives the following results. The total number of seizures at all the ports, including London, in each year since 1880 have been as follows :—

Year ending 31st March.	Seizures of all Sorts.	Seizures of Tobacco and Spirits.
1880 - - -	1,642	1,421
1881 - - -	1,391	1,265
1882 - - -	1,698	1,540
1883 - - -	1,799	1,601
1884 - - -	2,238	2,110
1885 - - -	2,698	2,445
1886 - - -	2,641	2,426
1887 - - -	2,577	2,344
1888 - - -	2,880	2,477*
1889 - - -	5,000	4,009*

Exclusive of seizures of cigars and spirits under the Merchandise Marks Act, 1882.

In the port of London, to which, of course, the evidence more immediately refers, the seizures during the same period has been as follows :—

Year ending 31st March.	Seizures of all Sorts.	Seizures of Tobacco, Cigars, and Spirits.
1880 - - -	335	296
1881 - - -	262	231
1882 - - -	299	253
1883 - - -	413	357
1884 - - -	605	558
1885 - - -	871	808
1886 - - -	890	823
1887 - - -	1,002	905
1888 - - -	1,066	868*
1889 - - -	1,786	1,188*

* Exclusive of seizures of cigars and spirits under the Merchandise Marks Act, 1887.

It is maintained that these figures speak well both for the system in force and for the activity of the officers who carry it out, and though it is hoped that many improvements may yet be effected in this branch of the service, it is believed that it is now in a more efficient condition than it ever was before.

Insufficient Control of the Gauging Duty.

92. The following is a memorandum by one of the Surveyors General on this subject:—

"Previous to that date (1882) one in eight of imported casks of wine and spirits was checked by the inspectors of gaugers, and no entry, however small, escaped the check.

"The same number are checked by the surveyors under the present system.

"Previous to 1882 casks re-gauged were checked by the inspectors of gaugers in the case of wine when the deficiency found by the examining officer amounted to two gallons or more, and in the case of spirits when the deficiency amounted to two gallons of proof spirits.

"Under the present system this practice is followed by surveyors, as directed by paragraph 190 of the Code.

"The accuracy of the examining officers' clerical work is now checked or tested on the same or the following day. Previous to 1882 such work was, to a great extent, unchallenged until the balancing or closing of the account. The present system provides more supervision than existed previous to 1882."

Insufficient Control of Operations and Floors.

93. The Surveyor General to whom this question was referred reports as follows:—

"The supervision of operation floors in Customs Bonded Warehouses is not complete in the sense of there being an officer standing over an operation until it is finished. The floors are sometimes in charge of an out-door officer, but the supervision of the examining officer is occasional, and that of the surveyor at intervals. The regulation contained in the Code, paragraph 316, is that operations must not be performed except in the presence of an officer whose attendance while operations are actively proceeding must be continuous; but this has not for many years been the practice, a general supervision being deemed sufficient.

"In large warehouses it is not unusual for an officer to be called upon to superintend several operations actively proceeding at the same time and on different floors or portions of a warehouse. To put an officer in charge of every operation in bond would be, I consider, unnecessary; and, provided the officer in charge of an operation floor makes frequent rounds of inspection at irregular times, and is visited at intervals by his surveyor, I think that all the necessary supervision is given, even though there may be several operations in active progress on the floor or floors in question. It is to be observed that in every case the operation is controlled by the prior and subsequent accounts, and, in my opinion, the visits of the officers and the evidence of the accounts afford ample protection to the Revenue. It is estimated that in order to afford constant supervision over every operation in the Bonded Warehouses in London 69 additional out-door officers would be necessary; the cost of such a staff, for whom employment could frequently not be found, would be out of all proportion to the result.

"H. S. Worsfold."

Collectorships of Customs.

94. The officers claim that the collections should be thrown open to the out-door department.

A London surveyor has been recently appointed collector at Dundee, and in cases where such appointments may be desirable in the interests of the public service, the Board are quite prepared to make them.

Unhealthy Offices.

95. In the statement sent in to the Commission the officers state that on gauging duty a great part of the work is performed in damp, badly-ventilated warehouses and underground vaults, where the air is vitiated with noxious gases and where artificial light is in constant use, much to the detriment of the health and to the injury of the eyesight of the officers employed, and that many of the clerical offices are unfit for occupation. This statement is repeated in the evidence in answer to question No. 25,578.

As to artificial light, it is a necessary consequence of the underground stowage which, for wines and spirits, the merchants usually prefer to the drier stowage obtainable above ground. It cannot be said to be good for eyesight, but it is not *per se* considered prejudicial to health as the relief afforded by change of stations is sufficiently frequent.

On inquiry it is found that at three stations, viz.:—

All Hallows vaults—staff, five officers,
Trinity vaults " "
Tower Hill vaults " "

the vaults are badly ventilated and prejudicial to health, and that at two, viz.:—

Regent's Park Canal, and
Shadwell Pier,

better arrangements require to be made. The proprietors of the three vaults have been called upon to remedy the cause of complaint; and at Shadwell Pier the Dock Company have been called on to improve the drainage. At Regent's Park Canal there need be no difficulty in improving the accommodation.

All the tea accounts have now been transferred back to the Custom House, and the complaints made in 1886 have been thus remedied.

It is to be observed that with one exception, and in that case the evil at the time complained of was remedied, the unsanitary condition of the five offices above referred to had not been brought to the notice of the Board in any report of the responsible officers.

The condition of the offices in which Customs work is performed is now more satisfactory than at any previous period, as steps have been taken to remedy abuses whenever they have been officially brought under notice. Nearly all the modern vaults are fairly supplied with light and air, and it is not believed to be detrimental for an officer to work in them during the limited time he is required to do so. This time is of necessity comparatively short, as the actual gauging is in most cases performed on the top floor of the vault, which is level with the street, or on the ground floor of a warehouse adjoining it.

LONDON SURVEYORS.

96. The surveyors commence their statement by referring to the large number of reductions in their grade which have been made since 1882, and to the relegation to the first class examining officers of much of the warehouse work which it was considered ought to be performed by surveyors.

97. The reasons which led to these changes have been fully stated in dealing with the evidence of the examining officers: they certainly were not made for the reason "supposed" by the surveyors, viz., "on account of statements "put forth on behalf of the members of the Excise de-"partment representing their rate of pay as inferior to "ours," and it may be observed that, in admitting that the supervisors of Excise should not be compared with surveyors, but inferentially with examining officers, the surveyors practically justify the course which was taken in relegating to examining officers duties which, in the Excise, are performed by supervisors.

98. It is stated that surveyors are called upon to act as inspectors. This is only the case when the inspector is absent on leave or sickness, and the present number of first class surveyors is more than sufficient to meet such cases. The fact is referred to, that on the Gravesend station there are about 200 officers with only one surveyor between them and the inspector of the waterguard. It has already been explained, in paragraph 65, that the staff in a district—including the surveyors—is settled each year in accordance with what the inspector states to be its requirements; and the comparative efficiency of the waterguard system points to the conclusion that more surveyors are not required in this branch of the London service.

99. The surveyors ask—

A. For abolition of classification.
B. That the maximum salary of the rank should be raised to 600*l.*
C. That compensation should be given for loss of promotion.

The claims advanced at A. and C. have been dealt with in the remarks upon the evidence of the examining officers, in paragraphs 67 and 70, and the reasons there given apply with equal, if not stronger, force to the grade of surveyors.

As to B. there are at present in London, at Liverpool, and the outports, 101 surveyors, arranged in three classes, but the scale of the classes varies, especially at the outports, where the minimum of the third class is 300*l.*, as against 350*l.* in London and Liverpool. The mean cost of the salaries of these 101 officers is at present 40,530*l.* a year.

Remarks on Evidence on Memorials.

If the classes were abolished and a scale of salary granted rising from 300*l.* to 600*l.*, the mean cost would be 45,450*l.*; if the scale of salary was made 350*l.* to 600*l.*, as would probably have to be the case (as there is no reason now why the salaries of the outport surveyors should be different to those in London and Liverpool), the mean cost would be 47,975*l.*, or 7,445*l.* in excess of the present mean cost.

It is not considered that the present maximum of the first class in London and Liverpool is insufficient.

H. Murray.

LIVERPOOL OUT-DOOR OFFICERS.

100. There are several subjects, such as—

1. The acting system;
2. Insufficiency of salary and annual increment;
3. Loss of prospects by reduction of higher appointments;
4. Mode in which annual character is given;
5. The out-port clerkships, &c.,

which have been already fully dealt with in the remarks made upon the evidence given by the London officers and need not be again referred to; but there are points which the Liverpool officers specially noticed.

Boarding Duty.

101. The officers complain of this duty and wish to have it transferred to naval pensioners: but it is one of the main requirements of an out-door officer and one as to which full notice was given him by the Civil Service Commissioners at the time he entered the service. The following is the notice which every officer receives before competing for entry into the Service:—

"Extract from Memorandum issued by the Board of Customs.

"An out-door officer of Customs at any port of the kingdom is an officer who, amongst other matters, is required to perform duty in rowing boats, *or on the river or elsewhere in guarding vessels*, or to assist his superior officer in rummaging vessels *when required*, in order to discover contraband goods, to do duty in the docks as a patrol to guard vessels lying therein, or in the bonded warehouses to deliver packages of goods and to lock and unlock the premises night and morning.

"The hours during which the out-door officers in London are employed vary according to the nature of the duties. When employed on the river their hours *are very uncertain, being continued frequently night and day*, and sometimes for a considerable period. When employed in the bonded warehouses their hours are, from March to November, 8 a.m. to 4 p.m., and during the remaining months 9 a.m. to 4 p.m.

"The general duties of an out-door officer are as above described, but he will be expected to perform also any work which may be *required of him by the exigencies of the Service.*"

Title of Out-door Officer and his Duties.

102. The title of "out-door officer," as applied to the lower grade in the service, is of comparatively recent date, and it will be as well to point out here the duties which were covered by the term when it was introduced.

There were, till recent years, employed in the Service—

1. Tide-waiters, viz., officers whose hours of duty depended very much upon the time at which the tide enabled ships to approach a port, and who were boarded on the vessels as they came up from the boarding stations.

2. Boatmen or watermen who rowed in the boats and rummaged the ships on their arrival.

3. Lockers, viz., officers who unlocked or locked the bonded warehouses and exercised a check by package over the goods received into and delivered from the warehouses.

4. Weighers, viz., officers who weighed dutiable goods, that is, placed the weights in the scales and called out the result to the landing waiter or (as he is now called) examining officer.

The boatmen still form a separate class, but, so far as the duties, formerly done by lockers and weighers, have still to be performed, they are done, or are liable to be done, by the out-door officers, and the duties of the tide-waiter remain *as the ordinary and proper work of an out-door officer;* when so employed the hours of these officers are, as formerly, uncertain both as to time and duration.

The officers, on joining the Service, are usually placed at once on this duty, in London for three years, in Liverpool usually for two, and at other ports according to circumstances. As to the duration of the service the Liverpool officers have therefore no cause to complain.

103. It is necessary that officers should, for the protection of the revenue, sometimes be boarded upon ships arriving from foreign parts for periods of 48 hours and over, but it is a fallacy to suppose that during this time the officers are continually on the watch and have no time for rest or refreshment. Officers thus employed are generally boarded in twos, and the time they are continuously on duty during each period of 24 hours cannot ordinarily exceed 12.

When an officer speaks of being 40 hours on duty, he means that he has with another been boarded on the ship for that time, and that only three hours' *leave of absence from the vessel* had been given him. Out of this 40 hours, however, there must be taken, in addition to the three hours' leave, the time occupied for meals and sleep. On Sundays the officers have an extra allowance of 1*s.* if required for duty on that day. 25,786.

104. The out-door officers do not deny their liability to this boarding duty, and they cannot do otherwise than admit that they knew when they entered the Service that they would have to perform it. Finding, however, on experience that it is monotonous and irksome they seek to get it transferred to pensioner boatmen whom they appear to regard as a class inferior to themselves; but it is a service on which it is advisable only, as a rule, to employ commissioned officers, and if it were not that the present race of out-door officers, in many cases, perform this part of their duty very indifferently, there is no ground for making any change. Recently, at Liverpool, some of the officers employed on it—men of less than 16 months' experience in the Service, and who were for the most part performing their duty in a manner unsatisfactory to their surveyor—having made complaints as to the nature of their duties and propounded their notions as to how the service ought to be performed, were required either to perform their duties efficiently and without grumbling or to resign a service for which they were manifestly unfit; but this option did not lead to any tenders of resignation. The officers were not censured, as is alleged, "for the mere fact of combination." 25,715.

105. It is to be observed that boarding duty is more like "sentry duty" than anything else, and that a young recruit might as well complain, on account of his youth, of being obliged to perform his share of a 24 hours' "guard," as an out-door officer complain of the 24 hours' system of duty on account of being young and fresh from school.

The boarding duty at Liverpool is now divided into alternate turns of six hours' duty and six hours' rest, with leave on two evenings in the week, and with every third Sunday free; previously, when the officers were boarded for 24 hours—followed by 12 hours free—full-time was allowed, as the officers admit is the case in London (25,696) in the 24 hours, for meals.

Hours of Attendance.

106. The alteration in the hours which an officer employed on landing and shipping duty will be hereafter required to give to the Crown is naturally a very prominent one in the inquiry, and was referred to at length, both by the London and Liverpool officers. It will be as well to clear the ground by stating the hours of service to which officers have been for many years liable.

The hours for the landing and clearance of *free goods, duly reported*, and for which perfect entries have been passed, are regulated by the orders of the Board, and are generally (with the exception of the four ports at which the new hours for the landing and shipping of cargo from and to foreign ports have been established) from 6 a.m. to 6 p.m. from the 1st March to the 31st October, and from 8 a.m. to 4 p.m. during the remainder of the year, whilst cargoes consisting of *free goods in bulk and fibrous goods in trusses or bundles*, which are easily examined, are allowed to be discharged at any hour without expense to the merchant, the Crown bearing as to these kinds of goods any expense that may be incurred for the "overtime" of the officers. If the goods are not properly entered, the free discharge can still take place between the same hours

as those properly entered, the merchant paying for the attendance of the officer, if required, before or after 8 a.m. and 4 p.m. in summer and 9 a.m. and 4 p.m. in winter.

The hours for the landing of *duty goods*, free of charge, to the merchant are from 8 a.m. to 4 p.m. in the eight summer months, and from 9 a.m. to 4 p.m. in the four winter months if they are not properly entered, but if they *are* properly entered, the landing at the docks in London may take place between 6 a.m. and 6 p.m. in summer, and 8 a.m. and 4 p.m. in winter. The clearance of duty goods is allowed between the hours of 8 a.m. and 4 p.m. in summer, and 9 a.m. and 4 p.m. in winter.

These arrangements are based upon the General Order 10/1862, of which the following is a copy :—

THE Board have had under consideration the regulations at present in force, by which certain goods are allowed to be unshipped from the importing vessel, under the supervision of the officers on water guard duty, before and after the hours approved for the discharge of goods generally; and the Board being of opinion that this privilege, which has already been extended at some ports to all free goods, corn, timber, and wood goods, should be acted upon at all the ports of the United Kingdom ;

Ordered,—

That all free goods, corn, timber, and wood goods, whether to be landed or delivered overside, be allowed to be taken out of the importing vessel, from 6 o'clock a.m. to 6 o'clock p.m. from the 1st March to the 31st October, and from 8 a.m. to 4 p.m. during the remainder of the year.

And the proper officers in London, and at the out-ports, are to govern themselves accordingly, observing that in any case of discharge before or after the above hours the merchant is to be called upon to deposit an amount sufficient to defray the expense of the extra attendance of the officers required.

These hours have been more or less in operation for a good many years, and while no objection to them has been raised by the officers, the benefit to the shipping interest has been great.

107. Every officer who joins the out-door department ought thus to be fully aware that he can be called upon, under these regulations, to serve 12 hours per day during the summer months in the discharge of goods entered as free, and in the face of these regulations it is idle for the officers to suggest that their proper working hours are, in landing and warehouse duty, limited to those between 8 a.m. and 4 p.m., and that they are regulated by the 9th section of the Customs and Inland Revenue Act, 1881 (44 Vict. c. 12). The object and purport of that section was to limit the hours of landing as against the merchant for the protection of the revenue, it has nothing whatever to do with the hours of service of the officers, which depend solely on the regulations made by the Board.

It is true that the Board do not enforce the 12 hours of attendance where there is no occasion for it, and, in fact, many of the officers who are now supposed to be on landing duty for 12 hours are at their stations only eight. It is only on emergencies, once or twice a week, that the officers attend during the full period. Many dock companies and wharfingers do not care to begin business earlier than eight in the morning, and, in practice, eight hours' duty has become so much the normal habit of the Service for much of the work of the department, that the Board took the point into consideration when the extended hours for landing and shipping of cargo were introduced at Liverpool and the Humber ports, and directions were given that the officers should be informed that they would not, on an average, be required to attend more than that number of hours, and this was announced by the Chancellor of the Exchequer in the House of Commons, but the *liability* to the longer hours continues.

ime. 108. It is necessary here to refer to the system of "overtime" which prevails in the department. The officers have been in the habit of receiving from the merchants extra pay (at rates sanctioned by the Treasury) for attendance at duties other than those coming within the lines laid down in the regulations which have been referred to. At many stations this extra pay forms a large addition to the emolument of the officers, and such stations are eagerly sought after. Though the officers are at these stations frequently on duty several hours a day in excess of eight hours, no complaint has ever been made as to the length of attendance, and any complaint now made as to injury to health under the new hours of service must, therefore, be received with due caution. But this system of "overtime" is demoralising to the officers, it renders them less fit for duty during the regular hours of service, and the object is to reduce it within as narrow limits as possible. Though other reasons are put in the foreground, it is because the new hours of service have so largely reduced the period within which "overtime" is payable, that the officers have resented their introduction ; now, however, that the question of the hours of service has been raised by the officers it is as well to point out that it is more than questionable whether, in strict fairness to the merchants, the practice which was permitted to grow up of out-door officers of this grade charging them overtime for the hours between 6 and 8 a.m. and 4 and 6 p.m. ought ever to have been allowed.

109. It was, in fact, the "overtime" question and the complaints which were made by the merchants on the subject which led to the alteration of the hours. In dealing with the question it was considered that every reasonable facility ought to be given to the trading community for the landing of goods and the expansion of trade, that there would be no more danger to the revenue if all goods, duly reported and for which an entry in some shape was forthcoming, were permitted to be landed between 6 a.m. and 6 p.m. as a regular part of the officers' duty instead of their being so landed during part of the time while the officer was employed on overtime, and that the most defensible system which could be adopted in order to check the abuse of "overtime" practice, would be for the Crown to give to the merchant free of charge, when so desired, the usual hours of labour, viz., 6 a.m. to 6 p.m., and that the merchant should be called upon to pay "overtime" to the officers only for service rendered between 6 p.m and 6 a.m. The proposal was submitted to, and approved of, by the Treasury, and it was determined to put the new system into force experimentally at the ports in the Humber and at Liverpool.

110. The experienced officers of the department were of opinion that, at those, and most of the ports, the existing staff was ample for the extended hours required, if the officers were employed generally on a relay system, similar to that which has been in force in London for over three years in connexion with the examination of parcels arriving by the foreign and colonial parcels post. This system provides for relays of officers throughout the whole 24 hours. Under such a plan, but limited to day hours, viz., 6 a.m. to 6 p.m., it was considered that, without material increase of expense to the Crown, the merchants would be relieved of overtime payments to a very considerable extent, and the "overtime" service of the officers reduced within reasonable limits ; for it is believed that much of the night work in the discharge of ships, for which, under the new system, the merchants will have to pay, will be pushed by them into the 12 hours of daylight, which will be free from any charge for "overtime." It will be seen that, although the effect of the new system will be to give traders 12 hours free from overtime payment, the actual hours of employment of the officers will, as a rule, be seven or eight only, and that their hours of work, so far from being extended, will be considerably reduced.

OPERATION OF THE NEW HOURS.

111. At the ports on the Humber the new system was soon brought into working order without much friction, but at Liverpool such was not the case. At that port the officers at first clung to the hope that the order would be cancelled, and the old hours of "overtime" service restored ; they did not, therefore, lend themselves willingly to the new system, and evince the same spirit in the performance of their duties as they did before the hours were changed ; in consequence the system was not introduced with the same ease as on the Humber, and owing to want of proper arrangements being made by some of the superior officers of the port, a very large number of hours of attendance (in excess of the ordinary average of eight or seven hours, according to the season), was put in by the officers. The difficulties have, however, been overcome, and the system is now working smoothly—with advantage to the merchants—with no material charge to the Crown, and without any real hardship to the officers ; the number of hours of excess attendance, which had accumulated, have been either repaid to the officers in the shape of extra leave, or else any claim to them has been resigned.

112. It is not correct, as is asserted by the officers in their statement, that the transit sheds are frequently required to be opened at 6 a.m. to prepare for the general work which begins at seven. Occasionally it is the case when the dock company wish for access to the movable engines used in landing goods, but the attendance of only one officer is required on such occasions, that is the depôt keeper at the station, and these keepers have a very easy time of it. As to the complaint of delay in the delivery of goods under the new system, which is referred to by the officers in question No. 25,854, the collector writes "that no such "complaints has been made to the inspector, the surveyors, "or myself, and I am satisfied that if complaints were

Remarks on Evidence and Memorials.

"made they would have immediately come to my know-"ledge."

Complaints against New System.

113. It only remains, therefore, to consider the complaints which have been advanced by the officers against the new system.

The principal grievance of the officers is the difficulty they do or will, experience in London and Liverpool in reaching their stations at 6 a.m., on account of the fact that, previous to that hour, public conveyances are either not available at all or are of very limited convenience. The extent to which this will be a real grievance is doubtful. At present in Liverpool the "hours of labour" do not ordinarily begin in the docks till 7 a.m., and none of the officers are required as part of an ordinary day's duty to be present until that hour; they then have the same means of access to their stations as the Dock Company officers. The grievance, therefore, remains to be proved in the case of the Liverpool officers. In London the new system has not been tried, and it is uncertain at what hour business will commence at the docks when it is tried; but at whatever hour business may commence, Customs officers will have the same opportunities of reaching their stations as the officers of the Dock Companies; and it may be observed that it is believed that the London officers can, if they choose to do so, obtain suitable residences nearer to the docks than is the case with the Liverpool men. If, however, any *bonâ fide* grievance can be proved to exist on this point the case can be submitted for the consideration of the Treasury, and though some inconvenience may be felt by the officers on account of the earlier hour of attendance, it will not be greater than they already have experienced when working "overtime" at the same hour; and it is impossible, in a department so specially mixed up with the trading interest as the Customs is, to consider the interests of the officers only.

114. The officers wish that, by a Treasury order, their hours should be definitely fixed at 8 in winter and 7 in summer. It would be impossible to adopt such a rule in view of the exigencies which may arise in connexion with shipping requirements in a department such as the Customs. That the Board is not disposed to overtax the energies of the officers is shown by the fact that, though in the warehouses and the long rooms the hours are from 8 to 4, those officers only are required to be present who are sufficient to meet the requirements of the public at the earlier hour.

25,841. 115. The officers ask that, if they are employed before or after the legal hours, *i.e.*, the hours as defined in 44 Vict. c. 12. s. 9, they should receive some compensation for the inconvenience. It has been already stated that the "legal hours" of landing goods have no necessary connexion with the hours of service of the officers, and if, as is now the case, the officers are only called upon to put in eight hours' service on landing duty, it is not considered that they are entitled to any special allowance because the duty may commence at 7 instead of 8.

25,807. Dinner hour. 116. There is no recognised interval for dinner between 8 a.m. and 5 p.m., but the officers can, and do, obtain this meal when the wharfingers or the warehouse keepers cease work for the same purpose. It is not the rule in public departments to recognise any hour for luncheon or dinner, but in practice time is always allowed for it.

25,739. Vacancies in the class of assistant examining offices. 117. The officers claim that the offices of assistant examining officer which have been assigned to Liverpool should be filled up. In the remarks made upon the existence of so many acting examining officers in the service, it has been already pointed out what the result would be if the vacancies in the assistant class were at once filled up. *See* paragraph 19.

25,741. Overtime. 118. The officers plead the recent diminution in the hours of overtime as one of the reasons why the initial salary should be raised; but overtime was unknown to them when they decided to enter the service, and it has already been pointed out in paragraph 108 that it was not properly claimable by the out-door officers on landing and shipping duty for the hours in respect of which the diminution in their earnings has taken place, and it is difficult to contend that salaries should be raised under a system which has practically shortened the hours of attendance.

25,745. Ledgers. 119. The officers complain of being employed in keeping the warehouse ledgers without receiving a higher rate of salary. On an average it appears that about nine officers are so employed; but the service is willingly taken, and is certainly an advantage with a view to promotion.

25,745/51. Previous to the amalgamation of 1882 no ledgers at all were kept. These ledgers contain a debtor and creditor account of all duty goods in the different warehouses, and as the duty connected with them is merely that of entering upon the one side or the other particulars supplied by various documents, it really resolves itself into a form of copying work, and was, indeed, till quite lately, in London given to copyists and examining officers between them. As the nature of the work, therefore, is of itself simple compared with that which is required to be performed in other duties, and as it is, moreover, checked by a surveyor or a first class examining officer, it was decided by the Board to dispense with the services of copyists (who were really only intended for indoor clerical work) and give it to the officers of the out-door department, who so nearly meet the copyists in rank and position. It is to be remembered, when claims are advanced of this nature, that aptitude for clerical work of an ordinary kind is now, owing to the spread of education, comparatively a drug in the market, and that it is not of the money value it used to be.

25,766. Diminution in number of competitive examinations. 120. The officers claim that they should receive compensation because fewer competitive examinations are held than they were led to expect when they entered the service. It is obvious that competitive examinations can only be held according to the requirements of the service, and it is probable that a more singular claim to compensation was never advanced by any body of public servants.

The Acting System.

25,776. 121. The officers state in their evidence that there are men in Liverpool who have been "acting" examining officers for 22 years. One officer has been so acting, but he was charged and reduced for being drunk on duty in 1872.

There are also some who have been acting since 1879, but out of four cases to which the remark might apply, two have been charged and reduced, and it is not deemed advisable to promote the two others.

The Intermediate Class.

5,767. 121A. The introduction of the assistant examining officers class is advanced as a ground for the immediate increase of the salaries of the out-door officers. The large number of promotions received by the out-door officers to the assistant class, as shown in the table of promotions attached to the remark on the London evidence (*see* paragraph 78), appears to be a complete answer to this claim; and it has also been shown in paragraph 38 that, while the number of out-door officers who are candidates for promotion has been largely reduced, the number of offices to which they can be promoted has largely increased. At present all appointments to the intermediate class are made by selection—without examination. Officers of tried experience have thus opportunities for advancement, instead of being passed over by young officers "fresh from school," and able in competitive examinations, but deficient in experience and the steadiness acquired by service.

24,774. 122. Reference is made to the case of an officer who has 19 years' service, and whose salary has, during that period, only increased by 10*l.*, though he has been employed on superior duty. This officer entered the service at the old initial rate of salary at the port of Liverpool, viz., 70*l.*, and he attained the maximum of his class in 1880; but his record was not clear, as he had been found guilty of being drunk on duty soon after he joined the service; and this is the "mistake" to which reference is made in the answer to question No. 25,797. Conviction for such an offence must necessarily retard an officer's advancement as compared with that of officers who have a clear record. It is not the case that this, or any other officer, labouring under a similar charge, was not allowed any opportunity for defence. He was regularly "charged," in accordance with the practice in the department. The inquiry was, as usual in such cases, on oath, and he was found guilty.

25,788 to 25,791. 123. There are two subjects here most ingeniously mixed up:—

(1.) Boarding duty.
(2.) Baggage duty in continuation of ordinary waterguard duty.

As to the former, the officer says that he gave sometimes 24 hours continuous attendance without any break whatever. Such a condition was possible until lately, though not frequent, and it arose in connexion with change of watches, under circumstances not easy to be here stated; but it is not possible now, the watches on boarding duty being taken in alternate periods of six hours by the two officers boarded on the ship.

As to the latter, the case of 40 hours continuous service partly on baggage duty (as admitted in answer to Question No. 25,791) might have been possible owing either to a glut of arrivals of American liners on the particular Saturday and Sunday in question or to delays in such arrivals, officers being meanwhile kept ready to examine passengers'

baggage. Such cases of prolonged attendance may sometimes occur, but *certainly* not without plenty of opportunities of rest, and as to all the hours outside the regular day's work the officer would have received special remuneration from the shipping companies who requested their attendance.

124. It is the case that an officer with a "C." character will probably not be promoted, and it is not in the interest of the public service that he should be. It is not true that a single, or even more, bad record is an absolute bar to promotion: a reasonable period, free from any such record, *and dependent on the gravity of the offence*, is required. Nothing but ignorance of the requirements of the service and inexperience could have suggested the idea that a fault grave enough to be recorded should be no bar to promotion after the lapse of two years.

125. The officers complain that at Liverpool the warehouses are, in summer, kept open from 8 a.m. to 5 p.m. instead of from 8 a.m. to 4 p.m. as in London.

The London practice is as stated, but in Liverpool, upon request of the merchants, as far back as 1852 it was arranged that, if necessary, at the request of the merchants, warehouses might be kept open for *the receipt and delivery of goods only* till 5 p.m. in the summer. It must be remembered that the officers had no claim to extra remuneration on this account, because of the hours for all officers in the summer months being from 6 a.m. to 6 p.m. on whatever duty they may be employed. The same practice applies at Bristol.

25,805. Warehouses kept open till 5 p.m.

LIVERPOOL EXAMINING OFFICERS.

126. Many of the subjects referred to by the Liverpool examining officers, such as—

The "acting" system;
Waterguard hours;
The employment of 1st class examining officers in checking warehouse accounts;
Compensation for loss of prospects;
System of promotion and reports on characters; and
Retirement;

have been dealt with in the remarks on the London evidence, and the question of the new hours of service to which the officers are liable has been explained in treating the evidence given by the Liverpool out-door officers: but, as in the case of the out-door officers, there are some points raised by the examining officers which require notice.

New Classification.

127. The Liverpool officers suggest that a new classification should be formed, whereby there should be a general class of examining officers at salaries from 150*l.* by 10*l.* to 250*l.*, and that above this, and between the surveyors, a new class should be formed to be called assistant surveyors, with salaries from 250*l.* to 350*l.*

There are no grounds given for this suggestion, except that many 1st class examining officers are now performing, what the witnesses call, superior duties, which, by the Warehousing Code, are allotted to surveyors or supervisors.

The nature of these so-called superior duties has been previously explained, and the reasons why they are assigned to the 1st class examining officers (*see* paragraph 58), and there is no ground for claiming a higher rate of pay for them than is given to 1st class examining officers.

As to the proposed new classification, it would seem by the answer to the question No. 25,816 that it is intended that it should only apply to Liverpool, but any such proposal would be a retrograde step, as the object of many of the changes, as regards salary, which have been made in recent years has been to place all officers of the same rank at different ports on the same scale of salary. And this is now the case with all salaries except those of the surveyors, and it is hoped that these also may soon be equalised.

128. Putting, therefore, out of the question any port distinction, the cost of the Liverpool proposal must be applied to the present numbers in the three grades in the service affected by it, viz.:—

223 1st class examining officers.
635 2nd " " "
512 assistant " "

The cost of the present scale of pay is estimated to be—

——	Minimum.	Mean.	Maximum.
	£	£	£
223 1st class examining officers -	50,180	58,540	66,900
635 2nd " " " -	74,295	106,997	139,700
512 assistant " " -	51,200	64,000	76,800
Total - - -	175,675	229,537	283,400

These figures are arrived at on the supposition that promotions to the 2nd class will be made from the class of assistants at the time when they will have attained a salary of 124*l.*, which they will carry with them on their promotion. This would be equivalent to raising the minimum of the 2nd class to 117*l.* (the mean between 110*l.* and 124*l.*).

The cost of the proposed classification (exclusive of the cost of raising the increments as proposed) would be—

——	Minimum.	Mean.	Maximum.
	£	£	£
223 1st class examining officers -	55,750	66,900	78,050
635 2nd " " " -	95,250	127,000	158,750
512 assistant " " -	51,200	64,000	76,800
Total - - -	202,200	257,900	313,600

The increased cost would therefore be—

	£
At the minimum - - -	26,525
At the mean - - - -	28,362
At the maximum - - -	30,200

But to this must be added 5,715*l.*, the estimated cost of raising the increment of the 2nd class of examining officer from 7*l.* 10*s.* to 10*l.*, and 4,096*l.*, the estimated cost of raising the increment of the assistant class from 3*l.* to 5*l.*

The estimated increased cost of the proposed classification would therefore be—

	£
Mean cost - - - -	28,362
Rise in the increment of the 2nd class examining officer - - -	5,715
Rise in the increment of the assistant class - - - - -	4,096
Total - - -	38,173

Insufficient Control.

129. In their printed statement the officers assert that the reductions made in the superior appointments have made the control of the department insufficient.

This is not the opinion of the collector or of the inspector of the out-door department. Under these officers there are at present an assistant inspector and 14 surveyors, viz.:—

2 of the 1st class,
4 " 2nd "
8 " 3rd "

and this staff is considered by the collector to be amply sufficient for the control of the out-door department of the port.

Reductions in Superior Offices and Existing Vacancies not filled.

130. When reductions in officers are made they are effected, after careful inquiry on the spot by superior and responsible officers. The Board have been informed that the number of surveyors at the port of Liverpool is in excess of the actual requirements of the service, and under such circumstances the Board would not be justified in filling existing vacancies.

Remarks on Evidence and Memorials.

Terms offered to Clerks on joining the Out-door Service.

131. The Liverpool officers state that these officers accepted their present positions on the understanding that they would not be required to work more than seven hours in winter and eight in summer, "and that the increase made "to their salaries was calculated on the basis of the extra "attendance involved by those hours"; and in support of this statement the officers quote the order of the Board of 26th February 1883, No. 3,505. In that order there is not a word which will justify the statement of the officers, the terms offered to the Liverpool clerks were the same as those accorded to the clerks in London, and they were accorded by the Treasury for the same reasons. On reference to paragraph 77 it will be seen that the immediate increment of 30*l.* was conceded by the Treasury on account of the liability of the clerks to serve when required from 6 a.m. to 6 p.m.

Meals.

25,847. 132. The officers assert that they have no time for meals between 7 a.m. and 5 p.m.

This statement is absolutely incorrect. It is the case that there is no recognised hour at which an officer should cease work and dine; but in the Liverpool docks work always ceases from noon till 1 o'clock, and the majority of the officers there employed have full opportunity for refreshment, in fact, many of them arrange for mess dinners to be provided for them in the Customs offices in the docks, and till lately, the cooking of these dinners was done, at a considerable cost to the public, by out-door officers, some of whom were in the 1st class. There must of necessity also be allowed, under the new hours, time for breakfast for those officers whose hours of duty may commence at 7, as in all places the labourers and others in the docks break off for refreshment, and, as a rule, it will be open to the officers, if they think fit, to make the same arrangements as to breakfast which they have made for obtaining their dinners.

25,853. 133. The officers refer to the staff at Princes Dock as insufficient between the hours of 7 and 9 a.m. The collector states that the work at those hours in that dock "is easily within the power of one examining officer."

25,854. The officers' statement would lead to the conclusion that an examining officer on a station had no assistance. He has always in attendance with him an out-door officer of experience who aids him in seeing that all packages from a ship are accounted for.

Loss of Sunday Pay.

25,855. 134. The officers admit that Sunday duty is necessary, but they assert "that unreasonable concessions to shipping "interests have added unnecessary and disagreeable duties "to the Sunday duties."

This statement would lead to the conclusion that recent orders had added to the Sunday work and to the number of officers employed on it; but the contrary is the case, and the complaint made points rather to the conclusion that it is the loss of the Sunday pay formerly earned, which is the real cause of dissatisfaction.

The Sunday duty is now almost entirely limited to the officers on waterguard.

Previously to 1887 landing of cattle on Sundays was supervised by officers specially employed for that purpose, and an examining officer so employed received from the merchants 12*s.* as his day's pay, and 2*s.* per hour for any overtime outside the limit of 8 a.m. to 4 p.m. In that year the duty was transferred to the waterguard as part of its regular duty (their attendance being constant on Sundays), and the attendance of any special officer ceased to be required. In fact, the charge upon the merchant was not justifiable, and the collector states that the discontinuance of the charge is a distinct improvement as regards the good management of the port. The measurement of deck cargoes, which is a duty requiring immediate attention on the arrival of a ship, has been since 1877 taken by the waterguard.

135. Exclusive of the waterguard the Sunday work at Liverpool is limited to—

1. Attendance to examine passengers when an unusual number arrive, and the waterguard is insufficient to meet the pressure.
2. The landing of perishable goods.
3. The discharge of goods from vessels—
   (*a*) in distress;
   (*b*) which have also mails and passengers and have been delayed by weather and are required to sail at an early date.

Attendance is also required for the discharge of vessels on holidays.

For the attendance on these occasions special application has to be made by the merchants, and the examining officers employed receive from the merchants pay and overtime at the rates mentioned as formerly received for attendance on cattle ships, and out-door officers are paid at the rate of 4*s.* a day, and overtime at the rate of 8*d.* an hour.

136. The attendance of landing officers at Liverpool for duty on Sundays or holidays is not compulsory. If an officer should object a substitute would be found; but there is only one instance in which an officer has objected to it; the alleged grievance of the officers is therefore imaginary.

137. The waterguard staff for examining baggage at Liverpool is governed by the number of passengers. It not unfrequently happens that the waterguard officers who have completed their day's turn of duty are kept back or recalled to assist at the examination of baggage, and an officer so recalled receives overtime from the merchant for attendance before or after the legal hour; but if that attendance is given on a Sunday, or part of a Sunday between 8 a.m. and 4 p.m., he receives from them a full day's pay as well as any overtime he may earn.

Pay for Sunday Duty.

138. Payment for Sunday duty is indirectly claimed by the Liverpool examining officers, in reply to question No. 25,855, and it is directly claimed by the Harwich boatmen who ask "that Sunday and Bank Holiday pay should be "proportionate to salary for the rest of the year." As already stated service in the waterguard at any port of necessity entails Sunday duty, and it has always been recognised as part of the ordinary duty of an officer so employed and, except that out-door officers and boatmen continue to receive an old allowance of 1*s.* a day when on Sunday duty, no extra payment has ever been given for it in the Customs Service. 25,855.

Wages of servants in private families cover any necessary service on Sunday, and such is the case as regards Sunday duty in the Army and the Navy and, it is believed, in most cases where service is paid by salary, and not by the day or hour.

139. In the Customs it may be said that the question practically only applies to officers employed on waterguard duty as it has been explained that those employed on Sundays on landing duty are paid by the merchants.

There were assigned to waterguard duty in the Department on the 1st ultimo—

	Cost of mean salaries.
	£
162 examining officers (say 2nd class) -	27,030
92 assistant examining officers - -	11,500
407 out-door officers (say 2nd class) -	30,076
777 boatmen - - - -	50,220

To meet the proposal for Sunday pay it would necessary to add one sixth to the salaries of the officers so employed, and on that basis the following sums would have to be paid:—

	£
To the examining officers - - -	4,505
To the assistant examining officers - -	1,917
To the out-door officers - - -	5,013
To the boatmen - - - -	8,370
Total increased cost - - -	19,805

Proposal to Abolish Uniform.

Such a proposal could not be sanctioned.

140. Officers of Customs are in daily contact with the public and, as some authority for their office, they must, unless they are employed on special preventive duty, or in offices, wear the uniform prescribed for their class. It prevents unauthorised persons from assuming the position of a Customs officer, and is, in many respects, a protection to the officer himself and to the public generally. 25,891.

It is not compulsory for an officer to wear uniform when employed on clerical duty or warehouse accounts.

Evidence of the Out-port Examining Officers.

141. There are only a few points which it is necessary to notice in the evidence of the out-port examining officers.

The work performed by 2nd class examining officers at the out-ports will hardly compare with that performed by Lower Division clerks. The class of work is, as a rule, somewhat inferior, and although the examining officer 25,907.

gives, for eight months of the year, one hour's attendance more per day than the Lower Division clerk, it is, in many cases, mere "attendance" and does not signify actual work.

915. 142. The superior appointments throughout the service are now thrown open to all officers, and the promotions to them are not confined, as was generally the case in former years, to the port in which a vacancy may originate. As an instance, London examining officers are not exclusively promoted to surveyorships at that port, but are now sent to out-ports, and out-port surveyors are removed to London. The advantages of such an arrangement are that "new blood" is introduced, the procedure at the different ports is brought more into harmony, and the officers who are promoted are better able to fill their new positions.

918. 143. The duty of an out-port examining officer in assessments for revenue purposes is not so large or special as might be supposed from the remarks made in answer to this question. Except in a few of the larger ports there are no large *direct* importations of dutiable goods, and those that are removed to the port for clearance have been already assessed on importation at London, Liverpool, or elsewhere. The out-port examining officers *re*-gauge or *re*-weigh for duty, and sufficient control is exercised over this duty by the collector acting in the capacity of surveyor. At ports where duty goods *are* imported there are usually surveyors who give their whole time to the work of supervising the officers. These surveyors are instructed to make their visits at irregular hours and as frequently as the duty will admit, and it is generally found that they loyally carry out their instructions.

923. Checking the warehouse books and testing the stock in the warehouse is a sufficient guarantee that goods are not taken out of the warehouse before the duty has been paid upon them, and the irregular visits to the officers whilst they are taking the account prevents collusion with the merchants as is suggested.

937. 144. It has been already observed that the distinction between the salaries of the surveyors at the out-ports and Liverpool and London requires reconsideration.

945. 145. The assistant examining officerships are not recognised as a stepping stone to the examining officerships, 2nd class, inasmuch as they are filled by selection from amongst officers of tried service as a reward of merit; but the fact of an officer accepting promotion to the assistant class is no bar to his further promotion. If an officer shows ability above his fellows he is promoted to a 2nd class examining officership.

Assistant Examining Officers.

146. The reasons which led to the formation of this class are stated in paragraph 7.

Not only out-door officers but boatmen also are promoted to it.

The salary which has been assigned to the class is considered fairly to represent the value of the work to be usually performed by those in it, and no improvement in it seems to be required.

147. It seems, however, to me a matter for consideration, having regard to the fact that the sphere of duty on which the officers serving in it may be employed has been enlarged since its introduction, and that its scale of salary overlaps the minimum of the 2nd class examining officer, whether the present arrangements should not be reconsidered.

The Boatmen (or Watermen).

148. The boatmen complain (1) of the hardships of the service; (2) of the 24 hours system, under which, at some ports, they are required to be on duty; and (3) of the insufficiency of their salaries.

In support of their statement the Liverpool officers forward copies of memorials which they presented to the Board in February and November 1884. The latter memorial is a copy of one which was also sent in by the boatmen at several of the leading ports.

Boatman's Duty.

149. A boatman's duty at a busy port is heavy, and at some ports, such as Liverpool, there is the danger attending it which must accompany boating in rough weather, but it is one inherent in waterguard service, and cannot be avoided if the work is to be properly performed. It is for this duty that the men offer themselves as candidates.

In rummaging it is the case that they have, to some extent, to act with some degree of independence, as though a rummaging crew consists of an examining officer or an assistant examining officer and two boatmen, the vessels are now too large for the officer always to accompany his men throughout the entire rummage.

The Twenty-four Hours System.

150. This subject has been already referred to in paragraph 86, but the following memorandum by Mr. Hinks, the head of the London water-guard, is here submitted:—

There is no question as to the advantage to the Revenue of the 24 hours system. It ensures the constant attendance which is necessary at all large ports, to put the quarantine and health questions at the boarding station, to examine passengers' baggage, rummage vessels arriving, boarding officers when that is necessary, landing cattle, perishable and bulk cargoes, and visiting officers when boarded. This work varies very much in amount and is seldom continuous at any port, but to meet it properly constant attendance th ugh not constant work, is required, and the men are provided with beds and cooking utensils, and allowed to take such rest as the business will permit.

As an equivalent for the 24 hours watch they are allowed 24 hours off duty, and a short watch every third day, from 8 a.m. to 4 p.m. is given in London. At Liverpool this short watch appears to come at some stations every fifth day instead of every third day.

I think that the London practice as to the short watch should, as a rule, be the practice wherever the 24 hours system prevails, but there are some stations at which the work is so light that it is not in any way necessary. Under this system in each 21 days a man is in attendance 224 hours or $10\frac{2}{3}$ hours in every 24, and is on duty at the most, every alternate Sunday. As a set-off against the extra attendance, as compared with an 8 hours system, $1\frac{1}{2}$ hours at least is saved in coming from and returning to their homes, and 50 per cent. in any locomotion expenses which may be necessary.

The watch is changed at 8 a.m., a most convenient hour, whereas, under the best arrangement which could probably be made under an 8 hours system, the third watch would have to come on duty at 11 o'clock at night. It is obvious, that under the 8 hours system the number of journeys from and to home would be largely increased.

Wherever the 24 hours system can be worked with a short watch every third day, I am confident, from long experience of its working, that it is the best system for the officers, and I am informed that even at ports where the short watch every third day is not the present practice the 24 hours system is generally preferred. An 8 hours system would hardly be fair to the public, as it must be understood that it would be *attendance* for duty when required, not constant performance of duty.

(Signed) W. H. Hinks.

The 24 hours system has also in recent years been introduced at Harwich, and the collector states that he believes that smuggling at that port has received a great check since its adoption.

It seems advisable that steps should be taken to carry out the recommendation made by Mr. Hinks as to the short watch at all busy stations.

System in Operation at Liverpool previous to 1884.

151. Previously to 1884 the examining officers on waterguard duty in the docks at Liverpool, with their boatmen, were in attendance only during the day time, any vessel arriving at night being simply put in charge of a patrol officer after the usual quarantine questions had been put to the master by an examining officer, in the capacity of inspector of patrol. The rummage of the vessel was deferred until she was visited by the waterguard examining officer during the legal hours.

For the patrol service of the port there were 111 glut officers and 18 out-door officers, of which latter 16 acted as inspectors. Every Saturday, at midnight, all patrol officers were withdrawn, and they did not resume their duties until midnight on Sunday. This patrol of 111 officers was placed principally on the land side of the different docks, but the number was really inadequate to guard efficiently the whole of the exits from the docks even on that side, while the river side was, practically, left unguarded. and, as shown above, on Sundays no patrol officers were on duty on *either* side.

The present waterguard system was designed to give a continuous and effective guard, composed principally of established and responsible officers employed on this duty only, and directed by one central authority responsible for all the waterguard work of the port.

Remarks on Evidence and Memorials.

That the present system has been attended with success as compared with that which it superseded is amply shown by the following figures giving the number of seizures of dutiable goods made within the port of Liverpool in each of the years from 1878 to 1888 inclusive; the immediate effect of the introduction of the new waterguard system in 1884 being at once apparent.

Old System.		New System.	
Year.	Seizures.	Year.	Seizures.
1878 - -	115	1884 (new system)	290
1879 - -	121	1885 - -	369
1880 - -	119	1886 - -	235
1881 - -	114	1887 - -	241
1882 - -	104	1888 - -	557
1883 - -	165		

Patrol Watch at the Docks in Liverpool.

152. In their memorial of November 1884 the Liverpool boatmen complain of the patrol watch at the docks as most severe and harassing.

This watch is an arrangement by which, at night, when there is no tide to be attended to or no rummaging to perform, the men of a crew can have a short rest by lying down at their head-quarters, on condition that one man keeps a look out; the men would apparently claim that, though, when they are on the 24 hours system they have 24 clear hours off duty as an equivalent for the 24 hours attendance; they are also to have the same right to relaxation when on duty as if they had no time compensation given for the 24 hours attendance. The watch in question falls, on an average, on a man twice between 6 p.m. and 6 a.m., and at each time lasts for two hours.

Incessant Duty at Liverpool.

153. The Liverpool boatmen state, in their memorial of November 1886, that there are more than three fourths of their number at that port who have an incessant run of duty for 365 days in the year, less the annual leave, and they desire to point out that the peculiar hardship attaching to that continuous duty is the amount of night work involved.

It is not easy to comprehend the meaning of this statement under the 24 hours plan of duty, which, as to its working in London, has been already explained. The facts are as follows:—

There were lately, at a given date, 86 boatmen in Liverpool, of these—

15 had a short watch every third day.
3 „ „ second day, on an average.
14 „ „ fifth day.
7 had no short watch.
24 were employed as rummaging, and, as a rule, have no night work.
2 on intermittent tide duty at Garston.
11 were acting as examining officers.
2 „ „ messengers.
1 as a cart-follower.
2 on quarantine duty.
1 was suspended from duty.
4 were absent on leave or sickness.

86

It will thus be seen that only seven come within the scope of the complaint, and even they are not kept continuously at stations where there is no short watch. As regards the 14 who had the short watch every fifth day, arrangements have recently been made to increase the number of the short watch days as to eight of the number; the other six are employed on a station where the night watch is light.

Salaries.

154. The present scales of salary were fixed by the Treasury in 1882, after the position of the boatmen had been the subject of inquiry by the Committee of the House of Commons, over which Mr. Norwood presided.

They are:—

1st class, 70*l.* by 1*l.* to 75*l.*
2nd „ 55*l.* „ 1*l.* „ 65*l.*,

and the men are paid an additional 1*s.* when employed on Sunday duty; they also receive uniform annually.

155. Previous to the scale fixed in 1882 the boatmen at the out-ports were on a lower scale than those in London and Liverpool, viz.:—

1st class, 65*l.* to 70*l.*
2nd „ 55*l.* to 60*l.*

Mr. Norwood's Committee recommended equalisation in the scales, and the Treasury minute of 28th January 1882, was the result.

There are now in the service as boatmen:—

—	1st Class.	2nd Class.	Total.
In London - -	59	121	180
„ Liverpool - -	30	61	91
At out-ports - -	173	431	604
	262	613	875

It will thus be seen that 604 men out of 875 are receiving the advantage of the concession made by the Treasury in 1882.

156. The Board declined in 1884 to forward their memorials for the favourable consideration of the Treasury, and when they were forwarded direct by the men, the Treasury declined, in the interest of the public service, to disturb a settlement which had been arrived at so recently as 1882, after an inquiry and report by a Committee of the House of Commons. Their Lordships, however, stated that they would give favourable consideration to any recommendations the Board of Customs might make for gratuities when boatmen incurred exceptional risk to save life, and in the event of casualties would not be unmindful of their families.

157. In assigning scales of pay some consideration must be given, as in the case of private employers—to the number of candidates for a position, and there are at present no less than 585 candidates for the service. The conditions of entry into the service must also be borne in mind. Boatmen do not enter by competition, but by direct nomination by the Treasury on applications made by the men to Members of Parliament or other persons. Before men apply for an appointment it must be assumed that they have made some inquiry into the nature of the duties they are anxious to undertake, and at any rate, as the appointment has cost them nothing except the fee for medical examination, they can, if they find the duty different to what they expect, resign and return to their previous employment.

158. They enter the service by a test examination in—

Reading,
Writing from dictation,
The first four rules of arithmetic, with the various weights and measures,

and the age for admission is between 20 and 30 years.

They receive, however, on their nomination no official intimation as to the hours of duty to which they will be liable, if they are accepted for the service. This is an omission which can be rectified.

Classification.

159. They ask that classification may be abolished, and two scales of pay are suggested:—

A. By the Harwich officers, 65*l.* by 2*l.* to 75*l.*, and then by 3*l.* to 95*l.*
B. By the Liverpool officers, 55*l.* by 2*l.* to 95*l.*

The cost of the present scale is:—

—	Minimum.	Mean.	Maximum.
	£	£	£
262 1st class, 70*l.* by 1*l.* to 75*l.* -	18,340	18,995	19,650
613 2nd „ 55*l.* „ 1*l.* to 65*l.* -	33,715	36,780	39,845
875 Total - - -	52,055	55,775	59,495

The Harwich scale

The cost of the Harwich proposal would, at its mean, be 14,225*l.* in excess of the mean of the present scales; but to this must be added an estimated sum of 7,000*l.* on account of the rapidity at which, under the proposed increments, the officers would arrive at the maximum of 95*l.*, as they would do so in 12 years.

Liverpool scale.

The cost of the Liverpool scheme would be:—

—	Minimum.	Mean.	Maximum.
875 boatmen, 55*l.* by 2*l.* to 95*l.*	£ 48,125	£ 65,625	£ 83,125

which would be an increase of 9,850*l.* a year as compared with the mean cost of the present scale.

No addition need be made on account of the increased increment proposed, as it will take, with the new increment, the same number of years, viz., 20, to reach the new maximum 95*l.*, as it now takes to reach the 75*l.* maximum at the old rate of increment.

160. It may be conceded that, in dealing with a scale of pay which has only a difference of 20*l.* between its minimum and maximum, there is not so much reason for classification as when the difference is wider, and the duties in the classes in some cases more distinct than they are in the case of boatmen.

161. But the abolition of classification is urged by the boatmen, in page 2 of their printed statement, on the ground of the slow rate at which officers have passed out of the second class. Whatever number of years may in future have to be passed in the second class, it cannot be said that the promotion from that class has, during recent years, been slow.

The following return shows the average service of the boatmen of each class in the 23 ports from which memorials have been addressed to the Commission, and the longest service of any boatmen of the second class at each port.

It appears by this return that, excluding the cases in London, Liverpool, Falmouth, Hull, and Swansea, in which promotion to the first class has not been given on account of the men not being considered fit for it, the longest service of any boatman in the second class does not exceed 8½ years.

Port.	Average Service of Boatmen, 1st Class.	Average Service of Boatmen, 2nd Class.	Longest Service of any Boatman, 2nd Class at the Port.	Remarks.
London	21 5/12	4 7/12	34 4/12	The senior boatman eligible for promotion has 7 3/12 service.
Liverpool	15 5/12	4 10/12	16 5/12	The senior boatman eligible for promotion has 6 11/12 service.
Aberdeen	24 11/12*	4 5/12	6 3/12	—
Barrow	33 5/12*	5	7 11/12	—
Belfast	9 3/12*	4 6/12	7 4/12	—
Cardiff	—	4 4/12	5 7/12	—
Cork	29	3 1/12	4 6/12	—
Dundee	24*	5 1/12	5 6/12	—
Falmouth	15 6/12	9 6/12	10 6/12	The man with this service has a C. character.
Glasgow	13 2/12	3 5/12	6 1/12	—
Goole	—	3 3/12	6 3/12	—
Grangemouth	12 7/12*	5 1/12	6 7/12	—
Greenock	17 3/12	5/12	6 7/12	—
Grimsby	12 3/12	3 2/12	6 1/12	—
Hartlepool	12	7 4/12	7 6/12	—
Harwich	9 1/12*	5	8 6/12	—
Hull	25 2/12	4 4/12	25 4/12	The man with this service was charged in 1877. The senior boatman eligible for promotion has 8 7/12 service.
Leith	9 1/12	4 1/12	6 3/12	—
Middlesbrough	9 3/12*	3 10/12	5 6/12	—
Newcastle	9 4/12*	3 3/12	7 4/12	—
Plymouth	9 3/12	5 11/12	7 3/12	—
Shields	9 10/12	4 7/12	7 6/12	—
Swansea	9	4 7/12	8 4/12	The man with this service was "reduced" for misconduct in 1885. The senior boatman eligible for promotion has 5 3/12 service.

* At the ports marked thus (*) there is only one boatman in the 1st class.

Rewards for Seizures.

162. In connexion with the salaries of the boatmen, it is to be observed that there is annually provided in the estimates a sum of 4,000*l.*, out of which rewards are paid to the officers in respect of seizures of dutiable articles made by them.

The rewards are shared by the rummaging crew, and they form a not inconsiderable addition to the salary of an intelligent and efficient boatman.

Sunday and Holiday Pay.

163. They ask that there should be extra pay for service on these days "in proportion to the salary for the rest of the year."

In the remarks made on the evidence of the Liverpool examining officers it is shown that the cost of this proposal would, on a rough estimate, amount to 19,805*l.* a year. *See* paragraph 139.

Overtime Pay.

164. It is claimed that the overtime pay of boatmen should be increased to 1*s.* per hour, and that overtime should be paid for all duties performed in connexion with vessels discharging foreign cargoes before and after the legal hours.

Boatmen, when employed on "short watch duty," are paid for extra attendance when employed after the legal hours and for the convenience of merchants, either in the examination of free goods discharged into lighters or on the river, and on the clearance of vessels after discharge of cargo, and when rowing the surveyors or examining officers in their visits to vessels discharging as above.

The present rate of overtime pay to these officers is 8*d.* an hour; it is the same as that which is paid to out-door officers, and is amply sufficient.

Promotion.

165. They ask that a more liberal amount of promotion may be accorded them to the ranks of examining officer and assistant examining officer.

Boatmen are not excluded from competition for promotion with the out-door officers, but as to the claim for other promotion it must be observed that the nature of the duty on which they are employed does not qualify them for the more varied duty to which an examining officer of the first and second class is liable; and though some men may show such special aptitude in waterguard duty as to lead to their selection for advancement and employment in the more skilled duties of that branch of the service, it is considered that promotion to the assistant class will meet most of the claims to promotion which boatmen may establish by noteworthy service.

Remarks on Evidence and Memorials.

It has been already shown in paragraph 38 that during the last three years 16 out of 212 promotions to that class have been given to boatmen, and as the number of boatmen employed has increased of late years, while the number of out-door officers has largely decreased, it is probable that a larger proportion of the promotions to that class will gradually fall to the boatmen.

It must, however, be borne in mind when the boatmen complain "that, while they merit promotion by their practical experience of the duties of the service, they are placed at a disadvantage in an educational competition with out-door officers," that they were allowed to enter the service by nomination and by a test examination only.

Pension.

166. The boatmen claim that they should be entitled to pension after 30 years' service.

There is no ground for any exception to the pension rules which prevail in other branches of the Service.

As already stated in paragraph 158, a boatman may enter the Service between the ages of 20 and 30. If he is unfit for service previous to the completion of his 40 years his name is submitted accordingly for pension to the Treasury.

Characters.

167. The mode in which annual characters are given has been already explained in paragraph 85.

The same system is applied to the boatmen, and no charge against a boatman is entertained except after an inquiry on oath.

Additional Uniform.

168. It is asked that the supply of uniform may be increased by the grant of another pair of trousers, and a long overcoat and long oilskin or waterproof coat triennially.

The uniform at present supplied is—

A pea jacket	annually,
A pair of trousers	
A waistcoat	
A cap, crown and badge	

and a greatcoat every three years, and a pair of overalls is allowed for use when on rummaging duty.

The uniform, &c. thus supplied is considered to be sufficient.

Summary of Cost Proposals.

169. The following is the estimate of the increased cost which would result if the several proposals for increased rates of pay and increment put forward by the different classes of officers were adopted:—

Proposals submitted by the London and other Officers.

	Increase.
	£
Out-door officers	9,000
Examining officers	54,988
Surveyors	7,445
Boatmen	9,850
Sunday pay to waterguard	19,805
	101,088
Add increased cost if the Harwich proposal as to the pay of boatmen was adopted in lieu of the Liverpool proposal	11,375
Total	112,463 a year.

The Liverpool Proposals are less costly.

	£
Out-door officers (same as London)	9,000
Examining officers and assistant examining officers	38,173
Surveyors (same as London)	7,445
Boatmen	9,850
Sunday pay	19,805
Total	84,273

Glutmen.

170. The number of the glutmen employed in the Service is considerable, and till recent years it was much larger. The sum voted this year for the pay of these men is, in—

	£
London	20,000
Liverpool	10,400
Out-ports	21,000
	51,400

which may be said to represent roughly the employment of about 1,000 men. They derived their name and the temporary nature of their employment from the fluctuating amount of the work to be done at the ports, in the days when the arrivals at a port depended on any change in the wind which might enable wind-bound vessels to enter it. Though a large number of these are able to obtain regular employment in the department they have no claim to it, and their services may be discontinued at any time without notice. Warning is, however, now usually given in those cases in which the employment has been regulated for some years.

Rate of pay

171. The rate of daily pay varies a little at the different ports, and is regulated by what would be paid at them for the service of a trustworthy labourer.

Supply of candidates.

There is a most ample supply of candidates at all the ports, and as the men think it a hardship if they are discharged, there seems no ground for altering their position or increasing their pay. In London alone the men have applied to the Royal Commission for an improvement in their position, but there seems no ground for doing so. In London there is a superabundant supply of candidates, and if those not regularly employed, attend at the Custom House on the chance of employment, it may be assumed either that the rate of pay is sufficient to tempt them to do so or that they have no employment elsewhere.

Duties.

172. In their statement they have somewhat magnified the importance of their duties. It is true that samples of wine and spirits are drawn by the glutmen, but it is done under the immediate supervision of the examining officer, who is gauging the casks and who has to certify on the test papers which accompany the samples to the laboratories, that the samples have been drawn in his presence. The glutman then carries the samples to the laboratory, so that his function in this respect is little more than that of a carrier. On bonded floors in warehouses the glutmen merely act as sentries, guarding the goods when certain operations, permitted by the regulations, are being carried out, and they sometimes act as "cart followers" in charge of goods when removed from one warehouse to another.

173. The rules as to boy messengers are, with the sanction of the Treasury, mainly based upon those which are in operation in the General Post Office as regards the same class. Their employment necessarily ceases at 19 years of age.

174. It seems, however, a matter for consideration, whether, in the case of those glutmen who, at any of the ports, have been in constant employment for upwards of one year, pay might not be allowed on bank holidays and any festival kept on a week day.

H. Murray.

14 May 1889.

FOURTH REPORT

OF THE

ROYAL COMMISSION

APPOINTED TO INQUIRE INTO THE

CIVIL ESTABLISHMENTS

OF THE DIFFERENT

OFFICES OF STATE AT HOME AND ABROAD.

Presented to both Houses of Parliament by Command of Her Majesty.

COMMISSIONS.

VICTORIA, R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith :

To our trusty and well-beloved Sir Matthew White Ridley, Baronet; Our right trusty and right well-beloved cousin Adelbert Wellington Brownlow, Earl Brownlow; Our right trusty and well-beloved Nathaniel Mayer, Baron Rothschild; Our right trusty and well-beloved Ralph Robert Wheeler, Baron Lingen, Knight Commander of Our Most Honourable Order of the Bath; Our right trusty and well-beloved Councillor George Sclater-Booth; Our right trusty and well-beloved Councillor, Henry Hartley Fowler; Our trusty and well-beloved Sir Edward Cecil Guinness, Baronet; Our trusty and well-beloved Algernon Bertram Freeman-Mitford, Esquire, Companion of Our Most Honourable Order of the Bath; Our trusty and well-beloved John Cleghorn, Esquire; Our trusty and well-beloved Alfred Spalding Harvey, Esquire; Our trusty and well-beloved Charles Edward Lewis, Esquire; Our trusty and well-beloved Arthur O'Connor, Esquire; and Our trusty and well-beloved Peter Rylands, Esquire; Greeting!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into the Establishments of the different Offices of State at Home and Abroad:

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorised and appointed, and do by these presents authorise and appoint you, the said Sir Matthew White Ridley, Adelbert Wellington Brownlow, Earl Brownlow, Nathaniel Mayer, Baron Rothschild, Ralph Robert Wheeler, Baron Lingen, George Sclater-Booth, Henry Hartley Fowler, Sir Edward Cecil Guinness, Algernon Bertram Freeman-Mitford, John Cleghorn, Alfred Spalding Harvey, Charles Edward Lewis, Arthur O'Connor, and Peter Rylands to be our Commissioners for the purposes of the said inquiry.

And We do hereby authorise and empower you, or any five or more of you, to inquire into the numbers, salaries, hours of labour, superannuation, cost of the staff, and the administration, regulation, and organisation of the said offices.

You will state whether, in your opinion, the work of the different offices is efficiently and economically performed; whether it can be simplified; whether the method of procedure can be improved; and whether the system of control is deficient or unnecessarily elaborate.

As ten years have now elapsed since the adoption of the scheme of organisation recommended by the Playfair Commission, the time has come when the working of the scheme may, with advantage, be reviewed. You will, therefore, report whether the scheme has been fairly tried; whether its provisions have met the requirements of the Service, and deserve confirmation, and whether any modifications are needed to give it complete development.

Lastly, you will examine the non-effective charge of the Civil Service, and advise whether the present Pension Scales and Regulations are equitable alike to the State and to its servants.

And for the better effecting the purposes of this Our Commission We do by these presents give and grant unto you, or any five or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all

such books, documents, registers, and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do further by these presents authorise and empower you, or any five or more of you, to visit and personally inspect such places in our United Kingdom and abroad as you may deem expedient for the more effectual carrying out of the purposes aforesaid.

And We do by these presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any five or more of you, may, from time to time, proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any five or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us, under your hands and seals, or under the hands and seals of any five or more of you, your opinion upon the several matters herein submitted for your consideration.

And for the purpose of aiding you in such matters, We hereby appoint Our trusty and well-beloved Horace George Walpole, Esquire, Companion of Our most Honourable Order of the Bath, Assistant Under Secretary of State to Our Principal Secretary of State for India, to be Secretary to this Our Commission.

Given at Our Court at Saint James's the twentieth day of September, one thousand eight hundred and eighty-six, in the fiftieth year of Our reign.

By Her Majesty's command,

HENRY MATTHEWS.

VICTORIA, R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith:

To Our trusty and well-beloved Robert William Hanbury, Esquire; Our trusty and well-beloved Harry Lawson Webster Lawson, Esquire; and Our trusty and well-beloved John William Maclure, Esquire; Greeting!

Whereas We did, by Warrant under Our Royal Sign Manual, bearing date the twentieth day of September, one thousand eight hundred and eighty-six, appoint Our trusty and well-beloved Sir Matthew White Ridley, Baronet, together with the several Gentlemen therein mentioned, or any five or more of them, to be Our Commissioners to inquire into the Establishments of the different Offices of State at Home and Abroad:

And whereas one of Our Commissioners so appointed, namely, Peter Rylands, Esquire, has since deceased, and two other of Our said Commissioners, namely, Sir Edward Cecil Guinness, Baronet, and Arthur O'Connor, Esquire, have humbly tendered unto Us resignations of their appointments as two of Our said Commissioners:

Now know ye, that We, reposing great confidence in you, do by these presents appoint you, the said Robert William Hanbury, Harry Lawson Webster Lawson, and John William Maclure, to be three of Our Commissioners for the purpose aforesaid in the room of the said Peter Rylands, Sir Edward Cecil Guinness, and Arthur O'Connor, in addition to and together with the other Commissioners whom We have already appointed.

Given at Our Court at Saint James's the thirtieth day of November, one thousand eight hundred and eighty-seven, in the fifty-first year of Our reign.

By Her Majesty's commands,

HENRY MATTHEWS.

REPORT.

MAY IT PLEASE YOUR MAJESTY,

WE, Your Majesty's Commissioners, appointed to inquire into Your Majesty's Civil Establishments at home and abroad, beg to present our fourth and final Report.

1. We now deal with the Foreign Office and the Diplomatic and Consular services. We have had the advantage of previous reports of Committees of the House of Commons—in 1850, 1858, 1861, 1871, and 1872.

We have examined as witnesses :—

	Page.
Sir Philip Currie, Permanent Under Secretary of State, Foreign Office	1, 33, 112
Sir Francis Alston, chief clerk, Foreign Office	15
Mr. Kennedy, senior clerk, Foreign Office	28, 67
Sir Percy Anderson, senior clerk, Foreign Office	47
Sir E. Hertslet, librarian, Foreign Office	60
Mr. Bryce, formerly Parliamentary Under Secretary of State at Foreign Office	74
Mr. Giffen, assistant secretary, Commercial Department, Board of Trade	87
Sir T. Sanderson, Assistant Under Secretary of State, Foreign Office	92
Mr. Law, commercial attaché	99
Mr. Davidson, legal assistant, Foreign Office	109
Sir Charles Dilke, formerly Under Secretary of State, Foreign Office	124
Mr. Howard, secretary of Legation at Pekin	140
Mr. Fane, secretary of Embassy at Constantinople	149
Mr. Ward, consul at Bordeaux	157
Mr. Mowatt, Treasury	161
Mr. Bourne, acting consul, China	164

2. The Foreign Office was re-organised in 1881, and is now divided into eight departments.

(1.) *The Eastern*, which deals with the affairs of Eastern Europe, Asiatic Turkey, Persia, Central Asia, Egypt, and Tripoli.

(2.) *The Western*, which takes Western Europe, Morocco, Algiers, Tunis, and the Pacific Islands.

(3.) *The American*, which takes North, South, and Central America, China, Japan, and Siam.

(4.) *The Consular*, which, in addition to consular business, deals with the East and West Coast of Africa and the slave trade.

(5.) *The Commercial*, where commercial and sanitary questions are treated.

(6.) *The Chief Clerk's*, which is charged with the financial business of the office, and the accounts of the diplomatic and consular services, with the preparation of estimates, and rendering of accounts to be laid before Parliament, and also with a variety of questions connected with the general administration of the department.

(7.) *The Library*, which has the custody, arrangement, and registry of the manuscript correspondence and of the printed library, and where memoranda on historical events, international cases, &c. are prepared.

(8.) *The Treaty Department*, in which the drafts of treaties are prepared, and which also deals with Orders in Council and various technical questions such as extradition, nationality, copyright, and enforcement of the Foreign Enlistment Act, as well as questions of Ceremonial, Royal Letters, British and Foreign orders, &c.

3. Of these, the first three are purely political, while the consular department, which deals with African questions, is partly so, and the commercial department is also partly political in the sense that there is a certain amount of confidential business transacted in it.

4. We have no evidence before us which would justify us in recommending any specific alteration in this distribution of the work which has been found to be practically satisfactory.

5. We have received certain suggestions from the Legal Assistant, for the improvement of the status of his office; but as the appointment was only made as the result of the recommendations of a special committee in 1886, we do not think sufficient time has elapsed to warrant, at present, any satisfactory conclusion being arrived at with respect to it. It may be observed, however, that Mr. Bryce, who was a member of the committee above referred to, is of opinion that there should always be an assistant legal under-secretary.

Bryce, 27,955–6.

6. The librarian has charge of the manuscript and printed library, and he is also frequently called upon to make précis and to prepare memoranda upon various subjects. The title of librarian is therefore somewhat misleading, as, while he is responsible for the general register and index of all Foreign Office papers, a part of his work approaches more nearly that of a general intelligence department. Various causes, and perhaps to a great extent the personality of the present librarian, have led to this state of things, but we are of opinion that the librarian's department should be confined as far as possible to the custody of papers for the purposes of reference. The preparation of memoranda in the various departments is their own proper duty, and constitutes of itself a valuable means of education for the staff of the office.

Currie, 26,928.

7. As regards registration, we do not think that the system of the Foreign Office is satisfactory. That system is, that two years' current papers remain in the various departments, a "diary," but no index, being kept; and at the expiration of two years they are handed over to the librarian's department, when another diary, a register, and eventually an index, are made.

Currie, 26,053.

8. The result has been that the registers in the library have fallen greatly into arrear, and ten clerks were a short time back appointed to work them up. It is anticipated that five more years will elapse, at the present rate of progress, before the registers are brought up to date. It appears to us, however, that steps should be taken to clear off the arrears at an earlier period.

Hertslet, 27,538–9.

9. But apart from the question of arrears, it appears to be thought impossible to register and index the papers till they have been bound, which takes some two years, and it has been stated in evidence, that "the correspondence of 1888, for instance, "will not be fit to be registered until the end of 1890 at the earliest." Another witness said, "I believe that the Librarian cannot commence to register corre- "spondence until after about four years have elapsed," and Sir Philip Currie expressed his opinion that the Index "ought not to be more than about five years in arrear."

Hertslet, 27,539.
Alston, 26,442.
Currie, 26,157.

10. We think that a system which produces such results, stands self-condemned, and we recommend that a regular register of all papers should be kept in each department, that it should be duly entered up and indexed every day, and that at the expiration of two years, the papers with the registers and indices complete, should be handed over to the librarian for custody, and eventual binding. Sir E. Hertslet admits the inconvenience of the present plan, and says that he "would be only too glad if "the registers were sent to him accompanied by an index, but unfortunately they "are not; and therefore, if any information were required about the correspondence "of the year 1888, the register of that year would have to be examined. That entails "a great deal of labour, but as it is now, the correspondence not for one year only, "but for ten years or more, will have to be looked through until the arrears are "worked up."

27,540.

11. It would probably be found that in normal times, at all events, this work could be done without any increase of staff, taking into consideration that the "diary" which is already kept in each department would be superseded by the departmental register, and also the admitted fact that the staff is not always under ordinary circumstances fully employed. We believe also that this work would be a useful training for the junior political clerks and diplomats, provided that they were not kept at it for too long a period.

12. For all copying, other than that of confidential papers, we think that a copying room should be established, where type writers might be mainly employed. By this means it might be found possible to reduce the number of the political clerks, who would be relieved of a considerable amount of their present work, and who would, at any rate, have more time for undertaking the duties of registration.

13. The Foreign Office is manned by three classes of clerks which are entirely distinct:—

(i.) Clerks who may for convenience sake be called political, and who enter by limited competition on the nomination of the Secretary of State. These are the confidential and distinctly first division clerks of the office, by whom the political work is exclusively done.

(ii.) Clerks whom Sir Philip Currie has for the purposes of comparison called "supplementary," who, before the introduction of lower division clerks, did all the other work of the department. They also are nominated by the Secretary of State, and in some cases compete, in others, as in the chief clerk's and treaty departments, are subject merely to a test examination. Currie, 26,007.

(iii.) Lower division clerks, who were first introduced into the Foreign Office in 1881.

14. We see no advantage in the retention of the class of supplementary clerks, and recommend that no more of that class be appointed. Their work has been principally under the chief clerk and the librarian, and in the treaty department, *i.e.*, in the subsidiary or non-political departments, and could be adequately performed by second division clerks. Some of the salaries now paid to the supplementary clerks reach 650*l.*, and while duly regarding the fair claims of those now in the service, it would be possible gradually to make the higher posts staff appointments, carrying even less salary than 650*l.*, which should be open to second division clerks who have by good work in the various branches deserved special promotion.

15. In our second Report we recommended that, after the issue of general regulations for the organisation of the Civil Service in an Order in Council, every department should be called upon to formulate its normal establishment in accordance with those regulations, and that the consideration of those establishments should be referred to a permanent consultative committee.

16. The Foreign Office should form no exception to this rule, and we think that, in the same way, its normal establishment should be, as nearly as possible, determined in the light of the changes that have already taken place, and of such changes as may be the result of our present recommendations, and that the requisite reductions and alterations should be gradually introduced as vacancies occur.

17. We do not agree with the policy of keeping our foreign service either at home or abroad upon a scale of numbers above the average daily demand for its own proper duties. In these days of rapid communication and locomotion, extraordinary pressure at one point may be met by calling officers from another. We repeat our conviction that the employment of political clerks and attachés upon mechanical work, when protracted beyond purposes of instruction, spoils young officers for higher duties.

18. The general work of the Foreign Office commences at 12 o'clock; but the commercial and chief clerk's departments open at 11, and there are resident clerks who open the letters. The amount of work fluctuates very much, and we have had evidence that later attendance is, owing to various reasons, more frequently required in the Foreign Office than in other offices, so that it is more difficult to lay down precise regulations in this than it is in other cases. Currie, 26,322. Bryce, 27,934.

We think, however, that if the present hour of commencement of work is maintained, it is at any rate essential that one clerk should be in attendance in each department at 11 o'clock, so that the papers arriving in the morning may be duly registered and prepared for the necessary action to be taken upon them by the head of the department upon his arrival.

19. We have received evidence from Mr. Giffen respecting the relations between the Foreign Office and the Board of Trade, and are glad to endorse his opinion that the arrangements are, in principle, satisfactory. The commercial department of the Foreign Office is one for negotiating commercial treaties; that of the Board of Trade for the publication of information. The Foreign Office, by its reports from secretaries of legation and consuls, supplies the Board of Trade with a good deal of the material which the latter works up for publication, and the Board of Trade give advice to the Foreign Office with regard to the negotiation of commercial treaties. There are daily communications between the two offices on shipping and commercial questions, and the practice which at present prevails upon all these points only requires a little more extension to be completely satisfactory. Giffen, 28,187.

20. There are at present 10 foreign service messengers, receiving 400*l.* a year and entitled to a pension, with an allowance of 1*l.* a day and travelling expenses when abroad on duty. They must be British subjects between the ages of 25 and 35 on appointment. They are nominated by the Secretary of State and pass a test examination.

Dilke 29,125–6, 29,137.

We think that it is necessary to maintain an adequate staff for the purpose of transmitting confidential despatches which cannot satisfactorily be sent in cypher. Foreign Governments use such messengers to a greater extent than we do, and it is possible that our service may be unduly curtailed owing to the comparatively high salaries which we pay.

We are of opinion that no fresh appointments should be made upon the present scale, and that, in future, 150*l.* to 200*l.* should be the salary. The service should be mainly recruited from officers of the Army and Navy on half-pay, or in receipt of pension, and who could produce unqualified certificates of character and pass a satisfactory examination in colloquial French and in at least one other continental language likely to be useful for their duties. To this should be added the present conditions of being British subjects, of possessing vigorous health, competency to perform journeys on horseback, and a sufficient knowledge of making up intelligible accounts. The age at date of appointment should be from 25 to 40, and we do not, therefore, recommend the introduction of competition. But the greatest care should be taken to select men who are thoroughly honest and trustworthy.

21. There are at present eight home service messengers who carry the boxes containing the foreign business transacted between the Secretary of State and the Queen and Ministers, and who also deliver other communications not transmitted through the post.

Five of these now receive 200*l.* a year, and three 150*l.*, with travelling expenses, and they are eligible for pensions.

Thoroughly trustworthy men are required also for this work, but we think that here also the salaries are unnecessarily high, and that 100*l.* to 120*l.* would be ample, and that non-commissioned officers of the Army and Navy in receipt of pension might, as a rule, be employed, and upon the same conditions as at present.

22. There is no reason why men of this class should not also, if qualified, be employed as foreign service messengers, but it would probably be rare to find them possessed of the requisite knowledge of foreign languages. And if such men should, as an exception, be found and so employed, we should not recommend any different scale of pay or allowances than that which we have proposed for the more responsible, and therefore better paid, posts of messengers on foreign service.

In both classes we think that retirement should not be postponed beyond 60 years of age, and that there should be no added years in calculating pensions.

23. First appointments to political clerkships in the Foreign Office are now made by limited competition, the Secretary of State nominating from his list a certain number of young men to compete for a vacancy.

First appointments to the diplomatic service are similarly made, but it is the practice to expect a private income of at least 400*l.* a year to be guaranteed to every attaché, who receives no pay until he has completed two years of service, and has obtained his commission as third secretary.

Bryce, 27,961–3. Dilke, 29,197.

24. The evidence which we have received points to the conclusion that both the Foreign Office and the Diplomatic service are well recruited, but that on the whole the Foreign Office commands the ablest men.

It does not appear to us desirable to employ young men in the regular government service for two years without salary, or to make a property qualification a condition of entrance.

There are other considerations also which have often been urged, and which point to an amalgamation of the Foreign Office and Diplomatic services. Such a system would supply the office at home and the embassies abroad with men of more varied training; it would enable times of pressure at any point to be met by more ready transfer; it would fill the ranks with men from whom from the first more steady work might be required; it might be expected to reduce the number of junior diplomatists, and to secure more constant promotion.

25. We recommend accordingly that there should be one foreign service entered by limited competition, and on the same examination, as that which now obtains for the Foreign Office, the limits of age being fixed at from 20 to 24. If the necessities of service abroad require in some cases more private means, it will always happen that by a process of natural selection as well as by the exercise of the discretion of the Secretary of State, those who can best afford it, and who show a special fitness and inclination for such service, will gravitate in that direction. We recommend, however, service of two years in the office at home before a young man is sent abroad, during which period care should be taken that he has the opportunity of training in commercial as well as diplomatic business.

26. The circumstances of the foreign service are exceptional, and we think that competition for it should remain limited, the responsibility being thrown upon the Secretary of State of securing that there should be real and effective competition for each vacancy, but that every competitor should be, so far as can possibly be ascertained, a person of such antecedents and character as to render him *primâ facie* a fit and proper person to be entrusted with the affairs, often delicate and confidential, of the British Foreign Office.

27. In order to carry out an arrangement whereby men entering the foreign service should, if showing capacity, have the same chances of promotion, whether serving at home or abroad, attachés would have to commence upon the same scale as that fixed for the Foreign Office. The existing scale is :—

4	Junior Clerks	100*l.* by 20*l.* to 200*l.*
20	„ „	200*l.* by 20*l.* to 600*l.*
7	Assistant „	700*l.* by 25*l.* to 800*l.*
5	Senior „	900*l.* by 50*l.* to 1,000*l.*

We recommend for an amalgamated foreign service the scale which we suggested for clerks of the first division, viz. :—

200*l.* by 20*l.* to 500*l.*
600*l.* by 25*l.* to 800*l.*
850*l.* by 50*l.* to 1,000*l.*

with the exception that in the special circumstances of this service, the first year should be regarded as one of probation, during which there should be a salary of only 100*l.*

We do not think that a system of allowances when on service abroad would work well. The amount would have, in fairness, to be varied according to the different cost of living in different foreign capitals, and could not satisfactorily be determined, and it would come to be regarded as a portion of the salary, and would render free transfer more difficult.

28. The total cost of the Foreign Office annually, on the assumption of present numbers, would upon this scale be slightly less than at present; but it would effect an improvement in the salaries of the junior diplomatists up to the rank of secretaries of embassy.

The salaries of the present diplomatic service are as follows :—

Attachés : for two years, no salary.
Third secretaries : (150*l.* + 100*l.* for law) 250*l.*
Second secretaries : 300*l.* by 15*l.* to 450*l.* ; one post at 500*l.*
Secretaries of legation : varying from 500*l.* to 800*l.*, with an addition of 250*l.*, after 10 years' service as such.
Secretaries of embassy : varying from 700*l.* to 1,000*l.*, with certain house allowances.

We should propose that secretaries of embassy be graded with senior clerks in the Foreign Office, and receive salaries of 850*l.* by 50*l.* to 1,000*l.*

That secretaries of legation be graded with assistants on salaries of 600*l.* by 25*l.* to 800*l.*

That second and third secretaries and the attachés (at present unpaid), be graded with clerks on salaries of 200*l.* by 20*l.* to 500*l.*, but receiving during their first year's service, which would be passed in the Foreign Office, only 100*l.*, as suggested above.

29. When the rank of secretary of embassy or senior clerk has been reached, there would, as a rule, be no more interchange, and the officer's career would be fixed for service at home or abroad as the case might be.

30. We should propose to do away with the house allowances of secretaries of embassy and legation, and with the allowance of 100*l.* now given to third secretaries for a special pass in law.

31. With a view of seeing what would be the comparative cost of our proposed scale, we have prepared the accompanying table showing the salaries in 1889–90 of the under-mentioned officers, and also the salaries they would have received had they been appointed on the proposed scale, the same date of appointment and rate of promotion being assumed.

Appointment.	Present Scale.	House Allowances.	Proposed Scale.
	£	£	£
7 Secretaries of Embassy - - -	6,000	1,000	6,850
15 „ „ Legation - - -	9,250	400	10,675
31 Second Secretaries - - - -	11,685	—	12,000
*4 „ „ (average) - - -	1,508	—	1,552
18 Third Secretaries - - - -	4,500	—	4,580
6 Attachés - - - - -	—	—	1,200
	32,943	1,400	36,857
	34,343		

* These four having been appointed direct from the Foreign Office, and, therefore, not having passed through the usual grades of the diplomatic service, their salaries have been calculated upon the average of the other 31 second secretaries.

From this table it will be seen that, on the assumption of *present numbers* and rate of promotion, the adoption of the proposed scale of salaries would have resulted, in the year 1889-90, in an excess of 2,514*l.* upon the cost of the diplomatic service as at present constituted, of which 1,200*l.* would be due to the payment of attachés during the first two years of service.

32. We should expect that with a service amalgamated as suggested, it might be possible to reduce the number of junior diplomatists, and of clerks in the Foreign Office; for there would be complete interchange, and readier means of employing men wherever pressure of work required it at home or abroad.

At the same time we should expect that it would give steadier promotion, and afford a better opportunity of employing men, according to their proved capacity, wherever their services might be most useful.

There would be considerable economies also effected by the substitution of second division for the present supplementary clerks, by the establishment of a copying room, by the reduced scale of salaries for foreign service and other messengers, and by the reduction in the staff of the Librarian's Department consequent on the registers and indices being transferred to him in a complete state.

Appendix, page 176.

33. A Foreign Office memorandum will be found in the Appendix giving the details of the diplomatic service, "the constitution of which remains based in all important "particulars on the recommendations made in the report of the Select Committee "on Diplomatic and Consular services, which was presented to Parliament in 1871."

Appendix, page 183.

We draw special attention to the statements in the Appendix setting out in detail the salaries, house rents, and allowances voted in respect of their several embassies and legations abroad by Great Britain, and, so far as they can be ascertained by France, Germany and Prussia, Italy, and Russia, and a table in which the totals are brought together for purposes of comparison.

34. The Committee of 1871 reported that "the evidence has not shown that the "expenditure upon the diplomatic service has been extravagant, nor that its conduct "has been inefficient," and we are generally led to the same conclusion.

35. The whole scale of salaries paid by Great Britain to its public officials is higher than that paid by any other country, and taking this into account, and the fact that our interests require us to be very widely represented in all parts of the world, it does not appear from a close examination of the comparative table that the cost of our establishments is on the whole excessive.

Dilke, 29,106.

The truest comparison is probably to be found between our system and that of France, and it is the opinion of Sir C. Dilke that if the totals (embracing the diplomatic vote, the consular vote, the buildings, and the Foreign Office vote) are

taken, the French service works out as slightly in excess of our own, the figures being 540,000*l.* or 550,000*l.* to 520,000*l.*

36. There has been some diminution in the number of the small German missions, and it is now proposed, on the occurrence of vacancies, to amalgamate the missions at Munich, Darmstadt, and Stuttgardt. Sir P. Currie thinks that it is desirable to keep up these missions, as they have opportunities of getting information which cannot easily be got anywhere else. We are not in a position to judge as to any further reasons, political or otherwise, which may exist for maintaining these missions, but subject to the possible existence of any such reasons we consider that their further reduction and ultimate abolition ought constantly to be kept in view. Currie, 26,906. Currie, 26,904.

37. We have not been able to obtain any evidence which would justify us in giving a definite opinion upon the salaries attached to particular embassies, or upon the precise numbers of their staff. The salaries of our ambassadors are not fixed with relation to the importance of the different posts, but in accordance with the presumed cost of living, and the charges of maintenance. And it may probably be that in some cases the embassies are overhoused. It is not clear that the total charges as set out in the comparative table above referred to, are so fully given in the case of other countries, as in our own estimates; but it would certainly appear from the figures that the expenses, for instance at Paris, might be reduced, and we have had some evidence to that effect. Dilke, 29,096, 29,100, 29,049–51.

As regards the evidence which we have received that, saving existing rights, there might be a reduction of the ambassador's salary at Vienna and Rome, we are not in a position to make any more precise recommendation than that with reference to these and all other posts, opportunities should be taken of revising the salaries according to the varying circumstances of each capital, and our requirements there. As regards the staff generally, we think that besides reductions which may even now be possible, the amalgamation of the Foreign Office and diplomatic services would tend in that direction. 29,054.

38. We do not recommend the introduction of any fresh class of clerks to perform the routine and non-confidential work of the embassies. It is inevitable that there should be days when the regular staff have time in hand, and, as in the case of similar work at the Foreign Office, it is a useful training for them that they should perform it. It is very desirable, however, that such employment should be confined, as far as possible, to the junior men.

39. Some use, as heretofore, and as is the case to a larger extent in most foreign countries, might still be made of honorary attachés, provided they in no way interfere with the better employment or promotion of men regularly in the service.

40. There are at present six chaplains appointed under the special circumstances set out in the Appendix. We consider that no such appointments should in future be made, Parliament of course being able to provide for any unforeseen and special circumstances which may arise. Currie, 27,079. Appendix, page 192.

41. The Diplomatic Pensions Act, 1869, differs materially from the ordinary Civil Service Superannuation Act. It fixes a certain maximum for first, second, third, and fourth class pensions, according to length of service as ambassador, on a mission of the first class, on a mission of the second class, or (for fourth class pensions) in the lower ranks of diplomacy.

42. Special considerations apply to persons serving in the first three capacities, and we do not think it necessary to propose any alterations, except that we can hardly see a reason why an aggregate of three years' service instead of five, as in the next two classes of pensions, should entitle ambassadors to a first class pension.

43. Should our recommendations for amalgamating the services be adopted, the fourth class pensions would disappear, and these officers would all come under the ordinary civil service rules, and this would be a great advantage, and remove many difficulties which now exist.

In case, however, this amalgamation should not be carried out, we should be in favour of doing away with fourth class pensions, and bringing those men who are now eligible for them under section 8 of the Act, altering five years to 10, and fixing some age (say 60) at which an officer could claim to retire without medical certificate. We are also of opinion that the pensions should be calculated by sixtieths of salaries, and not by thirtieths as at present.

Consular Service.

Appendix, page 177. 44. A memorandum will be found in the Appendix summarising the recommendations of the House of Commons' Committees of 1858 and 1872 on the consular service, and showing the steps which have since been taken by the Foreign Office to carry those recommendations into effect.

Bryce, 28,028. Law, 28,424 45. The evidence which we have received points to the conclusion that the country is well served by its consuls, and that comparisons with the practice of other countries is not to our disadvantage, in point either of efficiency or economy. It has not been the practice, nor is it desirable, to encourage our consuls to push the interests of particular traders, so much as is done, *e.g.*, by Germany. Information as to the conditions of trade in the districts where they are located, and as to fresh openings for British enterprise, is, besides their ordinary consular duties to British merchants and travellers, the principal object to which the interests of the country require that their attention should be directed. And we are glad to be able to say that it is the general opinion of all the witnesses whom we have examined, that the care bestowed by consular officers upon commercial reports is one of the most marked features of progress in the service. We point especially to the evidence of Mr. Giffen upon this subject.

Giffen, 28,174.

46. As regards the organisation and classification of the service, it is now divided into two branches—

(1.) Those who enter the service as a career, after passing an examination before the Civil Service Commissioners, and who are prohibited from trading;

(2.) Those either engaged in trade or who are permitted to do so. These are unsalaried.

47. There are about 500 of the latter class, and the expense alone of carrying out a scheme of turning all these into paid consulates would prevent such an idea being adopted.

48. The consular service in China, Japan, and Siam, which is recruited from student interpreters selected by open competition continues to be as efficient as when the Committee of the House of Commons of 1858 expressed their approval of it.

For consular officers in Turkey, the Levant, Persia, Greece, and Morocco, a scheme has been in operation for some 12 years for the education of young men selected by open competition. They also enter as student interpreters, and are educated at Ortakeui, and eventually, after passing two examinations, become vice-consuls.

This scheme, like the China one, is costly, but it has already produced good results. Including four students in training at Ortakeui, the service now numbers 26 officers, who are serving as consuls, vice-consuls, or assistants in various places throughout these countries, with a good knowledge of the languages, and an excellent training for consular work. This service is now full and admission to it is suspended.

49. The want of a special knowledge of languages which are not ordinarily acquired constitutes one principal reason for both these schemes, but omitting that part of them which provides for this special training, it is worthy of consideration how far such a system could be introduced in the case of the consuls "*de carrière*," in respect of their appointment, grading, and promotion.

Dilke, 29,020, &c. Bryce, 27,988–9. We do not think that this object could be attained by a consolidation of the consular and diplomatic services. Sir C. Dilke is of opinion that they could be so amalgamated, as in France; but we have received no other evidence to that effect, and much against it. For the consular service special commercial training is required, and the limit of age must in consequence be higher. We recommend that men who may hereafter be appointed to the service should be required to work for some period in the commercial department of the Foreign Office, or of the Board of Trade, or even be attached to one of the great Customs Establishments at home before being sent abroad; but as a man may be called upon to fill at once, as consul or vice-consul, a post of some responsibility, and as we do not see how a young man could acquire a consular training, in the way that young men qualify for higher diplomatic or Foreign Office posts, by service at home or in the embassies, we think that it is necessary to maintain a limit of age which may indeed be as low as 25, but which might be as high as 45.

The same considerations apply to some extent when we come to review the conditions of appointment.

50. If it be once admitted, as we think it must be, that to suit the exigencies of the service, and to secure men of commercial experience, the age of entrance must be kept as high as 45—or at all events that men of this age ought not to be excluded—it appears very difficult to introduce universally the principle of competition, limited or unlimited, which can only be carried out satisfactorily when men enter at approximately the same age, and when there can be a regular gradation and promotion by merit.

51. Any such system, moreover, would require to be of general application, and it would be fatal, if in order to work it exceptions should be found to any large extent necessary.

At the same time we are not insensible to the obvious objections which attach to keeping the appointment of consuls in the absolute patronage of the Secretary of State, and which might be held to point to some general system of competition, to the same extent, at all events, as that which obtains in the foreign service.

52. Consuls are now appointed by the Secretary of State, with a limit of age 25 to 50, and subject to a pass examination in arithmetic and commercial law, and in the language or languages of the port or district to which they are appointed. These conditions can, however, be dispensed with at the option of the Secretary of State when very special qualifications are needed.

We should not wish unduly to fetter the discretion of the Secretary of State in such cases, but it ought to be very rarely exercised, and guarded by a requirement of special report to Parliament or otherwise.

53. On the whole we consider that an attempt should be made to grade consulates and vice-consulates according to the salaries which appear necessary for the various posts, and perhaps also to group according to countries in cases where the language or other circumstances point to the possibility of doing so, so as to afford promotion from third to second and first class places. It is possible also that some increment of salary might be given, without change of post, for good service over a defined period.

We should hope that to some extent the advantage of rewarding good service might be attained by the suggestions which we have made, viz., by some system of promotion being introduced; but, if it is within our province, we would venture to propose that meritorious services of consuls might, to a larger extent than heretofore, be rewarded by honorary distinctions.

It should be understood that in making the above observations we have no intention of suggesting any change in the existing system, by which occasionally transfers from the diplomatic to the consular service and *vice versâ* have taken place. Such transfers may be attended with great advantage, and may be the means of rewarding exceptional fitness as well as of improving the public service.

54. There are two commercial attachés, who are stationed, one at Paris and the other at St. Petersburg. The latter appointment is for Russia, Persia, and the Asiatic Provinces of Turkey; the former for the rest of Europe. Mr. Law, whose head-quarters are at St. Petersburg, describes his duties as being to collect information, and to attend to special commercial questions—for which purpose he visits different ports and centres of industries. We have tried to satisfy ourselves as to whether we should recommend an increase in the number of these appointments; but though it is clear that the creation of the two posts is amply justified, we do not think that the experience as yet derived from them is conclusive as to the propriety of incurring any additional expenditure at present in the same direction. It is quite possible, however, that as time goes on, it may be found that the value of these posts is sufficient to justify some further increase in their numbers, more especially as the area committed to one at any rate of the commercial attachés is at present so extensive that it is scarcely possible for one man to adequately deal with it. It is not to be forgotten also that these officers are in reality more strictly diplomatic than consular; and we think that increased encouragement should be given to the acquisition of commercial knowledge among the diplomatic staff, and that they might be rendered more available for this very useful and important work. Law, 28,410.

55. In our second report we laid down the general principles upon which we thought that the clerical establishments of the State should be organised. We felt it impossible for a body constituted like ourselves to examine in sufficient detail, or to criticise effectively, the working strength of each individual office. And we accordingly recommended that the Government should take in hand, by means of a consultative

committee, the immediate dealing with the various departments, in the light of such general changes as they might adopt.

56. To this recommendation we continue to attach the greatest importance, and we venture to again express our strong opinion that that method should be adopted of reviewing immediately, and from time to time, not only those departments which have come partially under our own survey, but all the other offices also, including the Scotch and Irish ones, without exception.

57. There are further questions, other than those which we have more particularly handled, with reference to the non-clerical staff of such establishments as the Revenue Departments, and that of Education, Science and Art, and possibly Law and Justice, which raise somewhat different problems, and with which we have not attempted to deal.

58. Again, though not, as we understand, appointed with the main object of considering grievances, we have invited free communications from all civil servants, and endeavoured, so far as we could, to consider them—having during the long period of our sittings heard many witnesses from various classes of clerks, whose cases have been fully set out in our reports and appendices, and are, so far as we have not reported upon them, recommended to the careful and early consideration of the Government.

59. We desire at the conclusion of our labours to express our very high sense of the invaluable assistance afforded to us by our secretary, Mr. Horace Walpole, C.B. His official knowledge, great ability, and untiring application have been, during the whole of our Inquiry, at the constant disposal of the Commissioners—individually and collectively—and we wish accordingly to place upon record, in the most emphatic manner, our strong appreciation of his services.

All which we humbly submit for the gracious consideration of Your Majesty.

HORACE WALPOLE, *Secretary.*
30th July 1890.

I do not agree with so much of this report as would completely identify the service of political clerks in the Foreign Office with the service of attachés and secretaries abroad, assigning to the amalgamated service the Foreign Office scale of salaries, and no longer insisting upon the proof of private means from candidates for diplomatic employment abroad.

If any change of the kind were to be made, I should prefer uniform salaries, with a scale of allowances for service abroad. I see no reason to apprehend that these allowances would come to be regarded as part of the salaries; that is not found to be the case with the travelling officers of the Home Office, Board of Trade, Education Office, Local Government Board, and other public departments employing such officers. Nor do I see any greater difficulty in apportioning allowances for diplomatists than for consuls, according to the cost of living at different stations. So far from such adjust-

* Subject to subsequent observations.

ments rendering the transfer of consuls difficult, they are said to promote it. I feel convinced that allowances for foreign service would spring up under a system of identical salaries for diplomatic service at home and abroad, started on the principle of relief from private outlay.

I do not, however, find in the evidence proof of failure sufficient to justify, in my opinion, the cost of any such change; nor am I satisfied that it would secure the services of men, in all respects, better qualified than those now employed for diplomatic service in foreign capitals. The degree of voluntary fusion which is said to exist between the services in Downing Street and abroad, appears to me to answer all the conditions of interchangeability which the public interest requires, and, at the same time, to offer that variety of careers which attracts to the public service candidates of different tastes and means.

As regards the establishment in Downing Street, I could not concur in the terms of censure which are passed upon the present system of registration, unless I understood them to be confined to the delay which attaches to it in practice. I desire to put beyond all doubt the meaning which I attach to this part of the Report. If the departmental "diary" is an imperfect form of register, and lacks an index, and if the papers after they reach the library from the departments take two years to bind, these are defects of detail easily remedied. But the system itself of departmental registration appears to me to be essential to the separation of the confidential from the other papers that are daily arriving; and upon the possibility of this separation appears to me to depend the possibility of dividing the Foreign Office into *political* and *subsidiary* departments; and lastly, the possibility of this division determines the extent to which ordinary civil service clerks of the second division can be introduced into the foreign, as into other public, offices.

These conclusions I have supported by detailed references to the evidence in the paper I submitted to the Commission as "materials for a draft report." I think that the amalgamation of the Consular and Commercial Departments should be considered.

I sign the report subject to these reservations.

LINGEN.

I agree with the opinion expressed in the report, that it is impossible, for the present, at any rate, to amalgamate the diplomatic and consular services. On the other hand, I wish to emphasise the opinion expressed as to transfers from the one to the other, and to go somewhat further towards Sir. C. Dilke's conclusions based on his knowledge of the French system of a consolidated foreign service, with free interchange between the different branches. He pointed out the advantage of lessening the distinctions between consulates and embassies or legations, and with this suggestion I agree. It would also, I think, be found possible to make transfers or promotion from the consular to the diplomatic service more regular and frequent. In a few notable cases men have passed from one body to the other with great advantage to the State, and once at least the reverse process has taken place. Sir P. Anderson thinks it would be impossible to effect any further consolidation, because he says, "We discourage "the political consul." The special conditions of the consular service in Turkey and China, and the countries grouped with them, show that this is not strictly accurate, for, except in name, most of the matters with which they deal are as much diplomatic as consular in bearing. I believe the door of promotion might with safety be opened wider where officials in the performance of their consular duties show special fitness for higher and more responsible work. In this way there would always be a possibility of exchange between the two bodies when occasion offered, and adequate encouragement would be given to zeal and ability in the subordinate branch of our foreign service.

Dilke, 29,073-6. 29,061.

Anderson, 27,396.

H. L. W. LAWSON.

We are unable to agree with the recommendation that this Commission should terminate its labours without an inquiry into the Scotch and Irish offices, which are included within the terms of our reference.

R. W. HANBURY.

SUMMARY OF EVIDENCE.

For Index *see* preceding page.

Sir PHILIP CURRIE.

Permanent Under Secretary of State, Foreign Office - - - - - - 25,980
The office was reorganised in 1881 and 1882 25,981–4
Four lower division clerks were then appointed - - - 25,981, 25,984, 25,995
There is a senior clerk at the head of each of the eight departments - - - 25,985, 26,041
Who is primarily responsible to the Under Secretary of State - - - - - 26,042
The departments are divided amongst the under secretaries - - - - - 26,043–6
The Eastern, Western, and American are purely political departments - - 25,985
In which no lower division clerks are employed - - 25,991, 26,002, 26,219, 26,270
The consular and commercial departments are partly political - - - - - 25,985
The chief clerk's, librarian's, and treaty departments are not political, and are manned by supplementary and lower division clerks - 25,985, 25,988, 25,991–2, 26,002, 26,005–6, 26,180, 26,846, 26,920
It would be inconvenient to shift men from the non-political to the political departments, and *vice versâ* - 26,851–6, 26,926–7, 26,940

The clerks on the diplomatic establishment are equivalent to upper division clerks in other offices - - - 25,986–7, 26,922
They do the confidential work - - 25,988
It is necessary to have men of this class - 26,112, 26,180
These clerks are divided into four classes - 26,113–7
For senior clerkships the best man is selected - - - - - - 26,118–20
Irrespective of seniority - - 26,120, 26,123–4
For assistantships the first fit man is selected 26,121–2, 26,125–6

The supplementary clerks are technically upper division clerks - - - 25,987
The lower division clerks occupy the same position as lower division clerks in other offices - - - - 25,989–90, 26,032–5
They are employed on copying, registration, &c. - - - - - - 26,003–4
There are two classes of clerks entirely apart from the lower division, viz., the clerks on the diplomatic establishment and the supplementary clerks - - 25,992–3, 26,108–11
Four new lower division clerks were recently added to work up arrears in the library - 25,995–26,000

Ten other clerks were appointed for five years for the same purpose - 25,997, 26,001, 26,221–2
The indices now are being worked up with the utmost speed - - - - - 26,938
The diplomatic establishment clerks and the supplementary clerks are appointed by limited competition, after nomination by the Secretary of State - 26,007, 26,018–9, 26,021, 26,024–5, 26,030–1, 26,082–4, 26,128–31
The examination for the librarian's department is the same as for the diplomatic establishment - 26,007, 26,018–9, 26,021, 26,948–51
But for the chief clerk's and treaty departments test examinations only are required - - 26,007, 26,021, 26,948, 26,951–2
Separate lists of candidates are kept for the diplomatic and supplementary clerkships - - - - - - 26,036, 26,846
Salaries of the supplementary clerks - 26,008
They are entitled to pensions - - - 26,009–10
They are paid less than the diplomatic clerks, and do different work - - - 26,111–3

They are not promoted to the diplomatic clerkships - 26,014–17, 26,020, 26,022, 26,261–2
This bar to promotion does not have a prejudicial effect on their work - - 26,202–5
No lower division clerk has ever been promoted to a supplementary clerkship - 26,026–9
The resident clerks decipher telegrams arriving at night, and open letters in the morning - - - - - 26,063, 26,074
After that the letters are opened by the Under Secretary's private secretary - 26,075–80
The resident clerks are always members of the diplomatic establishment - - 26,066, 26,073
No supplementary clerk would ever be appointed a resident clerk - - - 26,081
Letters and papers are ready for heads of departments and the under secretaries when they reach the office - - 26,064, 26,067–72
Office hours are from 12 to 6 - 26,065, 26,148–53, 26,322–7

The hours of the Foreign Office have always been late, and if it opened at 10 it would not be able to close any earlier - - 26,322
But the bags are opened and the letters distributed the first thing in the morning by the resident clerks - - - 26,323–4
The commercial and financial departments open at 11 - - - 26,325
If it were the rule that the hours of attendance should be seven, it would not make much change - - - 26,326–30
The clerks work very hard, and come punctually - - - - 26,331–8
The heads of departments are responsible for proper attendance - - - 26,335
The cipher work is done in each department 26,340–4
Thinks that the standard in the Foreign Office examination is higher than in that for the first division of the rest of the Civil Service - - - - 26,132–6
The Foreign Office employs a type writer, who does her work very well - - 26,137–41
Four of the staff of the Foreign Office hold private secretaryships - - - 26,142
And the two private secretaries to the Prime Minister are charged to the Foreign Office vote - - - - - - 26,143–7
Established clerks have two months leave a year; lower division clerks have one - 26,154–5
The librarian has the custody of the papers after two years - - - - 26,047
The two years current papers remaining in the various departments - - - 26,048
Who keep a diary of them - - - 26,053–61
Thinks that this plan is better than having one register for the whole office - 26,062, 26,266
Has never found any difficulty in procuring papers when wanted - - - 26,059–61
The librarian also prepares memoranda when required to do so, especially on past papers - - 26,049–52, 26,928–30, 26,932–3
Many memoranda are prepared in the departments - - - - 26,928, 26,932
Cost of the librarian's department - - 25,156
It will be reduced when the arrears are worked up - - - - - 26,156–7
The librarianship, when vacant, will be filled up by the best man that can be found, whether inside or outside of the office - 26,158–68, 26,268, 26,935, 26,939
The sub-librarian should be chosen from men in the department - - 26,169–70, 26,267–8, 26,939

Summary of Evidence.

SIR PHILIP CURRIE—*cont.*

The present librarian is an index in himself - 26,933, 26,936–7

In the non-political departments lower division clerks might be substituted for some of the supplementary - 26,171–8, 26,290–2, 26,847, 26,860, 26,862, 28,721

But they would require to be supervised by supplementaries - 26,849–50, 26,857–9, 26,861, 26,945–7, 28,721

Does not think that lower division clerks could be employed in the political departments - - - - - - 28,722–3

No first division clerks from other offices have been transferred to Foreign Office - 26,182

Would not like to take a man without an opportunity of inquiring as to his capabilities - - - - - - 26,183–4

Limits of age for Foreign Office is 18 to 24 - 26,186, 26,917–8

Careful inquiries are made as to character and fitness of candidates on list before they are nominated to compete - 26,185–8, 26,200–1

Thinks there are strong reasons against opening the Foreign Office to open competition - - 26,189, 26,196–9, 26,249–50, 26,295

The justification for the system of nomination is the confidential nature of the work 26,189, 26,196–9, 26,269, 26,281, 26,295

Not necessary to make any condition as to private means for clerks in the Foreign Office - - - - - 26,190–4, 26,293

Though it is necessary for the diplomatic service abroad - 26,191, 26.293, 26,866, 26,871–2, 26,962, 27,137

The practice is, that men appointed to the diplomatic service are expected to have 400*l.* a year of their own - - - - 28,847

No clerk in the Foreign Office is obliged to make an exchange with a diplomatic secretary - - - - - 26,195

The superintendent of the treaty department was taken from the diplomatic establishment - - - - - 26,206

And the assistant from the supplementary class - - - - - - 26,207

The Secretary of State can appoint anyone he pleases to staff offices - - - 26,209–16

There are in the Foreign Office 36 clerks on the diplomatic establishment, 16 supplementary, and 17 lower division - - 26,220

Clerks are assigned to the different departments by the Under Secretary - - 26,223–8

The commercial department has three diplomatic clerks, one supplementary, and two lower division - 26,229, 26,231, 26,921–5

Size of the French commercial department - 26,230

The commercial department at the Foreign Office is maintaining its importance - 26,233

Nature of the work of the commercial department - - - - 26,234–44, 26,247

One man has been told off specially to edit the commercial reports - - 26,245

Three departments at the Foreign Office are entirely confidential, two partially so - 26,251–8

Clerks are moved about from one department to another - - 26,253–7, 26,347–8, 26,925

Therefore, even in the non-confidential departments, it is desirable that appointments should be made after nomination, and not by open competition - - - - 25,253–7

Anything of a confidential nature is kept from the lower division clerks - 26,259, 26,271–2, 26,282–3, 26,345–6

But not from the supplementary clerks - 26,260, 26,288–9

Though the practice is to employ only the diplomatic clerks on the confidential political work - - - - - 26,289

After four or five years lower division clerks may see confidential papers in the librarian's department - - - - - 26,273–5

A junior clerk on the diplomatic establishment does confidential work immediately after he is appointed - - - - 26,263–5

Of course a good deal of the work is not confidential - - - - 26,285

But it is necessary to maintain a sufficient staff of confidential clerks to meet a sudden press of work - - - - - 26,286–7

Work of the chief clerk's department - 26,276–80

Queen's messengers are appointed by the Secretary of State after a pass examination - - - - 26,297–9, 26,301–2

Their duties - - - - - 26,300, 26,310

They have fixed journeys to some of the more important courts - - - - 26,304

A minister abroad cannot send a special messenger home for a trifling purpose - 26,305–6

They are not allowed to take parcels for private persons, and their bags are made up in the Foreign Office - - - 26,307–9

Their number has been reduced of late years 26,310

Confidential telegrams are sent in cipher - 26,311–2

Despatches are sent in cipher by post frequently - - - - - - 26,313–4

But it would not be possible to send all confidential despatches in cipher, and so do away with these messengers - - - 26,315–7

These messengers might in future be replaced by retired non-commissioned officers 29,013

Duties of home service messengers - 26,318

The appointment of a legal assistant has worked well - - - - - 26,319–21

System of admission to Foreign Offices abroad 26,840

Salaries in French and German foreign offices - - - - 26,840–2, 26,845, 26,953

The Foreign Office and diplomatic service in foreign countries is one service - 26,843–5, 26,884–5

There have been some changes in the diplomatic service since the report of the committee in 1871 - - - - - 26,863–5

Attachés do not receive any salary for the first two years - - - - 26,867

Upon a vacancy occurring, the Secretary of State selects those on his list who appear most suitable to compete - - - - 26,873–7

Usually from four to six are nominated - 26,878–80

Up to a few years ago only one man was nominated - - - - - 26,881

There is a fairly large list of candidates - 26,882

Since 1871 there has been a more regular system of promotion - - - - 26,883

Newly appointed attachés serve, as a rule, for six months in Foreign Office - 26,085, 26,088–100 26,868–70

And consuls in the same way in the consular department - - - - - - 26,086–7

The diplomatic and Foreign Office services might be fused with certain restrictions - 28,715–9, 28,851

There might be an understanding that some men would be told off for foreign service and some for home service - 28,716, 28,720, 28,851

There would be to some extent an advantage in this - - - - - - 28,717

Does not think that a complete fusion would answer - - - - - - 28,719

As this might debar men being appointed without private means - - - - 28,719

With an amalgamated service the Foreign Office would probably be more largely manned than it is now, because of the constant pressure of work there - 28,842–4, 28,846

If the services were amalgamated the facility for transfers would of course be greater than at present - - - - 28,846, 28,852

Secretaries in the diplomatic service sometimes exchange, for a time, with clerks in the Foreign Office - - 26,101–7, 28,717, 28,845–6, 28,853

Each keeping their own salaries - 26,105, 28,854–5

It is desirable that these exchanges should take place to a reasonable extent - 26,107, 26,886, 26,888, 27,115, 28,717

Some Foreign Office clerks cannot afford to go abroad - - - 26,887, 28,848–50

Honorary attachés receive no pay or allowances, and are not qualified for promotion or pension - - - - - 26,889–95

Does not think that lower division clerks could be employed in the chanceries abroad - - - - 28,724, 28,837–8

It is desirable that the work of the embassies, &c. should be done by the regular staff - 28,724–7, 28,839

Lord Granville was opposed to the suggested appointment of a permanent translator and keeper of records being attached to embassies - - - - - 28,839

SIR PHILIP CURRIE—*cont.*

There have been several changes in salaries of the diplomatic services of late years - 26,896, 26,899

There has been an increase at Berlin, and a decrease at Paris - - - 26,896–8

It is thought desirable to have permanent houses for our representatives abroad - 26,900–3

There has been a diminution in the number of the smaller German missions, &c. - 26,904, 27,069–70, 27,140–2

And it is proposed to amalgamate them still more - - - 26,906–8, 27,077–8, 28,877–98

Believes that other nations keep as many or more ministers at these missions as we do - - - - 26,909–10, 28,891–4

System of promotion in the diplomatic service - - - - - 26,911–2

The examination for attachés is not quite the same as for Foreign Office clerkships - 26,913–6

The limits of age for entrance to the diplomatic service is 20 to 26 - - - 26,917–8

Much the same class of candidates enter both branches of the Service - - 26,919, 27,138–9

Changes have recently been suggested in the examination for the Foreign Office with the view to raising the marks given for foreign languages, &c. - - - 28,728–31

Does not think the legations in South America could be reduced - - - 26,953–60

The diplomatic service is not much sought after, owing to the expense of living abroad 26,961–2

Formal reports on the merits, &c. of men in the diplomatic service are not sent home, though they are provided for in the regulations - - 26,963*a*–75, 28,945–53, 29,009–12

Thinks that this rule may be left in abeyance, but sees no reason to strike it out - 28,957–8, 29,006

Thinks that such reports are not of much value - - - 26,975, 27,120–2, 28,952–3, 28,961–6, 29,011

And that ample means exist for forming an opinion on men in the service - 28,952–6, 28,960

Difference of status between an ambassador and a minister - - - - - 26,976–7

Their duties are practically the same - 26,978

Duties of secretaries of embassies and legations - - - - - - 26,979–80

One of the most important duties of a minister abroad is to further the commercial interests of England - 26,981–2, 26,990–27,002

Duty of protecting British subjects in their commercial interests falls upon the embassies and not on the consulates - 26,994, 27,006–7

Any British subject has the right to ask for the assistance of the English minister in the country where he lives - - - 26,983–6

In China and Japan the minister is also the superintendent of trade - - - 26,987–8

There are two commercial attachés specially to attend to commercial affairs in Europe, Persia, and Asiatic states of Persia - - 26,989, 27,011–5, 28,985–7

They are decidedly useful, and have made valuable reports - - - - - 28,988–92

The Consul-General and Vice-Consul at Berlin are both Germans - - - 27,003–5

The consuls take their instructions from the ambassadors - - - - 27,010

There is one naval attaché who is accredited to all the maritime courts - - 27,016–7, 28,969

He is appointed by the Admiralty, who have never asked for more - - 27,018–22, 28,968–71

His reports are sent to the Admiralty through the Foreign Office - - - 27,019, 27,023–4

Amount of outfit allowance to ambassadors, &c., and purposes for which it is given - 27,025–30, 27,041–5

An ambassador gets no other allowance except a small sum for necessary repairs to his house - - - 27,031–40, 27,046–50

Rules as to travelling expenses - - 27,051–3

There is no instance of an ambassador receiving an honorarium for special work - 27,054

The increased salaries in the diplomatic service since 1850 are due to the increased expenses of living - - - - - 27,055–60

The pensions are about 15 per cent. of the salaries of the active list - - - 27,061

Scale of pensions for the diplomatic service 27,063–5

Increase in salaries, &c. since 1871 - - 27,066–8

Embassies and legations at which there are chaplains - - 27,079–80, 27,087–90

There is no proposal to reduce them - 27,081

They have pension rights - - 27,082

And are part of the diplomatic establishment of the country - - - - - 27,083

They are appointed by the Secretary of State - - - - - - 27,085–6

It is not proposed to increase their numbers 27,087

The physician at Constantinople is wanted for quarantine purposes - - 27,091, 27,113–4

The dragomans at Constantinople do the interpreting and translating - - 27,092

A special allowance is given to junior members of the diplomatic service for qualifying in certain languages - 27,093–4, 27,100–6, 28,840

There is a translator in Spain - - 27,095–6

Interpretorial staff in Persia - - - 27,097–8

The staff at the different embassies can only be increased with the consent of the Treasury - - - - - 27,099

Staff at Cairo - - - - - - 27,107–10

The archivist at Constantinople has been abolished and one of the secretaries has charge of the archives - - - 27,111–2

Attachés and secretaries prepare reports - 27,116–9

There are other ways in which the Foreign Office is able to judge of their capabilities 27,118, 27,120

Thinks that the work of the embassies has increased of late years - - - 27,124–5

And that the time of the different members is fairly occupied - - - 27,126–31

There was for some years a block in promotion - - - - - 27,132–6

Although Berlin is the only place in Germany where negotiations would be carried on, there are other centres of political interest and commercial importance where it is desirable to have representatives - 27,143–62

Would regret to see these posts abolished - 27,163–5

Though some amalgamation might take place - - - - - - 27,166

Thinks that where there is a court there should be a diplomatic representative - 27,159–60, 27,167–70, 27,177

There is only one diplomatic representative for the whole of the United States - 27,173

Each state and large town being represented by consular officers - - - - 27,174–5

But there is only one Government to deal with in the United States, whereas in Germany there are many - - - 27,175

In Italy again there are no independent sovereigns - - - - 27,176

Does not think that the diplomatic establishment as a whole is extravagant - - 27,178

The Paris ambassador is paid higher than the one at Berlin, because it is more expensive to keep a great house up there - 27,179–80

Thinks the scale of living in Washington is less expensive - - - - 27,181–2

The discrepancy in salaries has nothing to do with individual rank, but has reference to the cost of living - - - 27,184

The same applies to ministers - - 27,185–91

Does not think that there is an undue divergence of salary in these cases - - 27,192–3

Explanation as to the cost of the British Embassy in Paris - - - 28,765–809

There is a large staff there, and an expensive house to keep up, and the cost of living is very high 28,765, 28,768–70, 28,776–83, 28,804–8

The Ambassador's salary has been recently reduced from 10,000*l.* to 9,000*l.* 28,766–7, 28,771, 28,785–7, 28,800–4, 28,809–10

And the salary of the Ambassador at Berlin has been raised to 7,500*l.* - - 28,772–3, 28,811

Berlin is not such an expensive place as Paris - - - - - 28,774

The Ambassador at Madrid only receives 5,500*l.* - - - - - 28,775

Believes that the expense of living at St. Petersburg is not so great as at Paris - 28,777–81

And that 9,000*l.* a year in Paris does not go further than 7,500*l.* a year in Berlin - 28,789

Summary of Evidence.

Sir PHILIP CURRIE—*cont.*

Expense of the English Embassy at Paris as compared with other embassies there 28,782, 28,788-96, 28,806

England pays, as a rule, higher salaries than other nations - - 28,788, 28,805, 28,917

And our representatives abroad are expected to entertain more than foreign embassies do - - - - - 28,806, 28,918-28

Reasons why our diplomatic establishments in some cases exceed those of other nations 28,902-28

Part of the cost of the Persian and China Missions is paid by India - - 28,929-30

From time to time salaries at embassies, &c. are changed, but there is no periodical revision of them - - - - 28,972-8, 28,980

When it is necessary to increase the pay of one post an endeavour is made to make a reduction in some others - - - - 28,978-82

Does not think that a periodical revision would be desirable - - - - - 28,983-4

Consuls are shifted about from place to place, partly with a view to promotion - - 28,732

There is no rule that a consul should serve at the same place for only a limited time - 28,733

The system of grouping consulates of a similar character, or speaking a similar language, might be tried - - - - 28,734-8

If the China and Levant system of appointing young men after open competition were adopted in other places, the expense would cause a difficulty - - - - 28,739

But witness is personally rather in favour of it - - - - - - - 28,739-40

Thinks that a system of granting personal allowances for the purpose of rewarding meritorious service amongst consuls would be very desirable - - - - - 28,741

If this were done, it should be left to the discretion of the Secretary of State to allot them as he pleased - - - - - 28,741

Does not think that it would be desirable to reduce the existing limit of age for the appointment of consuls - - - - 28,742

Owing to the necessity of occasionally appointing men with special qualifications - 28,742

Would be in favour of the appointment of more consuls-general or commercial attachés if the Treasury would sanction the expense - - - - - - 28,744

And thinks that it would be desirable to give allowances to secretaries of embassies, &c. for acquiring commercial knowledge - 28,744-5, 28,990-1

Witness prepared a scheme for open competition for consular and interpretorial work in the Levant, &c. - - - 28,812

It has been 10 years in operation - - 28,813

And works very satisfactorily - - 28,814

Manner in which promotion is provided for - 28,815-8

A perfect knowledge of the language is ensured - - - - - - 28,819-20

The difficulty of introducing this system elsewhere is the expense - - - 28,821-3

The examination for ordinary consulships is a simple test one, and is compulsory except in special cases - - - - - 28,824-7

The men appointed under this examination are competent to perform their duties - 28,828

No formal reports are made upon them, but they can be judged from the reports they write, &c. - - - - - 28,829-31

To a limited extent open competition might be applied to the consular service - - 28,832

The Secretary of State being at liberty in exceptional cases to appoint exceptional men - - - - - - - 28,833-4

Does not think that the consular service could be divided into groups, within which promotion should be made - - - 28,835

Does not believe that foreign consuls assist the trade of their countries more than English consuls do - - - - 28,993-6

Would appoint an Englishman, if available, as consul in preference to a foreigner 28,997, 29,001-3

The paid consuls are invariably Englishmen 29,004-5

Pensions under the Diplomatic Service Pensions Act are granted after 15 years' service from date of commission, and after 10 years' actual service abroad - - 28,746

The present scale of pensions was recommended by a committee that sat in 1827 - 28,747, 28,941-3

The total of the diplomatic pensions is now 25,950*l.*, and the salary list amounts to 180,000*l.* - - - - - - 28,747-8

The scale of pensions is more liberal than prevails in the Civil Service - - 28,749

The Queen's representatives abroad occupy a high position and are unable to save money from their salaries - - 28,750-1

Invalided secretaries when pensioned receive pensions calculated by one-thirtieth of their salary for each year's service instead of one-sixtieth as in the Civil Service - - 28,754, 28,757-8, 28,933-5

The reason for this is that they commence their service at a later age and do not begin to qualify for pension until they receive their commission 28,754-6, 28,936-9

These pensions are only given upon medical certificate - - - - - - 28,759-62

This certificate is not used to get rid of men on other grounds than ill-health - - 28,869

As a rule a certificate from any leading medical man would be accepted 28,760-1, 28,860-7

But in case of doubt a man would be ordered before a medical board - - 28,762-3, 28,871

If a man retires for ill-health and recovers he may be offered employment again 28,857-9, 28,864-5

The medical certificates should be genuine - 28,870

The third class pensions are given to envoys and ministers of the second class - - 28,872

Conditions on which the various pensions are given - - - - - 28,873-5

Does not think that diplomatic pensions should be put on the same footing as Civil Service pensions - - - - 28,876

Some objections have been made to the fourth class pension of 700*l.* a year, but no decision on the subject has been come to 28,756

The consular pensions are the same as the Civil Service pensions - - - 28,764

Does not think that any large reduction in the cost of the diplomatic service could be made without impairing the efficiency of the service - - - - 29,014-6

Sir FRANCIS ALSTON.

Chief Clerk of the Foreign Office - - 26,349

Has charge of the financial business of the office - - - - - 26,350-2

Assists the Under Secretary in the administration of the different departments - 26,353-5, 26,474-5

There are 36 clerks on the diplomatic establishment of the office - 26,356, 26,359, 26,608

Who are appointed by limited competition after nomination - - - - 26,357-8

There is also a class of supplementary clerks 26,360, 26,608

Who are appointed in the same way - 26,361

There are also some lower division clerks - 26,362-3, 26,608

Thinks that some of the lower division clerks might be selected to replace some of the supplementary clerks - 26,364-71, 26,374-5, 26,527, 26,609-13, 26,616-20.

The supplementary clerks come from a rather higher stratum of society - 26,372-3, 26,617

If the supplementary clerks were done away with, the number of diplomatic clerks would have to be increased - - 26,628

Does not think that the staff at the Foreign Office could be reduced - - - - 26,376-80

The work done in the political departments is all held to be confidential - 26,381, 26,387

The official letters are opened either by the resident clerks or the private secretaries - 26,382-4

SIR FRANCIS ALSTON—*cont.*

They are entered in the daily diaries of the departments - - - - 26,385
Owing to the confidential character of the work it is desirable to maintain the system of nomination 26,386–7, 26,497–8, 26,523–6, 26,534–5
Originally three candidates were sent up for examination, then six or seven, and now sometimes 10 or 12 - - 26,490–3, 26,554–65
No despatches are prepared in the Librarian's Department - - - - 26,388–90
The chief clerk deals with accounts and not with diplomatic correspondence - - 26,391
Manner in which he carries on correspondence with all the sub-accountants abroad 26,392–7
Any question which exceeded his powers he would hand over to the political division - - - - 26,398–400
The Commercial Department is partially manned by clerks belonging to the political departments - - - 26,401–3
Part of the work of the Commercial Department is confidential - - - 26.629–30
The Commercial and Consular Departments are manned for the most part by clerks of the political division; the chief clerk's department is not - - - 26,477–8
The clerks in the chief clerks department are supplementary clerks - - 26,404–5
Some of these might be replaced by lower division clerks - - - 26,406–15
But it would always be necessary to have at least one in a superior position to act as deputy - - - - - 26,407–9
Does not think that it would answer to pass one of the political clerks through the department to act as deputy for a couple of years or so - - - - - 26,410–14
Salary and work of the first class clerk in his department - - - - - 26,416–19
The chief clerk's correspondence is not confidential, and is sent sometimes by post, sometimes by messenger - - - 26,623–7
Staff and work of the Librarian's Department - - - - 26,420–30, 26,435–6
Extra clerks were appointed some time ago to work up the arrears - - - 26,431–2
Average number of documents received at Foreign Office - - - 26,433–4, 26,441–3
Papers are sent to the library after two years 26,437
They are then fully registered and indexed - 26,438–43
Lower division clerks in library might see secret papers seven or eight years old - 26,621–2
Nature of the arrangements made between Sir E. Hertslet and the Foreign Office with reference to the publication of treaties and other works - - - 26,444–5, 26,603–7
There is a printing establishment in the Foreign Office - - - 26,446–8, 26,533
The type writer does her work well - - 26,449–51
There is no shorthand writer in the Foreign Office - - - - - - 26,452–3
Allowances are given to three junior clerks acting as translators - 26,454–6, 26,464, 26,581–4
All clerks entering the Foreign Office must be linguists, but in time they may lose some of their knowledge - 26,457–64, 26,536–9, 26,587–8
Thinks that greater prominence should be given in the examinations to modern languages and less to classics - 26,465–7, 26,589
A knowledge of French is absolutely essential - - - - - - - 26,566–7
A good many despatches come in in German 26,568–70
And some in Spanish and Italian - - 26,571
The Russians correspond in French - - 26,577
French is less used by foreign nations than it was - - - - - 26,572–3, 26,580
Lord Salisbury has urged on the Civil Service Commissioners the desirability of candidates having thorough colloquial knowledge - - - - - 26,575–6
The Prime Minister's private secretaries' salaries are charged to the Foreign Office vote by direction of the Treasury - - 26,468–72
The number of political clerks was reduced at the re-organization - - - 26,481–3
During the first years of service the clerks are fully employed - - - 26,485–7
Thinks that by limited competition quite as good a set of clerks are obtained as by open - - - - - - 26,488–9
Sometimes nominations are given to the sons of old Foreign Office officials - - 26,493–6
When Foreign Office clerks are employed abroad their work is done by the other clerks, or by an attaché or secretary from abroad - - - - - 26,499–505
A Foreign Office clerk sent abroad has an outfit allowance - - - 26,506–15, 26,592–5
An attaché receives no outfit allowance - 20,595–6
As a rule only clerks on the political establishment are sent abroad, but on one occasion a supplementary clerk in the Chief Clerk's Department was sent - - 26,516–22
A clerk would not be obliged to go abroad against his will - - - - - 26,598–9
The work of the Foreign Office is not such as can be well measured by six or seven hours' attendance - - - - - 26,528–32
The commercial and passport departments open at 11 o'clock - - - - 26,529–30
Explanation of increase in cost of Foreign Office since 1869–70 - - - - 26,540–6
Reasons for the abolition of Foreign Office agencies and the compensations granted in consequence - - - - - 26,547–53
Clerks are transferred from department to department at the Foreign Office - 26,585–6, 26,590
But the heads of departments are rarely changed - - - - - - 26,591
The building, repairs, &c. of embassies is accounted for by the Office of Works - 26,631–43
Queen's messengers will be further reduced by one man - - 26,645, 26,651, 26,657–8
They carry despatches, &c. to embassies abroad - - - - - - 26,646–7
The regulations as to what they may take are very stringent - - - - 26,648–50
They are an expensive establishment - 26,651
But necessary for taking confidential despatches - - - - - - 26,652
It would not be possible to put all despatches and letters into cipher - - - 26,654
Occasionally extra men have to be engaged - 26,659, 26,662–4
Queen's messengers are gentlemen - - 26,660–1
The real economy would be to employ a different class of men - 26,651, 26,659, 26,679, 26,682
When they retire they receive pensions - 26,665, 26,669
They have five years added to their service in computing their pensions - - 26,667–71
Economies that have recently been effected in the messenger service - - 26,672–5, 26,680
There is now a confidential man, not a gentleman, employed between Calais and Paris 26,675, 26,678
This system might be adopted in other places - - - - - - 26,679–80
Queen's messengers have a salary of 400*l.* a year, and an allowance of 1*l.* for every night they are employed, and their actual travelling expenses - - - 26,681, 26,686–7
The last appointment was made in 1887 - 26,688

MR. KENNEDY.

Is senior clerk of the commercial department at the Foreign Office - - - - 26,689
The staff of the department consists of four clerks on the establishment, one clerk attached, two lower division clerks, and a typewriter - - - - - 26,690, 26,693–6
The staff is interchangeable with that of other departments - - - - - 26,697–8
The clerk attached has recently brought out an index to the commercial reports - 26,699
It was necessary owing to arrears to prepare this out of office hours - - - 26,700–2
Hopes that in future this work will be done as part of the regular office work - - 26,703–8
The business of the department is to correspond on all commercial and sanitary questions - - - - 26,690–2, 26,709–10

Summary of Evidence.

MR. KENNEDY—*cont.*

The department has communications direct with merchants and trading associations - 26,711–3
When the department was reorganised in 1872 the total correspondence was 4,900, and in 1888 it was about 17,000 - - 26,714–6
All consular reports upon trade go to the commercial department - - - 26,717–21
The lower division clerks are employed on anything which does not require initiative 26,722–3
Does not think that they would be able to take the direction of the department - 26,724
They do their work admirably - - 26,746
Witness entered the office as an established clerk - - - - - 26,725–8
Has nothing to do with the political side of the office - - - - - 26,729–30
The general consular instructions are revised from time to time - - 26,732–7, 26,796–7
The department is in constant communication with the Chambers of Commerce, &c. 26,738–9, 27,662
Some of the clerks in the commercial department have served in the political departments - - - - - 26,740–5
Thinks that the minimum establishment staff for the commercial department should be three - - - - - 26,747–8
Would deprecate the staff being reduced below four in all - - - - 26,774
Would like to have an additional lower division clerk in his department - 26,798–800
A supplementary clerk might be transferred to a political clerkship - - - 26,749
But does not think such a case has occurred 26,750–2
The supplementary clerks in some of the departments see confidential papers 26,754–5, 26,758–9
Does not think that the barrier between the supplementary and established clerks is necessary - - - - - 26,756–7
In negotiating a commercial treaty the first steps are taken in the commercial department, the final ones in the treaty department - - - - 26,761–8
This is confidential work, and might be seen by the supplementary, but not by the lower division clerks - - - 26,766–73
Sees no advantage in having three classes of clerks in the commercial department - 26,775–6
Thinks there should be two only: clerks on the diplomatic establishment and lower division clerks - - - - 26,777
Would like the lower division to have the opportunity of promotion in special cases - 26,778–9
But does not think they could be promoted to clerkships in the political establishment - - - - - 26,836–9
The Foreign Office was reorganised in 1881 and 1882 - - - - - 26,780–3
If a political clerk is transferred to the commercial department, he is not employed particularly on work connected with his late department - - 26,784–6
There are two sets of reports received annually from consuls and from embassies, &c., and in addition occasional reports on anything likely to be of interest to British trade - - - - - 26,787–95
Thinks that the commercial department might take a great part of the commercial work in regard to Eastern Asia - 26,801–9, 26,832–5, 27,762–6
This work is now done in the China department, which, in case of difficulty, would consult the commercial department - 26,801–4, 26,820–2
The consuls on the India Office establishment along the Persian Gulf, &c., correspond with the Foreign Office, and send reports to the commercial department - 26,810–19
All consuls, without exception, send in reports - - - - - 26,823–5
All these reports are published - 27,777–80, 27,783
Has very rarely had occasion to decline to print reports in consequence of their not being up to the necessary level - - 27,781–2
The Foreign Office supply the Board of Trade with information on trade questions 26,826–31
Previously to 1872, the Board of Trade advised the Foreign Office on commercial matters - - - - - - 27,686
Now the Foreign Office collects information for itself, and instructs the representatives abroad without previous consultation with the Board of Trade - - - - 27,686
Upon any question on which the Board of Trade require information, they would apply to the Foreign Office - - 27,687
There are daily communications between the Foreign Office and Board of Trade on shipping and commercial questions - 27,688
Consuls report direct to the Board of Trade on all subjects coming within the scope of the Board of Trade instructions - - 27,689
The present arrangements work perfectly satisfactorily - - - - - 27,690–1
Is not aware of any complaint that either the diplomatic or consular service has shown remissness in regard to commercial interests - - - - - 27,663, 27,803
The appointment of consuls is entirely a matter for the discretion of the Secretary of State - - - - - 27,665
The limits of age are from 25 to 50 - 27,665
The appointments seem to be quite satisfactory - - - 27,666, 27,775, 27,855
Believes that English consuls assist British trade quite as much as foreign consuls assist the trade of their countries - - 27,667
Has never heard anything to the contrary from Chambers of Commerce - 27,668, 27,672
The relations of the Foreign Office with Chambers of Commerce are such that complaints would have reached witness, if any were made - - - - 27,669–71
Believes that in the case of Belgian and French consuls a greater latitude is allowed them to act as agents for particular firms - - 27,673, 27,677, 27,767–9
If a British consul found that his instructions did not allow him to take any particular action required of him, he would refer the matter home for orders - - - 27,674–7
British agents abroad are instructed to promote British trade generally - - 27,677
The appointments to the consular service in China, Japan, &c. are much upon the same principles as those for the Levant - 27,679
They are under the American and Asiatic Department, not the Commercial Department - - - - - - 27,680–1
Does not think that a large paid consular service would be worth the expense - 27,682–3
Does not think that it would be practicable to further consolidate the functions of diplomatic and consular officers - - 27,684
Their duties are, in fact, distinct - - 27,684–5
German consuls send home particulars of patterns of various manufactures supplied by the United States and England - 27,692–3
Our consuls do not do this - - - 27,694
They send home patterns of native manufactures - - - - - - 27,695
They supply information as to articles our competitors are supplying in foreign markets, but not patterns - - 27,696
Does not recollect attention having been called by any chamber of commerce to the mode in which the consular work of Germany is done - - - 27,697
But remarks have been made, chiefly in reference to Eastern Asia, as to the want of information our manufacturers have, compared with that which Germans have 27,698–701
A wish has been expressed that there should be some museum for samples of goods, as the Belgians have in Brussels - - 27,701–4
The Belgian consuls send home samples; the English do not because of the expense 27,705–11, 27,732–4
First, there would be the initial expense of the museum, say. 20,000*l.*: then an annual outlay of some 500*l.* would be required - 27,712–5
Thinks that the difficulty is the expense and not the different class of the consuls in Germany, Belgium, &c., as compared with the English - - - - - 27,716–20
No definite proposal has been made for the establishment of a commercial museum - 27,735–8

MR. KENNEDY—*cont.*

Thinks that an English consul of the non-commercial class is quite as good as a German - - - - - - 27,721–2
Previous commercial training would be of advantage to consuls - - - - 27,723–5
There are many posts in which special qualifications must be considered on appointing a consul - - - - - 27,726
In France political considerations preponderate, but not in Germany - - 27,727–9
A German regular consul is more likely to have a commercial training than an English one - - - - - - 27,730–1
The Commercial Department at the Foreign Office is the commercial intelligence department of the country - - - 27,739–40
The Foreign Office is quite ready to obtain information for the Colonial or India Offices on trade questions - - 27,741–50
No complaint has reached the Foreign Office as regards the increase to fees - - 27,751–4
Shipping fees are received at the Foreign Office, and transmitted to the Board of Trade - - - - - - - 27,755
The consuls are only under the direction of witness as regards forwarding reports upon trade - - - - - - 27,756–61
Thinks that the reports received from consuls appointed by open competition are on very much the same level as those of men appointed after nomination - 27,770–5, 27,819–21
The Secretary of State has an opportunity of considering any recommendations made in the reports of consuls - - - 27,784–99
Does not often have suggestions from the Board of Trade on commercial matters - 27,800
It is the business of the Foreign Office to act for itself on such matters - - 27,802
All reports are sent to the Board of Trade - 27,801
Receives valuable reports from the commercial attachés - - - - - 27,805–8
There are two commercial attachés - - 27,809–10
One at Paris and one at St. Petersburgh - 27,811
Doubts whether an increase in their number, or the appointment of more consuls-general, would be worth the expense - - 27,812–3
But in the case of some countries it might be beneficial to appoint more consuls-general as a tentative measure - - 27,834–41
Consuls-general would be better than commercial attachés - - - - 27,839
Commercial men prefer the publication of commercial reports in the Foreign Office series, rather than in the Board of Trade journal - - - - - - 27,814
Is not, as a rule, consulted when consular appointments are made - - 27,815–6, 27,850
But calls attention to any meritorious officer with a view to his promotion - - 27,831–3
The list of candidates is kept by the Secretary of State - - - - - - 27,817
Thinks the bulk of men appointed have not had previous commercial experience - 27,818
Thinks that commercial knowledge and geography might be added to the subjects of examination - - - - - 27,822–3
And that every consul should, on appointment, serve a month or two in the Commercial Department - - - - 27,824–6, 27,829
Thinks that the men now appointed are fully aware of the commercial interests of the country, and act accordingly - 27,827–8
Has been on two tours of inspection abroad, and has also been delegate on commercial negotiations - - - - 27,844–6
There are certain posts where it is desirable to have salaried consuls - - 27,848–50
Some places might be paid less than others so as to provide for promotion - 27,851, 27,857, 27,861–3
Would not throw these posts open to open competition - - - - 27,852–4
But would not object to limited competition - - - - - - 27,854
Has no fear of the danger of absolute patronage - - - - - 27,856
Redundant posts have been reduced of late years - - - - - - 27,858
It has been held that it is an advantage that consuls should not be shifted from place to place - - - - - - 27,864–6
But, on the other hand, constant service in the same place without opportunity of promotion exercises a depressing influence on a consul's work - - - - - 27,867–70
A prospect of promotion would be an inducement to a man to strive to the utmost 27,869
An increment of salary or a personal allowance might meet the case - - 27,871
The French is a much more graded service than the English - - - - - 27,872–3
And witness favours some modification of the present system in this direction - 27,874
The posts might be classified and grouped in certain divisions - - - 27,875, 27,878–83
And there might be promotion from one to the other, or a personal allowance - - 27,876
In this way the value gained by local experience might be preserved - - 27,877

SIR PERCY ANDERSON.

Senior Clerk of the African and Consular Department at the Foreign Office - - 27,194
Has occasionally been employed abroad - 27,195–6
Consuls are nominated by the Secretary of State, and then, as a rule, pass an examination - - 27,199–202, 27,227–8, 27,238, 27,275–6, 27,453
Consuls-General and consuls so appointed form the regular consular service - 27,203
In addition to these, there are some who are engaged in trade - - - - 27,204
These are also appointed by the Secretary of State - - - - - - 27,281
They are not necessarily foreigners, but are always residents at the place where they act - - - - - 27,205–8, 27,282–3
These trading consular officers have no salary, but they receive allowances to cover their outgoings - - - 27,209–10
There are about 500 trading vice-consuls - 27,211, 27,215
The above classification works well - 27,214
An enormous expenditure would be entailed by making the whole consular service a paid service - - - - - - 27,215
A sufficient number can be found willing to discharge the duties without pay - - 27,216
The unpaid men are much wanted at ports to look after the shipping interests - 27,215
In addition to these two classes of consuls, there is the service in the Levant, Persia, Greece, and Morocco . - - - 27,218–20
To begin with, this is also an interpretorial service - - - - - - 27,221
Introduction into this service is now stopped, as there is not a sufficient flow of promotion - - - - - - - 27,222
There is an examination for this service - 27,223–6
Consuls of the regular service pass three months in the Foreign Office after appointment, and then go to their posts - 27,229–30, 27,235–6
In the consular service there is no "ladder"; the whole service is, more or less, on a level - - - 27,231–2, 27,278, 27,379
There are no prizes in the service, except a consul-generalship - - 27,231, 27,379
The salaries are adapted to the requirements of the various posts - - 27,231, 27,255
The highly paid posts are not always the better posts - - - - 27,320, 29,255
A consul, on appointment, might be sent anywhere - - 27,232, 27,238, 27,278–80
The other day an Indian officer was appointed Consul-General at Zanzibar - - 27,233
He did not pass any examination: the Secretary of State has the power of dispensing with that - - 27,234, 27,269, 27,454
It is, however, very rarely dispensed with - 27,270–4
Knows no instance of a consul being appointed who had failed in the examination 27,479–83
The limits of age for consul are 25 to 50 - 27,237–8, 27,277, 27,457–8

Summary of Evidence.

SIR PERCY ANDERSON—*cont.*

A consul can be transferred to the diplomatic service; and several Ministers have risen from the consular service - 27,239–42, 27,459–60

A regular consul gives the whole of his time to his consular duties - - - 27,243

And is prohibited from trading - - 27,244

The Foreign Office would find out if this regulation was broken - - - 27,245–9

The salaries are fixed in communication with the Treasury - - - 27,250, 27,253

No augmentation can be made without the consent of the Treasury - - - 27,250

But the Foreign Office could appoint a vice-consul if he had no pay and no allowance - 27,251–2

A consul can lay nothing by out of his income - - - - - 27,255

There have been many instances of the reduction of salaries of consuls - - 27,256

The last general revision of salaries was when Mr. Childers was Chancellor of the Exchequer - - - 27,254, 27,257

During the last 10 years the net total of salaries and allowances has been reduced from 110,602*l.* to 96,760*l.* - - 27,257–64

There are no regular reports upon the conduct and discipline of consuls - - - 27,265

But the Foreign Office keeps a general supervision over them - - - 27,265–8

The Consuls-General at Berlin, Leipsic, and Vienna are in an exceptional position, and are foreign merchants of high standing - 27,284–7, 27,477–8

Thinks that it would be impossible to man the consular service by open competition - 27,292

In consequence of the separate qualifications required for separate posts - - 27,292

The result would be enormously increased expenditure, and a risk of diminished efficiency - - - - - 27,292

The Levant, &c. service which is manned by open competition, is exceptional, and the service is expensive - - 27,295, 27,307–8

Description of the Levant service, and way in which the various men are employed 27,296–304

It is possible to have a grip over this service, in which there is constant intercommunication - - - - - 27,305–6

Some of the appointments in it are not ordinary consular appointments - - 27,309–14

A consul after appointment has to learn all about shipping - - - - - 27,315–6

Would like all consuls at ports to be paid officers - - - - - 27,319

The most highly paid post is at New York - 27,321

The present Consul-General went there from San Francisco - - - 27,322–3, 27,325–6

He was sent there on account of merit - 27,324

It is difficult to compare our consular service with that of other countries - - 27,327

We discourage our consuls from meddling too much in politics - - 27,327–9, 27,396

It is difficult to ascertain precisely the salary and emoluments of foreign consuls - 27,330–4

Our expenditure is based upon our own requirements without reference to those of other countries - - - - 27,336–7

Economy is impressed upon the Foreign Office at every turn - - - 27,338

Does not think that Germany is spending more upon their consular service than England is - - - - - 27,339

Cost of the English consular service - - 27,340–4

All consuls make reports every year - 27,345–51

Salaries of French and German consuls - 27,352–4

Salaries of English consuls - - 27,355–8

It would be possible for a young man of 25 to be appointed at once to a salary of 1,000*l.* a year - - - 27,238, 27,359–63

It is not the rule to insist that every candidate after passing the examination should have some training as a vice-consul - 27,364–5

Nature of the examination for consulships - 27,366

The examiners are the Civil Service Commissioners - - - - - 27,367–9

Thinks the examination gives well-qualified men - - - - - 27,370

It is only a qualifying examination - 27,371–2, 27,453

It is not a difficult examination - - 27,455–6

There is a limited competition for the diplomatic service - - - - 27,373–4, 27,378

Thinks that the consular service is essentially one for selection - - 27,293–4, 27,375

Although this does not apply to all posts - 27,376–7

Would object to two or three consulates when vacant being put up to limited competition - - - - - 27,379

The qualifications of a man outside the consular service, selected for a particular post, are known to the Secretary of State - - - - - 27,380–1

Witness would not, as a rule, be consulted before a new man is introduced into the service - - - - - 27,382

Upon a vacancy in a lucrative consulate occurring, the Secretary of State, after consultation with witness and others, would select the best man he could find for it, if a man in the service were appointed - 27,383–8

But this course of procedure would not be adopted if an outsider were appointed - 27,389

It is an absolute, but not an arbitrary, act of patronage - - - - - 27,386

The transition from the consular to the diplomatic service is about as easy now as it was formerly - - - - - 27,390–1

It has not been found practicable to consolidate still further the functions of diplomatic and consular officers - - 27,392–3

A consular officer would not look forward to promotion to the diplomatic service as a right - - - - - - 27,394

Such promotions are the personal act of the Secretary of State - - - - 27,395

Does not believe that it is possible to make any sort of bridge between the two services - - - - - - 27,396

The recommendations of the Committee of 1872 have been carried out as fully as possible - - - - - - 27,398–400

Honorary rewards have been more freely distributed amongst consuls - - 27,399–400

All possible reductions of redundant posts have been carried out - - - 27,401–2

The movements of trade are constantly watched - - - - - 27,403–4

Salaries of consuls in Italy, and amount of fees received by them - - 27,405–6

There is a danger that some commercial firms, instead of using their own agents, may trust to the information given by consuls - - - - - 27,410–11

Thinks that the English consuls supply vastly more information than the German consuls - - - - - - 27,412

But the Germans send commercial agents where the English send only circulars - 27,412–17

Thinks that English consuls are in thorough touch with English trade - - - 27,418

A great deal of the consul's time is taken up with answering traders' questions - 27,419–20

Consuls are not allowed to give official recommendation to particular firms by acting for them - - - - - - 27,421

Consular fees have enormously increased lately - - - - - 27,423–9

Does not think that any further circular visits to consulates from the Foreign Office are in contemplation - - - - 27,430–1

Sir C. Hill recently visited and reported on the consular establishments in the West Indies - - - - - - 27,432–3

Secretaries of legation occasionally go round and send in reports - - - 27,434

The scale of pensions for the consular service is the same as for the rest of the Civil Service - - - 27,435, 27,498–500

Does not know that the German consuls send home patterns of new manufactures, &c. that are introduced specially by England - 27,436–8

The English policy is to encourage commercial consuls, not political consuls - - 27,439

We require sound practical men of business with commercial qualifications - - 27,441–2

And believes that such men are obtained under the present system of appointment 27,443–7

SIR PERCY ANDERSON—*cont.*

So far as witness knows, Secretaries of State have not used the consular service for political appointments - - - 27,448
Though, of course, recommendations may be made by political friends - - 27,449–50
The Secretary of State can appoint whom he pleases - - - - - - 27,451
The consular service is subordinate to the diplomatic, though their work is distinct 27,461–2, 27,468, 27,471–3
Appointments to the consular service in China and Japan are much upon the same lines as in the Levant service - - 27,464–7
In communicating with a consul witness would do so direct, not through the legation - - - - - - 27,469–70
Reports are sent by the legations or by the consuls, according to what their nature may be - - - - - - 27,474–6
Believes that the relations between the diplomatic and consular services are extremely cordial - - - - - 27,484–5
The Foreign Office is in constant communication with the Board of Trade upon commercial and consular questions - - 27,486–90
Consuls receive orders direct from the Board of Trade on routine points connected with shipping - - - - - - 27,489–90
Has known cases of consuls being removed for inefficiency - - - - - 27,491–4
Before getting a pension a consul must produce a certificate from the Secretary of State that he has served with diligence and fidelity - - - - - 27,495–503
Consuls have the same "abolition" terms as the rest of the Civil Service - - 27,504
But a post would not be abolished in order to get rid of an incompetent consul - 27,505–8
Thinks that about 10,000*l.* a year might be advantageously spent in establishing special commercial posts - 27,418, 27,509–19, 27,525
They would be in addition to the two commercial attachès at Paris and St. Petersburgh - - - - - - 27,520–1

SIR E. HERTSLET.

Librarian of the Foreign Office - - - 27,526–8
Duties of the librarian - - - - 27,529–30
Has to prepare memoranda and to make précis - - - - - - 27,529
And has charge of the manuscript and printed library - - - - - - 27,530
A few years ago the Board of Trade library was removed to the Foreign Office - - 27,530
There are now 85,000 printed and 95,000 manuscript volumes in the library - 27,530, 27,601
About 200 volumes of historical, geographical, treaty, &c. works are added annually to the library - - - - - - 27,531
After two years all the papers are sent from the departments to be kept in the library 27,530, 27,534–5
They are then bound, re-registered, and carefully indexed - - - 27,531, 27,596–9
The registrar forms the index to the volumes 27,627
These papers form between 700 and 800 volumes a year - - - - - 27,531, 27,623–5
Any paper that comes into the Foreign Office is bound - - - - 27,532, 27,646–50
Thinks it would be undesirable to destroy any paper in the library - 27,532–3, 27,605, 27,626
If they are to be destroyed at all they should be destroyed in the departments before they are sent to the library - - 27,532–3, 27,600
Reasons for not destroying papers in the library - - - - - - 27,595–600
In consequence of want of staff the registering in the library fell greatly into arrears - - - - - - 27,536
Ten clerks have now been appointed to work up the arrears - - - - - - - 27,536
All the law officers' reports since 1861 have lately been bound and indexed - 27,536–7, 27,632–4
Has to refer very often to law officers' reports previous to 1861 - - - - - 27,635–42
Hopes that the arrears in the general register will be brought up in five years - - 27,538–9
Two years must always be in arrear, because it takes that time to bind the papers of one year - - - - - - 27,539
They are all bound at the Foreign Office - 27,609–16
Would be very glad if the registers and papers when sent to the library were accompanied by an index - - - 27,540–1
But does not see how this could be done with the existing staff - - - - 27,541
Does not think any difficulty has been found in getting at papers when wanted - 27,542, 27,547
This is owing to a system of keeping papers together in "cases" - - - - 27,542–3
Thinks that to have a general register for the Foreign Office, and each paper indexed daily, would bring about a complete revolution in the whole system and management of the Foreign Office - - - - - 27,544–6
If the staff of the librarian's department had been increased some years ago, the great arrears in the register would not have occurred - - - - - - 27,548–9
The librarian and his assistants have to prepare memoranda upon historical subjects - 27,550–1
Instances of the sort of memoranda alluded to - - - - 27,552–3, 27,558. 27,569
Between 1875 and 1889, 2,800 memoranda were prepared in the librarian's department - - - - - - 27,554
Of which 300 have been printed - - - 27,555
An important memorandum might take three or four weeks to prepare - - - 27,556–7
The number of important memoranda are increasing daily - - - 27,558
There are almost hourly references to the library on current work - - - 27,559
The departments draw up memoranda upon the papers in their custody - - - 27,560–2
In addition to the current papers the departments keep "cases" of subjects still unsettled - - - - - - 27,562–4
These "cases" are bound up separately and not in the general registers - - 27,565–8, 27,600
Some years ago found that the systems of the registries in other offices was very different to that in the Foreign Office, and thought that they could not be applied to the Foreign Office - - - - - 27,570
There is no general daily register of letters coming to the Foreign Office - - 27,571–2
If a matter of importance arises, the original documents are not sent to the departments, but the librarian prepares a précis 27,573–5
A reference would be made to the original papers - - - - - - 27,578–9
If the question was of a current nature, the department would prepare the memorandum - - - - - - 27,575–7
The clerks in the librarian's department have to look out the papers for the preparation of the précis, which is highly responsible work - - - - 27,580–1
The clerks in his department are on a different scale of promotion and prospects to those in the political department - 27,582
They have always felt that this is a grievance - - - - - - 27,583
Does not think that it would be a benefit to the service if the political clerks passed in their earlier years through his department - - - - - - 27,584–5
Thinks it is desirable that his department should be kept distinct - - - 27,586
Is anxious that the appellation "librarian's" department should be changed, as it does not describe the nature of the work - 27,586–7
Thinks that the duty of searching for information and furnishing it should fall upon the library - - - - - 27,588
This system has worked admirably hitherto - 27,588
Sometimes has to refer to papers 30 and 40 years old - - - - - - 27,589–90
Foreign Office papers earlier than 1847 are at the Public Record Office - 27,590–3, 27,630–1

Summary of Evidence.

SIR E. HERTSLET—*cont.*

And every three years about 3,000 volumes are sent there - - - 27,592, 27,628–9
Thinks it is dangerous to destroy papers even 30 years old - - - - 27,606–7
Though there must be many papers of no permanent value - - - 27,608
The departmental printing is all done at the Foreign Office - - - - 27,617–22
The librarian's department is credited with two clerks who do not belong to it 27,643–5, 27,657–8
Thinks that the work done in the librarian's department is quite as confidential as that done in the political departments - - 27,651
Thinks that an amalgamation with the diplomatic staff would be undesirable - - 27,652
And that the librarian's department should be left distinct - - - - - 27,652
But that the clerks in that department should be considered as holding as important a position as the diplomatic clerks 27,652
On two occasions clerks have been transferred from the librarian's to the treaty department - - - - - 27,653
But this is exceptional - - - 27,656
There is a good deal of similarity between these two departments - - - 27,654
The clerks in the diplomatic departments interchange - - - - - 27,655

MR. BRYCE.

Parliamentary Under Secretary at Foreign Office from February to July 1886 - 27,884–5
Thinks the distinction between supplementary and diplomatic clerks need not be maintained - - - 27,887–8, 27,890
The system of lower division clerks might be more extensively used - 27,889, 27,890, 27,940–4, 28,021, 28,031, 28,088–90
And the number of established clerks might be then reduced - - - 27,940–4, 28,031
Lower division clerks might be employed on routine work in the political departments - 28,089
Does not think that there would be any great gain in introducing open competition for the Foreign Office - - - 27,891
It is desirable to have an opportunity of ascertaining what a candidate's character and connexions are - - - 27,891
Thinks it would be an advantage if the diplomatic service was fused with the Foreign Office - 27,892, 27,895, 27,960, 28,031–8
Thinks that a better salary should be paid to young diplomatists at starting, and that the rule requiring them to have private means should be abolished - 27,893–4, 28,023–4
This might add to the cost of the diplomatic service, but there are branches in which retrenchments might be effected - 28,024, 28,128–30
Thinks there would be no difficulty on the score of expense in getting the clerks to go to posts abroad - - - - 28,033–7
Thinks that any person occupying a recognised public position should be entitled to apply to the Secretary of State for a nomination to the Foreign Office - - 27,895–7
And that the Secretary of State should give every candidate on his list, of whose character and abilities he had sufficient evidence, an equal chance of competing - 27,898, 27,900–1
Does not think that the Secretary of State sees a man before he places his name on his list - - - - - - 27,899
The Secretary of State ought to act as a trustee in the matter, and not as a dispenser of patronage for personal or political considerations - - - 27,901
The supplementary clerks, as a rule, are not men of quite so much capacity as the clerks in the political departments - 27,902
The amount of really confidential work in the Foreign Office is by no means so large as is sometimes supposed - - 27,903
But it varies at different times - - 27,904–5
Doubts whether it would not be done by a much smaller number of clerks than are now employed in the political departments 27,905
Thinks that lower division clerks could be found who would inspire as much confidence in their honour and probity as the men in the political departments do - 27,906
Type writers and shorthand should be more employed - - - - - - 27,907–8
The upper division clerks are too much employed on mechanical and copying work - 27,909–10
The librarian's department renders very valuable service - - - 27,911
Thinks that it would be an advantage if the young political clerks passed through the librarian's department for a year or two - 27,912
The mechanical work of indexing, &c. should be done by lower division clerks - 27,912
The papers are kept for two years in the departments and are then handed over to the library - - - - - 27,913
It might be as well to have them registered and indexed on one general system as soon as they come in - - - - - 27,913
But never experienced any difficulty in getting a paper under the present system 27,914–5
Thinks that not quite enough attention is paid to the keeping up of knowledge of current European politics - 27,916–8, 29,921–6
And that it might be well to add an intelligence branch to the librarian's department - - - 27,919–20, 28,017–9
Perhaps too much detailed work comes before the Secretary of State and the Under Secretaries - - - 27,927–30
The Secretary of State is especially overloaded with work - - - - 27,930–1
Is not in favour of laying down a strict rule as to hours of attendance - - - 27,931*a*–2
Much of the work can be only done in the afternoon - - - - 27,932, 27,934–6
Does not think that seven hours attendance is two much - - - - - 27,933
All telegrams are opened early in the morning - - - - - - 27,937
There are resident clerks at the Foreign Office - - - - - - 27,938
The position of legal adviser might be improved - - - - - 27,945–7
This post was created in 1886 - - 27,946–7
Sir J. Pauncefote was appointed as legal Assistant Under Secretary - - 27,948
After he was made permanent Under Secretary he continued to do some of the legal work - - - - - 27,949–50
But he found this very laborious, so the legal adviser was appointed in 1886 - 27,950
The legal assistant does not act as an Under Secretary of State - - 27,952
Is of opinion that there should be a legal Assistant Under Secretary at the Foreign Office - - - - - - 27,955–8
Thinks that there might be some saving in the Foreign Office printing - - 27,959
The diplomatic service does not seem to be as strong intellectually as the Foreign Office is - - - - - - 27,961–3
The position in the Foreign Office is more attractive - - - - 28,022, 28,025–7
Thinks the conditions for a young diplomatist abroad are much more unfavourable than they are for a Foreign Office clerk - 27,964
A great portion of his work being very dull and mechanical - - - - - 27,964
Thinks that men of the calibre of lower division clerks might be attached to the chanceries abroad to do this sort of work 27,965–7
Believes that the training in Oriental languages would be better done in England than it is in Constantinople - - 27,968–71

MR. BRYCE—*cont.*

The age for the Constantinople service might be increased and the examination might include Oriental languages - - 27,972–5

Changes might be made in the present classification of embassies and legations 27,976

Some posts that are at present only legations might be made embassies, for instance, Washington - - - 27,976–82

It would be better if the consular service became a regular service - - - 27,985

The Secretary of State should not be entitled to appoint anybody he pleases to it 27,985–6, 28,016

There is only a low qualifying examination 27,987

Would not amalgamate the consular and diplomatic services - - - 27,988–9

Does not believe that there is any marked difference in point of ability between the men in the consular and diplomatic services - - - - - - 27,990

The consuls ought to be much more conversant with commercial matters - - 27,991

The limits of age for the consular service should be older than for the diplomatic, and the examination should be different - 27,992–3

The scale of salaries in the consular service should be revised and promotion should be provided for - - 27,994–8, 28,109–12

The service should be more one of merit and less a matter in which mere favour prevails - - - - 27,999, 28,109–12

The value of the consular reports has very much improved since 1886 - - 28,000

Believes that there are fewer complaints from chambers of commerce as to consuls not attending to trade interests than there was in 1886 - - - - - - 28,001

In that year a second commercial attaché was appointed whose head-quarters are in Russia - - - - - - 28,001

Probably there ought to be a third to travel about and report upon places where there are openings for trade, &c. - - 28,001–6

Thinks that it is desirable that there should be cordial relations between merchants, chambers of commerce, and the Foreign Office - - - - - - 28,007

Traders are encouraged to come with suggestions, &c. to the Foreign Office - 28,007

Thinks that the consuls do their duty very fairly - - - - - - 28,028

In some large ports the consuls might with advantage have assistance - - 28,008

Thinks that a British consul ought not to be anything like a mere trading agent - 28,009–10

Sees no objection to consuls sending home samples or specimens of new manufactures - - - - - 28,011

Saw a good many of the consular reports whilst at the Foreign Office - - 28,012–3

Did not form any opinion as to whether those submitted by men appointed after open competition were better or worse than those submitted by men who had been nominated - - - - 28,014

Thinks a little more might be spent on the consular service, but a great increase is not necessary - - - - - 28,015

There might be some advantage if the political clerks passed through the commercial as well as the librarian's department - - - - - 28,020

Ministers abroad send reports at their discretion - - - - - 28,039–41

Occasionally they send newspapers, but not to a large extent - - - 28,042–4

On first appointment attachés are unpaid for two years - - - - - 28,045–7

Salary of a young diplomatist on first appointment - - - - - 28,048–51

There is a pretty frequent change in consular stations - - - - - 28,052

Depending chiefly upon the commercial importance of the place - - 28,053–4

Any representation from chambers of commerce advocating the opening of a new consular station would be considered - 28,05–75

The question of amalgamating the diplomatic service with the Foreign Office service was mooted before the House of Commons Committee in 1871 - - 28,058

Foreign Office clerks are sometimes temporarily employed abroad - - - 28,059–60

Is inclined to think that this possibility of interchange is not sufficient - - 28,062

The necessity of having private means is one of the elements which causes the diplomatic service not to be so intellectually capable as the Foreign Office service - 28,063

But the work of the Foreign Office and living at home is preferred by many - - 28,064

Some of the ablest Foreign Office clerks have interchanged of late years - - 28,065–6

In some cases the secretaries of legations and embassies live at the embassy houses 28,067–8, 28,071

The cost of living is an argument used in enforcing the property qualification - 28,069–70

Thinks that just as good men are obtained for the Foreign Office by limited competition as would be obtained by open competition - - - - - 28,073

And there are reasons for maintaining the present system - - - 28,073

Thinks an examination of the same character should apply to both the diplomatic service and the Foreign Office - - - 28,074

Does not think the Foreign Office examination lends itself to cramming more than any other Civil Service examination - 28,075–6

Would like to see the nominations by the Secretary of State given rather more freely - - - - - 28,078

The advantage of nomination is that you leave the Secretary of State some discretion - - - - - - 28,078–9

Whilst at the Foreign Office did not see much of the work of those who had just joined - 28,080–3

Thinks the period during which attachés serve at the Foreign Office might be increased to a year - - - - 28,084–5

Never heard any complaints from traders as to the hours of attendance at the Foreign Office - - - - - 28,086

There may be reasons for keeping the chief clerk's department distinct from the political departments - - - 28,091–2

It would be better to have more interchange of clerks in the other departments - 28,092–3

There may be some advantage in the Chinese and Japan consular service being under the commercial department - 28,094–5

Thinks that reports from the diplomatic service on financial and commercial subjects should be insisted on rather than encouraged - - - - - 28,096–102

The India and Colonial offices would probably communicate reports on trade to the Board of Trade rather than to the Foreign Office - - - - - - 28,104–8*a*

There are cases in which consuls have received honorary rewards - - - 28,113–4, 28,116

There is more disposition now to recognise the work of consuls and treat them as equals - 28,115

Does not think it would be desirable to make frequent changes between the diplomatic and consular services - - - 28,117

On the whole it would be better to appoint consuls after examination and expect them to qualify themselves for their work - 28,119–20

A consul should help traders generally, not one particular firm - - - 28,122–4

It would be a good thing to establish museums for the display of samples - 28,125

But Parliament should not make a contribution towards them - - - 28,120

Does not see the necessity for the appointment of consuls general to overlook the general consular work - - - 28,127

Does not think that all the reports on financial and commercial matters are printed - 28,131–3

A question such as bi-metallism would be a secretarial, not a commercial, report - 28,134–5

Summary of Evidence.

Mr. GIFFEN

Assistant Secretary, Commercial Department, at Board of Trade - - - 28,137–8
Points where the Board of Trade and Foreign Office come into contact - 28,139–40, 28,145–6, 28,156–7
In 1872 an officer was appointed at the Foreign Office to take the initiative in commercial negotiations which had hitherto been taken at the Board of Trade - 28,139
At this time the statistical and commercial departments at the Board of Trade were amalgamated - - - - 28,139
Consuls transact a large business with the Board of Trade in connexion with shipping 28,139
On this subject the Board of Trade corresponds direct with consuls all over the world - - - 28,139, 28,182–4
Where questions of discipline and principle arise, a correspondence must necessarily go on with the Foreign Office - - 28,139
All this work goes on very satisfactorily indeed - - - - 28,139
Another point where the Board of Trade is in contact with the Foreign Office is the compilation and publication of foreign tariffs - - - - 28,140
This is done, as it always has been done, by the Board of Trade - - - 28,139–40
A great amount of information respecting foreign tariffs is published in the Board of Trade Journal - - - 28,140
The Foreign Office supplies a good deal of the material which the Board of Trade works up for publication - 28,140, 28,142–3, 28,188–94
But by no means the whole of such material 28,140
The Board of Trade would like to get more information from the Foreign Office than they do - 28,140–1, 28,145, 28,195–6, 28,204–8
Either through the consuls or the secretaries of legations - - - - 28,141
And to get it quicker - 28,141, 28,144–5, 28,195–6
The Board of Trade also comes into contact with the Foreign Office in the compilation and publication of foreign trade statistics - 28,145
The trade statistical information, necessary for this compilation comes very partially through the Foreign Office - - 28,145
Has no suggestion to make on this point, as the sources of information of the Board of Trade are, and must be, independent of the Foreign Office - - 28,145
The next matter in which the Board of Trade comes into contact with the Foreign Office is with reference to the Board of Trade Journal - - - - 28,145
But the Board of Trade is not exclusively dependent upon the Foreign Office for the information published therein - - 28,145
Would like to get more information from the Foreign Office - 28,146, 28,148–55, 28,204–8
In the present number only about five pages are derived from the Foreign Office - 28,145–55
Believes that there will be an improvement in this respect in future - - 28,156
The Board of Trade give advice to the Foreign Office with regard to the negotiation of commercial treaties - - - 28,157
Thinks that it would be desirable if the Board of Trade could receive communications on such subjects rather earlier then they do - 28,157
The elements of a good practice exists, and only want a little extending - - 28,157–61
Believes that this is the opinion of the Foreign Office also - - - - 28,161
The arrangements between the Board of Trade and the Foreign Office are in principle quite satisfactory - - - 28,162
On the subject of commercial museums the two offices are entirely at one - - 28,163–4
Does not favour the grant of Imperial money for this purpose - - - - 28,213–5
A proposal has been made to publish the tariffs of foreign countries in four or five languages - - - - - 28,164–6
Witness pays a good deal of attention to the consular reports - - 28,167
Thinks that it would be desirable if Board of Trade were able to employ their own printers - - - - 28,168, 28,197–8
In the case of very short reports published by the Foreign Office, thinks that it would be better if they were published in the Board of Trade Journal - - - 28,169–73
Thinks that there has been an improvement in the consular reports during the last 20 years - - - - - 28,174
Those on special subjects are often admirable - - - - - - 28,174–8
But a good deal of compression could probably be applied to the annual reports - 28,176–7
They are apt to get into too much of a rut - 28,178
Would not be inclined to say that the reports of any other country are superior to our own - - - - - 28,180, 28,210–2
Reports are published with sufficient quickness - - - - - 28,181
Does not think that there is any duplicate work at the Board of Trade and Foreign Office - - - - - 28,185–6
The Commercial Department at the Board of Trade is for the publication of information - - - - - 28,187
The Commercial Department at the Foreign Office is one for negotiating commercial treaties - - - - - 28,187
The Board of Trade Journal is circulated largely to chambers of commerce and mercantile men - - - - 28,197
Some copies are circulated gratuitously - 28,199–201, 28,203
It has a very fair circulation by payment - 28,202
Consular reports are received from the Foreign Office sometimes in manuscript and sometimes in print - - - 28,216–7
A consul would report on commercial and political matters in separate despatches - 28,219

Sir T. SANDERSON.

Assistant Under Secretary of State at the Foreign Office - - - - - 28,220–1
The American and treaty departments are specially under witness - - - 28,222–3
The management of the staff rests with the Permanent Under Secretary - - 28,224–5
Agrees with the evidence given by Sir P. Currie as to the staff of the office - - 28,226–7
Has not seen much of the work of lower division clerks - - - - 28,228, 28,280
Does not think that in the treaty department fewer clerks of the higher class would suffice - - - - - 28,230, 28,282
In the political department the staff ought to remain in much the same status as they now are - - - - - - 28,231–3
The consular service in China, Japan, and Siam is in witness's department - - 28,234
Believes it to be an efficient service - 28,235–8
Appointments to it are made by open competition - - - - - - 28,239–40
As a rule, a man once appointed is not transferred to another branch of the consular service - - - - - - 28,241–2
The consular service in the Levant has been recently remodelled on a somewhat similar basis - - - - - - 28,243–6
These services are expensive - - 28,247, 28,389
Theoretically, it would be desirable if the rest of the consular service were more graded than it is, so as to provide for more promotion - - - - 28,248, 28,396
But there are great difficulties in detail, partly on account of expense, and partly on account of the dissimilarity of the requirements of the different posts - 28,248, 28,250
When a vacancy occurs, the Secretary of State always considers the claims to promotion of officers in the service - 28,248–9, 28,252
Certain consulates are considered the prizes of the service - - - - - 28,251

SIR T. SANDERSON—*cont.*

The Secretary of State appoints whom he pleases to the service - - 28,253, 28,404–5
Subject to the limits of age—25 to 50 - 28,254–5, 28,404–5
If the expense were sanctioned, another set of consulates might be arranged on a system similar to the China and Levant services - - - - - 28,256
But some consulates, such as Samoa, would have to be left outside this - - - 28,256–7
This scheme would involve paid vice-consuls, and would be expensive - - - 28,258
Does not think that sufficient reasons for the change could be shown to induce the Treasury to authorise the expenditure - 28,259–61
Thinks the country is efficiently served by the existing service - - - - - 28,262
It would perhaps be well if vice-consuls, serving under consuls or under consuls-general, could have more assured prospects of promotion - - - - - 28,262–6
Every facility should be afforded for transferring men from the diplomatic service to the Foreign Office, and *vice versâ* - - 28,267–8
There would be difficulties in absolutely amalgamating the two services - 28,267, 28,274–8
In some foreign countries the two services are identical - - - - - 28,269–72
Does not believe that there is a great difference in the ability of the men in the diplomatic service and in the Foreign Office - - - - - 28,273
Men entering the diplomatic service are required to have about 400*l.* a year, of their own - - - - 28,276–8, 28,381–4
Does not see how the diplomatic and consular services could be more amalgamated - 28,279
Thinks that the supplementary clerks in the Foreign Office are necessary - - - 28,280–3
They have a greater knowledge of languages than the lower division clerks - - 28,284–9
If lower division clerks were reported fit they might take the place of some of the supplementary clerks - - 28,290–2, 28,300–3
The supplementary clerks are appointed after limited competition - - - - 28,293–8
They receive smaller salaries than the political department clerks - - - - - 28,299
Does not think there would be much advantage in passing clerks through the chief clerk's, librarian's, and treaty departments, so that they might learn the work of each 28,304–6
But would not prevent transfers, which occasionally now take place - 28,307–8, 28,311–2
There might be some advantage in passing clerks through the treaty, librarian's, and commercial departments - - - 28,309–10
Unpaid consular officers are allowed to trade 28,313–5
Extent to which the consular service is at present graded - - 28,316-24, 28,349–51
A consul who had distinguished himself would have a probability of promotion - 28,325–6, 28,385, 28,390–5
The junior diplomatic service is distinctly graded - - - - - 28,327–30
To so grade the consular service as to enable men to go forward by increments of salary would imply a great change - - 28,332–3
In most cases it would be better to have paid consuls, were it not for the expense - 28,334
It would involve great expense to make all the unpaid consuls paid - - 28,336–44
In the United States the proportion is 15 paid to 22 unpaid - - - - 28,335
Generally speaking, the unpaid consuls do fairly well - - - - 28,345
If an unpaid man were not doing well he would be replaced by someone else - - 28,346–8
It is the practice to transfer consuls from place to place - - 28,350–4, 28,363–5
Though some consuls always remain in one place - - - - - 28,352
Occasionally consuls are appointed without examination - - - - 28,355
As a rule, a good class of men is appointed - 28,356–61
It is difficult to provide a better system of promotion than now exists - - 28,362–4
Does not think that any disadvantage results from the China consular service being under witness's, instead of under the consular, department - 28,366–71, 28,377–80
The China consular reports are sent to witness, who prepares them for publication, but the final steps are taken by the commercial department - - - 28,372–6
There is no bar to a consul in the Turkish service being promoted to another branch of the service, or *vice versâ* - 28,386–9, 28,402–3
Is satisfied with the results of open competition for the China and Levant services - 28,397–401
Is rather in favour of open competition, but it is difficult to contrast the two modes of entry, as the Levant service was so recently established - - - - - 28,399–401

MR. LAW.

Was appointed two-and-a-half years ago commercial attaché for Russia, Persia, &c. - 28,407–9, 28,609
His duties are to collect information, and to attend to special commercial questions - 28,410–11, 28,628–30
He travels about for this purpose, but his headquarters are at St. Petersburg - 28,410–12, 28,497–500
He sends in reports when he has sufficient information to justify him in doing so - 28,413
Ordinary commercial matters are treated locally by a consul, but matters are constantly cropping up which require action at the embassies - - 28,413, 28,435, 28,628–30
The district he is in charge of is so immense that it is impossible for him to do all he ought to do - - 28,414–6, 28,498, 28,501–10
He has never yet been to Smyrna, the Levant, or the Persian Gulf - - - 28,416
His duties have never been specifically laid down - - - - - 28,417
Thinks that it is essential that a consul should know the language and the habits of the people of the country in which he is serving - - - 28,418–9, 28,611
Therefore it is a misfortune that consuls are shifted promiscuously from one part of the world to another - - - 28,418
But it is necessary to move them to provide for promotion - - - 28,419, 28,423
Does not think that the appointment of consuls should be absolutely only by examination - - - - - 28,612
Would not definitely appoint a consul who did not know the language of the country to which he was to go - - - 28,614
Does not think that the question of age much affects this point - - - - 28,613–5
The system in China and Japan appears to work well - - - - - 28,419
And might, broadly speaking, be applied to the rest of the service - 28,616, 28,618–22
Countries should be grouped, and promotion take place in each group - 28,419, 28,423–4, 28,484–90, 28,610–1
In South Russia the Russian language is necessary - - - - - 28,420
But in North Russia, German is sufficient - 28,420
The Black Sea, South Russia, the Caucasus, Persia, and Turkey, could be advantageously grouped together - - 28,422
Thinks the country is exceedingly well served by the consular service - - 28,424
The consular reports are sent to witness as they are printed - - - - 28,425–6
They are often of great value - 28,425–7, 28,640–3
And contain full information as to tariffs - 28,644–6
The chambers of commerce do not sufficiently make known what information they want - 28,429–30, 28,494–6

Summary of Evidence.

Mr. LAW—*cont.*

Witness has no jurisdiction over the consuls - - - - 28,431–4
But they are most willing to collect information for him - - - 28,434. 28,475–6
Mr. Crowe is commercial attaché for those parts of Europe with which witness does not deal - - - 28,436–9, 28,448
Does not think that a sufficient number of commercial attachés would ever be appointed to cover all the ground, because of the expense 28,440
Therefore would suggest that money allowances should be given to diplomatic secretaries for acquiring commercial knowledge 28,440, 28,444–7
They should also either pass through the Foreign Office Commercial Department, or work in a large consular office - 28,441, 28,647
A very limited number of roving commercial attachés would then be sufficient - 28,444
When witness is moving about there is no one at headquarters to whom he can specially refer - - 28,444–7, 28,459–60, 28 648–51
In some important places thinks that England is not properly represented by consuls, the money allowed not being sufficient - 28,449–57, 28,511–3, 28,523–7
Diplomatic secretaries have not, as a rule, had any experience of commercial work - 28,461, 28,648–51
Though they occasionally send home reports on subjects connected with commerce - 28,462–7
If attachés were attached to the commercial department of the Foreign Office they should serve there at least a year - 28,471–3
Some would gain a great deal; some nothing at all - - - - - 28,468–70
Does not think that in the entrance examination there should be any test of commercial knowledge - - - - - 28,474
The relations between the commercial and diplomatic services are very satisfactory - 28,476
Consuls have no means of knowing whether their reports are approved of - - 28,476–8
Has seen something of the Turkish consular service - - - - - 28,479–80
Thinks that a consul appointed under the Turkish system furnishes better reports than an ordinary commercial consul - 28,481–3
Witness is greatly dependent on the consuls for local information - - 28,491, 28,514
But in most places in Russia has connections of his own - - - 28,528–30
Prefers a collection of samples constantly changing, to a commercial museum - 28,493
Witness was 13 years in business - 28,516, 28,519–22
And was previously in the Army - - 28,517–8
When visiting any place would see all the traders, and hear whether they had any complaints to make - - - - 28,530–40
There are not many Russian merchants who have English connexions - - - 28,541–2
And outside of St. Petersburg there are not many English merchants properly so-called - - - - - - 28,543–5
Salary, &c. of consul-general at Odessa as compared with the German consul-general 28,546–55
The allowance of 30*l.* a year given at Cronstadt is sufficient - - - - 28,556–60
Witness reports to the Ambassador at St. Petersburg - - - - - - 28,564–5
The consular department at the Foreign Office would look after the varying importance of different ports - - - 28,566–71
In Russia some of the English vice-consuls are Russian subjects, and are traders - 28,572–4
They receive no salary - - - 28,575–6
They know the language, the wants, and the trade of the country - - 28,577–80, 28,583
But they are afraid of their own Government, which makes them not fully satisfactory - 28,580–2
Every consul is obliged to make an annual report on the trade of his district - - 28,584
Native vice-consuls receive their appointments from the consuls - - - 28,585–7
The consuls cannot oblige the vice-consuls to send in reports - - - - - 28,588
The vice-consuls are useful in smoothing difficulties with local authorities, and matters of that sort - - - 28,592–5
The Germans largely employ commercial travellers - - - 28,596–9, 28,602–3
More might with advantage be done in this way by English merchants - - - 28,600–3
Witness sent home a collection of samples of textiles, but never heard whether it was cared for by chambers of commerce, &c. - 28,603–4
Witness never served in the Foreign Office - 28,607
The unpaid consuls may be often better than the paid, because they are practically in business - - - - - - 28,624
An unpaid consul cannot be forced to draw up a report - - - - - 28,625
And very few do so - - - - - 28,626–7
But they personally give good information when asked to - - - - 28,626
Witness has nothing to do with the Board of Trade - - - - - - 28,631–2
Is perfectly satisfied with the way his reports are treated - - - - - 28,633–4
Considers that it would be his duty to report if he found that our trade was suffering from want of a consul or vice-consul - 28,637–9
But not in the case of a place where a vice-consul might be dispensed with - - 28,635–8
Does not think that the French or Germans have any officer corresponding to a commercial attaché - - - - - 28,653–4
Thinks that a German consul, in a local business question, will do for a German trader what an English consul will not, and should not do - - - 28,655–7, 28,661
An English consul can help a trader by giving him general information and assistance - - - - - - 28,658–60

Mr. DAVIDSON

Is legal adviser to the Foreign Office - 28,663–5
Was appointed in July, 1886 - - 28,664
In consequence of the recommendations of a committee - - - 28,666–7, 28,697
When questions are referred to the law officers, witness draws the reference 28,668, 28,671–4, 28,711
But settles the great majority of cases himself without reference to the law officers - - - 28,668–70, 28,693–4
The ultimate decision whether a case should be referred to the law officers rests with the Secretary of State - - - 28,674
Witness has a great deal of heavy and responsible work - - - 28,675–7
And has no department to help him - - 28,678
There is no other legal official of any kind in the Foreign Office - 28,678, 28,689–91, 28,705
In 1876 Sir J. Pauncefote was appointed Legal Assistant Under Secretary - 28,678, 28,681
And continued to discharge the legal duties after he became Permanent Under Secretary 28,686
He has now gone to Washington, and has been succeeded by Sir P. Currie, who is not a lawyer - - - - - 28,678
Does not think that the arrangements for the discharge of the legal business in the Foreign Office are so complete as in other Secretary of State's offices - 28,679, 28,687
Witness has more to do than he can satisfactorily get through - - 28,680, 28,688
Believes that he does in the Foreign Office practically what Legal Assistant Under Secretaries do in other offices - 28,683–5, 28,695
But is not a Legal Assistant Under Secretary either in rank authority, or pay - 28,685
Believed when he took the appointment that there would be always two legal officials in the office - - - 28,686, 28,698–9
And that, when Sir J. Pauncefote left, either his successor or one of the Assistant Under Secretaries would be a lawyer - - - 28,686
The legal work at the Foreign Office has greatly increased of late years 28,695

MR. DAVIDSON—*cont.*

Does not sign letters, or communicate officially with anybody of his own motion - 28,700–1
Cannot recollect any case in which an Under Secretary has not accepted his opinion upon a legal point - - - - 28,702
The legal work of the Foreign Office is more difficult and heavier than that in the Colonial Office - - - - 28,704
Nature of the questions that are referred to witness - - - - - 28,706–11
They are very numerous, very varied in character, and involve questions of difficulty and importance - - - 28,712–3

SIR CHARLES DILKE.

Was Under Secretary of State at the Foreign Office from April 1880 to December 1882 - 29,018
Considers that it would be desirable to amalgamate the Foreign Office, diplomatic, and consular services - - 29,020, 29,166–7, 29,214
Would treat the diplomatic and consular services as the Foreign Office abroad, and the Foreign Office as the diplomatic and consular service at home - - - - 29,020
Men should go backwards and forwards from one to the other - - 29,020, 29,061, 29,210
That is the case with most other countries, especially France - - 29,020, 29,061
The consular service, with few exceptions, should be a paid service - 29,021, 29,186–7, 29,225–8
There are very few men in the Foreign Office who would not have sufficient income to live abroad, if they lived carefully - - 29,022
Thinks that there is a good deal of exaggeration as to the amount of income necessary for a man to live abroad - - 29,022, 29,199–202
Doubts the necessity for the condition requiring men entering the diplomatic service to have a private income of their own - 29,023
The French have a similar condition, but it is never acted on - - - 29,023
In the French Foreign Office they make more use of unpaid attachés - - 29,024
Generally speaking, a few unpaid men might be employed if it is considered necessary to have as large a staff at our embassies as there is at present - - 29,024, 29,035–41
In the French consular service the salaries are calculated purely on the cost of living at each place - - - 29,025, 29,078
Thinks that a saving might be made by reducing the staff of our embassies - 29,026, 29,043, 29,056
There is not work in the embassies for the number of men employed there - - 29,026–9
As regards lower division clerks, is personally opposed to the existence of clerks of different kinds - - - 29,030–2, 29,168–9
But if lower division clerks are maintained, they could be more largely used in the Foreign Office than at present - 29,033, 29,141, 29,174
About one-third of the work done in the political departments is non-confidential - 29,141
This might be done by a non-confidential department manned entirely by lower division clerks - - - 29,141, 29,174
But if this work was taken away from the political clerks, they would at times have little to do - - - - - - 29,141
It is necessary to have the Foreign Office overmanned for its daily ordinary work, because of the pressure of work that constantly arises suddenly - - - 29,141
Doubts whether it is practical or convenient to attach lower division clerks to departments, making them work in separate rooms - - - - - - 29,142
In the Librarian's department, after four or five years, lower division clerks see confidential papers - - - - - 29,143
It is very undesirable to set up artificial rules with regard to secrecy as between one class of clerks and another - - 29,149
Is opposed to a suggestion that has sometimes been made to establish in the Foreign Office a separate political room as a sort of intelligence department - - 29,151–4
Does not think that the Foreign Office is overmanned - - - - - 29,144
The hours must be different from those at other offices - - - 29,145–6, 29,256–8
Thinks that in all branches of the service less regard should be paid to seniority in promotion and more to merit - 29,154–7, 29,175
Thinks that some ambassadors carry on their work too much by private letters to the Secretary of State - - - - - 29,158–65
The library, the chief clerks, and the treaty departments, if the latter was confined to mere treaty work, might be treated as separate offices, with a different staff of clerks to those employed in the political departments - - - - - - 29,170–2
Thinks that the bar between the two classes of clerks must act prejudicially - - 29,188–92
The maintenance of the third class—the supplementaries—at the Foreign Office is a needless complication - - - 29,193–5
Would have only one examination for the Foreign Office, diplomatic, and consular services - - - - - - 29,033
One advantage of amalgamation would be that it would give an inducement to young diplomatists to work, by affording more prospect of promotion - - - 29,034
If amalgamation took place, would not make it an absolutely close service, but would retain the power of bringing in outsiders - 29,041
But would hope that this power would only be acted on in rare cases - - 29,042
Money might be saved by the abolition of certain posts - - - - 29,043
But at some places the pay of the head of the mission is not sufficient - - 29,043
For instance, Washington should be made an embassy - - - 29,043, 29,181–2
On the other hand, the importance of Vienna, Rome, and Constantinople has declined - 29,043
Thinks that the representation at the smaller German Courts should be altogether abolished - - - - - 29,043–9
The most important places now appear to be Washington, Berlin, St. Petersburg, and Paris - - - - - 29,049
Thinks that it is not necessary to keep so large a staff at Paris as at present - 29,049–51
Cannot give any information as to the real value of the ambassadors' salaries at Paris and Berlin respectively - - 29,052
Does not think that any ambassador can save from his salary, except possibly at Constantinople - - - - 29,053
Does not think that, except in very distant places, it ought to be understood that an ambassador should entertain those who bring letters of introduction - - 29,053
Some reduction in salaries might be made at Vienna and Rome - - - 29,054
At Constantinople it might be difficult, as there are expensive houses to be kept up - 29,054–5
The cost of entertainment, &c. is partly the cause of the high salaries of ambassadors, &c. - - - - - 29,057–9
Sees no reason why virtually there should be two heads to a mission - - - 29,059
A consul-general or a commercial attaché might take the place of a head of a mission when he is absent - - 29,059–60
In some places consulates might take the place of missions - - - 29,061
At the present time some men have passed from the consular to the diplomatic service 29,063–4, 29,081

Summary of Evidence.

SIR CHARLES DILKE—*cont.*

And from the diplomatic service to the Foreign Office - - - 29,211-2
One advantage of amalgamation would be that the consular department of the Foreign Office would be worked by men understanding the consular work - 29,064
At the present time there is nothing to prevent the Secretary of State from misusing his consular patronage - - - 29,064
Thinks that it is necessary to maintain the separation between the Foreign Office and the rest of the Civil Service - - 29,064, 29,167
Believes that if there was open competition for the Foreign Office, foreign Governments would place men there - 29,065-6, 29,177-8
But is in favour of limited competition - 29,179-80
The standard of examination for the Foreign Office is very high - - 29,067, 29,196
But for the diplomatic service it is nothing like so high - - - 29,067-8, 29,197
Does not think that this is due to the property qualification - - - 29,198-9
Sees no objection to a rule that a certain number at least should be sent up to compete for the Foreign Office - - 29,067-72
In France, after appointment, men pass three years in the Foreign Office - - 29,073, 29,079
Two years in the political and one in the commercial section, or *vice versâ* - 29,073, 29,079
At the end of three years they pass a further examination - 29,073
And either become paid attachés in the Foreign Office, third secretaries of embassies, or vice-consuls - - - 29,073
They have a choice of the various services according to vacancies - - 29,074
They know that they will probably change two or three times during their career 29,074, 29,234
There is a power in France to bring men straight into the service without examination, but it is not exercised to a large extent - - - - 29,074
When a man has entered the consular service there is a free exchange - - - 29,075-6
Men are discouraged from remaining a long time in distant consulates - - 29,076-7
The French do not employ any clerks answering to lower division clerks - - 29,079
But the Germans employ ex-non-commissioned officers - - - 29,079, 29,150
The French seem to have more consuls-general and fewer heads of missions than we have - - - - 29,081
Instances of transfers in the French service from the consular to the diplomatic branch, and *vice versâ* - - - 29,081-2, 29,086
Does not know what is the French system in regard to reports on the efficiency of men in the service - - - 29,083
In England there are no formal reports, but there probably are virtual reports in private letters - - - - - 29,083-5
Thinks that under the French system there is more inducement to work with spirit and zeal - - - - 29,086
Has not heard more complaints from French merchants of their consuls than from English merchants of ours - - 29,087
It is difficult to compare in detail the allowances given to our ambassadors and to those of Foreign Powers; for instance, it is difficult to compare the cost of housing - 29,096-29,100, 29,104-5
To compare the cost of the various services of different countries, the various votes—Foreign Office, Consular, Embassy Buildings—should be added together - - 29,087-8, 29,100, 29,106
Does not know what the system of pensions is abroad - - - - 29,089-92
The total cost of the French services appears to be slightly larger than ours - - 29,093
Believes that in France there is 100,000*l.* voted for secret service, of which 28,000*l.* is given for the foreign service - - 29,094-5
It is difficult to compare the cost of the consular service of France with our own, because consular and diplomatic services are so much mixed up together - - 29,107-9
The French have not many unpaid vice-consuls - - - - - 29,110-1
In some cases French consuls are more diplomatic than commercial - - 29,184
Higher salaries abroad are much lower than ours, but lower salaries are larger 29,112-9, 29,121-2
Does not think that on an average the French ambassadors are so rich as the English - - - - - 29,120
But the Germans and Russians have employed men of great wealth - - 29,120
The French and Germans employ on their messenger service men on much lower salaries than we do - - - 29,122
They are thoroughly trustworthy and confidential, but they are not gentlemen - 29,123
Thinks that the Queen's messenger service should be filled by men of this sort 29,124, 29,129-33
Who should be most carefully selected - 29,124, 29,129, 29,138-40
It is absolutely necessary to maintain a Queen's messenger staff - - 29,125-6, 29,135
Letters cannot be sent in cipher because it is such a slow process - - - 29,127-8
Thinks that the "Cabinet print" is dangerous - - - - 29,133-4
Believes that the Russian messengers travel more than our Queen's messengers - 29,136-7
Men could be found on the consular staff who would be most useful in commercial negotiations - - - - - 29,205-6
In the event of complete amalgamation of the services, thinks that some of the consulates would be in demand among the men who thought they had no great future before them - - - 29,208-10
Some revision of consular salaries would have to be made - - - 29,211
Does not see the necessity of a "ladder" in the consular service - - - 29,216
A consul holding one of the best posts would, if the services were amalgamated, look for promotion to the Foreign Office or diplomatic service - - - 29,217-20
The China and Levant consular services for reasons connected with languages might, to some extent, have to be kept distinct - 29,221-4
There are not the same chances of coming to the front in the consular service as there are in the other two services - 29,229-30
But if consuls were employed in diplomatic work they would have a better chance of becoming known - - - - 29,231-4
If all the consular service was graded on the same system as the China and Levant services, the cost would be very great - 29,237-8
The best consulates are much sought after at the present time - - - 29,239
The best way to bring about amalgamation would be to do it gradually - - 29,240
Does not think there would be any difficulties of etiquette in bringing in men to the diplomatic from the consular service - - - - 29,241
Would not lay down an absolute limit of age for the whole service - - - 29,242
To some extent the French have a system of grouping their consulates, &c. in countries speaking the same language - - 29,243-4
Does not think that there is sufficient commercial business, other than consular, performed at embassies, &c. to justify one secretary being specially told off to attend to it - - - - - 29,245
Believes that the Foreign Office is increasingly anxious to make its diplomatists help traders - - - 29,246, 29,260-1
But doubts the success of the German experiment in trying to make their consuls push trade - - - - - 29,246-7
The consular reports are improving - 29,248-9
Lower division clerks might be employed on non-confidential work abroad - - 29,250-1
Too much work at the Foreign Office goes to the Secretary of State and Under Secretaries - - - - 29,252
Too many papers are printed at the Foreign Office for Parliament, &c. - - - 29,253-5

Mr. HOWARD.

Secretary of Legation at Pekin - - 29,263-7
Does not think that the complete amalgamation of the Foreign Office and the diplomatic service is feasible - - 29,268, 29,457
It might answer in the lower grades, but not in the higher - - 29,269, 29,276-8, 29,457
At the present time there is a good deal of interchange between the two services - 29,275-8, 29,454-6, 29,465-71
No man ought to serve abroad unless he has at least 400*l.* a year - 29,271-2, 29,392, 29,463-4
The social duties abroad entail expense - 29,273-4
The constant changes from place to place also make the service very expensive - - 29,279-80
Has never had any experience of unpaid honorary attachés, but would think that their employment was desirable - - 29,281-3
Has never served at an embassy - - 29,284
Does not believe that the staff at embassies could be reduced - - - 29,285
Knows a good deal about the China consular service, which is a satisfactory one - 29,286-7, 29,326
Has recently made a report upon it - 29,287-9
Does not think that the diplomatic and consular services could be amalgamated - 29,291, 29,440, 29,462
Does not think that the amalgamated system in France answers - - - 29,292
The men are taken from such very different classes - - - - 29,293
A different kind of man is wanted in diplomacy from what is wanted in the consular service - - - 29,294
The Secretary of State can now appoint a man in the diplomatic service to a consulate if he pleases - - 29,295-6, 29,299-301
As a rule in the consular service a man wants a salary to live upon, but not in the diplomatic service - - - 29,297
There are instances of men being brought into the diplomatic service from the consular - - - 29,302-4, 29,461
In China the consular and diplomatic services are perfectly separate - - 29,305-6, 29,311
But the consuls are political officers and judges - - - - 29,307-10
Thinks that it is almost an advantage for diplomatic officers in China not to know the language - - - - 29,312-20
The men in the consular service must know it - - - - - 29,311, 29,318, 29,441
Two ministers in China were appointed from the consular service - - 29,324-5, 29,434
Believes that the consular service generally is very satisfactory - - - 29,327
Men in both the diplomatic and consular services have to entertain largely - 29,328-32
Thinks that the Americans would like Washington to be made into an embassy - 29,333-6
It would not make any practical difference as regards the actual duties, &c. - 29,335-6
But an ambassador would not take charge of a legation, so that the field of selection is limited - - - - - 29,337-40
Sufficient provision is not made in the Diplomatic Pensions Act for first secretaries - 29,341-52
The result is that they do not retire - 29,342-3
There should be a specified time after which a man might take his pension - - 29,348
The diplomatic service ought to be put under the unhealthy climate system - 29,349-51
This applies at present to the consular service only - - - 29,366-7, 29,369
Does not think that the scale of pension in the diplomatic service is much higher than in the consular - - - 29,368
Has had experience both in the Foreign Office and abroad - - - 29,354
The system of dealing with papers is much the same in both cases - - - 29,355
Thinks that clerks such as the lower division would do very well in part of the Foreign Office - - - - 29,357, 29,364
But does not think that their employment abroad would answer - 29,356, 29,358, 29,474-5
A permanent chancelier might be useful in some places - - - - 29,476
Mode of dealing with papers, &c. in embassies, &c. abroad - - 29,539-62, 29,477-80
Thinks that the clerical arrangements are satisfactory - - - - 29,363-5
And that the English diplomatic service is quite equal, as regards knowledge of languages, to any foreign service - 29,373-7
China is quite exceptional - - 29,378
And a completely separate consular service is required there - - - 29,379
It is better not to keep a diplomatic officer too long in China - - - 29,380
In China, men of the consular service act as interpreters - - - - 29,382-5
They are perfectly competent and satisfactory for all diplomatic purposes - 29,386-7, 29,429-33
Junior men in the diplomatic service of foreign countries receive much the same salaries as in the English service - - 29,393
Does not think the expense of the diplomatic service could be reduced - - - 29,394
Does not believe a British Ambassador, &c. ever saves money - - - 29,395
Believes that foreign ministers are paid extra for official entertainments given by them - - - - 29,395-400
The Austrians and Germans employ more unpaid attachès than we do - - 29,401-2
One reason why the scale of salaries paid to our diplomatic service is higher than those of other nations is the expense of entertainment - - - 29,404-11
Does not think that the ambassadors of foreign countries are paid much less than ours - - - - 29,413-7
Consuls as a rule have not the training necessary for social duties abroad - - 29,423-5
There is no regular interchange between the diplomatic and consular services - - 29,435-9
And witness is not in favour of it - - 29,440
Does not think that there would be any advantage in transferring the control of the China consular service to the consular department of the Foreign Office - - 29,442-6
Thinks that the Chinese commercial reports are as good as the other commercial reports - - - - - 29,447
And that the consuls are doing all they can - - - 29,448-51, 29,453
But they would be no good in the diplomatic service - - - - 29,452
A consul might be useful in the commercial department of the Foreign Office - 29,458-60
Witness has never served in the commercial department of the Foreign Office - 29,481
An attaché has an opportunity of learning about commerce abroad - - - 29,482-3
But of course the commercial business is principally in the hands of the consuls - 29,484-5
If a legation has to report on a commercial subject it is usually the first secretary's duty to do so - - - 29,489
He obtains the necessary information either from the consuls, or through the commercial department of the country - 29,490-2

Mr. FANE.

Is secretary of embassy at Constantinople - 29,497-500
The examination for the diplomatic service is not so difficult as for the Foreign Office, because there are fewer competitors - 29,501-2
Only men with a certain income can enter the diplomatic service - - - 29,503
If there were more interchange with Foreign Office clerks, the salaries of the diplomatic juniors would have to be increased - 29,504
Life at an embassy is more expensive than a Foreign Office clerk's life need be - 29,505-8, 29,527-8
A partial fusion of the two services would be advantageous - - - 29,509-10
Witness served for a few months in the Foreign Office - - - 29,511
It would be useful for Foreign Office clerks to see something of the work of the diplomatic service, and *vice versâ* - - 29,512-4

Summary of Evidence.

Mr. FANE—*cont.*

Does not believe that the amalgamation of the consular and diplomatic services in France is carried very far - - 29,515–9
Does not think that an amalgamation of the consular and diplomatic services of England is desirable - - 29,520, 29,595, 29,616
A different class of men is required for the diplomatic service to those who enter the consular service - 29,521–5, 29,555–6, 29,598–600
We have not many political consuls - 29,522, 29,592
It would be undesirable to have in our chanceries abroad persons not belonging to the regular diplomatic service - - 29,526
Believes that, relatively speaking, the salaries of our ambassadors, &c. are not higher than those paid to men of the same rank in foreign services - - 29,529–35
Believes that frequently the cost of official entertainments given by foreign ambassadors are paid by their Government - 29,531–3
The English embassies, &c. entertain a great deal more than the foreign do - - 29,535
The salary of the minister at Washington is now 6,000*l.* a year - - - 29,536–7
It is one of our most important diplomatic places - - - - 29,537–8
An ambassador is put to greater expense in entertaining than a minister - 29,538–9, 29,542–4
The cost of entertainment in Paris is very large - - - - 29,540–1
It would not be possible to have a minister at Paris instead of an ambassador - 29,545
The legation at Washington might be made into an embassy - - - 29,546
To appoint an ambassador to a country instead of a minister is a mark of respect 29,548–9, 29,552
The appointment of honorary attachés is desirable - - - - 29,550–1
Thinks that in places like Berlin and Vienna it would be better to have a British subject as consul if one could be found who would do the work for nothing - 29,557–67, 29,612
But doubts the necessity of having paid consuls in such places - - - 29,565
Has had experience of the consular service in Turkey and the Levant - - 29,568
The head of the chancery at Constantinople has charge of the school of student interpreters - - - - 29,569
Believes that the school is going to be closed for reasons of economy - 29,569–71, 29,575
This school has turned out excellent young men - - - 29,572–7, 29,586
They could not yet have filled the higher consulates - - - - 29,580
The men appointed in this way are quite as good as the ordinary consuls - - 29,584–6
In the East, generally a consul has more chance of distinguishing himself than in other parts of the world - - 29,587–90
To a certain extent, this has a healthy effect upon the service - - - 29,591
The secretary of an embassy reports on the general commercial business of a country - 29,593
The consuls' reports are local - - 29,594
A consular post has the advantage of permanency - - - - 29,596–7
Some of our diplomatic representatives are Consuls-General - - - 29,600–2
Does not think there would be any advantage in giving more political work to the consuls - - - - 29,603–7
Paid consuls are not allowed to trade - 29,609–11
A consul has usually to act on his own responsibility - - - 29,619
A large portion of a young diplomatists' work is of a mechanical character - - 29,617–8
But it improves them and trains them for higher posts - - 29,620, 29,623
And they are occasionally entrusted with tasks of an important kind - - 29,623
In the embassies a second secretary has higher duties to attend to than a consul has - - - - 29,625
Nature of the duties of a second secretary at Constantinople - - - 29,626–9
The work of a consul, though requiring just as much mental power, is of a totally different kind - - - 29,630
He would have nothing to do with our commercial policy with a foreign country - 29,631–4
Though he might be consulted about it - 29,632, 29,636–8
Witness never served in the commercial department of the Foreign Office - 29,639
Thinks that all men in the diplomatic service should pass through that department - 29,640–2
Thinks that the consular service is very efficient - - - - 29,645–7
Thinks that after a man has served abroad in the diplomatic service some 25 or 30 years, he ought to be entitled to claim a fourth-class pension - - - 29,648–57
At present it is optional with the Treasury to grant it or not - - 29,652–4, 29,658
The Secretary of State ought to be the judge, and not the Treasury - - - 29,652–4
The junior members of the service are very inadequately paid - - - 29,653
And the pension is looked forward to as partly compensating for this - - 29,653
No fourth-class pension has been granted since 1879 - - - - 29,659–60

Mr. WARD.

Is consul at Bordeaux - - - 29,661
Has had nearly 30 years' experience in consular service - - - - - 29,662–4
It would be an advantage if consuls after first appointment served in the Foreign Office for about a year - - - 29,665, 29,668
Witness spent about two months there - 29,666–7
Thinks that the examination for consulships is all that is required - - - 29,669
But the qualifications of a consul cannot be well ascertained merely by examination - 29,669
It would be of great advantage if there were a ladder in the service providing for promotion 29,670
But it would be difficult to arrange because the various posts require various qualifications - - - - 29,670–2
The general amalgamation of the consular and diplomatic services is not desirable - 29,673, 29,768–70
Though some amalgamation might take place at large ports where there are legations - 29,673, 29,701
Thinks that in the French service consuls care less about commercial matters than political - 29,674–6
The duties of witness at Bordeaux are not purely commercial - - - 29,677–8
In case of reporting on anything of importance would send his report through the embassy at Paris - - - - - 29,679
During the last few years has had more demands made on him for reports, &c. - 29,680–1
And more applications from English traders for information - - - - 29,682–4
The limits of age for the consular services are 25 to 50 - - - - 29,685
Thinks that 25 is the lowest that should be allowed - - - - 29,686
The commercial attaché in Paris helps the consuls and the consuls help him - - 29,687–9
Believes that most consuls are of opinion that they have hardly sufficient inducements to do exceptionally meritorious work - 29,690, 29,751, 29,766–7
Thinks that a system of personal allowances for rewarding exceptional service would be advantageous - - - - 29,693
Does not think that it is desirable to move consuls from place to place frequently - 29,692–3
Thinks that it would be impossible to group the paid consuls in districts - - - 29,694
Witness speaks both French and German - 29,695–6
It is impossible for a consul to discharge his duty without being familiar with the language of the country in which he is serving - 29,697

Mr. WARD—*cont.*

Thinks that the French consuls he has seen are well qualified for their posts in point of knowledge of law, but not so well in point of languages - - - - - 29,700
The English consul at Paris holds the rank of second secretary of embassy - - - 29,702–4
The expense of living at a place chiefly regulates the salaries of consulates - - 29,705–6
The appointment of consuls is a matter of patronage - - - - - 29,707–8
Consuls hold naval courts under the Merchant Shipping Act - - - - - 29,709–16
But such courts are very rarely necessary - 29,716
As a rule, a consul, after appointment, serves about six months in the Foreign Office - 29,717–20
Thinks that it would be better if he served there before he was definitely appointed - 29,720
As a rule, his instructions come to him direct from the Foreign Office - - - 29,721
He sends reports to, and receives instructions from, both the Foreign Office and the Board of Trade - - - - - - 29,722–3
Does not believe that foreign consuls do more for trade than the English ones - - 29,724–5
Witness passed an examination when he entered the service - - - - - - 29,727
It is a very easy examination - - 29,728–32
The examination is not always enforced - 29,734
But thinks that it ought to be - - 29,735, 29,737
Does not see how consuls could be appointed otherwise than by patronage - - 29 736
Witness served two years in the United States and five years in East Prussia - - 29,738–45
And after that was sent to Bordeaux - - 29,746
If a consul makes a specially valuable report a letter of commendation is written to him by the Secretary of State - - - - 29,748–50
The consular reports are published separately - 29,752–4
The work at Bordeaux is mainly shipping business and notarial work - - - 29,755–6
The recent increase in consular fees has not caused any friction - - - - 29,757
Does not think there would be much advantage in members of the diplomatic service having experience in commercial work - - 29,758–9
Does not think that French consuls are in a better position than English - - 29,760
In the French service there are constant transfers from one branch to the other - - 29,761
The only transfers in the English service are from the top - - - - 29,763–4
A consul does not look forward to a transfer to the diplomatic service - - - 29,765
Witness has never traded - - - 29,771
Believes that the prohibition against paid consuls trading is strictly enforced - - 29,772–3
Never heard complaints of foreign consuls trading - - - - - 29,774–5
Thinks that there should be a uniform scale of pension awarded to all the consuls of the superior grades - - - - 29,778, 29,781
Does not think the pension should be calculated on the salary of the post the consul last quits - - - - - - 29,778–80
Would suggest that after 10 years, in some circumstances, there should be a right to a pension of 100*l.*, to be increased by 15*l.* for each subsequent year's service - - 29,782–5
Believes this would rather decrease the total vote for pensions - - - - 29,783
Believes that a consul now is obliged to retire at 70 years of age, but has a right to retire at 65 - - - - - - 29,786
The provisions as to pensions for unhealthy climates are satisfactory - - - 29,794
Thinks that the German and Russian consuls are superior to the English as regards knowledge of languages - - - - 29,787
But that our consuls are pretty well qualified in this respect - - - - - 29,788
Would not make the examination more stringent in respect of languages - - 29,789–91
All consular fees are now paid to Government 29,792–3
The unpaid consuls generally are ready to help when required - - - - 29,795–6
Would not extend the system of unpaid consuls - - - - - - 29,797–9
Would not give the honorary title of consul or consul-general to trading foreigners - 29,800–2
There should be a distinction between the paid English consul-general or consul, and the unpaid foreign traders - - - 29,803
The unpaid men ought to be all vice-consuls - 29,804

Mr. MOWATT.

The Diplomatic Pensions Act differs materially from the ordinary Civil Service Superannuation Act - - - - - 29,805–6
The amounts of the several classes of pensions are not fixed, the words being, "not exceeding the following amounts" - - 29,806–7
As regards the fourth class, the Treasury have questioned whether, when a medical certificate was not produced, and the officer withdrew from the service, the full amount should be given him - - - 29,807, 29,812, 29,828–31
The Secretary of State has expressed his willingness to consider this point with the Treasury - - - - - - 29,808
No medical certificate is required for a third-class pension - - - - - 29,809
In the lower branches of the diplomatic service, the salaries are low, and practically that is made up by a higher pension on easier terms - - - - - 29,810
From a Treasury point of view this is not satisfactory - - - - - 29,811
The medical certificate required is the same as for the ordinary Civil Service - - 29,813–4
A first secretary comes under the fourth-class pension - - - - - - 29,815
Section 8 of the Act applies to second and third secretaries retiring for ill health on low salaries, and insures them a higher rate of pension than the ordinary Civil Service scale - - - - - 29,816–9
From a Treasury point of view thinks that a medical certificate should be required for a fourth-class pension - - 29,820, 29,822
There may be other considerations affecting men high up in the service - - 29,821
The fourth-class pension might be abolished, and clause 8 made apply to all below the third class - - - - - 29,823–5
A man is eligible for a pension of the fourth class after 15 years from the date of his receiving his first commission, practically 17 years in all - - - - - - 29,826–7
There have been very few pensions granted under section 8 - - - 29,832–5
A difficulty may occur in a man being pronounced unfit to take up an appointment in some climate, and there being no other place open for him - - - - 29,836
If in consequence he has to retire he can be recalled to service - - 29,837–42, 29,852–4
The fourth-class pension has been awarded to men who did not retire on the ground of health or age - - - 29,846–8, 29,850
Speaking from a Treasury point of view this is not satisfactory - - - 29,851
After 15 years' service a man can be retired on a pension in either of the four classes - 29,849
Has no official knowledge of a man in the diplomatic service who has retired on account of ill health working afterwards in the City or elsewhere - - - - 29,855–6
That would be a matter for the Secretary of State to see to - - - 29,857–8
The Secretary of State determines to which class of mission the various embassies, &c. should belong - - - - 29,860–4
Consuls are granted pensions on the ordinary Civil Service scale - - - - 29,865
Certain districts are scheduled as unhealthy, in which cases two years' service counts for three - - - - - 29,866

Summary of Evidence.

Mr. MOWATT—*cont.*

Does not see how a consul's pension could be calculated on any other basis than that of salary - - - - - 29,868–74
The diplomatic pension vote comes to about 24,000*l.* - - - - - - 29,875–8
Comparison of diplomatic pensions with those of the Civil Service generally - - 29,878*a*
The average diplomatic pension is practically equivalent to that of a civil servant of corresponding rank - - - - 29,878*a*
There is no age definitely laid down at which a diplomatic officer can claim a pension - 29,879
It would be desirable to give a right to retire at 60, as in the Civil Service - - - 29,880–2

Mr. BOURNE.

Acting consul on the Chinese coast - - 29,884
Joined the service as a student interpreter - 29,885
Consuls in China have to administer British law - - - - - - 29,887, 29,921
They pass a special examination in law - 29,888
Since 1872 appointments to the China consular service have been made by open competition 29,889
They are examined in England in ordinary subjects - - - - - - 29,890
And are then sent to Pekin as student interpreters to learn Chinese - - 29,890–3, 29,925–6
When a vacancy occurs they are appointed assistants - - - - - 29,895
Their duties are both political and commercial 29,896
29,960
From assistants, they become vice-consuls and consuls - - - - - 29,897
The consular service in China is subordinate to the diplomatic service - - - 29,898
The Chinese secretary and assistant secretaries, who belong to the consular service, are attached to the legation at Pekin - 29,899–903, 29,966
There is an absolute block in promotion - 29,904–6, 29,923, 29,927–8, 29,938–9
Witness has received no promotion for 10 years 29,924
Thinks that promotion should be made after a fixed number of years on the recommendation of the Minister - - 29,907, 29,929–31, 29,939
And that acting appointments as consul or vice-consul should not be filled by assistants receiving a temporary allowance - - 29,908–11
An assistant does not hold a commission - 29,912–3
The pay of a vice-consul begins at 600*l.* - 29,914
And the highest pay of an assistant is 400*l.* - 29,915
The assistants count service for pension - 29,916
Does not think that the work done by the China consular service is fairly recognised - 29,918–9, 29,923, 29,981–2
A student interpreter has the chance of rising to 300*l.* a year - - - - 29,932–3
The vacancies in the consulates and vice-consulates are filled up by assistants - - 29,934
And the higher paid consulates by lower paid consuls - - - - - 29,935
Nobody is brought in from the outside - 29,936–7
Does not think that the block in promotion would be cured by not appointing so many student interpreters - - - 29,938–42
The service is kept at a certain standard of strength - - - - - 29,943–5
There are no men in the service who are not in regular employment - - - - 29,946
The total number of vice-consuls, assistants and student interpreters is about 60 - - 29,947
A man can learn enough Chinese to be useful in about two years - - - 29,950–2
There is very rarely an exchange between China, Japan, and Siam - - - 29,953
The Japanese posts are pleasanter than those in China - - - - - 29,956
The Chinese are very troublesome to deal with 29,956
But the merchants are very precise in their dealings - - - - - - 29,957–9
When a political question arises, a consul would communicate at once with the legation - 29,961
But he constantly has to act on his own initiative - - - - - - - 29,962–5
The present system of selecting and sending out diplomatic officers is a good one - - 29,967–8
The consuls communicate direct with the Foreign Office - - - - 29,969–72
Does not think that English merchants have any cause to complain of the action of the English consuls in China - - 29,976
The Germans are serious rivals, but the German consuls may go too far - - - 29,976
The English consuls are encouraged to do all they can to aid trade - - - 29,977
They pick up commercial knowledge in dealing with the ordinary work of a consulate - 29,979–80

LIST OF WITNESSES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE ROYAL COMMISSION

ON

CIVIL ESTABLISHMENTS.

SEVENTY-SIXTH DAY.

7, Whitehall Place, Westminster, S.W., Tuesday, 12th November, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.
Rt. Hon. H. H. FOWLER, M.P.
Mr. A. B. FREEMAN-MITFORD, C.B.
Mr. J. CLEGHORN.
Mr. A. S. HARVEY.
Mr. R. W. HANBURY, M.P.
Mr. H. W. LAWSON, M.P.
Mr. J. W. MACLURE, M.P.
Mr. H. WALPOLE, C.B., *Secretary.*

Sir PHILIP W. CURRIE, K.C.B., called and examined.

Sir P. W. Currie, K.C.B.

12 Nov. 1889.

25,980. (*Chairman.*) I believe you are the Permanent Under-Secretary of State to the Foreign Office?—Yes.

25,981. In the questions we propose to put to you to-day, we intend to confine ourselves in the main to the constitution of the Foreign Office and its establishment, and to leave out for the present the diplomatic and consular services, except so far as it becomes necessary to introduce them. In the memorandum which you have been good enough to furnish to the Commission, you speak of the re-organisation of the Foreign Office in 1881, and state that it has been divided into eight departments, three being political and one partly so. Was that division into eight departments a new one?—There was a reduction of the numbers of the establishment, and the departments themselves were reduced in number. Instead of seven senior clerks—the heads of departments—we have only five. "It will be seen that the scheme," this is in a letter to the Treasury proposing the re-organisation, "contemplates the immediate reduction of the staff of "the establishment by four clerks, viz., one senior "clerk, two assistant clerks, and one junior clerk, and "a re-arrangement of the classes of the junior clerks. "Instead of ten first-class junior clerks, nine second-"class, and six third-class, it is proposed to form only "two classes, with the addition of four lower division "clerks to be employed in the commercial and con-"sular branches of the office. It is intended to "further reduce the number of senior clerkships, when "circumstances will admit, by substituting for the "senior clerk, now retained on his present scale of "salary in charge of the Slave Trade, &c. business, "an assistant at the same salary as the other assistants, "viz., 700*l.* by 25*l.* to 800*l.*"

25,982. Do I understand that the number of departments was reduced in 1881?—Yes. What was then called the German department was merged in the French; they were two separate departments, but they are now one department, which is called the western. There was a certain amount of remodelling at that time; there were re-arrangements of the departments in 1881 and 1882, the result of which is that their numbers have been reduced from seven to five.

25,983. The re-organisation in 1881 was in fact a re-modelling of the eastern, western, American, consular, commercial, and other departments; and then there was the reduction of which you have spoken, in the number of clerks?—Yes.

25,984. I think the division in the departments is pretty well explained in the memorandum?—I think the memorandum gives all the facts, but I may say that the result of the re-organisation in 1881, and the further re-arrangement of departments in 1882, was to reduce the number of departments, to reduce the number of clerks, and to take in four lower division clerks.

25,985. Is there a chief clerk at the head of each of the eight departments?—There is a senior clerk, as we call him, at the head of each department. We look upon the eastern, the western, and the American as purely political departments. The consular department is partly political, because it deals with African questions. It also deals with the consular business which is not political, and on which lower division clerks are employed. The commercial department is partly political, in the sense that there is a certain amount of confidential business in it, but there is a good deal of routine business, and lower division clerks are employed there also on the non-confidential work In the chief clerk's department the only man who is on the regular establishment of the Foreign Office is the chief clerk himself; the others are either what we call supernumerary clerks or lower division clerks. The library is to a certain extent outside the office, and the men employed there are either supernumerary clerks or lower division clerks. The treaty department is the same. As I have stated in the memorandum, "in the political departments only "clerks on the establishment and members of the "diplomatic service are employed, the latter on "first appointment, by exchange or by special "permission. In the consular and commercial

Sir P. W. Currie, K.C.B.

12 Nov. 1889.

"departments, lower division clerks assist in the "routine and non-confidential work. In the consular "department, besides the staff of clerks, consuls are "employed on first appointment or by special permis- "sion. In the chief clerks', librarian's, and treaty "departments, clerks corresponding with the 'sup- "plementary' clerks of the Treasury are employed, "assisted by lower division clerks."

25,986. (*Mr. Hanbury.*) May I ask what you mean by "clerks on the establishment"?—Clerks on what we call the diplomatic establishment of the Foreign Office.

25,987. (*Mr. Freeman-Mitford.*) Do you mean what would be called in another office the upper division clerks?—Yes, and what we have called in the memorandum supplementary clerks are. I believe, also technically upper division clerks. I understand that it has been laid down that clerks with salaries rising above a certain point are upper division clerks; and I believe the definition of an upper division clerk is a man whose salary rises, I think it is, above 400*l.*

25,988. (*Mr. Hanbury.*) What is the difference between him and a "clerk on the establishment." I ask because it is a new phrase to me, and I have not met with it before?—We are speaking of the clerks of the diplomatic establishment of the Foreign Office; that is, they are the confidential clerks; they are the men who are employed on the confidential business—the diplomatic business. The second class, the supplementary clerks, are the men who are employed in the non-political departments. Formerly they did the whole of that work, but they now divide the work of the non-political departments with the lower division clerks.

25,989. (*Chairman.*) Perhaps it would be convenient if you would be good enough now to take each class of men employed in the Foreign Office, and to state what are the terms of admission, and what is the nature of the work which they do. To begin with the lower division clerks: as I understand, they occupy the same position as lower division clerks all over the Civil Service?—Yes.

25,990. And there is no difference between their position in the Foreign Office and their position anywhere else?—No.

25,991. It is stated in your memorandum that the lower division clerks assist in the routine and the non-confidential work of the consular and commercial departments, but they are not employed in the political departments?—That is so; they are not employed in the political departments.

25,992. Therefore when you speak of clerks on the establishment being employed in the political departments, you mean something different from the lower division, who are not termed clerks on the establishment of the Foreign Office?—That is what I mean.

25,993. You have in view a clerk who is distinctly a Foreign Office clerk employed in the diplomatic establishment of the Foreign Office?—We have two classes of clerks in the Foreign Office entirely apart from the lower division clerks. We have the clerks on the diplomatic establishment who are employed in the political work and the confidential work, and we have a class whom we have, in the memorandum, termed "supplementary." I do not know what name to give them, but as I found there were some clerks in the Treasury called supplementary clerks, I used that term.

25,994. (*Mr. Lawson.*) Where do the supplementary clerks appear on the estimates?—I do not think they are called supplementary in the estimates.

25,995. (*Chairman.*) Speaking generally of the lower division clerks, has their employment varied of late years—are there more of them or fewer of them?—We never had any lower division clerks until the reorganisation in 1881. Then, in 1882, some were appointed to the chief clerk's department, and a short time ago four new ones were added to the library.

25,996. Were they in lieu of clerks on the establishment?—No, they were an increase of the establishment.

25,997. In consequence of the increase of work in that department?—It was found that the registration could not be kept up. It had fallen, indeed, very much into arrear. So we got the Treasury to allow us temporarily 10 clerks in order to work it up, and those are to be employed, I think, for five years. They were entirely extra. Then, in order to prevent the registration falling into arrear again, we got four lower division clerks to assist in the registering work.

25,998. (*Mr. Freeman-Mitford.*) That was in the registering of the library, I suppose, and did not apply to the departmental registering?—No, I ought to have spoken of it as the indexing of papers for reference.

25,999. (*Mr. Lawson.*) Who did that work in 1881?—It was done in the library, but the librarian, owing to press of work, had not been able to keep it up, and it had fallen into arrear. Therefore we got some men to work up the arrear, as an extra thing, and we got four lower division clerks to assist them, in the hope that once worked up it would never fall into arrear again.

26,000. (*Mr. Cleghorn.*) Are those the four clerks described in the estimates as third-class clerks beginning at 100*l.* and rising to 240*l.*?—No, those four extra clerks belong to the 17 clerks of the lower division.

26,001. (*Mr. Lawson.*) Will those men be required when you have once got the registry in order?—The four clerks will be required, but not the 10 who are now engaged in working at the arrears. Those 10 are not lower division clerks. The Treasury could not give us lower division clerks and so we were authorised to engage men specially wherever we could get them.

26,002. (*Chairman.*) Are we to understand that, speaking generally, the employment of the lower division clerks in the Foreign Office is confined to what you describe as routine and non-confidential work?—That is so.

26,003. Have you found in your experience of these clerks that there is any work they are fit to do other than that which you usually give them; do you find that there is other work which you can entrust to them?—The lower division clerks are very fully employed, not only in copying, but also on registration and the custody of non-confidential papers. I have observed their work, and they seem fully occupied.

26,004. I am speaking rather more of the nature of the work. Do you find from the qualifications and capacities of these men that there is a good deal of work other than the merely routine and non-confidential work which you can entrust to them?—I understand that no such work has been entrusted to them; they are not required for that class of work.

26,005. (*Mr. Lawson.*) There are 17 lower division clerks in the Foreign Office, but I do not quite gather where the rest of the 17 are?—There are two in the commercial department, two in the consular department, eight in the chief clerk's department, four in the librarian's department, and one in the treaty department: those make 17 in all.

26,006. (*Chairman.*) Then the supplementary clerks, in what department are they employed?—In the chief clerk's department, the librarian's department, the treaty department, and there is one in the commercial department.

26,007. How are they appointed?—They are nominated by the Secretary of State. The examination for the librarian's department is the same as for the diplomatic establishment. For the chief clerk's and treaty departments test examinations only have been required.

26,008. At what salaries do they come in?—In the chief clerk's department there is a first class clerk who has a salary of 400*l.*, rising by 20*l.* a year to 600*l.*; he corresponds to the assistant clerks on the regular establishment. Then there are two clerks in the chief clerk's department, whose salaries rise from 400*l.* to 500*l.* In the librarian's department there is a sub-librarian whose salary rises from 550*l.* to 650*l.*, two first class clerks with salaries rising from 400*l.* to 500*l.*, two second class clerks with salaries rising from 250*l.* to 360*l.*, and four third-class clerks with salaries rising from 100*l.* to 240*l.*

26,009. (*Mr. Fowler.*) Are the supplementary clerks all entitled to pension?—Certainly.

26,010. Then they are on the establishment; the test of being on the establishment being that they are permanent civil servants entitled to a pension, therefore all these supplementary clerks are permanent civil servants?—Certainly they are.

26,011. What then is the advantage of keeping up a distinction of title between supplementary clerks, who rise to as high as 600*l.* a year, and assistant clerks, who are getting from 700*l.* to 800*l.*, and junior clerks.

who rise up to 600*l.*?—It is only for convenience; the character of the work being different.

26,012. Would there be any objection to consolidate them all into one class?—Their work is distinct.

26,013. That I assume, as there might be distinct work for different classes of officers in the army, but is there any reason why they should not be all consolidated into one class?—I do not think there is any reason in favour of the present method, except that the men who are employed on the more important and more confidential work have been more highly paid, and that they are looked upon as rather a different class of men.

26,014. (*Mr. Hanbury.*) Do the supplementary clerks pass from one class to the other?—No.

26,015. Is there a distinct barrier drawn between them and classes above them?—There is a distinct barrier.

26,016. (*Mr. Fowler.*) Therefore there is no promotion from one to the other?—No.

26,017. (*Mr. Maclure.*) And no interchange?—No.

26,018. (*Mr. Fowler.*) Is the mode of admission the same?—Yes, as far as nomination by the Secretary of State is concerned.

26,019. (*Mr. Lawson.*) Were these supplementary clerks appointed by examination?—They were nominated in the same way that the others were, and admitted after limited competition.

26,020. Do they enter knowing that they cannot be promoted into the higher class of the Civil Service?—Certainly they do. I have known cases where men have tried to get on to the diplomatic establishment, perhaps have competed and failed, then eventually have got a nomination for what I may call the supplementary establishment.

26,021. (*Chairman.*) When there is a vacancy among the supplementary class does the Secretary of State nominate a certain number of candidates?—Yes, except in the case of the chief clerk's and treaty departments, where, as I have mentioned, the examination has been a test one.

26,022. I believe he can nominate any one he pleases for that?—Yes, certainly. There has been a case in which a man on the supplementary establishment was very anxious to pass into what we call the diplomatic establishment, but it was ruled that he must go through the other examination just as if he were not in the service at all; that he could only get in by competition with men who were competing for the diplomatic establishment. He got a nomination, but he declined to go up, and he remains in the supplementary establishment.

26,023. Then when you now talk about clerks on the diplomatic establishment, as I understand, you really mean the same men as those you refer to as clerks on the establishment in your memorandum?—Yes, no doubt it is not quite clearly stated there; it is rather a difficult thing to explain unless one explains it by word of mouth.

26,024. (*Mr. Maclure.*) Are these supplementary clerks necessarily nominated from other branches of the Civil Service?—No.

26,025. They may be nominated from outside?—Yes.

26,026. (*Mr. Hanbury.*) Do I understand that there is a barrier between the lower division clerks and the supplementary clerks, with again a second barrier between the supplementary clerks and the clerks on the establishment?—The lower division clerks are like the lower division clerks in any other office; they do not belong exclusively to the Foreign Office, and may, I believe, be transferred to any other office. The supplementary clerks belong exclusively to the Foreign Office, but there is a barrier between them and the men on the diplomatic establishment.

26,027. Other offices have been in some doubt as to whether their lower division clerks could be promoted into these higher offices. What is the rule in the Foreign Office?—There has never been any question of promoting the lower division clerk.

26,028. Not into the supplementary rank?—No.

26,029. (*Mr. Lawson.*) Is there anything in the nature of a staff office in the Foreign Office to which a lower division clerk could be promoted?—There certainly is none, because all persons, except the lower division clerks, have to come in by limited competition.

26,030. (*Chairman.*) Now, take the clerks on the establishment of the Foreign Office: they come in, do they not, by limited competition upon nomination by the Secretary of State and a special examination?—That is the case with the diplomatic establishment and the supplementary establishment.

26,031. The examination is conducted by the Civil Service Commissioners, I presume?—Yes.

26,032. (*Mr. Hanbury.*) Then there is no limited competition for the lower division clerks?—No, they come to the Foreign Office exactly as they go to any other office.

26,033. (*Mr. Harvey.*) Do you apply to the Civil Service Commissioners for them?—I think so.

26,034. Is there any nomination for a lower division clerk in the Foreign Office?—None.

26,035. Then you simply apply to the Civil Service Commissioners just as any other Government office does?—Exactly in the same way.

26,036. (*Mr. Lawson.*) As a matter of fact, are not separate lists of nominees kept to what you call the diplomatic establishment and to the supplementary establishment?—Yes.

26,037. (*Mr. Freeman-Mitford.*) In all these questions of establishment are we not now examining you upon matters which belong rather to the office of the chief clerk of the Foreign Office than to yourself?—He is much more conversant with them than I am.

26,038. Your business lies in another direction, does it not—more in the political working of the establishment as given to you?—Certainly; I have less to do with these questions.

26,039. (*Chairman.*) I presume all the different branches of the Foreign Office come directly under you?—Certainly they do, only I am, perhaps, not quite so conversant with these questions as the chief clerk who has been occupied with them for a great many years. I have only been Permanent Under-Secretary for a very short time.

26,040. (*Mr. Freeman-Mitford.*) The chief clerk's special duty is to deal with these questions, is it not?—He has other things.

26,041. (*Chairman.*) We will now deal with the way in which the work of the Foreign Office is done. Do I understand that the political departments have each got their own head in the person of a senior clerk?—Yes.

26,042. Is the head of each department directly responsible to the Secretary of State?—The head of the department is responsible primarily to the Under-Secretary.

26,043. Are all the departments independent of each other?—Yes The departments are divided between the under-secretaries.

26,044. Of whom there are how many?—The Permanent Under-Secretary, the Parliamentary Under-Secretary, and two Assistant Under-Secretaries. The Parliamentary Under-Secretary takes the commercial department, and the other departments are divided between the Permanent Under-Secretary and the two Assistant Under-Secretaries.

26,045. (*Mr. Lawson.*) In what way are they divided?—I take the chief clerk's department, the librarian's department, a portion of the African department, a portion of the western, and the whole of the eastern department; Sir Villiers Lister takes the consular department and a certain portion of the African and western departments; Sir T. Sanderson takes the American and treaty departments.

26,046. I see that when Sir Julian Pauncefote was at the Foreign Office, he is put down as taking five out of seven departments?—We divide the work according to convenience. Sir Julian Pauncefote took only portions of the political departments.

26,047. (*Chairman.*) Will you now explain what the library department does?—The librarian has the custody of the papers. He is referred to for memoranda on all but current questions; all questions which go back a certain time are referred to him.

26,048. (*Mr. Freeman-Mitford.*) When you say he has the custody of the papers, you mean, I presume, the custody of the papers beyond the two current years?—

Sir P. W. Currie, K.C.B.

12 Nov. 1889.

Yes; the two current year's papers remain in the departments—after that the papers go into the library.

26,049. (*Chairman.*) Are not there a great many memoranda upon current political and diplomatic questions prepared in the librarian's department?—The memoranda on current papers are prepared in the special departments, but those memoranda which require reference to past papers are prepared in the librarian's department.

26,050. Supposing there was a question which involved precedents contained in papers of two or three years ago, would the librarian's department be solely responsible for the preparation of the memorandum dealing with such a question as that?—The memoranda are sometimes prepared in the department, and sometimes by the librarian.

26,051. Take your own departments, the eastern and western, how is the line drawn between the work done in those departments and the work done in the librarian's department?—The rule is that the librarian would only prepare memoranda on papers of a certain age. For instance, memoranda relating to the two current years, the papers for which are in the department, would be prepared in the departments; beyond that date they might be prepared by the librarian, but they are sometimes prepared in the department. It is occasionally a matter of arrangement between the head of the department and the librarian as to who should prepare them.

26,052. Do the papers all come to you or to the head of another department first, and then you minute them or he minutes them, to be dealt with by the librarian or otherwise according to circumstances?—Yes. If it was a question requiring reference to treaties and matters of that sort, I should generally refer it to the librarian. We happen to have in Sir Edward Hertslet a very exceptional man, who is wonderfully conversant with every treaty and every past question.

26,053. Is the registration of each department part of the librarian's work?—Not of the department. The current diary is kept in each department by one of the clerks. At the end of two years, when the papers are handed over, the department diary is handed over also, and the librarian's department then make a diary of their own from it and eventually an index under subjects.

26,054. When a paper comes into the Foreign Office in the morning, is there not one registry for the whole Foreign Office?—No, each department has its own register.

26,055. Do you think that a convenient method?—I think it is very convenient. I think any other system would cause great delay. The peculiarity of the Foreign Office is that, as a rule, the greater part of the business is required to be done with speed. If what I believe is the case in other offices where there is a general registry, and a paper goes in and takes about 24 hours before it comes out again, were applied to the Foreign Office, I do not think that would suit us at all.

26,056. (*Mr. Harvey.*) Have you in the eastern department a register which is distinct from that in the western, and from that in the American?—Certainly, each department has its own register, in which every paper is entered as it comes in.

26,057. (*Mr. Lawson.*) Yet those departments are reconstituted from time to time; for instance, I see there was a reorganisation in 1881, when they were altered entirely?—Yes, and then they had to alter their registers.

26,058. They had to alter their registers then?—Each department has a new register every year, and each register is divided into the countries dealt with in each particular department.

26,059. For the purposes of reference, is not that rather awkward; when those departments are themselves varying, would it not be difficult to know exactly which department to refer to?—I do not think there is any inconvenience in it. At the beginning of the year the register is divided according to the countries dealt with in the department. Where departments have been altered, if you want to refer back two or three years, of course you may find the subject dealt with in the register of another department, but by that time the registers would have been taken to the library, and, therefore, it is of no consequence, as all the registers after two years are in the library.

26,060. Then you find no practical difficulty?—We have never found any whatever, and I think for speed it is a very convenient system. I think it makes the men in each department much more conversant with the papers than they otherwise would be, because when they register the papers they have an opportunity of seeing them.

26,061. (*Chairman.*) In each department is there one clerk who specially attends to the register?—Generally one man is told off to do it, but it is not done exclusively by him. This work is done by junior clerks.

26,062. Have the Foreign Office ever considered the question whether it would not be desirable to have one registry for the whole office?—Yes, we have considered it. I think the universal opinion has been that it would not suit our arrangements nearly so well as the present method. Now the official despatches are opened by the resident clerk, and sent into the department, where they are registered. The head of the department reads and minutes them, and sends them on to the Under-Secretary; the Under-Secretary then deals with them and sends them on, when necessary, to the Secretary of State; they then come back to the department, where they are immediately acted upon.

26,063. You say opened by the resident clerks; are there always clerks resident there?—There are four resident clerks who have rooms in the Foreign Office, and who have to decipher all telegrams that come in in the night, and to open the letters in the morning.

26,064. But what time are the despatches and the various communications for any particular department ready to be dealt with by the head of the department?—About the time he arrives.

26,065. I think you say in your return that the office hours begin at 12 o'clock?—The office hours are from 12 to 6.

26,066. (*Mr. Lawson.*) With regard to the resident clerks, may I ask from which class they are chosen?—The appointment is generally offered according to seniority to any man who likes to volunteer for it; it has been held by a senior clerk.

26,067. (*Mr. Harvey.*) When you came this morning did you find all the letters and papers that came by this morning's post on your table; had all those which naturally come to you been registered ready for you by 12 o'clock?—The papers that came in this morning would not have been registered.

26,068. Then what would be the latest paper that you would get this morning at 12 o'clock?—I should find all the telegrams; in fact, I generally receive the telegrams at my house. Directly I reach the Foreign Office probably the head of the department comes in and brings me anything of importance that there is.

26,069. In yesterday's papers?—No, in the papers that came this morning.

26,070. (*Mr. Cleghorn.*) Does he judge as to the urgency of the papers?—Certainly he does, he is responsible for that. For instance, before I came away just now, the head of the eastern department came in and brought to me some papers which arrived this morning, and said he thought they required immediate attention; naturally I looked at them and said what was to be done with them.

26,071. (*Mr. Lawson.*) That is in the department of which you practically take the command?—Yes; that would apply to the heads of the eastern and western departments.

26,072. But not to the others?—Not to the others unless in special cases. Of course if there is anything special they would come to me.

26,073. (*Mr. Hanbury.*) I did not quite gather what was the position of these resident clerks who seem to have very responsible duties, such as deciphering telegrams and opening letters?—The resident clerks belong to the diplomatic establishment of the Foreign Office invariably. They are included in the 36 "clerks" on the establishment." Of course they occupy a very responsible and confidential position. I held the position myself for 16 years. During that time a good many secrets and matters of great importance naturally passed through my hands. That is one reason why we think it necessary in the Foreign Office to restrict the confidential work to these men who are on the diplomatic establishment. No doubt people in other positions may keep secrets quite as well; but these are men whom we know, we know all about them, they have been nominated and their families are probably

more or less known. We know their habits and we can thoroughly and entirely trust them in every way.

26,074. These four men, as I understand, decipher all telegrams and open all letters, and nobody else does anything of that kind?—In the night.

26,075. What happens in the morning?—In the morning the letters that come to me are opened by my private secretary.

26,076. Who opens the letters that come to the Foreign Office generally?—My private secretary opens the greater part of them.

26,077. I want to know what is the rule; who are the people set apart to open these important letters coming to the Foreign Office?—During office hours all the letters are opened by my private secretary, and he distributes them to the departments.

26,078. Do you know what happens in other branches?—When I am away, they go to the under-secretary who is in charge, and he generally, not having a private secretary, employs one of the clerks to open the letters.

26,079. What I want to get at is this: there is caution exercised evidently during the night as to the people in whose hands these letters and telegrams shall fall; are the same precautions exercised with regard to the telegrams and letters arriving by day?—Certainly; the telegrams and letters arriving by day are opened either by the Under-Secretaries themselves or by their private secretaries.

26,080. The whole of them?—The whole of them.

26,081. (*Mr. Lawson.*) I understand that no supplementary clerk would ever become a resident clerk?—No.

26,082. Although the supplementary clerks are nominated as well as the others?—Yes.

26,083. As I understand, both classes are nominated by the Secretary of State?—Yes.

26,084. Therefore the Secretary of State may know all about the supplementary clerks and their families, as well as the clerks on the establishment and their families?—He may.

26,085. (*Chairman.*) As I understand, at the Foreign Office the clerks you have mentioned are supplemented by newly-appointed attachés?—Yes.

26,086. And by consuls to some extent, are they not?—By consuls in the consular department only.

26,087. Is there any fixed time during which a newly-appointed consul has to serve in the consular department?—Sometimes it is very inconvenient for him to come, as he may have to go to his post at once. The general rule is that he should go to the consular department for six months.

26,088. What is the rule with reference to attachés?—The rule with reference to attachés is six months; but then sometimes a man is not kept so long, sometimes he is kept longer; it is a matter of convenience.

26,089. The rule is that every attaché should work six months in the office?—Yes.

26,090. (*Mr. Lawson.*) Where are these attachés employed in the office, and what sort of work do they perform?—They work in the political departments, and they do the same work that the junior clerks do.

26,091. (*Mr. Freeman-Mitford.*) In fact, they are trained in the work which they will have to perform when they go to their various legations and embassies?—Yes; it is the same work, practically, that is done in the legations and embassies, and the experience, of course, is of great use to them. They get habits of business from working in the office, and learn how the work has to be done.

26,092. (*Mr. Hanbury.*) Take a man, for instance, who is going out to Constantinople; is he put to the eastern division?—It is not always settled until a man has completed his term in the office what post he will go to.

26,093. Is the work that he does during the six months he is at the office, work which specially trains him for the particular post to which he is going to be sent?—Not necessarily for the particular post, but it does train him, he learns the mode in which the business of the Foreign Office is conducted.

26,094. (*Mr. Freeman-Mitford.*) He gets, in fact, a general training?—Yes.

26,095. (*Mr. Lawson.*) The object being, I suppose, to give him an insight into the work of the Foreign Office rather than to fit him for his work abroad?—Into the way in which the Foreign Office work is done.

26,096. (*Mr. Cleghorn.*) I suppose the work is principally clerical?—It is principally clerical work on which an attaché in the office is engaged.

26,097-8. (*Mr. Lawson.*) Copying?—Copying, and sometimes making memoranda; sometimes, perhaps, writing drafts of minor importance.

26,099. (*Mr. Freeman-Mitford.*) Does he do précis writing?—Yes.

26,100. (*Mr. Lawson.*) Is it a fact that he does anything higher than copying?—Yes, I should say very much so if he shows aptitude for it.

26,101. (*Chairman.*) When men have been attachés, do you often have them back again on to the staff of the Foreign Office?—Frequently.

26,102. Is it an increasing practice?—When we are very busy, and have not got hands enough in the Foreign Office, we are very anxious to get attachés. We find many of them volunteer. They are anxious, for private reasons, to be in London, and if we want them we allow them to come. Sometimes they exchange with clerks in the Foreign Office.

26,103. (*Mr. Lawson.*) Are you still speaking of attachés?—Yes, I called them attachés, they are really secretaries in the diplomatic service. There is a system of exchanges which, of course, have to be sanctioned by the Secretary of State. A clerk in the Foreign Office and a secretary in the diplomatic service may arrange an exchange, and carry it out, with the sanction of the Secretary of State.

26,104. On what terms?—On the terms that each man takes the place of the other in the service for the time being.

26,105. At the same salary?—They keep their own salaries.

26,106. (*Mr. Hanbury.*) Do you mean for the time being as a temporary arrangement, or as a permanent one?—As a temporary arrangement. A man may exchange for one year or two years, to suit his convenience.

26,107. (*Mr. Lawson.*) Is that in practice constantly done?—It is tolerably frequently done. It is not done to any great extent at one time, because we should find it would rather disturb the business of the office. We are, however, very glad to get one or two secretaries in this way, as we think it does them good, and on the other hand, we are very glad to send our own men abroad, because they then learn the business of the foreign legations, and are more useful to us when they come back.

26,108. (*Mr. Fowler.*) If I understand you correctly, the Foreign Office staff is practically divided into three classes; first, the clerks on the establishment; secondly, the supplementary clerks; and, thirdly, the lower division?—That is so.

26,109. The clerks of the establishment are regarded by you, are they not, as part of the diplomatic service rather than as part of the clerical service?—They are clerks in the Foreign Office, but they are employed on diplomatic work, and we consider them as belonging to the diplomatic establishment. They are the men who are allowed to exchange abroad with the secretaries, and they are attached to special missions. At this moment we have got one at the conference at Washington, and one at the conference at Brussels.

26,110. They are members of the diplomatic staff, as it were?—I think you may say that. They are not members of the diplomatic service, because the two services are kept distinct, but the work on which they are employed is practically the same as that on which the members of the diplomatic service are employed.

26,111. Therefore in that respect, the Foreign Office is to be distinguished from every other office; there would be no similar class of men in any other office, would there?—No, certainly not.

26,112. Would you justify the retention of that separate class upon political and diplomatic grounds?—Certainly. I do not think we could satisfactorily conduct the business of our office with any other class of men. We want men who can meet, for instance, the diplomatic corps here on equal terms, men who have got a certain position in the world. I think it is very important we should have men of that class.

Sir P. W. Currie, K.C.B.

12 Nov. 1889.

26,113. This class of clerks, I see, is sub-divided into four classes; senior clerks, assistant clerks, first-class junior clerks, and second-class junior clerks. What is the rationale of that division into four sections?—The senior clerks are responsible heads of departments; the assistant clerks come next in rank and take the work when the senior clerk is away, and therefore during his absence are responsible for the work of the department. The junior clerks, I believe, correspond with the regular class now in all offices under the reformed system. The four junior clerks, who I think are peculiar to us, were insisted upon by the Treasury, in order to keep the expense of our office down to a certain point; on re-organisation, there was a certain fixed sum which could not be exceeded, and excess was avoided by keeping our four clerks at that lower standard of 100*l.*, rising to 200*l.*

26,114. Then that is really a Treasury arrangement?—The Treasury insisted on that.

26,115. As I understand it, the work of the first-class junior clerks corresponds to the work of what have been called the upper division clerks in the other branches of the Service, but whom we are now proposing to class as first-class clerks?—Exactly.

26,116. The clerks above them are a separate class altogether, specially trained, and, as I understand, you consider their preservation necessary for the public service?—The class above them are the senior clerks, and the assistant clerks.

26,117. They are the heads of departments?—They are all promoted from the class to which you alluded just now.

26,118. Inside these 36 clerks is the promotion entirely by seniority?—No. Perhaps I had better read to you Lord Granville's Minute at the time of the re-organisation. The minute is dated November 23rd, 1882:—"The recent re-organisation of the Foreign "Office having reduced the number of senior clerks, "and thereby increased the importance of their duties, "Lord Granville takes the opportunity of the "present redistribution of the work of the office, to "renew the intimation respecting promotion, given in "the minute of the 7th April 1881, and to add, that "as regards senior clerks, they will in future be "selected solely with a view to the interests of the "public service, and to the promotion of those who "have shown themselves best fitted for the position." I understand by that, that we are bound to select the best man when a department is vacant.

26,119. And you do so?—Certainly.

26,120. (*Mr. Lawson.*) Without reference to seniority?—Yes.

26,121. (*Mr. Fowler.*) That does not apply to the assistants, does it?—That does not apply in the same degree to the assistants. We should certainly pass over a man if we thought him incompetent, and we have done that.

26,122. (*Mr. Freeman-Mitford.*) You say you have done so?—It has been done; but I do not think it would be quite fair to begin selection so low down as that—I mean selection distinct from passing over an incompetent man—I look upon those as quite distinct things.

26,123. (*Mr. Fowler.*) As I understand, the five senior clerkships now depend entirely upon competence?—Entirely.

26,124. And are given away on the principle of selection?—Certainly.

26,125. The appointment to the assistant clerkships, the Secretary of State, as I understand, reserves to himself, to deal with as he thinks proper?—Yes.

26,126. But in promotion to the assistant clerkships you would let a man go forward, unless he was incompetent?—Certainly, I should.

26,127. I presume the other 20 clerks rise absolutely automatically?—Once in that class they would rise automatically.

26,128. As I understand, there is an examination for these 36 clerkships?—There is a competitive examination. Generally eight or ten nominee candidates are selected for each vacancy for examination by the Civil Service Commission.

26,129. (*Mr. Lawson.*) How are those names selected?—They are taken from the list of the Secretary of State.

26,130. Then after the first nomination to the list, is there a second nomination to the actual examination list?—There is no nomination to the list Any man who writes asking the Secretary of State for a nomination for his son has his name put on the list. Then when there is a vacancy, the Secretary of State's private secretary prepares a list and submits it to the Secretary of State, who chooses from that list the persons whom he nominates for the vacancy, and he generally nominates from eight to ten for each vacancy.

26,131. The supplementary clerks are appointed in the same way, but I suppose they have not so severe an examination?—That is so. I have explained the system in each department.

26,132. I presume that in an examination for the establishment a knowledge of foreign languages is absolutely essential?—A knowledge of French and German is obligatory, other foreign languages are optional. The difficulty of an examination like that depends upon the standard of education of the men who go up for it. The Foreign Office examination perhaps would not appear on the face of it, if you look at the subjects, to be so very difficult; but it is made extremely difficult by this fact that a great many people being more or less sure that they will be able to get nominations for their sons, train them up for the Foreign Office from a very early time, they are specially trained for it, and consequently the examination is an extraordinarily hard one.

26,133. Where there is open competition there is a sort of average standard obtained; but where there is a nominated list the standard must vary from time to time, and therefore the examination must be less or more difficult according to the list of names sent up?—According to the men who go up; but I think it is shown that our examination is a tolerably severe and good one, by the fact that the Treasury have filled up two of their vacancies from the Foreign Office. Mr. Murray and Mr. Mallet, clerks who got into the Foreign Office under limited competition, have been appointed Treasury clerks without any further examination. I believe our system of examination really to be a more stringent and severe test than the other, because the men who go up have been specially prepared for the examination.

26,134. (*Mr. Harvey.*) You think that the competition of men, all of whom are to a certain extent prepared, results in the competition being sterner than in a nominally severer competition extending over a much wider area?—I think so.

26,135. (*Mr. Freeman-Mitford.*) The examination consists in simple subjects extraordinarily well done, in fact?—That is what it is.

26,136. (*Mr. Lawson.*) Would you say that the standard is higher in the Foreign Office examination than in the examination for the first division for the rest of the Civil Service?—I believe it is.

26,137. (*Mr. Fowler*). I think you have a type-writer on the staff?—Yes, a lady.

26,138. Will you tell us how that works?—Extremely well, she type-writes admirably.

26,139. For what purpose do you use the type-writing, pure copying, dictation, or what?—Pure copying.

26,140. Do you find it a saving of labour?—Yes, we do find it a very considerable saving, and I think we shall be able to increase the system.

26,141. Do you know what salary you pay?—I rather think she gets 1*l.* a week, but the chief clerk will tell you that; she is under his special supervision.

26,142. Several of the staff I see have got appointments as private secretaries to the Secretary of State and to the Under-Secretaries?—Four of them; two to the Secretary of State, one to myself, and one to Sir James Fergusson.

26,143. I do not quite understand the estimates. I find put down in the estimates a private secretary to the Prime Minister, an assistant private secretary to the Prime Minister, a private secretary to the Secretary of State, and a précis writer to the Secretary of State?—The private secretaries to the Prime Minister have nothing to do with the Foreign Office.

26,144. They come under the Foreign Office vote. I want to know how out of the Foreign Office vote 650*l.* a year is paid for what ought to be a Treasury vote?—I was not aware of the arrangement.

26,145. Does it really represent four men or two men?—Four men. The Prime Minister has two private secretaries, who have no connection with the Foreign Office, although they have a room at the Foreign Office and do their work there.

26,146. They are not on your staff?—No, they have nothing to do with the Foreign Office work.

26,147. Altogether Lord Salisbury appears to have 1,250*l.* a year for private secretaries?—The Prime Minister always has private secretaries, and the amount charged represents their pay as well as that of the foreign minister's private secretaries. Why it is charged to the ForeignOffice vote I am unable to say. The chief clerk will be able to deal with that.

26,148. Then you say that the hours of work are from 12 to 6, nominally. What is the meaning of the word "nominally"?—"Nominally" means that the men do not go punctually at 6 if there is anything for them to do. We expect them to remain as long as they are wanted.

26,149. Does the "nominally" apply to their coming at 12?—No, the departments are all open at 12.

26,150. And the men are expected to be there at 12?—Certainly they are.

26,151. Is there any regulation in force at the Foreign Office as to the hours?—Yes, the hours are from 12 to 6.

26,152. I mean to see that the men keep those hours?—Not farther than that the head of the department is responsible for seeing that his men attend.

26,153. Would you expect him to report to you if they did not?—If any man was very slack in his attendance I certainly should.

26,154. "The yearly allowance of leave is two months," you say in the memorandum. Does that apply to the whole of the supplementary clerks and to the establishment?—Yes, that applies to everybody in the office, except the lower division clerks.

26,155. They have a month?—Yes.

26,156. (*Mr. Maclure.*) I want to ask you about the librarian's department. It sounds to me a very heavy one, costing, as it does, more than 4,800*l.*?—The librarian's department has been largely increased lately, in consequence of the indexing having fallen into arrear. I think it possible that some reductions might be effected. Now that we have introduced lower division clerks, I think we might probably introduce more, and so reduce the cost of the permanent staff, but that will be a matter rather for experience.

26,157. From what you said just now the probabilities are that you will get the whole of your indexing very shortly into the most perfect order, and then you will be able to make some considerable reductions in that department?—We shall certainly be able to get rid of these 10 extra clerks, who were only taken on to work up the arrears. It was calculated that those arrears would be overtaken within five years. I got a return from the librarian two days ago, saying that they have done more than was expected, so I hope the work will be done in less than five years. Then those 10 men will be dismissed, as they were merely taken on for the job; and the four lower division clerks whom we have got ought to be able to keep the index up to the proper date. It ought not to be more than about five years in arrear, I think.

26,158. (*Mr. Lawson.*) May I ask whether the librarian and keeper of papers is a member of your diplomatic establishment?—As a matter of fact, the appointment has become rather hereditary. Sir E. Hertslet and his father have been librarians, and his uncle sub-librarian, and they have shown an extraordinary aptitude and capacity for the work. There is no rule on the subject, and we shall take the best librarian we can get when we have the misfortune to lose our present one.

26,159. From what class inside the office do you take the librarian? What has been the practice in filling up the post which those three gentleman have occupied?—The present librarian was trained in the librarian's department under his father.

26,160. Did he enter as an established clerk?—Yes, but not on the diplomatic establishment.

26,161. In the event of the post being vacant, would it be open to you to choose the librarian from any class in the office—I do not say would you be obliged to choose from the clerks in the office, but would you be able to do so?—I consider it would be open to the Secretary of State to appoint any person whom he considered fit for the post.

26,162. From the outside or from the inside?—Yes.

26,163. Without examination?—That would be a question to be arranged with the Civil Service Commissioners.

26,164. Is it a place open, not only to every class within the office, but to the outside world?—I think the Secretary of State has the power to fill it up either from the office or from outside. What I think he ought to do would be to select the person best fitted, whether he belonged to the office or not.

26,165. I suppose it is a place for which official training counts a good deal?—It does; and of course that would be a question to be considered. This matter has been very much discussed at times.

26,166. Would it not in practice work well if it were regarded as a staff office, open not only to the supplementary clerks, but to the meritorious clerks of any class?—I consider it to be open to any person whom the Secretary of State chooses to appoint to it.

26,167. Not confined to the office or to the Civil Service?—I should not confine it to any class at all.

26,168. Not confined to the Civil Service, I mean—that is the point?—I do not think it is necessarily confined to the Civil Service. I think we must try and get the fittest man we can whenever the post becomes vacant.

26,169. Do the same observations apply to the post of sub-librarian?—I think the sub-librarian should be chosen from the men in the librarian's department.

26,170. Would the choice for the office be made by seniority?—Seniority, tempered by regard to competency. I would give the same answer with regard to that as I gave with regard to the assistants in the other departments.

26,171. I understood you to say that all the supplementary clerks were nominated by the Secretary of State, and that you consider nomination a very valuable guarantee of fitness of character. In what respect would you say that they differ from the established clerks?—I think, with regard to the non-political departments, we might accept the idea that has been laid down in the Treasury Minute for the Civil Service—when I say accept, I know, of course, we must accept it for everything if it is made arbitrary; but my opinion would be that in the non-political departments you might fairly substitute lower division clerks for a considerable number of the present appointments.

26,172. Is that being done at the present time?—It has been done in the library, where we have four lower division clerks.

26,173. And are they taking places formerly occupied by the class known as supplementary?—I do not think there has yet been any corresponding reduction, but I think that there may be.

26,174 "May be" is a little vague; might I ask whether there is any attempt being made to effect it?—I should certainly be inclined to propose something of the kind when there are vacancies.

26,175. I understand these lower division clerks are clerks appointed for additional work?—They are additional clerks appointed in order to keep up the indexing, which it was found impossible, with the existing staff, to keep up to date.

26,176. As a matter of practice, is there any work done by supplementary clerks that could not be performed by lower division clerks?—None, I think, of that done by the junior supplementary clerks.

26,177. We have had evidence from other departments that the work of supervision is very effectively done by lower division clerks?—That is a matter of which I have no experience.

26,178. Are you inclined to think it might be so?—My idea is that the non-political departments might be principally manned by lower division clerks, superintended by clerks of the class who now exist in the departments.

26,179. Do I understand you to say that some of those who failed in the examination for the established clerks have come in as supplementaries?—They have

Sir W. Currie, K.C.B.

17 Nov. 1889.

competed, I think; but, really, that is not a question I could answer off-hand.

26,180. Why is it the case that where you have got the guarantee of this nomination which you attach so much importance to, they have not been allowed to do the confidential work of the office, if they prove themselves fit for it?—The fact is that there are in the office certain departments where the work is confidential, and there are some where the work is not confidential, consequently, the system has grown up of having a certain class of clerks for the confidential departments, and another class for the non-confidential departments; the pay of the latter is not so high, and their functions are not so important.

26,181. I understand you to say that you think for that class of work which a Foreign Office clerk has to do, you want a man of a certain status in life, and yet the same clerks, in some cases, compete for the two branches; should there be any distinction made with regard to the class of work?—I think what I said was that there was a case in which a clerk in the supplementary class who had proved himself to be a very competent and very reliable person, did obtain a nomination to compete for the diplomatic establishment. He was very anxious to be transferred to it, but it was settled he could not be transferred, and that the only way in which he could obtain admission to it was by competition. The Secretary of State, in recognition of his services, gave him a nomination, but he declined to go up.

26,182. Have you ever had clerks transferred from the first division of other offices into your own?—Never.

26,183. From what you know of the Civil Service, do you believe that those who have entered on the examination for the upper division would be unfit to perform their work satisfactorily?—If we could do like the Treasury, and choose the best men out of the other offices, I should be delighted with the system; but if we are to take the men who are turned out of other offices for being unfit, I should be very sorry to have them.

26,184. I was not contemplating that; I was rather looking at the man who has come in by this very difficult examination, and who is fully qualified to do the work of an upper division clerk in the office of a Secretary of State, would you be willing to take him?—I should not like to take him unless I had an opportunity of inquiring what his capabilities were. I would prefer to take the men as we do now, by limited competition.

26,185. We may take it as a matter of fact that the Secretary of State cannot know much of a clerk personally, except as to his birth, connections, and matters of that kind. Have you any means of gauging the character of one of these clerks better than the Civil Service Commissioners have at their examination, and by their papers?—It is the business of the private secretary to make inquiries about the men whose names are on the Secretary of State's list. I was private secretary myself for two years, and I always took pains to inquire as to the characters and antecedents and fitness of the men. When I brought their names before the Secretary of State, I told him what I knew about them, and he naturally chose those who seemed most fit.

26,186. What is the average age at which they come up for examination?—The limit of age, I think, is 18 to 24, and the average, I should say, is from 18 to 22; they come very young sometimes.

26,187. Do you think that you have any means of testing their characters before they enter your office?—If I knew the character that a boy who had been at a public school had among his friends, I should say, eminently so.

26,188. Then, would you limit it practically to public school men?—No; I do not limit it. I said "if."

26,189. Then you do not think that this system of nomination, as opposed to open competition, can be relaxed in any way?—I think there are very strong reasons against opening the Foreign Office to open competition, and the strongest to my mind is that there, no doubt, is information in the Foreign Office which is valuable, and which people might make considerable efforts to obtain. I think it would be quite possible, if you had open competition, that foreign governments, or perhaps people engaged in large financial operations, might train up men or send up young men for examination, and keep them in their pay.

26,190. I suppose you would not say that the Foreign Office service involves a clerk in any greater expenditure than service in any other office of State?—Certainly not.

26,191. Therefore you do not think that it is necessary to put any condition as to private means?—Not in the Foreign Office, but I do in the diplomatic service.

26,192. I am not dealing with the diplomatic service, but with the Foreign Office?—Certainly not with regard to the Foreign Office.

26,193. Therefore it is simply on the score of character that you think this system of nomination is valuable?—I do not think that it is affected by the question of private means.

26,194. The men that you have on your list may not be better off in point of worldly goods than those who enter other offices?—I think that most clerks in the Foreign Office are, as a rule, moderately off. There are some men there who have private fortunes, but I should not say so as a rule.

26,195. (*Mr. Harvey.*) Would not the fact that transfer is possible between the diplomatic service and the Foreign Office clerkships affect your answer there?—We never make transfers compulsory, and no man in the Foreign Office would accept a transfer unless his means allowed him to live abroad. I have, however, known a case in which a man asked to be transferred from the Foreign Office, because his means were not sufficient to enable him to live in London; he was a married man. I pointed out to him that I thought it was cheaper to live in London, but he said he had tried it, and he thought not.

26,196. (*Mr. Lawson.*) Then really it is the same with the Foreign Office clerk as it would be with the average clerk in any other office; his means, so far as you know, are not any greater, and therefore pecuniary temptation to wrong doing would be the same?—Do you mean the temptation to be bribed?

26,197. You referred just now in this connexion to foreign powers?—Excuse me, that is not what I meant. What I meant was that foreign powers, or persons interested in large financial operations, might place a man in the Foreign Office.

26,198. With regard to financial operations, that is possible certainly in two or three other offices into which we have inquired?—Of course I do not know what important information there may be in other offices, I can only answer for my own. I know that in the Foreign Office there is information occasionally, I will not say very often, which is very valuable, and which some people in the city would give a good deal for. If I thought they could place a man in the Foreign Office, I should feel very uncomfortable at having him there, and, if open competition were adopted, there would be no earthly way of keeping him out if he presented himself before the Civil Service Commissioners, and he was a man of good health and good character in other respects. He would be sent to the Foreign Office, and there he would remain, and we should never be able to get rid of him.

26,199. Would not you admit, that the contingency you represent is a remote one?—I do not think it remote at all.

26,200. Is not it rather the case, that the private secretary for the time being to the Secretary of State, as a matter of practice, would merely have regard to the family of the person whose name appears on the first list of nominees, and that the Secretary of State himself would not have any real control?—I look upon the Secretary of State's private secretary as his *alter ego*. When I was private secretary I took a great deal of trouble to inquire about the men who were on the list.

26,201. Yes, but you cannot surely tell from the character of a boy of 18, what you can expect from a mature clerk?—I think if you know a good deal about a man's family, you may say that you know a good deal about him.

26,202. Do you find that the absolute bar to promotion to a large part of the office has a prejudicial effect upon the work of the supplementary clerks?—Not the least. Those men are appointed with a perfect knowledge of what they have to look forward to, and I have never heard any complaints from them or any expectation of promotion on their part.

26,203. Do you think you get the best work you can out of them?—I think that we get very good work from them.

26,204. If it is mere mechanical work, there is no reason, surely, why it should not be done by a class of men at a lower rate of pay?—It is not merely mechanical work; for instance, in the chief clerk's department there are men who have a good deal of very important financial business to look after. You would not call that purely mechanical work, I suppose: purely mechanical work means merely adding up figures or copying.

26,205. Copying or indexing work?—They have, I should say, work similar to that in other offices, but it is not work of the confidential character that is done in our political departments.

26,206. The superintendent and the assistant in the Treaty Department are, I take it, men who have been clerks on the establishment?—The superintendent was taken from the diplomatic establishment.

26,207. What class was the assistant drawn from?—The assistant belonged to the supplementary clerks.

26,208. As a matter of fact the clerks of the lower division are rather a recent innovation, do you think that they will prove satisfactorily without any means of promoting or advancing them?—I have no experience gained from the men themselves, but I think that one's knowledge of human nature leads one to think that men to whom promotion is absolutely barred, are not likely to continue permanently very useful members of any service.

26,209. (*Mr. Hanbury.*) You say that the librarian can be appointed at the mere choice of the Secretary of State, without any limit upon his choice. What other offices are there in the Foreign Office that he can similarly appoint to?—The under secretaries and the legal assistant; in fact, in regard to the staff appointments, I do not consider that his power is limited.

26,210. In your opinion, with regard to all staff appointments, can the Secretary of State choose either from inside the office or from outside?—I should think he could.

26,211. From inside the Civil Service generally, or from outside it altogether?—The latter has been on several occasions done.

26,212. Is that the practice of the Foreign Office?—It has been done. For instance, an assistant undersecretaryship was given to the late Lord Ampthill; he was in the diplomatic service, not in the Foreign Office. Sir Julian Pauncefote is another instance.

26,213. Going down below the under secretaryships, what staff appointments would there be outside that could be appointed to by the Secretary of State?—There is the legal assistant.

26,214. Those he can choose from the outside if he likes?—The legal assistant naturally must come from the outside.

26,215. Do you know what qualification there is?—I suppose the man must be a qualified lawyer, and well recommended for the place. Perhaps I might here say that I look upon the librarian's department as a post demanding special qualifications, and that if there was no man in the office who was fit for it, I should certainly consider that the Secretary of State had a perfect right to go outside, and would be perfectly justified in going outside to find a man who could perform the very important duties required.

26,216. My question is, how many other offices are there in the Foreign Office which the Secretary of State can similarly fill up from the outside, without any control over his choice?—I should say the staff appointments.

26,217. Going to the question of nomination. Do you know how far that system prevails in other foreign offices; for instance, how men are appointed to the German Foreign Office, the French Foreign Office, and the Russian Foreign Office?—I have no doubt that they are appointed solely by the nomination of the minister.

26,218. Does a nomination precede examination in France?—I will endeavour to obtain that information.

26,219. I understand that in the first three departments, the Eastern, the Western, and the American, there are positively no lower division clerks at all?—That is so.

26,220. And that in the whole office the proportion of clerks of the upper establishments, as I will call it, to lower division clerks, is about three to one; the numbers being, 36 clerks on the establishment, 16 supplementary, and 17 lower division clerks, or 52 to 17?—Yes.

26,221. You mentioned 10 clerks who are employed temporarily; but I am not quite sure whether those are lower division clerks or not?—They are not lower division clerks, simply because there was not a sufficient number of lower division clerks to spare.

26,222. Then they are not included in the 17?—No.

26,223. How are the clerks assigned to these different departments; is it a matter of their own choice, or are they put into a particular department by the Secretary of State?—That is done by the under secretary; that is my business.

26,224. On what principle do you appoint them to these separate departments?—I appoint men that I think fit for the different departments where they are wanted.

26,225. You mean men who you think have shown special qualifications for those departments?—I take the list of the men, and naturally I consider where assistance is most wanted.

26,226. (*Mr. Freeman-Mitford.*) But a youngster coming into the Foreign Office has not yet shown any special qualifications?—A youngster is put where he is wanted.

26,227. (*Mr. Hanbury.*) Is there any special qualification of languages, or anything else, for any particular department?—No, certainly not.

26,228. Then it is just a chance to which department a man is sent. Can you tell me what are the numbers in each of these departments?—Seven or eight, more or less.

26,229. The department I want to know most about is the commercial; is that one of the larger departments or one of the smaller?—That is a large department, but it is rather a mixed department; it has some clerks on the diplomatic establishment, it has one on what we call the supplementary establishment, and it has two lower division clerks.

26,230. Do you know whether, as compared with the commercial departments of the foreign offices of France and Germany, it is larger or smaller than theirs?—In the French commercial department there are one sous-directeur, two rédacteurs, two attachés payés, seven attachés autorisés, one commis de chancellerie, and one expéditionnaire.

26,231. We do not know how many men we have got in our own commercial department; there is nothing to show it; the documents we have show the supplementary clerks and the lower division, but not the clerks on the establishment?—We have four clerks on the establishment, one supplementary clerk and two lower division clerks. The number varies according as we have clerks available for the purpose. Just now, the commercial department being rather easy, I have taken a man from it and given him to another department which was pressed.

26,232. "Being rather easy," why. Is there less work being put upon it, or what?—At some particular moments there are not any questions of a very pressing nature, and naturally we have to shift our men about as they are wanted.

26,233. Is the commercial department of the Foreign Office a department that is increasing in importance or the reverse?—I should say it is maintaining its importance; but that would not affect the question of whether at any particular moment there happened to be a press of work. If a treaty were being negotiated or a tariff revised, or some business of that kind, there might be considerable pressure upon the department for a time, but when there is nothing of that kind going on naturally the pressure relaxes, and the men who are employed in the department become available for other departments. We try in that way to make our staff available generally for the office.

26,234. Can you tell me what is the general idea of the work of this commercial department; what does it principally do?—If you call upon me to state it in a concise form, I should say it deals with commercial matters.

Sir P. W. Currie, K.C.B.

12 Nov. 1889.

26,235. (*Mr. Lawson.*) Does it deal first of all with consular reports upon commercial questions?—The department publishes the consular reports.

26,236. (*Mr. Harvey.*) Would it deal with the tariffs of a foreign country?—Yes. All commercial treaties in their earlier stages are negotiated by the commercial department. When they get into the treaty stage then they go to the treaty department.

26,237. (*Mr. Lawson.*) Do complaints of merchants and traders go to the commercial department?—Yes, whenever they relate to tariff or commercial questions. Any complaint respecting the conduct or action of a consul would be dealt with in the consular department.

26,238. (*Mr. Hanbury.*) How far, apart from the consular department, does the diplomatic department do anything to assist the trade of the country, in other words, what is done in this direction by the Foreign Office proper as opposed to the consular department?—I should say one of the principal occupations of Her Majesty's representatives abroad is in every way to assist and foster the trade of the country, and to assist all commercial men who have any kind of difficulties.

26,239. Is there a commercial department at the Foreign Office which, as it were, looks them up to see that they do that kind of work?—Certainly; there is a commercial department which conducts the correspondence regarding such matters.

26,240. Is that work growing, or has it grown much of late years, or not?—I think the whole of the work has grown. I do not know that the work of that branch has grown especially. It is one of those questions I cannot answer offhand; I have not the supervision of the commercial department myself.

26,241. (*Mr. Freeman-Mitford.*) The commercial department is entirely a matter of modern growth, is it not, and it is still growing?—Yes.

26,242. Twenty years ago such a department did not exist; 20 years ago Her Majesty's ministers and ambassadors abroad practically did very little to foster commerce, and had very little to do with commercial questions, is not that so, in comparison with what they do now?—I should say they had then much less to do with commercial questions than they have now.

26,243. Therefore, this is a matter of entirely modern growth, and, as you say, it is still growing?—Yes, the commercial department of the office is a modern creation; formerly whatever work of the kind had to be done was practically done by the Board of Trade; we referred these matters to the Board of Trade, and they suggested what we should do. Now the commercial department takes the initiative in those things, independently of the Board of Trade.

26,244. (*Mr. Hanbury.*) Does the Foreign Office list show what are the instructions and regulations relating to this department?—There are no special regulations.

26,245. (*Mr. Lawson.*) In the consular memorandum you say that the attention given to commercial reports is one of the most marked features of progress in the service. Does that involve a good deal of extra work for the commercial department of your own office?—One man has been told off especially to edit the commercial reports. He is a man on what I call the supplementary establishment. Lord Rosebery instituted the system of publishing them very much more rapidly than had ever been done before, and each individual commercial report is now published immediately on its receipt.

26,246. (*Mr. Hanbury.*) Another question arises out of that. We have lately had issued to us an index to all these consular reports, the preface to which says that the Foreign Office clerk who has indexed these reports did the work not in office hours, and that there is nobody specially set apart for that duty?—It is the special duty of the man who made that index to edit these reports, but the task of making a general index to all back reports was an extra work which he undertook. He thought it would be useful, and I believe it is very useful.

26,247. In your opinion, year by year, the Foreign Office is doing this work more thoroughly, and is taking a greater interest in assisting the trade of the country?—I think not only the commercial department, but the Foreign Office generally, does everything it possibly can to assist the trade of the country. There is nothing we have more strongly before us than that; that is one of our chief duties.

26,248. (*Mr. Lawson.*) Was this man an expert in that kind of work when he was appointed a supplementary clerk?—He originally entered the office as a supplementary clerk; he has some literary ability.

26,249. (*Mr. Freeman-Mitford.*) I gather from what you have said that you are not in favour of making any alteration in regard to limited competition for the Foreign Office?—No. I think it decidedly desirable to keep in the hands of the Secretary of State the selection of the men who shall compete for clerkships in the Foreign Office.

24,250. I believe that Lord Clarendon on one occasion did say that he would rather give up the seals of the Foreign Office than cease to have any control over the men whom he appointed to it; is not that the case?—I believe he did say so.

26,251. (*Mr. Hanbury.*) May I ask how many of these departments are confidential?—Three are entirely confidential, and two partly so.

26,252. At the utmost, then, only half of them are confidential departments?—The other departments are partially manned by men not on the diplomatic establishment. The heads of all the political departments, of the commercial department, of the consular department, and of the chief clerks' department, are all men on the diplomatic establishment.

26,253. But inasmuch as these last-mentioned are not confidential departments, your argument as to the necessity for a nomination would not apply to them, even if it held good with regard to the others?—I think it would be very difficult indeed to have two systems in the office, because it is very desirable that the men in the office should take their turn in the commercial department, and should learn the commercial work. It is also very desirable that they should take their turn in the consular department.

26,254. Do they change about in that way?—Certainly they do. Every man in the office, as a rule, has been through the departments of the office. My idea is to keep the juniors for about two years in one department and then to move them to another, so as to let them get, as far as possible, a general knowledge of the work of the office.

26,255. Apart from that, is there any reason why the senior clerks in the non-confidential departments of the Foreign Office should be appointed, after nomination, any more than in any other Government department?—I think it would be very undesirable to have a double system in the office.

26,256. But apart from that, is there any reason for it?—There is the fact that we are in the habit of not chaining men down to any one department, but move them from one to the other. It would, therefore, be a very inconvenient thing if the head of the commercial department was a man whom we could not put into a political department if we wanted him.

26,257. Then your argument, I suppose, is that because one half of the work of the Foreign Office is confidential and the other half is not, the whole of the clerks must be appointed after nomination in order to secure a regular change of offices amongst these men?—Yes; I would not say so absolutely of the commercial department, but I would not separate that altogether from the rest of the office.

26,258. (*Mr. Freeman-Mitford.*) I presume that, even in the commercial department, there may at any moment crop up certain matters of a very confidential nature which might not necessarily filter down to the lower grades of that department, but might be confined to the men at the head, who are men on the diplomatic establishment of the Foreign Office?—Certainly. I think it is very desirable to have the commercial department presided over by a man who is on the regular staff of the office.

26,259. (*Mr. Lawson.*) Is that so. Could anything in the commercial department be kept from the knowledge either of the supplementary or of the lower division clerks?—Certainly, everything of a confidential nature is kept from the knowledge of the lower division clerks.

26,260. Is it kept from the supplementary clerks?—No. I should look upon a supplementary clerk as quite worthy of trust. When men are on the regular establishment, I never should doubt their being perfectly trustworthy.

26,261. And yet you bar the door of promotion to them?—That is simply for convenience sake, in consequence of the different nature of the work.

26,262. (*Mr. Hanbury.*) They are appointed after nomination, and, therefore, if you attach such great importance to nomination as a test of character why should not the supplementary clerks who have gone through the test of nomination be fit for promotion to a higher rank?—That is simply an arrangement which has been made for the convenience of the office. In the political departments, where the work is more important, we have men whom we consider to be more highly trained. I do not like to say we have not perfect confidence in these other men, I certainly should trust them, but still you can understand that in working very important diplomatic matters it is desirable to have men whom you thoroughly know.

26,263. (*Mr. Lawson.*) Is it the case that the work which a junior clerk entering the service would do in any department would be very much the same whichever department he went to?—I should say not.

26,264. Would not his work for the first two years be mechanical?—In the political department some of his principal work would be deciphering telegrams.

26,265. (*Mr. Maclure.*) Would that be confidential duty?—It is most confidential work. I think that a man who has to copy important despatches naturally acquires some knowledge of them. I came into the Foreign Office at the time of the Crimean war, and I spent two years in copying Lord Stratford's despatches. I think that was rather a valuable experience. There was a good deal to be learned from them. I should not have seen them or read them unless they had passed through my hands in that way. I do not know any way in which a very young man can be better employed.

26,266. (*Mr. Freeman-Mitford.*) We had some talk just now about the advisability, or otherwise, of establishing a general register in the Foreign Office. Are you thoroughly satisfied with the present order of things?—I think that our system, which requires a very rapid reference to papers, necessitates our having a separate register in every department. I think that if they went to a central register we should not be able to get at the papers so quickly as we do. Now, the Secretary of State very frequently calls for papers which are required in a moment, while perhaps a foreign minister is waiting. I think if we had to go to a central register and to general archives we could not get the papers nearly so quickly as we do now from each department.

26,267. In regard to the appointment of a sub-librarian, a sub-librarian as I understand, even if the librarian were appointed from outside, would be an officer whose appointment you would like to see confined to the office itself?—Certainly.

26,268. By promotion, as I understand, in order to keep up the traditions of the office?—I think that the appointment of a librarian from the outside should be a very exceptional thing, but when I am asked what the powers of the Secretary of State are, I certainly am not prepared to limit them. If any post in the Foreign Office required very exceptional capacity, and there was no man in the office who had that capacity, then I should say the Secretary of State was perfectly at liberty to go to the outside for him. With regard to such a post as that of sub-librarian I think that it is very desirable to get men who have been trained in the department, and who have a knowledge of it, and I do not think that such exceptional qualities are required in that position as would justify going to the outside to fill the office.

26,269. (*Mr. Harvey.*) You justify the maintenance of the principle of nomination, on the ground of the confidential nature of the work of the men who are to be employed in the political divisions, do you not?—Yes.

26,270. As I understand you, there are no lower division men and no writers in the political divisions?—None.

26,271. Are steps taken to prevent any papers containing matters of a confidential nature from coming into the hands of lower division clerks, or the writers of other divisions?—Those papers never ought to go into their hands, and certainly they never would go into their hands.

26,272. Would you say they never do as a matter of fact?—Never.

26,273. In two years they will, of course, because in two years under your system they will pass into the hands of the librarian, and the librarian's department is composed of lower division clerks, and I presume, if necessary, of copyists?—Not of copyists.

26,274. Of lower division men at any rate?—There are some lower division men in the department employed in indexing.

26,275. So that after two years the lower division men in the librarian's department would practically see everything?—I do not think it would be quite as soon as two years; but as soon as the papers are ready for indexing. The papers go into the librarian's department in two years, but I do not think they begin the indexing of them for some further time; I should think about four or five years or longer. No doubt then the lower division men would see the papers, but even then not all, as a certain amount of this work is reserved for the supplementary clerks.

26,276. Now as to the work of the men in what you call the diplomatic or political departments, would you say that the work of a junior clerk entering the Foreign Office in the diplomatic department was more difficult or less difficult than that of a man who was in the chief clerk's department when he first entered?—I imagine that in the chief clerk's department he would be occupied in adding up figures. In a political department the man is employed in deciphering telegrams, no doubt in a good deal of copying, and also in doing generally what is required of him. I do not consider it to be difficult work.

26,277. Would the chief clerk's department have charge of the Vote for the Foreign Office?—Yes.

26,278. It would have charge of the financial arrangements?—Yes.

26,279. Would you say that any work that a junior clerk on the diplomatic establishment ought to do during the first two years was up to the level of the work that any man ought to do who was entrusted with the Vote of the Foreign Office, or the Vote of the Consular Service, or the Vote of the Diplomatic Service?—I think that the work he would have to do requires a considerable amount of general intelligence; and I should also consider that work as a training fitting him for the more important duties he would have to perform hereafter.

26,280. (*Mr. Freeman-Mitford.*) And such work is confidential, is it not?—Yes.

26,281. (*Mr. Harvey.*) That is a point which I wish to accentuate. I understand the drift of your evidence to be that you would not at all defend the principle of limitation of competition on the ground of the nature of the work done by the men so appointed, but exclusively upon its confidential character?—Certainly not upon the difficulty of it, but upon its confidential character.

26,282. Are steps actually taken in the political departments—the eastern, the western, and the American—for preventing papers from so lying about in an office where, I suppose, as in every other office, men go from one room to another, to prevent a lower division clerk from seeing any of the confidential papers?—No confidential papers are left lying about in the department. All confidential papers are always locked up at night

26,283. If you would defend this limited competition on the ground that you must have a special body of men on account of the specially confidential nature of the work, I want to see whether, as a matter of fact, in the daily practice of the Foreign Office the confidential papers are really guarded against the knowledge of any lower division clerk from any other department, say from the commercial department or the treaty department, who might in what seemed to him the legitimate course of his business come into a particular political department?—I should say they are strictly guarded from him and that no lower division clerk in the Foreign Office would ever have the slightest chance of seeing any confidential printed paper, or any other confidential paper. I may say positively that that is so.

26,284. How many junior clerks have you in the departments that are under your superintendence?—In the western department there are a senior clerk, two assistants, and five juniors.

26,285. Is their time exclusively taken up with work to which you give the name confidential?—Of course

Sir P. W. Currie, K.C.B.

12 Nov. 1889.

there is a good deal of work done in the department which is not confidential. You might say—I suppose that would be your view—why not eliminate the work which is not confidential and put it into another department.

26,286. That is what I was going to put to you?—My answer to that would be that we are liable in the Foreign Office to a very great and sudden pressure of business, and that business is very often of a very confidential nature, therefore, if we did not do any other than confidential work in the departments, if we were to eliminate all that work and keep only men always employed on confidential work, we should, in the event of a sudden pressure, find ourselves short-handed. For instance, I was in the French department in 1870 occupying much of my time with work which was not confidential, suddenly the Franco-German difficulty began, and in a moment there was an enormous rush of work. I remember I was kept there all through the summer working about 10 or 12 hours a day on work which was of a very confidential nature. If that department had been kept strictly limited to the number of men necessary to do the confidential work in ordinary times, we should have been utterly unable to cope with the work when this sudden pressure came. That, I think, applies to the office generally. Everybody knows that at any moment European complications might take place, and we should then, no doubt, have a very great pressure of work. If our staff was strictly limited to the amount that was necessary in ordinary times for confidential work, then in a time of pressure we should not have enough men to do the work.

26,287. So that we may take it that the normal staff of the political divisions of the Foreign Office is manned with a reference not merely to the ordinary work but to the special demands exceptionally made upon it?—I should say yes, that the political departments deal not only with the confidential work but also with a good deal of work that is not confidential. I think it would be undesirable to diminish that, because you would then so diminish your staff that in a time of pressure you would not have hands enough.

26,288. You have, I think, regarded the supplementary staff as men who may be entrusted with confidential work?—I think it is invidious to say of any class of men that they are not to be trusted, and I should decline to express any opinion of that kind.

26,289. In the practice of the Foreign Office, would it be the custom to entrust the confidential papers, if necessary, to supplementary men as well as to the men on the main division?—I should not consider those men as unworthy of confidence. As a matter of fact, the practice of the office is, that the confidential work, which is confined to the political departments, is done entirely by the men on the diplomatic establishment.

26,290. Supposing we assumed that the ideal arrangement of the Foreign Office should be that a system similar to that or identical to that at present in operation for men to be entrusted with purely confidential work should continue, might not the whole of the other work be done by clerks of the lower division under the system which this Commission has laid down in its previous reports?—I think that the work of the non-confidential departments might be done by clerks of the lower division, superintended, as is the case in other departments, by a certain number of upper division clerks. Those upper division clerks I should take not from the diplomatic establishment, but from what I have called the supplementary establishment. That has already been adopted in the Foreign Office to a considerable extent, for as you see there are eight or ten lower division clerks in the chief clerk's department, and four in the librarian's department.

26,291. The gist of my question is, that this Commission having laid down certain rules for the Service generally, and you, as representing the Foreign Office, having shown grounds for excepting a certain portion of the Foreign Office from the general arrangement which this Commission has laid down as applicable to the whole Service, I want to see whether we could not get the whole of the work of the Foreign Office within the scope of our former recommendations, with the exception of that part which is employed on what you call confidential work?—I think you cannot do that. I think that the non-confidential departments might be chiefly manned by lower division clerks. I have not much experience of lower division clerks, but I think it would be very desirable to have them superintended by a certain number of higher division clerks as they now are.

26,292. But you would not think of putting forward any view about lower division clerks opposed to the generally high opinion as to their confidence, and as to their capacity, which has been given in other sittings of this Commission?—No, I should be quite satisfied to accept that view as regards the non-political departments of the Foreign Office. As regards the political departments, I think that we ought to have a special staff of men of the class that we have now.

26,293. As for the grounds on which that class is selected, you have told us that you were private secretary to the Secretary of State for Foreign Affairs, and in answer to a question that was put to you, I understood you to say that the private means of a candidate was not one of the points which you would consider in the selection of those names which should be submitted for competition?—Not for the Foreign Office, for the diplomatic service we should.

26,294. I am leaving out the diplomatic service entirely; I am speaking simply with reference to the Foreign Office?—With reference to the Foreign Office there is a stipulation as to age; if a man has a home in London he is eligible rather earlier than if he has not. I never troubled myself about a man's means in the least.

26,295. Have you considered whether you would not get this confidential work just as well done by ordinary men of the higher division entering under the ordinary arrangements as the rest of the Service without nomination; would not the necessary confidence be as thoroughly secured and well guarded if you were to abolish the system of nomination in favour of open competition as it exists in other offices?—I gave what I thought a very strong reason against open competition. What I would add to that is that I think the Secretary of State ought to have a distinct control over the nomination of any persons who are to compete for the Foreign Office.

26,296. With reference to the librarian; has not the librarian of the Foreign Office published several books?—He has published State papers and collections of treaties.

26,297. If you would be good enough to turn to the Estimates, page 106, you will see that there are ten Queen's Foreign Service messengers at 400*l.* a year each; who appoints them?—The Secretary of State.

26,298. Is there any examination for that appointment?—There is a pass examination before the Civil Service Commissioners.

26,299. (*Mr. Maclure.*) That is not a competitive examination, is it?—It is not competitive in any way; it is merely a pass examination.

26,300. What are their duties?—Their duties are to carry despatches to Her Majesty's representatives abroad.

26,301. (*Mr. Lawson.*) With regard to the examination, it is more or less of an elementary kind, is it not?—Foreign service messengers must on appointment be between the ages of 25 and 35. They must be British subjects. They must have such a knowledge of either French, German, or Italian as will enable them to make themselves understood in regard to such matters as concern their duties on the road, those duties being to convey the despatches entrusted to them safely and expeditiously by whatever means they may have occasion to travel; they must have such a knowledge of the first four rules of arithmetic as will enable them to make out their accounts in the simplest form. Those examinations are now suspended. They must be able to ride, and competent to perform journeys on horseback; and they must possess sound bodily health.

26,302. Is there any examination for the riding?—A man has to show that he can ride.

26,303. (*Mr. Fowler.*) Is there any check upon their journeys?—I must refer you to the chief clerk, he specially superintends the messengers and is responsible for their accounts.

26,304. I am not talking about their accounts, I am talking about journeys. It has been alleged frequently in the House of Commons that these messengers are not employed exclusively in conveying despatches, but that they are employed for various purposes, for convenience of the embassies, and that they often make

journeys when there is really no political necessity for such journeys being made?—There are fixed journeys to some of the more important Courts. For instance, there is a weekly messenger to Berlin, a fortnightly messenger to Constantinople, and a fortnightly messenger to St. Petersburgh. The messenger's business is to convey the despatches, and there is generally a considerable accumulation of things to be taken at the end of that time. Many years ago there was great complaint that the messengers conveyed parcels for people who did not belong to the Service, but there have been very strict rules laid down about it. A messenger is justified in taking a certain amount of moderate sized parcels for the minister and the ambassador to whom he carries despatches, but nothing belonging to persons not in the Service is allowed to be sent.

26,305. Is there any authority which would interfere with an ambassador or a minister sending a special messenger home for a mere trifling purpose?—Certainly; he cannot do it.

26,306. He cannot do it?—An ambassador can only send a messenger home by asking special authority from the Foreign Office to do it. As a rule he has no messenger at his disposal except the man who has been sent out from the Foreign Office with a fixed time for going, and a fixed time for coming home.

26,307. (*Mr. Freeman-Mitford.*) Was there not a distinct order given out to say that Foreign service messengers were not to take any parcels for members of the legations?—I think the order applied to parcels for people who are not members of the legations.

26,308. (*Mr. Lawson.*) What means have you for enforcing the rule with regard to the contents of the Foreign Office bags?—They are made up in the Foreign Office.

26,309. (*Mr. Fowler.*) Then nothing can be put in without the sanction of the head of each department?—That is so. Frequently the head of the department comes to me and says there is rather a large parcel come for the ambassador, and asks me for my sanction to send it; I frequently say, that before sending it he should write to the ambassador and ascertain exactly what it is.

26,310. I can understand that confidential despatches must, of course, be sent by a messenger, but now I want to ask your opinion whether there can be any reduction in the expenditure under this item?—In reply to that, I may say that Queen's foreign service messengers are employed under the Foreign Office to carry between London and foreign capitals, despatches and communications of a confidential character which it is not considered advisable to intrust to the ordinary post. In 1869 there were 17 of these messengers; in the following year they were reduced to 15, in 1873 to 12, and under a minute approved by Lord Granville in 1883, they now number 10 only. In consequence of the increased facility and rapidity of communication and of the establishment of a local service between Paris and Calais, it is in contemplation, as vacancies occur, still further to reduce the number. The following are the fixed journeys now performed by the foreign service messengers:—A fortnightly service to Constantinople, by way of Paris, Stuttgardt, Munich, Vienna, Belgrade, and Sophia; a fortnightly journey to Berlin; a fortnightly journey in the intermediate weeks to St. Petersburg by way of Berlin. The messengers are held in readiness for extra journeys as required. The messengers receive salaries at 400*l.* a year, with an allowance of 1*l.* a night while employed abroad. The messengers charge in their accounts their actual expenses, that is to say, the railway fares and the sums paid for excess luggage. Such items as cab hire, fees to guards, porterage, &c. are settled according to a table of fixed allowances, calculated, as far as possible, so as to reimburse the messenger his actual outlay, and no more. This table is revised from time to time, so as to adapt it, as far as may be, to altered circumstances, the last occasion of such revise having been in 1887, when further savings estimated at about 250*l.* a year were effected.

26,311. (*Mr. Hanbury.*) I suppose the telegrams are sometimes confidential, are not they?—Yes, generally.

26,312. But you trust them to the foreign post offices?—They are all in cipher.

26,313. Why cannot despatches be sent by post in cipher?—Despatches are frequently sent in cipher by post.

26,314. Just as confidential telegrams cannot be deciphered, and just as you trust important communications to the telegraph, why cannot you also send despatches by post in cipher, and so save these messengers?—Despatches are frequently sent by post.

26,315. Why cannot you send more—why cannot you send them all?—I do not think that it would be possible for us to dispense altogether with messengers, but this memorandum shows that their numbers have been much reduced—the number of journeys has been very largely reduced, and I hope that it will be possible to diminish the number of messengers still further.

26,316. Then there are other reasons for employing these Foreign Office messengers besides the danger of despatches being read?—Yes; for instance we keep our foreign representatives abroad at important posts informed of what is going on, and we send them habitually the confidential printed papers. It would be an endless labour to put all those into cipher.

26,317. What is the distinction between papers that you send by Queen's messengers, and those that you can send by post either in cipher or in plain?—There are voluminous papers that are sent to Foreign Ministers, and the labour of putting them into cipher and deciphering them would be so great that it is better to send them by messenger.

26,318. (*Chairman.*) Now the Home Service Messengers: your memorandum says what their numbers are, but I do not quite understand what they do?—Their business is to carry the boxes in which Foreign Office business is transacted between the Secretary of State and the Queen and Ministers, and to deliver letters to foreign representatives, other offices, &c.

26,319. I think you were asked some questions about the new arrangement, whereby a legal assistant has been appointed to the Foreign Office at 1,000*l.* a year, has that been proved to be a satisfactory arrangement?—I think it has. Dr. Deane was assistant to the Law Officers in Foreign Office business, and he received 2,000*l.* a year; but his post was abolished, and a man entirely attached to the Foreign Office as a part of the establishment was appointed, with a salary of 1,000*l.* a year.

26,320. In the questions which you have found it necessary in your position as Permanent Under Secretary to get dealt with by the legal adviser, have you found that the present arrangement is a good one?—I have found it is a very satisfactory arrangement. I think it is an excellent arrangement. We constantly require advice on matters which it is not necessary to submit to the legal officers of the Crown, and we find his advice of great use.

26,321. (*Mr. Lawson.*) Is his time fully occupied?—He tells me that he cannot get through his work.

26,322. (*Chairman.*) Then about the hours of the Foreign Office, at first sight it does not appear why the Foreign Office should begin at 12 instead of beginning at the usual hour?—The hours of the Foreign Office have always been late. We find by experience that it is very difficult to close the office early. I myself never leave the office before seven; and whenever there is a pressure of business I remain a great deal later. The Secretary of State generally sends his work on late; it depends very much upon him. He sees the Foreign ambassadors and ministers in the afternoon: they seldom come before three; three to five are about the hours at which they are received; then the Secretary of State, having as a rule been a member of the House of Lords, frequently returns to the office after the house has risen; therefore, we are liable to have important work come to us quite late, and it is impossible to close the office early. If we were to open at 10 o'clock I do not think we should be able to close early.

26,323. Is there any inconvenience caused to other departments, and possibly to other ministers, by the Foreign Office bags not being opened early enough, or is it the fact that the Foreign Office bags are opened early?—The Foreign Office bags are opened the first thing in the morning by the resident clerks, and all the letters that come in the Foreign Office bags are distributed.

26,324. Then the Foreign Minister would get his letters at home early?—Certainly.

26,325. (*Mr. Lawson.*) I see that some of the departments are open at 11 o'clock?—Yes; those are the Financial and Commercial. The Commercial Department is open at 11 to suit the convenience of the Parliamentary Under Secretary.

Sir P. W. Currie, K.C.B.

12 Nov. 1889.

26,326. Supposing the hours of the clerks at the Foreign Office were seven, would it not be for the general public convenience if the office were open at 11 throughout?—If the office were open seven hours I should prefer that it should be open from 12 to 7 rather than that it should be open from 11 to 6.

26,327. But you open parts of it at 11 now?—We do, but not the political departments. The political departments are open from 12 to 6.

26,328. (*Mr. Hanbury.*) Do the departments which begin at 11 o'clock close at 5?—I do not think they do close at that hour. For the political departments there are no really fixed hours, although we call them from 12 to 6.

26,329. (*Chairman.*) Have you been considering at the Foreign Office the question of adopting the opinion of this Commission, that the hours ought as a rule to be 7; have you considered how to introduce that into the Foreign Office?—It really would not make any very great change to us.

26,330. Probably not, and certainly not with the higher officers, but with reference to the lower division clerks who are now getting 80*l.*, rising by 15*l.* triennially up to 200*l.*, for six hours work, how would it effect them?—A lower division clerk generally has a certain amount of mechanical work served out to him at the beginning of the day, and whether he works for five hours, six hours, or seven hours, makes no difference, he simply goes on a little longer. But the work of our political departments cannot be dealt out to the men at the beginning of the day. Perhaps when they come there is a certain amount of work to do in connexion with registering, putting the papers by, and getting the things into order, but then it is uncertain what amount of work comes down. Perhaps the Secretary of State sends down three or four long telegrams to be sent off. Those have all got to be put into cipher and sent off, then copies of all have to be made to be sent to the Cabinet. You cannot possibly tell what amount of work there will be in course of the day, and therefore you want a certain amount of elasticity. For that reason I should be unwilling to adopt the system of an attendance book, because if you tie a man down to come positively at a certain fixed hour, and then state another fixed hour for the time that he leaves off his work, naturally at that time he takes his hat and goes, whereas according to our present system in the Foreign Office, there is no time for going away, and the men go away when they have done their work. When I was the head of the eastern department, during the war between Russia and Turkey, when there was very heavy work, the men did not habitually go until long past 8 o'clock. I, myself, used to be there very constantly till 9 o'clock, and I generally left two or three men still in the department. In consequence of the disturbed state of the east of Europe and Egypt the strain on the department lasted fully ten years, from 1876 to 1886.

26,331. (*Mr. Lawson.*) To put a direct question, whilst everybody would acknowledge that the higher officials have an immense amount of work to do, do you think you work your young men sufficiently long hours?—I think so; I think that the moment there comes any pressure of business, we work them very hard indeed: we keep them very long hours, and we keep them very hard at work.

26,332. In ordinary times, do they work six hours?—Yes, I think they do; they are there six hours.

26,333. (*Mr. Hanbury.*) Do you really say it would not be an advantage to the office to make sure that everybody should be there punctually to begin work at a given hour?—They do come punctually. The departments are always open at 12 o'clock, and the greater part of the men are there. But we have not got an attendance book, so that I could not call for anybody, and say, "that particular man did not come until five "minutes late, or ten minutes late, or a quarter of an "hour late."

26,334. Or half an hour late?—Or half an hour, it might be.

26,335. (*Mr. Freeman-Mitford.*) I suppose you would make the heads of the departments responsible?—The head of the department is responsible for that; it is his affair; he has got to see the work done. I have not been asked my opinion about keeping an attendance book, but if you ask me upon that I would say that if you make a man come absolutely at the minute, naturally he says, I will go at the minute too. That would be perfectly fatal to us—the one thing that is important to me in the office is that I shall be able to keep the men to any hour the business requires. At present I will undertake to keep the men there all night, if necessary, and nobody will complain. It is the custom of the office; it always has been: there is a very good spirit shown, and nobody considers they have any right to go away until the work is done.

26,336. (*Mr. Lawson.*) Does that apply to every class?—That applies to the political departments; of course the work of the other departments is more routine; for instance, in the financial department it is of less consequence whether the work is done that day or the next as long as a fair proportion of the work is got through.

26,337. Surely the commercial business in the commercial department is of some importance?—I do not think it applies so much to the commercial department; I was speaking of the political departments. There are times, no doubt, when there is very great pressure in the commercial department too.

26,338. Do not you think it would be an advantage if in the non-political departments the hours were seven instead of six?—I do not think you will get any more work out of a man if you ask him to stay an extra hour.

26,339. (*Mr. Harvey.*) Do I understand that a man from the City coming to the Foreign Office at half-past 10 to the commercial department would not find anyone there?—He would not find anybody in the department, but he would find the resident clerk.

26,340. (*Mr. Fowler.*) Is the cipher department a separate department?—No, that work is done in each political department.

26,341. Is there a separate cipher in each political department?—Each department has its set of ciphers.

26,342. And are all the men on the establishment familiar with the use of them?—Yes.

26,343. (*Mr. Freeman-Mitford.*) When you say each department has a set of ciphers, you have the A, B, C, D, E, F, and you have got one set of those in each?—Yes.

26,344. It is not a separate cipher?—No.

26,345. (*Mr. Lawson.*) In your experience have there not been cases in which information of a confidential character has permeated down to classes which are not within the category?—I have no knowledge of any such.

26,346. You do not know of any?—No.

26,347. Sometimes complaints have been made that the ordinary clerk in the Foreign Office is not sufficiently acquainted with commercial business—do you insist that every one of your political clerks shall pass a certain time of real effective work in the commercial department?—It is not an absolute rule, but as a matter of fact I should try to put most of them there. Then of course there always comes in the other consideration that when a man has been some time in the commercial department he becomes very useful, and if I attempt to take him away the head of the department says "If you take that man away, I do not know what I shall do."

26,348. Then you do not disturb the different branches more than you can help?—My principle is to move the men about, but still you have to consult the convenience of the departments.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

SEVENTY-SEVENTH DAY.

7, Whitehall Place, Westminster, S.W., Wednesday, November 13th, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.
Rt. Hon. H. H. FOWLER, M.P.
Mr. A. B. FREEMAN-MITFORD, C.B.
Mr. J. CLEGHORN.
Mr. R. W. HANBURY, M.P.
Mr. H. L. W. LAWSON, M.P.
Mr. J. W. MACLURE, M.P.
Mr. H. WALPOLE, C.B., *Secretary.*

Sir FRANCIS ALSTON, K.C.M.G., called and examined.

Sir F. Alston, K.C.M.G.
13 Nov. 1889.

26,349. (*Chairman.*) I believe you are the chief clerk of the Foreign Office?—I am.

26,350. I understand that you are principally in charge of all the financial business of the office?—Entirely so.

26,351. And that the accounts of the diplomatic and consular service, with the preparation of the estimates, is in your hands?—Yes.

26,352. And that you also represent the Foreign Office before the Public Accounts Committee of the House of Commons?—I do so.

26,353–4. Do you also have charge of the staff?—It would be, perhaps, more correct to say that I assist the Under Secretary of State in the administration of the different departments of the office. At the Foreign Office the Under Secretary of State regulates the discipline of the clerical portion of the establishment.

26,355. Do you mean the Parliamentary Under Secretary?—No, the Permanent Under Secretary. I should say that I, as chief clerk, assist the Permanent Under Secretary, and that all questions of discipline are referred to him.

26,356. Sir Philip Currie gave us some evidence yesterday, with reference to the different classes of clerks which you have in the Foreign Office. I do not think I need go into detail over all that. I think we understand, from the memorandum submitted to the Commission by the Foreign Office, that you have 36 clerks on the establishment; that is to say, 36 Foreign Office clerks proper?—Yes.

26,357. Who are nominated from a list by the Secretary of State, and who then compete for the appointments?—Quite so.

26,358. I believe that eight or 10 generally compete at a time?—Quite so.

26,359. According to the memorandum, these 36 clerks are set out as consisting of five seniors, seven assistants, 20 first-class junior clerks, and four second-class junior clerks?—Yes.

26,360. Then you have a class something analogous to the supplementary clerks of the Treasury?—That is so.

26,361. They, I believe, are similarly appointed, only they undergo a different examination?—The supplementary clerks are appointed under a different examination. There is a class in the library which is somewhat analogous to the supplemental class, but they undergo the same examination as the clerks on the diplomatic establishment of the Foreign Office.

26,362. Do you mean the whole of the clerks in the librarian's department?—Yes, with the exception of four lower division clerks, who were added to the department about 12 months ago.

26,363. Are these lower division clerks doing in the librarian's department the same kind of work that is being done by the other clerks?—They are on the registry, registering and indexing old papers.

26,364. What is your opinion with reference to the work of the lower division clerks; do you think it would be possible that the position of the clerks who correspond to the supplementary clerks in the Treasury could to any extent, as vacancies occurred, be taken by lower division clerks?—That is a question which will have to be considered very soon. Our lower division clerks have now served upwards of eight years. I had always considered that the question would not arise till they had served 10 years, because under the old Order in Council they must have served 10 years before the question of promotion could arise; but if the term is reduced to eight years, they will become at once eligible for promotion. So that it is a point which will unquestionably have to be considered whether some means of promoting them cannot be found by substituting some of the lower division clerks on selection for some of the supplemental clerks who have been hitherto appointed.

26,365. From what you have seen of the lower division clerks that have come into the Foreign Office, would you say that they are the kind of men who are likely to do good work in the Foreign Office, as good work, for instance, as is now being done by the supplemental clerks?—As far as my experience goes, they do excellent work, but of course you cannot expect always to find all men equal in every respect. One man may be admirable as regards his work, but he may not be one of nature's gentlemen; you will find differences in that respect.

26,366. Speaking generally, do you see any necessity for maintaining, or do you think it would be desirable to maintain, the class of supplementary clerks?—No, if the matter rested with me I should say at once that I am prepared to consider the question whether we could not, in certain instances and by selection, promote lower division clerks to the positions previously held by the supplemental clerks.

26,367. (*Mr. Lawson.*) What do you mean by selection from the lower division; would it not be possible to fill most of those places with lower division clerks in the ordinary manner without selection?—I am speaking of the staff appointments. I should tell you that I have here a memorial from the lower division clerks in the Foreign Office, which they have requested me to put in before the Commission. I will now hand it in. (*Handing in same.*) I may say that the burden of their complaint (and it is the only complaint that they make) is, that they see no prospect of promotion. That was on my mind in answering the previous question.

26,368. (*Chairman.*) Take the staff at present in the librarian's department, which consists of a sub-librarian, two first-class clerks, and two second-class clerks, leaving out the four clerks below, who, I understand, are lower division clerks employed upon the registry; what Mr. Lawson is asking is, whether all those appointments should not be recognised as second division clerks' appointments, the sub-librarianship being, of course, a sort of staff appointment only filled by lower division clerks?—We do not know what a second division clerk is made of until we have had some experience of him. I should certainly, in all cases, like to have experience not only of the capacity of a lower division clerk but of his manners.

26,369. (*Mr. Lawson.*) Is not the work that is done by some of these gentlemen who are called the clerks in the librarian's department, such as could be done by the average lower division clerk?—Do you mean in point of capacity?

26,370. Yes, in point of capacity?—I do not for a moment suggest that the lower division clerks are otherwise than very capable.

26,371. Are they capable of doing this particular work; is it work such as you would intrust to the average lower division clerk?—If I found, on experience, that he was a capable man I should have no sort of objection to him; but I cannot say that all the

Sir F. Alston, K.C.M.G.

13 Nov. 1889.

men who come in as lower division clerks have invariably the qualities that would fit them for being placed in the library, at all events, in the upper positions.

26,372. (*Chairman.*) I suppose the present supplementary clerks in the librarian's department, the first and second-class clerks, have all got their places on promotion, and that you do not take them entirely on trust for the more important work of the division?—The supplementary clerk enters, in the first instance, at the bottom, and naturally he has to do the inferior work in the first instance. Then the librarian judges of his capacity and of his character, of his manners, and his general behaviour, and if the librarian is satisfied with the clerk's conduct he would recommend him in due course for promotion from one class to another, unless the librarian were so satisfied he would not recommend the clerk for promotion.

26,373. Do you feel that you know more of the adaptability of that clerk to your work in any portion of the department than you would of the lower division clerk when he first enters; have you got any guarantee of his capability?—No guarantee other than that he comes from a rather higher stratum of society, and is nominated by the Secretary of State, whereas the lower division clerk enters by open competition; those are the only distinctions.

26,374. Do you think as far as concerns the work which is now being done by the supplementary clerks that you could probably find men among the lower division clerks who could do the work?—That I have not a doubt about.

26,375. I rather gather that you are in favour of that being considered?—Certainly.

26,376. It strikes any person who looks for the first time at the estimates and the staff of the Foreign Office that you have got a good many heads, a large number of the higher clerical places, although I believe they have been diminished of late years. What can you tell us about the necessity, in your view, for the staff as it exists?—You see there are five senior clerks as against seven before the re-organisation in 1881. It was a question at the time whether the reduction of two of the senior clerks was not more than experience showed would work satisfactorily, but I am prepared to say I think it has answered the purpose. We have fortunately, five first rate men in these positions, and so long as we are careful to promote no one but a first-class man to the post of senior clerk, I think we shall be able to carry on the work as we are.

26,377. That is so long as you have the absolute right of selection?—We must insist upon that.

26,378. What do say about the number of assistant clerks and first-class junior clerks; that seems to bear rather a large proportion to the staff of the lower grade; is there anything in the nature of the Foreign Office work which you think necessitates that?—The reason why we maintain seven assistant clerks is that two of the departments have each two assistant clerks. Whether that is necessary I am not sure that I am so competent to say as Sir Philip Currie would be, because these are the political divisions with which I am not directly concerned at the present time.

26,379. Have you made any representations recently to the Treasury for extra clerks?—There were communications with the Treasury two or three years ago with reference to one or two lower division clerks. No assistance has been asked for in the body of the establishment.

26,380. I will now ask you to state as far as you are aware whether you see any means of reducing the staff with advantage to the Foreign Office?—I do not believe that you can with propriety or with safety reduce the body of the political department. There might be some re-adjustment possibly. It might be possible, instead of having seven assistant clerks, to have six assistant clerks and 21 first-class junior clerks, or to re-arrange the numbers somewhat in that form, but I do not believe that, as a body, taking the 36 clerks together, the work could be performed, certainly not in cases of pressure, with a less number of clerks.

26,381. With reference to the nature of the work that is done in the political department, to what extent is that work confidential?—It is held to be all confidential; some, of course, much more so than other portions of it.

26,382. I presume that the letters which come to the Foreign Office, if they are not marked "confidential," are opened in the ordinary way, as they would be in any other office?—All official letters addressed to the Under Secretary of State are opened by him or his private secretary.

26,383. If they are not marked "confidential," who opens those letters?—The despatches coming in the morning, addressed to the Secretary of State, are opened by the resident clerk, who is one of the political division of the office. Any letters coming in the course of the day are not taken to a registry room or to a department where the letters are to be opened, but they are taken direct to the Under Secretary of State or his private secretary. Any letter addressed to the chief clerk is brought to me, and I open it, or my first assistant would do so in my absence. Any letter addressed to the Under Secretary is taken to the Under Secretary, and is opened either by him or by his private secretary.

26,384. (*Mr. Freeman-Mitford.*) In fact, all the correspondence is held to be confidential, is not it?—Yes.

26,385. (*Mr. Fowler.*) Is it registered if it is opened?—It is registered in the department to which it belongs, registered in what is called the daily diary of the department, which is a different thing from the librarian's register.

26,386. (*Chairman.*) These questions are rather pointing to the same evidence we had yesterday from Sir Philip Currie about the status and position of the clerks upon your establishment, Sir Philip Currie holding a very strong opinion that it is desirable, owing to the confidential nature of the work, that there should be that special nomination for these clerks which does not exist in other offices. We should be glad to hear your views upon that point?—I am entirely of Sir Philip Currie's opinion, because I consider that the whole of the work is confidential.

26,387. The work is all regarded as confidential?—Yes.

26,388. Now a question about the relationship of the librarian's department to the other departments. I do not quite understand whether the papers in the ordinary course of current business are prepared by the librarian, or in his department?—Are you now referring to the memoranda?

26,389. Are there any despatches prepared in the librarian's department?—No despatches are prepared in the librarian's department; it is not a correspondence department.

26,390. That is what I wanted to be clear about; there is no correspondence?—That is so. I do not mean to say that Sir Edward Hertslet might not sometimes draft letters on matters with which he is specially conversant. For instance, any matter concerning the librarian's department probably would have to be drafted in my department, but Sir Edward might say, "I understand the case better than you, and I "will write it for you," but it would not be his business to write it, and his department is not a corresponding department.

26,391. (*Lord Lingen.*) Are we right in understanding that your department in the main works independently of the political department, and that, as a rule, you deal with accounts, and not with the diplomatic correspondence, properly so called; is that so?—That is the state of the case.

26,392. And that so far as you have correspondence it is with the servants of the Foreign Office, with consuls, and with secretaries of legation, and so on, as to their expenses?—With every sub-accountant, of whom there are between 600 and 700, I think.

26,393. Now take an important embassy, say of Paris, or Berlin, or Vienna, or Constantinople; supposing a question of accounts arose and came before you, in which we will say the ambassador himself was concerned, and something had to be written upon it, what would be the course of getting that letter written and despatched from the Foreign Office; should you draft it yourself?—I should not only draft it myself, but I should sign it; the whole of that correspondence would rest with myself.

26,394. If you did not consider it of sufficient importance to take the opinion of the Secretary of State upon it, would you issue that letter yourself?—Yes.

26,395. Being issued, would it appear on record in the registered correspondence in the Foreign Office?—It might, or it might not, that would depend entirely upon the form the communication took. If it was on an ordinary matter, I should deal with it in my own department and issue it from my own department.

26,396. If it was an ordinary matter and you knew the ambassador or the first secretary personally, should you write it in the form of a private or of an official note, or of a memorandum on the account; how would you send it?—I should write it in the form of an official communication; but very probably supplemented by a private letter, because I have an enormous private correspondence with every agent of ours abroad. I see that last year I sent out 1,282 official communications in regard to accounts independently of at least a similar number of private letters.

26,397. And all those papers written in official form would remain on the record of the Foreign Office, would they not?—They would remain on record in my own department, and they are bound up.

26,398. I want to put this case to ascertain how far the record is strictly official. I put a case which is an extreme case, not likely to happen in fact, but which still might happen. Supposing you had such a dispute with an ambassador about a question of accounts, that at last it attracted attention in Parliament and papers were moved for, would the letters that had gone out of your department be so far official, that they would be produced as a matter of course?—I am not aware of any instance in which they ever have been produced, but I see no reason why they should not be. I may say, that if ever I find the difficulty more than I can conquer, I hand the matter over to the political division. For instance, I should write a draft for signature by the Secretary of State if the official required to be pulled up, and proved stronger than I was, or if I was not able to deal with the case. There are occasions when it does happen that the thing goes beyond my powers of managing.

26,399. May we assume that as far as your department is concerned, if a question of accounts ever took so serious a form that it became a question of discipline and subordination, and not simply a question of accounting, that then would go into the Secretary of State's own department on reference from you?—Quite so; probably I should have the management of it, but I should pass it through that department.

26,400. You would consider that at that phase it passed out of your department into the Secretary of State's department?—Yes.

26,401. Owing to this division of the Foreign Office into the department of accounts, and the librarian's department (which is a sort of department of record), and the treaty department (which may be considered something of the same nature), and the commercial department, a young gentleman who is brought up wholly in the political department has no very direct experience, either in commercial questions or in accounts, has he?—The commercial department is manned, to a certain extent, from the political body of the office. I should say that the number of those in the Foreign Office who have been through the commercial department is considerable.

26,402. That is to say, clerks that belong to the political department are employed in the commercial department?—Certainly.

26,403. And would be transferred from one division of the office to another, including the commercial department?—Yes.

26,404. But in your department, which is the department of accounts, at present all your own special staff (which, by the by, is an exceedingly small one considering how much you have to do, only three) are supplementary clerks?—Those are supplementary clerks.

26,405. And none of the politicals, if I may call them so, pass through your department?—No; I was offered some years ago the assistance of one gentleman of the political establishment of the office, but I said I preferred to be wholly master in my own department.

26,406. I understood the gist of your own opinion to be this, that the posts now occupied by these three men might, as vacancies fall, perfectly well be recruited from lower division clerks?—I should not like to go so far as that. I think that my successor (and it is a question which will arise one of these days, for I have almost completed my 50 years in the Foreign Office) should not be handed over exclusively to lower division clerks. I should doubt his ability to cope with the work which he would have to deal with, with less than the superior staff by which I am now assisted.

26,407. Supposing it were understood that a lower division clerk, taken to be one of the clerks in your division, was *ipso facto* put up several years' salary at once in that way, to mark the responsibility of his duties, and having a very considerable number to select from, of men who have been in the Foreign Office for a considerable time, would you not think it probable that you could get perfectly competent men without having a separate division and a separate admission for them?—Well, the room in which the three assistants that you are speaking of sit, is visited in the course of every day by a considerable number of gentlemen from either embassies, legations, or consulates abroad, who happen to be home on leave, and it is absolutely necessary that there should be more than one man to meet them. I have some capacity for work myself, but it is quite impossible that the chief clerk can see all those gentlemen who call in the course of the day. It would be more than one man could do. You must have at least one man always in the next room who is competent to receive the gentlemen who come to the department to discuss matters of accounts or any other questions which bring them to the chief clerk's department.

26,408. That practically comes to this, that there must be somebody capable of acting as your deputy in the less important interviews and in that part of the business of your department which has to be personally conducted?—Yes, and I should be afraid to limit the number to one, because there are occasions when the one may be away.

26,409. You and your deputy would, as a rule, not be away together?—Not very often. I am scarcely ever away myself. I hardly ever leave the office, but I should not like to undertake to receive everybody who comes into my next room; that would be out of the question.

26,410. You see there is a very considerable inconvenience, unless a strong reason can be given for it, in having a special class if you can work an office with a general one. As far as your own deputy is concerned, would not one of the political young gentlemen be considerably improved by being familiarised with your system of accounts and passed through your department. It would be his special duty to be, we will say, your deputy, that is, would do the reception part of the story. He would also obtain a familiarity with all the finance of the department, and the management of it in the hands of those officers that were at a distance. Could not we manage the deputy by telling off for that duty one of the political clerks who would pass through your department, not necessarily confined to it all his life, but he would pass through it as he now does through the commercial department?—The objection to it is, of course, that it takes a lifetime to know all the details of my department. I do not think that any man coming in and staying, say a couple of years in the department, would be of much service. You want a man who has experience, who is acquainted with all the intricacies of the work of the department. If you could find a man who would go into the department and be content to stay there (as I have been content to remain there) for the rest of his official life, all well and good. In the process of time he would learn his business; but if he only came in for a couple of years he would hate it and only be too glad to get out of it again.

26,411. Might not that argument be just as well urged in the commercial department, that if once in, a man should never go out of it. Do not you want that the men in the political department, especially if they come to the top of it (if they become assistant secretaries, and so on), should be familiar with every part of the Foreign Office, and be able to call all the officers to account that are under them, and to know whether they are performing their duties or not? Is not a man a good deal stronger when he gets up to the top of the office if he is familiar with every part of it?—That I grant, there is no doubt about that.

26,412. Supposing that you had a man for some three or four years in that office, one of the political clerks who represented you for purposes of reception, would not that answer the condition of having a gentleman at hand to receive visitors, and so on, and would not that give him very useful experience?—I do not know how he would like being called into my room 20 or 30 times in the course of the day. I should not be content with a mere ornamental assistant, I want a working assistant.

26,413. (*Mr. Lawson.*) Are any of them ornamental?—I should think that if a man is only there for the

Sir F. Alston, K.C.M.G.

13 Nov. 1889.

purpose of receiving visitors the more ornamental he is the better.

26,414. (*Lord Lingen.*) I think we should find a good deal of difficulty here in supposing that you wanted supplementary clerks as distinct from lower division clerks, on the theory that a supplementary clerk would be capable of receiving visitors properly and a lower division clerk would not. If any such distinction as that is necessary, one would think that it would be best by passing one of the political clerks through your department?—It may come to that one of these days. I should not advise that anything of the sort were attempted now, because so long as I am there, and so long as my first assistant is there, it would be a thousand pities to disturb the present arrangement.

26,415. We are speaking of filling up the vacancies?—It is a question to be considered.

26,416. (*Mr Fowler.*) I see that the first-class clerk in your department has a maximum salary of 600*l.* a year?—Yes.

26,417. Is that work higher or lower than, or equivalent to, the work of the assistants who get 800*l.* a year?—It is not political work.

26,418. Pardon me, whether it is political or not is not my question. Is the intellectual exertion or intellectual character of that work superior, or inferior, or equal to the work performed by the assistant clerk?—That would be a matter of opinion.

26,419. Is not the work which your first-class clerk has to perform equal to the work which the assistant clerks have to perform?—They say comparisons are odious; I have a very high opinion of the character of the work he performs.

26,420. Now we will go, if you please, to the librarian's department. The memorandum which has been supplied to us states that "the library has the custody, "arrangement, and registering of the manuscript cor-"respondence and of the printed library, and where "memoranda of historical events and international "cases, &c. are prepared." Now is there any other work done in the library but that?—That is the general description of the work; the work embraces almost everything. The librarian has the custody of the papers printed, as well as manuscript. We get all our information on historical matters, on international questions, questions of treaties, boundaries, and so forth from the library, or rather from Sir Edward Hertslet, who is the head librarian.

26,421. I presume that in a case of that sort, where you want information upon a treaty, or where you want memoranda prepared, that would be the work of Sir Edward Hertslet?—Yes.

26,422. Now, I should like to ascertain what the four third-class clerks, and the two second-class clerks, and the two first-class clerks have to do. Irrespective of the librarian and the sub-librarian, there are 10 clerks in the librarian's office at very high salaries?—I think you mentioned the sub-librarian.

26,423. Yes, and I will assume that he is an able man, of course?—He would be employed also on memoranda. The two first-class clerks in the librarian's department no doubt would be also employed on memoranda. There are two second-class clerks, and there are four third-class clerks. There is what is called a reference room, where the papers are kept, and these clerks will be in that room to put their hands upon any paper that may be required. Then a certain number of them would be on the registry. Then these clerks who are on the registry, say for six months, come to the reference room to do reference work, and the clerks who are in the reference room go into the registry, and they interchange in that way.

26,424. Would there be any difference in the ordinary work of the librarian's department, I am excluding the memoranda, between what would be done in the librarian's department and what is done at the Bodleian at Oxford or at the British Museum library in London?—The Bodleian library is a printed library only.

26,425. There are a great many manuscripts there, if you will allow me to correct you?—Yes, but you cannot compare the two.

26,426. I do not think you can. I think I am, perhaps, approaching it from a different point of view?—The work of the library is not merely shifting about papers and arranging papers; it consists of work incidental to the duties assigned to the head man, Sir Edward Hertslet. If, for instance, he is required to write a memorandum on any subject he would employ his assistants in getting the information for him.

26,427. I am admitting, for the sake of my question, that a librarian, a sub-librarian, and two first-class clerks are all exclusively occupied in this memoranda work?—They are more or less.

26,428. Are we to understand that the memoranda that are written in the Foreign Office require more than four highly-paid public officials?—It is a question which really Sir Edward Hertslet could answer better than I can.

26,429. You are responsible to Parliament for the preparation of the estimates, and I am now on the estimates, and I ask you, as a responsible official, what is the nature of the work which those gentlemen perform. We have got it in the memorandum submitted to us that they have the custody, arrangement, and registry of the manuscript correspondence and of the printed library. Therefore I take it that the library at the Foreign Office consists, as it does at Oxford or in London, of a manuscript department and a printed department. I take it that every book has to be catalogued and taken care of, and that all correspondence has to be registered. Now I want to know what other work the six clerks perform except that of registering, cataloguing, taking books out, taking manuscripts out, and putting them back again into their places?—I am sorry not to be able to answer the question more definitely. I wish I could, but I think it would be only fair that Sir Edward Hertslet should be allowed the opportunity of answering it.

26,430. Then you would not, I suppose, be able to answer any questions as to the state of the register in the librarian's department?—Generally, I think, I can answer such a question.

26,431. We know, in fact, that the registry was so far in arrear that the Foreign Office had to apply to the Treasury to have a large number of extra clerks employed?—Yes.

26,432. Will you please tell us the circumstances which led to that application?—That was the result of an establishment quite inadequate for the duties which it was called upon to perform. The establishment of the librarian's department was fixed in 1842, and with the exception of two clerks who were added in 1868, it remained until two years ago upon the same footing that it had been between 40 and 50 years before. In the meantime the correspondence had quadrupled, and an establishment which was competent to deal with 20,000 papers was perfectly incompetent do deal with 80,000.

26,433. What is the average number of letters and despatches a day at the Foreign Office?—It reached its maximum in 1886, when the numbers were 83,960; you may say 84,000, in the year. Then the number went down in 1887 to 76,106, and for last year it was 75,702.

26,434. Taking it in round figures, it would then be a very fair average to say that there are 1,500 despatches and letters per week?—I daresay that is so. In 1842 the number of despatches was 23,700.

26,435. Exclusive of the librarian and sub-librarian and a first-class clerk, what is the entire staff employed in the library; is it four second-class clerks, four third-class clerks, and four lower division clerks?—Yes.

26,436. There are 12, then?—Yes; but it will be observed from a note to the estimates that two of the clerks of the second class, though for estimate purposes classed as librarian clerks, are permanently employed, the one in the commercial and the other in the treaty department. The total number of second and third class clerks, with the four lower division clerks, is therefore 10.

26,437. As I understand it, documents do not come to the library for registration until, at all events, one or two years after they have been registered in their departments?—They come in in about a year and a half or two years.

26,438. The registration in the department, I suppose, shows completely the nature of the document, and is an index as to whom it was from, and its date?—It is a most elaborate register of the contents of every paper, and then there is an index besides.

26,439. Is every despatch and letter registered in the department?—It is registered, but not in the sense in which the librarian registers it afterwards; it is a

totally different registry. If a despatch comes in from Constantinople of a dozen sheets it may refer in the course of it to a dozen important incidents. In the daily diary the number and the date of the despatch, and the date of its receipt, would be entered, and if its primary subject were, say, disturbances in Armenia, and it were consequently wanted in a hurry, perhaps "Commotion in Armenia," or something of that sort, would be all that would be put down; but when the librarian registers it he will not be content with recording "A commotion in Armenia," but would register all the important incidents, and names of persons and places in the despatch. The registry, in fact, is done over again in a more amplified form.

26,440. It is a different register altogether?—Yes, and much fuller.

26,441. And therefore, although two years or one year elapses before the document reaches the library it is then a complete new registry?—When I said that the papers came into the librarian's hands in one or two years I did not mean you to infer that it would be possible for the librarian to commence to register the papers in one or two years. They come into the library, and the next thing that happens is that they have to be bound in volumes under a certain classification. That binding, you may say, generally takes a twelvemonth before it is finished. It is done on the premises. I believe that the librarian cannot commence to register correspondence until after about four years have elapsed.

26,442. Very well, say four years; but when the despatches and letters have got there and have been bound, then the work is simply the registry and a complete précis of its contents?—Yes.

26,443. As chief clerk have you considered the question whether the library staff was insufficient or superabundant?—I feel that Sir Edward Hertslet is a man who is far better qualified to offer an opinion on the subject than I can be. I should take Sir Edward Hertslet's word at once if he told me that his staff was insufficient. I should believe him at once. I feel that not only is he a most conscientious man and a most admirable public servant, but that he knows far better than I do what the men can do in the matter. I have a memorandum here which shows that the number of despatches received in 1886 was 84,000. In this memorandum Sir Edward Hertslet makes out, excluding the Sundays and the holidays, that there are 256 working days in the year. We have therefore 84,000 divided by 256, which gives 328 despatches to be registered and indexed daily. This memorandum is dated, by-the-bye, in 1886, before the lower division clerks were added: "The number of clerks engaged "on the register is five. Each clerk can register 60 "despatches daily." I should mention that Sir Edward makes that statement after communication with Messrs. Longman, who have great experience in these matters. "Therefore five clerks can register "only 300 despatches daily, leaving a deficit of 28 "despatches daily, or 7,168 annually; but, as in "the library the despatches are indexed as well as "registered, and each clerk can only register and index "40 despatches daily, the number of despatches so "registered and indexed would be only 200 daily, "leaving a deficit of 128 daily, or 32,768 annually. "To grapple with that, three additional clerks" (it should be four, I suppose) "would be required, thus "making the staff engaged upon the register and index "eight instead of five, as at present. The above, "however, leaves no margin for illness, or unavoidable "absence from other causes, or for being taken off "the register to be employed in other duties of the "department."

26,444. What is the arrangement between Sir Edward Hertslet and the Foreign Office with reference to the publication of treaties?—I have here a short memorandum upon that, which Sir Edward gave me last night. "Hertslet's Commercial Treaties. The "printing is paid for by the compiler and editor out "of his own pocket. No contribution of any kind is "ever made by Her Majesty's Government. They "subscribe, however, for 300 copies of each volume on "its publication through the Stationery Office." That is Sir Edward's note with regard to the commercial treaties.

26,445 Is that the arrangement that was always in force?—That is the arrangement in force. The present arrangement has always been in force.

26,446. Then you have in the Foreign Office the printing establishment?—We have.

26,447. Who has the control of that department; is it under you?—Generally speaking, it would be under me, but it is under the control of Mr. Harrison, who is a master printer. He has the use of the rooms.

26,448. And as I understand, he charges the ordinary printer's charges, and those are charged again by you to the various departments; the confidential printing of the Government being all done in the Foreign Office?—Yes, the greater part is done in the Foreign Office, but it is paid for by the Stationery Office.

26,449. Is it also true that you have got one typewriter?—We have.

26,450. Is that a satisfactory arrangement?—So far as we have experience of her, quite satisfactory.

26,451. Do you find it a more effective and a quicker mode of copying ordinary documents than by hand?—I think so.

26,452. Have you any shorthand writer in the Foreign Office?—We have not.

26,453. Not in the whole establishment?—Not that I am aware of.

26,454. I see that there is this note in the memorandum: "The post of translator of European languages "was abolished in 1886, and those translations are "now entrusted to three junior clerks." I suppose those are the first class junior clerks selected by competition?—Yes.

26,455. "To whom allowances, amounting in all to "292*l.* a year, are paid in lieu of the sum of 400*l.* "formerly paid for this service." Was not the original sum sanctioned by the Treasury 50*l.* a year to each junior clerk who did translation work?—That was for the exhibitions, was it not?

26,456. When the 400*l.* a year was abolished there was a translator at 400*l.* a year, and the suggestion was made that these junior clerks should do the work?—I am afraid that my memory does not quite agree with you upon that point. I think that there were three exhibitions of 50*l.* each, and when they undertook the translating we were to give them all we possibly could. The Treasury insisted upon no increase of expenditure being incurred. I think we found, after getting rid of our translator and compensating him on his departure, that we had so much left. I believe it was 292*l.* or something of that sort. Whatever it was, it was divided among these three clerks, and I must say that I think it is well earned.

26,457. Take the first class junior clerks, with salaries ranging from 200*l.* to 600*l.* a year, from whom the assistants are chosen; is it a *sine quâ non* that every first class junior clerk should be a foreign linguist?—I think every one should be.

26,458. Every one should be, but is every one?—Under the present system of examination he must be, I think. I do not see how he can avoid being a linguist.

26,459. Then may I take it from you that in your judgment a first-class clerk on the establishment in the Foreign Office ought to be able to write and to read, say, French, German, and Italian?—Certainly, it would be very desirable that he should, but German is a difficult language, as I daresay you know. A man may have a sufficient knowledge of German to be able to pass the examiner, and yet if you have a difficult paper, even taken out of a newspaper, and more particularly when it refers to technicalities, you would require much more than a general knowledge of German to be able to translate that properly.

26,460. Do not you think that every first-class clerk in that office drawing these high salaries ought to be capable of doing that work?—It would be very much better if he were capable, but I should doubt whether any young man, unless he submitted himself to a special course of study after his entering the Foreign Office, would be so. The young men who come up for the Foreign Office must be admirably prepared or else they would not pass the examination; but there is such a thing as cram—we all know that—and after a young man gets into the Foreign Office try him at the end of 12 months, say, and see how much of that cram he recollects. If you can persuade him to keep up his knowledge of the language, if you can give him a temptation, an inducement rather I should say, to continue his knowledge of the language, I think it would be a very great gain to the Foreign Office.

26,461. Do not you know that in a large number of mercantile establishments in London and elsewhere it

Sir F. Alston, K.C.M.G.

18 Nov. 1889.

is an essential that certain clerks should be perfectly competent to conduct the French, the German, the Spanish, and the Italian correspondence?—Probably they have foreigners for the purpose.

26,462. Young men must be able to write and to read those languages or else they could not obtain those situations?—Of course there may be technicalities which a man may be able to get at. If I were engaged in a stockbroker's office there would be some expressions that I should soon find the equivalent for in German, and I should be able to convert those expressions into German; but I do not suppose the correspondence is of a very lengthy or intricate character; I do not know. I never was employed in the City in my life.

26,463. Do you know whether it is a *sine quâ non* in the German Foreign Office that every confidential clerk there must be able to read and write English?—Very likely it is so. At the Foreign Office we have made very great progress. When I was young very few people learnt German thoroughly; I was, perhaps, in this respect an exception to the general rule.

26,464. At all events, what we have got as a matter of fact is this, that three of these junior clerks have to be paid an extra compensation, which you think is well earned, in order to translate foreign documents for the use of the Foreign Office?—They were a substitution for a translator, and the time may come when every young man in the Foreign Office will be such an admirable German and French or Italian scholar that he will be able to do it for the very love of the thing. At present, and so long as the authorities insist upon Latin and give to ancient Greek a value equal to that of some of the modern languages, I really do not see how you can expect to get such a result.

26,465. If you were constructing an ideal Foreign Office examination would you give a greater prominence to knowledge of the modern languages and a less prominence to knowledge of the classics?—Most assuredly I should.

26,466. (*Chairman.*) Are you quite right in saying that Greek is insisted upon?—Greek is not obligatory for the Foreign Office, it is optional, and a young man who knows Greek can throw Italian aside. Lord Salisbury had a very strong view upon the subject, and we approached the Civil Service Commissioners upon it. We asked them whether they were inclined to drop Greek and they said no.

26 467. (*Mr. Fowler.*) We know what the opinion of the Civil Service Commissioners is, but I want your opinion, as a competent and experienced officer, whether it would not be a greater advantage to the public service that the clerks in the Foreign Office should be able to speak or write Italian or German instead of Greek?—Unquestionably so.

26,468. Now let us turn to the Estimates, page 105. You will observe there that you have got one private secretary to the Prime Minister at 400*l.* a year and an assistant secretary to the Prime Minister at 250*l.* On the next page you have the private secretary to the Secretary of State, 300*l.*, and a prècis writer to the Secretary of State, 300*l.* How have you got the Prime Minister's private secretaries charged on the Foreign Office Vote?—The Treasury thought it the most convenient arrangement. It had to be charged somewhere.

26,469. It was not your doing; it was the doing of the Treasury?—It was the doing of the Treasury, certainly.

26,470. Therefore you have now charged upon the Foreign Office Vote for the first time, in addition to the private secretaries of the Secretary of State, the private secretaries of the Prime Minister?—But we have the honour of having the Prime Minister as Foreign Secretary; he is not First Lord of the Treasury.

26,471. Those two gentlemen who are private secretaries to the Prime Minister of course are not members of the Foreign Office staff?—They are not.

26,472. And they are not engaged on Foreign Office work?—No.

26,473. But the other secretaries are Foreign Office secretaries, are they not?—Quite so.

26,474. (*Mr. Lawson.*) We were told yesterday that you are more or less responsible for the whole of the establishment of the Foreign Office?—Yes.

26,475. I should like to ask you, with regard to these clerks on the diplomatic establishment, whether, as they pass through the different departments, you come in contact with them in the early part of their careers as a rule?—As chief clerk I do not come in contact with them, because, as I explained some little time ago, I am not responsible for the conduct of the political division. It rests with the Under Secretary of State.

26,476. Were these clerks, when they entered the Foreign Office, allotted to one of your departments so that they might have some knowledge of the work?—Are you referring to the political departments?

26,477. No. Do not these clerks pass through one of the departments with which you are immediately concerned?—No. My department, the chief clerk's department, in that respect is on a different footing from the commercial department and the consular department. The commercial and the consular departments are manned for the most part by members of the political division. They have one or two lower division clerks besides, but the consular and commercial departments belong to the political division, whereas the chief clerk's department does not.

26,478. But they do not belong entirely to the political division, because you find in them clerks who are not privileged to rise to confidential rank?—Quite so, they are supplementary clerks.

26,479. Do you know anything of these clerks on the diplomatic or political establishments?—I know them in the same way that I know the other clerks. I necessarily know them as being in the same office with them, but their competency or otherwise does not come before me; it is no business of mine.

26,480. Then you cannot express an opinion as to the work that they do?—Officially, I cannot; it would not come before me.

26,481. In the comparative statement submitted to us of the department before and after re-organisation, I see there is only a reduction of one in the number of these political clerks?—It is more than that.

26,482. I do not think so. Before the re-organisation there were 10 first-class junior clerks, nine second-class junior clerks, and six third class. There are now 20 first class and four second?—Yes, but we reduced the number of senior clerks.

26,483. I am dealing only with this class. The number that existed before re-organisation was only reduced by one, and the salary was raised at the same time?—We had 40 clerks before, and now we have only got 36; that is a reduction of four clerks.

26,484. You are taking the whole of the establishment. Would you be prepared to say at the present time that there is not, in the departments in which these gentlemen are exclusively employed, work which could be done by the average lower division clerk so far as its intellectual requirements are concerned?—How would you propose to deal with the work? Do you propose to take a despatch and say "This is not confidential, I will take this out of the room and let somebody else deal with it." It would not work.

26,485. Are not a great number of these gentlemen employed solely in doing copyist's work?—They have to begin; it is a part of their education to copy despatches in the first instance. When I was a young man there was an enormous amount of copying, but I do not think there is the same amount of copying now.

26,486. Do you believe that they are at the present time, during the first years of service, at all events, fully employed?—I should say so. Certainly they are.

26,487. For six hours daily doing genuine work?—Sometimes much more, sometimes less. I cannot say that the work is continuous; the work is not continuous; it is heavier to-day and lighter to-morrow, it is not continuous from day to day.

26,488. Do you believe that by the system of examination under which these gentlemen enter you obtain as good a class of men intellectually as are obtained from the first-class examination for the rest of the Civil Service?—I have a very small experience of what the result of the latter has been, but I have always supposed from the fact that the Treasury came and stole two of our own clerks away that they were not quite satisfied with their experience on the subject.

26,489. Are you aware that the open examination is a more difficult one, in point of subjects?—I should be disposed to doubt that. I have not got the regulations

for the examinations before me, but I can conceive nothing more severe than the examination for the Foreign Office, especially considering the manner in which the candidates all come up equally prepared.

26,490. In the first place the competition is less severe because they are a few nominees chosen from a list?—If you have a dozen nominees ——

26,491. Only eight, I think, is the number?—Twelve went up this very week for one vacancy.

26,492. Do you know how those 12 were chosen—on what grounds?—That is a matter between Lord Salisbury and his private secretary, about which I know nothing at all.

26,493. Entirely?—Lord Salisbury was good enough to offer me one for my second son, but I was frightened at the examination, and I am keeping him in reserve for another occasion, that is all I know about it.

26,494. Is it the practice—I ask it without any reference to your own case—to offer these nominations to public servants in the employ of the Foreign Office?—I should say that the services of old public servants would be considered in a matter of that sort, but unfortunately it is not always that old public servants are in a position to take advantage of it, because unless your means are such that you are able to give your son an education fitting him for such a post he, of course, will run behind.

26,495. Yes, but we all know it is a matter of cramming to a great extent?—It is, as you say, cramming to a great extent.

26,496. While everybody would acknowledge the services of the old officials in the Foreign Office, do you not think it is rather anomalous that they should have opportunities given them that public servants have not in other departments with regard to nominations for their sons and other relatives, although the others may have performed equally good service in other departments?—In the result I think there are only two or three young men on the diplomatic establishment of the Foreign Office whose fathers were in it.

26,497. As a matter of fact do you attach very great importance to this system of nomination as a test of character?—If you mean as between limited competition and unlimited competition I do, certainly.

26,498. With your experience of the public service do you believe that by the open system of examination for the higher division of clerks you would get men whom you could entrust with the most confidential work that is done in the Foreign Office?—I have no experience of unlimited competition to enable me to answer that question confidently, but from what I know of human nature I should be disposed to doubt it, and certainly what I mentioned just now with regard to the experience of the Treasury does not seem to point in that direction.

26,499. When these gentlemen are taken away and sent, as Mr. Spring Rice is at present, on commission to different parts of the world, who does their work?—Somebody else has to do it of course. It is just the same as when you go on leave, somebody else has to do your work.

26,500. Does not that show that when the establishment is full and the clerks are all at the Foreign Office (and remember these Commissions are only occasional), there is rather an excess of clerks?—I remember some years ago when Lord Hammond was examined before one of the parliamentary committees, he mentioned that the establishment was advisedly constituted so that two clerks should always be employed abroad. You will find it somewhere or other in one of the reports of the parliamentary committees.

26,501. Is that the case now? There are two Commissions at present I know, but is it the case that you have two clerks always employed on these Special Commissions?—We have two now, and I should think that is the case pretty generally. The number might be even more at times.

26,502. (*Mr. Freeman Mitford.*) I think you have two abroad now, Mr. Austin Lee and Mr. Spring Rice?—There are three as Mr. Wylde has just gone abroad on a Special Commission.

26,503. (*Mr. Lawson.*) Take the case of one of the clerks who is at present in Paris, is his place regularly filled up during his absence?—The work which he would otherwise do is performed by somebody else. I cannot answer the question off hand, but I have no doubt you would find that some attaché or second secretary or third secretary from abroad has been brought in to work at the Foreign Office. We have more than one certainly at this moment working at the Foreign Office.

26,504. Is that the case with regard to one of the present instances?—Yes, there is an interchange of duties.

26,505. But that does not take place when there is a special commission like the American Conference at Washington?—It was not anticipated that the Washington Conference would last so long. We encourage the employment of our men abroad. We think it is for their advantage and for the advantage of the Foreign Office also that they should be employed abroad.

26,506. Before you employ them abroad do you make any inquiry as to their means. The want of means, as we know, is a disqualification for the diplomatic service. Do you, when you send your own clerks abroad, say to them, "Have you the means to accept the appointment"?—They always have an outfit allowed them.

(*Mr. Freeman-Mitford.*) Not when they exchange.

26,507. (*Mr. Lawson.*) What does an outfit mean?—If a young man goes abroad he has, to begin with, to purchase a uniform. He cannot go to a foreign court without having a uniform.

26,508. Is that allowed him?—It generally takes the form of 100*l.* or it may be 200*l.*, as an outfit. That is to cover his uniform and everything else.

26,509. (*Mr. Freeman-Mitford.*) But that is only if you send him out specially, not if he exchanges, is not it?—Yes.

26,510. (*Mr. Lawson.*) Is there any other class of clerk in the whole of the Civil Service who gets a special allowance of this sort for uniform?—I do not know. You see it is obligatory if you send him to Washington or to any other court, he must have a uniform.

26,511. Where would an allowance of this kind appear in the estimates?—It will not appear in the estimates, it will appear in the appropriation account.

26,512. How much do you generally allow in the year for these outfits?—That will depend upon circumstances, upon whether anybody is sent out. There is no special provision made in the estimates for it.

26,513. (*Mr. Hanbury.*) I understood you to say that as a rule you send out two or three every year, so you know you are going to send them out, therefore why do not you put it in the estimates?—We do not send them out on purpose, only if the case arises.

26,514. But on an average you send out two or three in the year, why is not that shown in the estimates?—I can only say that the appropriation account would show it.

26,515. (*Mr. Maclure.*) I did not understand you to say that you always send out two or three in the year?—We do not always send out two or three in the year.

26,516. (*Mr. Lawson.*) Are these clerks always of the political establishment?—On one occasion, many years ago, I remember it was when Mr. Cave went to Egypt, one of the clerks in my department was attached to that mission, which was considered to be a financial commission of inquiry.

26,517. As a matter of fact you appear to allow the supplementary clerks to be attached to a special mission although they could not be entrusted with the confidential work of the Foreign Office?—In the case to which I have just referred it was necessary to have an expert on financial questions, and therefore one of the clerks in my department was sent out.

26,518. Would not that work be just as confidential in its nature and involve just as great interests as most of the confidential work at the Foreign Office?—If there was any risk, the risk had to be run; we had to send somebody out.

26,519-20. I do not say you were wrong to run the risk; but then I want to know what becomes of the guarantee of character which you consider you get in the case of your political clerks?—He was sent out simply because we wanted to attach a capable financial man to the mission.

Sir F. Alston K.C.M.G.

13 Nov. 1889.

26,521. (*Mr. Maclure.*) And because you had, I presume, the greatest confidence in his moral character?—Yes.

26,522. And because he was the best one that you could select in the whole of the Foreign Office to fill that post?—Yes.

26,523. (*Mr. Lawson.*) Is it really believed at the present moment that by this system of selection you get in the Foreign Office men of family, and that these men of family, to use a common phrase, will necessarily be men of particular integrity?—I do not wish to suggest that you find integrity only in one class of life. I am speaking of a variety of other qualifications which have to be considered.

26,524. Do you think it is necessary to put this absolute bar, because that is the whole end of our questions, to the admission of clerks to the political part of your office?—My answer to that question is this: that I have been in the Foreign Office for 50 years, and that I have that opinion of the Office that I should be sorry to see any endeavour made materially to modify its present character. Improve it if you can, but do not assail the Foreign Office in essentials, because it is, in my judgment, about as perfect a working machine as you can get. We know there is nothing human that is perfect, but taking the office all round, and knowing as I do from long experience the capacity which it shows for dealing with any and every sort of work, I say do not meddle with it if you can help it; that is my decided view.

26,525. Is it your view that you can neither decrease the upper part or the political part of the establishment, nor alter the conditions of service?—I do not know about the conditions of service.

26,526. Take the conditions of entrance?—The conditions of entrance are exceedingly severe, and I think it is an advantage that the Secretary of State should have an opportunity of making inquiries beforehand with regard to the young men whom he nominates.

26,527. I think you said in some part of your evidence that it would be an advantage if these lower division clerks had some opportunity of promotion. Do you contemplate the creation of any staff offices in the Foreign Office at the present time, for which they would be eligible?—The question is not immediately before us, but it is one that cannot be put off for all time; it is a question that must come up, and will have to be decided in some form or other. I am not sure whether it was the chairman who suggested or whether I myself did so, but possibly a means might be found in giving promotion to deserving officers in substitution for the class which is now called supplemental. I know of no other way of giving them promotion than that.

26,528. Do you believe that it would be advisable with regard to the part of the office with which you have to do to prolong the hours from 6 to 7?—That is a question which we have all been discussing with great anxiety for the last two or three years. I need not say that whatever this Commission may recommend it will be our duty to pay the utmost respect to; and if any regulation with regard to certain hours is embodied in an Order of Council, there is, of course, an end of the question. I believe the opinion of those most competent in the Foreign Office to judge is that the work of the Foreign Office is not such as can be measured very well by time.

26,529. From the point of view of public convenience, you believe that the commercial department, for instance, should be opened a little earlier in the day?—The commercial department is opened earlier; it opens at 11.

26,530. Do you think that it might be with advantage opened an hour earlier than that; would not 10 to 5 be better hours than 11 to 5. Then there is the passport department?—The passport department is open at 11, and remains open for six hours. As far as the passport department is concerned, there is no doubt that six hours is ample. The British public can get any number of passports they require during those six hours. There can be no advantage in keeping the passport department open longer, though in a case of pressing necessity appeal can always be made to me until a later hour. With regard to my own department it is a very difficult question, it appears to me, to know how to arrange it all. The book-keeping branch of my department opens at 11 and closes at 5. The other branch of the office opens at 12, and the men go away at 6. They all attend most punctually; as the clock strikes 12 they are there with the exception of those who come at 11 or half-past 10. Knowing that I was coming here this morning I was at the office before 11, and somewhat to my surprise I found one of my young men hard at work at 11. I said, I suppose you have come here because you thought I was coming. He said no; on the contrary, I had a vast arrear of work which I could not get through, and so I came here at half-past 10; that was the reason he gave me. They all go away punctually at 6 o'clock, and I am very glad when they are gone, because until they have gone it is almost impossible to attend to a variety of matters myself. I find the most valuable time for me is between 6 and 7 in the evening, when I do all the writing that I cannot get through in the course of the day.

26,531. (*Mr. Maclure.*) Then would not 11 to 5 suit you better?—If you require me to attend at 11 o'clock I should still have to stay till a quarter past 7, as I do now.

26,532. If your subordinates came from 11 to 5 would not that suit you better than their coming from 12 to 6, supposing you did not get there at 11?—If they came at 11, I should think it my duty to come as near 11 as I could, but I should still have to stay after they had gone.

26,533. (*Mr. Lawson.*) I believe the printing is nominally under you. Are any steps taken to revise prices from time to time by the Stationery Office?—A couple of years ago there was a very strict revision made. I think that the printer declared they had cut him too low, but he still survives.

26,534. (*Mr. Maclure.*) Do you consider that the nominations for the Foreign Office should be made by the foreign minister independent of the nominees having handles to their names or anything of that sort?—That is my opinion.

26,535. You remain firm on that?—I do.

26,536. Do not you think that every clerk and every officer in the Foreign Office ought at the end of 18 months to be perfectly conversant with at least two languages? Having regard to your answer about the cramming, which enables them to get in, ought they to forget a great deal by the end of 12 months. Do not you think at the end of 12 or 18 months a man ought to be able freely to converse and freely read both French and German, or French and Italian, or some other two languages?—I should be sorry to suggest that they could not.

26,537. Ought they not to be competent to do it?—You may have a literary acquaintance but not a colloquial acquaintance with a language. I am not sure that you can expect what you suggest. It was for that reason that I, for one, was very glad when this translation arrangement was made, because it keeps those three men up to the mark, and we can depend upon them.

26,538. Still, you think yourself, do you not, that it would be an advantage if they had that knowledge?—Certainly.

26,539. One of the objects, is it not, of allowing this exchange from your office with an attaché abroad is to familiarize a man in your office whom you know to be a useful officer with the language of the country to which he is sent?—Certainly.

26,540. (*Mr. Hanbury.*) Has there been an increase or a decrease in the cost of the Foreign Office itself during the last few years?—I have a paper here comparing the figures for 1869–70 with the figures for 1887–88. The net expenditure of the Foreign Office for the year 1869–70 was 63,079*l.*, and for the year 1887–88 it was 68,409*l.*

26,541. What was the cause of the increase?—In 1869–70 the salaries and wages amounted to 40,114*l.*, and in 1887–88 they amounted to 47,062*l.* The increase was 6,948*l.*, and it is accounted for as follows:—First, by the annual increments. Secondly, by the transfer of the salary of the Oriental translator, and allowance to the Under-Secretary for management of the Secret Service Fund to the Foreign Office Vote in 1874; 700*l.* is thus accounted for. These are two charges which Mr. Rylands objected to being charged to the Secret Service Fund. Thirdly, the transfer of servants' wages from incidental expenses to salaries, that is 674*l.* Fourthly, the appointment of an additional Under-Secretary of State, 1,200*l.* to 1,500*l.* Fifthly, the salaries of two private secretaries to the Prime Minister while

holding the appointment of Foreign Secretary; that is 650*l.*, but that is a temporary addition. Then allowances of 150*l.* each to two junior clerks as private secretaries to the permanent and parliamentary under-secretaries.

29,542. Did not the under secretaries have private secretaries before?—No.

26,543. How long have they had them?—The appointments began with Lord Tenterden about 15 years ago. Then, to continue my answer to your former question, there is an allowance of 100*l.* to the senior clerk in the Commercial Department, that is, to Mr. Kennedy; it is a special allowance. Then, there is the appointment of a clerk to the library at 250*l.* to 360*l.*; he is more especially assigned to the care of the printed library. Then, a clerk employed in the Commereial Department, that is Mr. Maycock, has an extra allowance of 100*l.* year. Lastly, there is an additional supplemental clerk to the Treaty Department at 100*l.* a year.

26,544. Apparently the staff has remained about the same during those years, and there has been no large increase?—No, there has not. To go on with my figures, there has been an allowance made to the reader in the Printing Department of 2*l.* a week. Then we make provision for extra copying 100*l.*, which we do not spend, and then there is a porter in the library at 60*l.* to 80*l.*

26,545. Take such an extra allowance as that which I see is paid to the Permanent Under-Secretary of State for the management of the Secret Service Fund; is that a new payment, or has that been paid for many years?—As I was saying, that is the allowance which formerly was charged to the Secret Service Fund.

26,546. That is, he was paid out of the Secret Service Fund, but now the payment is recognised, and put on the Votes instead?—Yes.

26,547. Is any part of the increase due to the compensations on abolition of Foreign Office agencies, or have they been going on all that time?—They have been going on ever since 1870.

26,548. What was the history of those compensations and abolitions?—I thought possibly I might be asked that question, and I have brought with me our case as laid before Parliament in 1868.

26,549. I do not think you need read it?—The circumstances were these:—that from time immemorial there had been the institution of Foreign Office agencies. Nobody can trace their origin, they may have been in existence before the Flood for all I know. They were legalised by Order in Council in 1795, and were put under special regulation by Lord Castlereagh in 1816. They were inquired into by a Committee of the House of Commons in 1837, I think, and they were the subject of inquiry by a further committee in 1858. They survived all these inquiries. At last, about the year 1868, it begun to be thought that they were not quite in accordance with modern views, and they were talked about outside, and all sorts of bad things were said about them which I need not tell you was not the case.

26,550. What were these agencies?—Every man employed abroad had an agent in the Foreign Office, the agencies were in comparatively few hands. I was one of the agents, and Sir Edward Hertslet was another. It did not suit the purpose of any person who desired to be employed abroad to accept such an office, because of course it prevented his going abroad. The business of the agent was to draw the salary of his principal; he deducted a percentage from it and paid it over to his principal's banker, or if the salary was very small, his principal was allowed to draw for it on the agent who executed all sorts of little commissions for him.

26,551. In fact they are army agents on a small scale?—Precisely so.

26,552. Do these compensations run only as long as the late agent remains in the Foreign Office or for life?—I wish they did run for life. They only run as long as we remain in the Foreign Office.

26,553. And there are only two left?—Yes.

26,554. Coming to the question of nominations, can you tell me what has been the practice in the Foreign Office with regard to nominations, as to the number of persons who have been nominated for a vacancy?—When it commenced they were limited to three, and then they got up to six, and then they got up to eight. For the vacancy which is being competed for at this moment, there are 12 men up.

26,555. When you say they were limited to three, was three the utmost; and might there not be fewer than three?—There never were fewer than three.

26,556. How long has it been the rule to have at least eight, we will say?—Since the passing of the Order in Council of 1870.

26,557. What is the Order in Council of 1870?—That is the Order in Council further dealing with the examinations which were made compulsory under the Order in Council of 1855.

26,558. Did it say nothing about the number of nominations?—No.

26,559. As I understand it, the Secretary of State has a perfectly free hand, and he may nominate either two or 20 if he likes?—Of course, he may nominate either two or 20, but no Secretary of State at the present day would think of nominating less than six or seven. I think public opinion would be too strong for him.

26,560. How is public opinion to get any influence?—There is a strong public opinion in the Foreign Office itself.

26,561. Is the opinion in the Foreign Office rather in favour of increasing the number of nominations for a vacancy?—I am speaking, not as a member of the Foreign Office, but as one of the public. I think if you want to get the best men you must have a sufficient number to choose from.

26,562. Do you think 10 or 12 a sufficient number?—I think that a competition between 10 or 12 picked men is much more severe than an open competition where you might get one or two very good men and the rest might be all poor creatures.

26,563. Do you think there would be any harm done if there were a rule laid down to the effect that there should be 10 nominations at least for every vacancy?—There is a rule on that; it is not a written rule, but I consider that practice has sanctioned the rule sufficiently. I never for a moment imagined that a Secretary of State would send up less than eight, even if he went so low. You might nominate say a dozen, but then perhaps all the dozen may not come to the scratch at the last moment.

26,564. Within recent years have the Secretaries of State ever nominated one only?—Not since 1857, that is a long time ago now.

26,565. How long is it since they began to nominate as many as six?—On the passing of the Order in Council. I should tell you that the examination in the first instance was of the most trivial character. It required the power of translating French, and arithmetic, and something of that sort, Then, on the passing of the Order in Council of 1870, the Commissioners wrote to the Secretary of State, who was then Lord Granville, proposing that the examinations should be considered and brought up to the requisite standard. From that time it has been what you find it at the present day. You will see the regulation for these examinations in the Foreign Office List. I think it is pretty stiff.

26,566. Recollecting what you have said about foreign languages, can you tell me exactly how far the knowledge of foreign languages is required in the service of the Foreign Office proper for clerks who do not go abroad; do many despatches come in, for instance, in foreign languages?—There is a good deal of French. A knowledge of French is absolutely essential. Even the vouchers to the accounts in my department are to a great extent in French. If they are in some Oriental language we insist upon their being accompanied by a certified translation, but we cannot ask for that in French.

26,567. Then may I take it that a great many documents come into the office in French?—Yes.

26,568. Now, about German?—A great number come in in German. All the notes from the German Embasy are in German.

26,569. It is only lately that they have begun to correspond in German?—Some years ago they began it.

26,570. Since the Franco-German war?—Some few years before the German Empire was established.

Sir F. Alston, K.C.M.G.
13 Nov. 1889.

26,571. What other Foreign Offices correspond in their own language?—I should not like to answer that question off-hand, but we have Spanish, Italian and German of course.

26,572. Is French being used less by Foreign nations than it was, or more?—I think much less.

26,573. And other Foreign nations are employing their own languages in their correspondence with you more than they did?—Yes, they make a point of it.

26,574. Therefore there is more necessity, of course, for having clerks who can understand these foreign languages?—I should say so. I myself attach great importance to the knowledge of modern languages by clerks, and the more they know the more useful they are.

26,575. Have the examinations by the Civil Service Commissioners met these requirements? — To the extent of those three languages of course they have, but rather more than a year ago, there was a correspondence between Lord Salisbury and the Civil Service Commissioners. Lord Salisbury had reason to suppose that the Commissioners did not allow as many marks for a colloquial knowledge of the language as his Lordship thought was desirable, and that the Commissioners attached less importance to a colloquial knowledge of the language, than to a power of translating it grammatically. Of course this was an observation that applies, if you please, in a still greater degree to the attachés than it does to the clerks in the Foreign Office; but considering the *rapprochement* which has taken place between the two services of late years, I think I may say that it appears in the long run to apply to both equally. Lord Salisbury said that it was most important that they should have a thorough colloquial knowledge of the language, for even if they should not be able (of course that applied to the embassies abroad) to write quite grammatically, it would be possible for the finishing touches to be put to the notes by somebody else, before they were sent out. What Lord Salisbury conceived was required at our embassies abroad was that our young men should be able to mix in society and to pick up information, and that it was impossible that they should be able to do that, unless they had a thorough colloquial knowledge of the language of the country in which they were serving.

26,576. That applies to clerks who may be sent abroad and exchanged, but does it apply to clerks in the Foreign Office itself?—It does not apply equally, but of course it applies in a lesser degree to the clerks in the Foreign Office, because the clerks in the Foreign Office are all liable to be sent abroad, and are sent abroad from time to time. Just in the same manner as we have had instances of diplomatists who have served for about three or four years consecutively in the Foreign Office; for instance, there is Mr. George Buchanan, a son of Sir Andrew Buchanan, who has been serving some time at home, so on the other hand Mr. Austin Lee has been serving in Paris ever since Lord Lytton went out to replace the late Lord Lyons. Mr. Austin Lee is a man of superior linguistic accomplishments, and I have no doubt whatever that he has done an essential service in Paris, and has been most useful to Lord Lytton, and not only to Lord Lytton but to the public service generally. That will not be lost upon Mr. Austin Lee when he comes back to London. He will be all the better, because he will not only be competent to deal with foreign communications in the Office, but he will be also on good terms with the heads of the foreign missions in this country, which is also a consideration.

26,577. What language do the Russians correspond in?—They correspond in French, they do not correspond in Russian. I suppose they will in time.

26,578. Is the learning of Russian encouraged in the Foreign Office or by the Civil Service Commissioners?—I heard only yesterday afternoon of a wonderful instance of a young gentleman who acquired the Russian language in 16 weeks, during which time he was at St. Petersburg. That must have been a wonderful *tour de force*. I was told Sir Robert Morier reported this to Lord Salisbury, calling it a "linguistic feat," and I think it really was.

26,579. That again is outside the Foreign Office proper. I am talking of the qualifications of the clerks outside the Foreign Office in respect to those foreign languages?—Mr. Fairholme, one of our clerks, has received a certificate from the Civil Service Commissioners as translator of Russian, but I cannot say that I know at this moment of any particular reason why more than one man in the Foreign Office should know Russian, as he can do all the translating we at present require, but it would be an honour to others to know it, and I should think the better of them if they knew it, and one of these days it may be of great service to us certainly as regards translating. I believe that besides Mr. Fairholme two more of our clerks have already acquired a fair knowledge of Russian.

26,580. Now we have the fact that these foreign nations are corresponding more in their own languages? Yes.

26,581. When your despatches come in are they translated and read by the ordinary Foreign Office clerks, or do you have special translators to do the work?—We have three clerks, as I mentioned before, who are especially assigned for the purpose of making translations in these languages, Russian being one of them. They have to qualify before the Civil Service Commissioners.

26,582. They act specially as translators; do they do anything else?—Yes, they do their work besides. The translating is done out of office hours.

26,583. Is it paid for extra?—Yes.

26,584. If a clerk who is in the Spanish Department understood Spanish, there would be no need for a translator; but as he does not understand Spanish, and your clerks do not understand Spanish, you have not only to employ a clerk, but you have also to assist him with a translator?—You see the translator is an expert, and the other man may have a very good colloquial knowledge of the language, and yet he may not be able to translate some difficult document which may be full of terms, which it is the business of the translator to master. He probably will have to fall back upon a dictionary if this document is full of expressions which are not in ordinary use; but still it would be his business to do it. I know it was the opinion of Lord Lingen that the justification for these exhibitions was to encourage our young men to study languages. It was thought at the time the exhibitions were established that the result would be to encourage the study of languages. We went a step further—we abolished our translator, and we gave these young men—I forget exactly in what proportions the salaries are assigned—200*l.* or 300*l.* between them, and they are bound to do all these difficult translations for the office. I think it is a small matter, but it is a very good thing for the office.

26,585. Are the clerks in the Western Department, for instance, assigned to that particular department because they have any special qualification, or because they have any knowledge of the language of those countries?—No, I do not think that would be the case. The idea is that every young man entering the Foreign Office should in the course of time, and as opportunities offer, pass through the several divisions. He is for a time in the Western Division, where he acquires a knowledge of the business as carried on in that division. Then after a time (there is no fixed rule) he would probably be moved to some other division, when somebody might say, "I am overloaded with work, there is a sudden "influx of work; I must have additional assistance." That would go before Sir Philip Currie, the under Secretary. He would look over the list and say, a "Mr. A. B. has been for some time in the Western Division." Perhaps he has reason to suppose that the work of that Department is rather slacker at this moment; "I will let you have Mr. A. B." and Sir Philip Currie will send him upstairs in the other room. That is the way in which this work is done.

26,586. So that the idea in the Foreign Office is rather to give the whole of the clerks of the Foreign Office a general knowledge of the whole of the work, rather than to have clerks specially qualified to deal with particular countries?—Unquestionably, that has always been the view.

26,587. And of course the result of that, is that, although each country now is corresponding with the Foreign Office more in its own language, you have not got the clerks in these departments who can be independent of translators?—I do not think you can go quite so far as that, because, to begin with, you have a knowledge of these languages which they are bound to show evidence of when they go up before the Civil Service Commission.

26,588. By these languages do you mean French and German?—French and German and Italian or Spanish, which are alternative languages.

26,589. (*Mr. Lawson.*) Would you not say "optional" rather than "alternative"?—Yes, but a man is only too glad to take them unless he is very strong in Greek. If he has been at Oxford he may very likely take up Greek, but I would much rather that he took up one of these modern languages.

26,590. (*Mr. Hanbury.*) Assuming that he has taken up Spanish, we will say, as an optional language, he will get no particular benefit from it in the Foreign Office, he will be moved from post to post, from one division to another, and therefore his Spanish will probably be of no use to him?—Of course you must balance the good with the evil; there is no doubt that, for the general purposes of the Foreign Office, it is a great advantage that a man should have been right through the several divisions as far as it can be managed.

26,591. (*Mr. Freeman-Mitford.*) I believe the heads of departments are very rarely changed?—Very rarely.

26,592. (*Mr. Hanbury.*) On the question of the outfits, what does an outfit include besides this allowance for a uniform? Is there a fixed scale of outfit?—The outfit sometimes has been 100*l.*, and sometimes 200*l.* It is held that it covers, first of all, the uniform. I forget what the uniform costs, but it costs 60*l.* or 70*l.*, I suppose, all told. Then, probably, he has to fit himself out in other ways. He may be going to a hot climate, and his wardrobe must altogether be renewed. If he has to go to St Petersburg, for instance, he must have a fur coat, and a fur coat costs a lot of money. Moreover, whatever balance there may be is held to be a sort of gratuity.

26,593. Has it always been the practice that these outfits are not entered in the estimates, although you have some every year?—They are shown in the appropriation accounts. We hope the members of the House of Commons study those accounts. As far as the Foreign Office is concerned, I am very proud of them. Perhaps I may be allowed to say that no outfit is issued without Treasury sanction.

26,594. (*Mr. Lawson.*) Might I ask where they appear in the Appropriation Account for this year?—On page 131 you will see an item, "Junior clerk, first class, outfit as Special Commissioner to Hayti. 200*l.*" and another item, a junior clerk, first class, as acting chargé d'affaires, 77*l.* The latter was Mr. Conyngham Greene, whose transfer to the Diplomatic Service is now accomplished; but at the time, I forget the circumstances, somebody had to be sent out to act as chargé d'affaires at Darmstadt, and he had so much a day.

26,595. When a gentleman is appointed to the Diplomatic Service he receives no special allowance for uniform; therefore a Foreign Office clerk receives what the diplomatist would not?—The conditions are not altogether the same. The Foreign Office clerk begins upon a salary of 100*l.* a year, and an attaché has to serve abroad for two years without anything at all.

26,596. (*Mr. Hanbury.*) Is not that rather a reason for the attaché having the outfit instead of the Foreign Office clerk having it?—I have no doubt they would be only too glad to get it. The attaché is expected to have private means and the purchase of a uniform in his case is absolutely necessary.

26,597. (*Mr. Freeman-Mitford.*) Is not it the fact that the Foreign Office clerk takes service with you in order to do duty in London; but you send him out for the purposes of the Foreign Office to such and such a post, and inasmuch as that public duty would entail upon him an extra expense, you give him this outfit to meet that extra expense?—That is a very proper view of the case; that is what it comes to.

26,598. (*Mr. Hanbury.*) Then, on the other hand, could a Foreign Office clerk refuse to go abroad?—To say he could refuse to go abroad is going a long way; but I do not suppose that any Secretary of State would insist upon sending him abroad.

26,599. (*Mr. Freeman-Mitford.*) If a man were to plead poverty, would not the Secretary of State take that into consideration?—I think so. I am not sure whether it is not laid down somewhere or other that he may be sent abroad, but that I cannot speak to from memory. I am sure that in practice he would not be sent abroad unless he was willing to go.

26,600. (*Mr. Hanbury.*) Can you tell me what other items are mentioned in the appropriation accounts and not in the estimates?—*De minimis non curat lex.* We happen, in the course of the year, to have had one instance.

26,601. We happen to have very small items in the estimates?—Yes, almost too small, I think.

26,602. Are there any other charges of this kind, similar to outfits, which are paid by the Foreign Office, and which do not come before Parliament?—Except in the case of men employed abroad, there is nothing whatever.

26,603. Are there any other books that Sir Edward Hertslet has published besides those treaties?—Yes, there is Hertslet's Commercial Treaties; that is a work which has got up to 16 volumes. Besides that, there is what Sir Edward calls Hertslet's Treaties and Tariffs. I asked him last night what they were. I knew that they were thin books, whereas the others are very ponderous volumes. He said, "There are about seven of them." He says they are the treaties and tariffs regulating the trade between Great Britain and foreign nations, and the same remark applies to these books as to commercial treaties. The Government, however, have taken copies of each part hitherto published. In the case of the commercial treaties, the Government engage to take 300 copies, whereas, in the case of the smaller volumes, they take as many only as are required. In other respects, the cases are similar. Then I come to the British and Foreign State Papers, which is a work which has got up to 70 or 80 volumes. That is entirely a Government publication; Sir Edward Hertslet has nothing whatever to do with it except as editor on the part of the Government. The Government pay for the printing, and receive the proceeds arising from the sale of the books.

26,604. (*Mr. Freeman-Mitford.*) Does Sir Edward Hertslet receive nothing for it?—Nothing whatever.

26,605. (*Mr. Hanbury.*) Not even as editor. No; he found that his father did it before him, and he is continuing the work. I think I need hardly mention the Foreign Office List. That exceedingly useful publication is entirely and exclusively a private undertaking, for which Sir Edward gets nothing whatever, except from the sale of his copies.

26,606. It is well to know the facts; what are the facts about the Foreign Office List?—Sir Edward says it is a private undertaking, and the printing is paid for by the compiler out of his own pocket. The Government have never given the editor any subsidy towards it, although, many years ago, they gave the printer who then undertook the publication on his own account and sustained a loss by it, an annual gratuity of 30*l.* a year, but that has been discontinued for some years. The Government are under no agreement to take any number of copies of this work; but, as a fact, about 60 copies are ordered annually for official use. Then, lastly, the Map of Europe by Treaty, which is a most wonderful book. The printing was paid for by Her Majesty's Government, who received 1,000 copies of it (the whole number published), and gave the editor 1,200*l.*, which was voted by Parliament. The Government have received the proceeds of the sale of this work.

26,607. Did the Government sell the copies?—Yes; Sir Edward Hertslet got 1,200*l.* as editor, and then gave the book over to the Government.

26,608. You have been 50 years, you say, in the Foreign Office; can you tell us what is the precise advantage of having in the Foreign Office three divisions of clerks, instead of two as in other offices. In other offices there is a higher and a lower division, and even it is doubtful whether there is a barrier drawn between the higher and lower division clerks in all the other offices. As I understand, in the Foreign Office, there are three divisions of clerks: the clerks on the establishment, the supplementary clerks, and lower division clerks?—Yes.

26,609. Between those three there is a great gulf fixed; what is the advantage of that?—The lower division clerks have found their way into the Foreign Office, and apparently are likely to do so. I have not the gift of prophecy, but I imagine they will in due time sooner or later take the place of the supplemental clerks or of some of them. That seems to be the logical conclusion at which one arrives.

26,610. Do I understand you that the work that is done by these supplementary clerks is work that can, in your opinion, be done by lower division clerks?—I did not say that. I am assuming that where we have had these lower division clerks before us for a certain number of years, and have had opportunities of testing their value and their ability; wherever we find—if we do

Sir F. Alston, K.C.M.G.

13 Nov. 1889.

find—a lower division clerk who has won his spurs in the lower character, an opportunity should be offered to him of a rise into some better position. That is the view I take.

26,611. Do you think there are three kinds of work in the Foreign Office which would permanently require three different classes of clerks separated from one another by a great gulf forbidding all promotion?—Practically as regards the lower division clerks, we had no option in the matter. I do not think we should have gone to the Treasury and asked for lower division clerks if we had had a chance of getting the supplemental clerks. We preferred what we had got. We were satisfied with the supplemental clerks, but we knew perfectly well the Treasury would not give them to us. They said supplemental clerks were a dying service. "If you want any fresh clerks you must have lower division clerks." That was the view taken by Sir Edward Hertslet. He to the last was very strongly opposed to the introduction of the four lower division clerks into the registry room in the library. The answer was "It is Hobson's choice; if you do not like "to have four lower division clerks you will get none "at all."

26,612. Then is it distinctly understood that the supplemental clerks are a dying class?—No, that is only my forecast; that is the view I take. I do not see how, in the long run, the supplemental clerks and the lower division clerks can exist together. They may exist together in this sense: that I do not see why a lower division clerk, when he has proved his capacity and ability in various ways, and, not least, from his manners, and so on, should not be promoted into the division formerly or now held by the supplemental clerks; so that instead of going to the outside to look for a fresh supplemental clerk, you will take your man from one of the lower division clerks.

26,613. Is it your view that gradually all the supplemental clerks will be replaced in that way?—They might or they might not be. I certainly should not be prepared to say that they can all be replaced in my department. I feel bound to say that rather in the interests of my successor than on my own account, because the establishment of my own department, which is largely officered by lower division clerks, will, no doubt, last my time. I have to consider all those who are coming after me, and I certainly think that it should be open to the chief clerk, whoever he may be, to say, "my work is of such a character that I must "have the assistance of such and such a man." One of the questions is: will you find that man among the lower division clerks? If you do not find him there, you must go to the outside to get him. That is all I can say.

26,614. Going away from the lower division clerks to the upper division clerks, why should your upper division be divided into two—clerks on the establishment and supplemental clerks, with an impassable barrier between them: whereas no such division exists in any other office?—To begin with, the two divisions, with the exception of the librarian's clerks, enter by a very different examination.

26,615. Why do they enter by a very different examination?—I do not know why they should, but they do; that is all I can say.

26,616. Could not the Foreign Office be filled very well by only two sets of clerks, a lower division and an upper division, leaving out of consideration altogether whether the lower division were to be promoted to the higher grades or not. Do you want your upper division strictly divided into two, as you have got it now, and as no other office has got it?—To a great extent it may be done, but there must be exceptions to every rule, and I should not like to pledge myself to saying that in any one department of the office, whether it is the chief clerk's department or the librarian's department, the head of that department, who is under great responsibility, should be forced against his will to take from the other room a man who was not acceptable to him.

26,617. Not forced: I say what qualifications have the clerks on the establishment got which the supplemental clerks have not got?—They have social qualifications, I think, to a higher degree, certainly; it may be an odious thing to say, but the clerks on the establishment come from a higher stratum of society.

26,618. Then the idea in the Foreign Office is to have three strata of society for your clerks?—Perhaps that is what it comes to, but I am not arguing in favour of the absolute retention of these supplementary clerks; I am willing to diminish them, and to let them be recruited from the lower class, only I say do not force me to have a lower division clerk if I do not find one among the lower division capable of the work.

26,619. There is a lower division in all the other offices; but what I want to get at now is why in the Foreign Office you divide your upper division into two, making it impossible to pass from one to the other; whereas no such rule exists in any other office?—Sir Philip Currie would say that the supplemental clerks were not a higher division; in point of fact, that they were the lower division before the lower division was an accomplished fact. That is the meaning and the explanation of it; they were the lower division and they have really become the middle division.

26,620. Now that you have got the lower division clerks in the Foreign Office, is there any necessity for having three different classes?—No, and the supplemental class must gradually diminish—there is no doubt about that.

26,621. (*Mr. Lawson.*) Might I ask whether it is not the case at the present time that the lower division clerks, as well as the supplementary clerks in the library, have to deal with matter of the most confidential kind two or three or four years after it has entered the office?—The fact is this. There are four lower division clerks now in the library on the register, and they are registering despatches about seven or eight years old in a separate room in the basement.

26,622. Are the supplementary clerks dealing with more recent papers?—They would be dealing with more recent papers, and would be stationed, some in the reference room adjoining Sir E. Hertslet's room and others in the large M.S. library. Papers relating to anything that Sir Edward Hertslet might be desired to keep secret—Sir Edward Hertslet has most confidential work—he would retain in his own possession, but the body of the clerks would see all the papers that came into their respective rooms. As to the lower division clerks in the basement they might possibly pick up some secret, say eight years old, and much good might it do them.

26,623. (*Mr. Hanbury.*) Your correspondence with the embassies abroad is, I understand, principally on financial questions?—Yes.

26,624. And I suppose it is not more confidential than most financial questions?—It is not confidential at all.

26,625. How is it carried—by letter or by messenger?—Sometimes one, sometimes the other; it is sent out by messenger if a messenger is going; if not, it is sent by post.

26,626. And no messenger is sent out specially for your correspondence?—No, I am afraid it is not at all likely.

26,627. The bulk of it, I suppose, is done by letter?—Yes.

26,628. (*Mr. Freeman-Mitford.*) If you were to do away with the supplemental clerks, as you call them, you would have practically to increase the clerks of the diplomatic establishment of the Foreign Office, would you not?—I think certainly that would be the case. Take the case of my own department. I do not for a moment think that any succeeding chief clerk, so long as Mr. Newman my first assistant was there, would find anybody so well qualified to assist him. He is a most excellent public servant, and I have always received from him the most invaluable assistance during the many years I have been chief clerk. But should Mr. Newman go and if the department were recruited in the future exclusively from lower division clerks, my successor would, I think, have to apply to the Secretary of State for one and it might be for two of the higher class clerks.

26,629. (*Mr. Lawson.*) As a matter of fact are the supplementary clerks employed in the political part of the Foreign Office?—Not in any of the purely political divisions. There is a supplemental clerk in the commercial department, and at first sight you would say, "What "is there secret in the commercial department?" A large proportion of the work is not confidential, but a commercial treaty while under negotiation is certainly so.

26,630. Have not these gentlemen access to the most confidential work, although you do not allow them to pass the barrier that separates them from the confidential part of the office?—Mr. Maycock is the only

clerk of the supplemental class who is employed in the commercial department.

26,631. (*Mr. Hanbury.*) With regard to the building and repairs of embassies abroad, does that come into your office?—It is accounted for by the Office of Works.

26,632. Do you make recommendations to them?—Practically it passes through my hands. Anything connected with money comes to me, and I know all about it.

26,633. Who recommends it to the Office of Works?—The minister is usually in direct communication with the Office of Works, but not invariably so. Take the case of the house at Washington. When Sir Julian Pauncefote arrived at Washington he found the house in a very bad state, and he wrote to us about it, though I am perfectly aware that the Office of Works would have preferred that he should have addressed himself direct to the First Commissioner. It was no doubt from inadvertence that he did not do so, but passed his despatches through the Foreign Office. Those despatches were immediately sent up to me, and were minuted.

26,634. (*Mr. Freeman-Mitford.*) May we say that in 99 cases out of 100 the communications take place between the minister and the Office of Works?—Yes, that is so.

26,635. (*Mr. Hanbury.*) And that the Foreign Office exercises no control?—It has been taken out of our hands. The Office of Works has the control.

26,636. Supposing, for instance, we built a new embassy at Berlin, or wherever it may be, the Foreign Office, as a Foreign Office, practically knows nothing about it?—We should know something about it.

26,637. Officially?—The actual conduct of the negotiations for the purchase or the hire, and so on, would be conducted by the Office of Works.

26,638. Does not the Foreign Office, for instance, have a voice in saying whether it would be better to rent a house than to build one?—No doubt the Office of Works would communicate with the Foreign Office, and the Foreign Office would communicate with the Office of Works. There would be free communication between the two offices and with the Treasury on the subject.

26,639. Do you look upon it as a fixed portion of the work of your department to inquire into the expenses in that direction?—I have a great deal to say upon it, but the responsibility of accounting for it is with the Office of Works.

26,640. (*Mr. Freeman-Mitford.*) Is there not an officer especially appointed for the purpose, who is attached to the Office of Works—the Surveyor of Embassy and Legation Buildings?—Yes; and that gentleman is in constant communication with the Foreign Office.

26,641. But it is on his recommendation that the work is done?—Yes.

26,642. (*Mr. Hanbury.*) Take a place where it is possible that the embassy might be abolished—say Darmstadt, or some of those small German States; if the Foreign Office official was not necessarily informed of what was going on, the Board of Works, knowing nothing of the intentions of the Foreign Office, might sanction a building which was really unnecessary?—There is a free communication between the Office of Works and the Foreign Office on these subjects.

26,643. Is there always?—Yes.

26,644. (*Mr. Lawson.*) I believe it is the case that the Queen's messengers are entirely under you, are they not?—They are.

26,645. Are you contemplating any reduction in their number at the present moment?—We are going to reduce them by one more as vacancies fall in.

26,646. (*Mr. Hanbury.*) What are your regulations as to what they shall carry with them?—They have to carry whatever is brought. They take the despatches.

26,647. What else do they take?—They take any communications which may come from the Palace.

26,648. What do they carry for the different attachés, for instance?—The regulations are very stringent upon that subject—almost too stringent. I do not think they are infringed to any great extent, but I think sometimes a clerk will oblige a friend abroad by slipping something into the bag. I do not say he will do it in such a manner as to constitute an abuse.

26,649. (*Mr. Lawson.*) How do you enforce the regulations?—The regulations are there in the office, and if a man chooses to break them, he breaks them at his own peril; that is all I can say. If I became acquainted with it, of course I should call attention to it.

Sir T. Alston, K.C.M.G.

13 Nov. 1889.

26,650. (*Mr. Hanbury.*) But you do not think, as a matter of fact, that it is often that the regulations are infringed?—I think not. I remember in the old agency days the agents used to make up the bags, and it is supposed that all sorts of iniquities went on, but that was not the case.

26,651. (*Mr. Lawson.*) As a matter of fact, would nine Queen's messengers have their time fully occupied on the present business?—They have been rather slack of late, but at this moment they are very busy. For the last few years we have been measuring the number of journeys they have taken. We came to the conclusion that we could reduce them, and we have reduced them. I think we have only got 10 at this moment, and we are going to reduce one more; but we shall have to keep a certain number of messengers. I am perfectly aware that they are a very expensive establishment, and I wish I saw my way to reducing the expenditure, but that can only be done by altering the class of men.

26,652. In these days of constant telegraphy, will not nine be more than sufficient for all the work?—No doubt the telegraph has taken the life out of the messenger service to a large extent, but what the messengers do is this: we print all our confidential despatches, and we have a system by which all those despatches are sent in print to the chief embassies and legations abroad. That print can only be sent by messenger; we could not send it through the post.

26,653. (*Mr. Freeman-Mitford.*) Is there not also one very important document which is carried by the messengers, namely, the private instructions from the Secretary of State to the ambassador or minister abroad in a private letter, which it would not be safe to send through the post?—A messenger will sometimes be sent specially abroad, with one letter in his charge.

26,654. (*Mr. Hanbury.*) If a messenger is sent with only one letter, and I will assume that that letter is as confidential as it can possibly be, you send very confidential information by telegraph, because you can do it by cipher. Then why cannot you send letters in cipher, equally containing confidential communications?—The Secretary of State probably writes his letters at about half-past 7 in the evening. Most of the private letters are written at the very last moment, and it would take a long time to put one of Lord Salisbury's private letters into cipher, and it would not go the same night by post.

26,655. I suppose the post and the messenger would travel at about the same pace?—The messenger beats the post.

26,656. (*Mr. Lawson.*) Has not the recent introduction of through services throughout Europe made a great change in the demands upon these messengers' time; take as an instance through service to Constantinople by train?—They take advantage of the through service, of course.

26,657. Can you do with less men, therefore?—We have done and are doing with less men.

26,658. When?—One follows upon the reduction of two previously. I may take the credit of those three reductions myself.

26,659. (*Mr. Freeman-Mitford.*) As a matter of fact you very often have to engage extra men, do not you?—Yes, whenever there is a press of business. We can always find them, but my view is that the real economy would be in employing a different class of men.

26,660. (*Mr. Hanbury.*) You have got three social classes apparently at the Foreign Office; to which of these does the messenger correspond?—He is a gentleman.

26,661. Then he corresponds to the clerk on the establishment?—Yes.

26,662. (*Mr. Lawson.*) When you take men for special work, which may be very important, how do you select them; supposing at the present moment there was a European complication, and that you wanted two or three extra messengers, how would you get them?—I might go to my club; but probably a Foreign Office clerk would be only too ready to volunteer.

Sir F. Alston, K.C.M.G.

13 Nov. 1889.

26,663. (*Mr. Freeman-Mitford.*) Do you not very often take men who are in receipt of pensions—old pensioned Foreign Office clerks and men of that stamp?—Two such men have volunteered.

26,664. You have done such a thing, have not you?—Yes, in two cases.

26,665. (*Mr. Hanbury.*) When the messengers retire, do they get pensions?—Yes.

26,666. Although they have passed no examination?—There is an examination, but they do not always pass it.

26,667. And yet they get in?—It happened in this wise. About 10 years ago it was considered that as a messenger entered somewhat late in life, (the service, it must be remembered, is very severe; it is all very well and pleasant to take two or three journeys, but to go on for years travelling by railway is very trying), it would be right that the messengers should have five years added to their period of service in computing their pensions, and it seems that under some regulation of the Civil Service Commissioners that exempts them from the Order in Council.

26,668. (*Mr. Lawson.*) Suppose to-morrow you wanted a Queen's messenger, would you select a man between 25 and 35 years of age?—Yes.

26,669. And then would he commence with five years added to his pension rights?—At the end of his service he would have five years added.

26,670. Until he had served 10 years would he have any such rights?—I believe not.

26,671. Would he be under the ordinary conditions, except that he had five years additional?—If he served 10 years he would be able to calculate 15.

26,672. (*Mr. Hanbury.*) Would there be any advantage in having younger men appointed; because, I understand they are men generally of middle age?—There would be no advantage as regards the performance of the duties. With respect to economies effected in the messenger service, formerly we had a Queen's messenger service all the way to Rome, which cost several hundreds a year. Now we make use of the Indian mail as far as Bologna, and the dispatches are carried by somebody or other, I forget who it is, between Bologna and Rome. It is a local service. That was a very considerable economy. The next economy we effected was in getting rid of the Calais and Paris station as served by Queen's messengers.

26,673. (*Mr. Lawson.*) When?—Two or three years ago.

26,674. Recently, in fact?—Yes.

26,675. (*Mr. Freeman-Mitford.*) Are you referring to the man who ran regularly?—Yes; he was stationed between Calais and Paris. It was a very expensive service. Lord Salisbury was very strong upon the the necessity of keeping down the expenditure for messengers, but as a messenger service is quite unavoidable and we cannot do without it, our only alternative is to reduce the cost by altering the character of the service where we can. So we got rid of that station between Calais and Paris, and the despatches are carried by a confidential man belonging to the Embassy, who does it very much cheaper.

26,676. (*Mr. Hanbury.*) Have you got any similar fixed stations still left?—Yes, we have fixed stations between Berlin and London, and St. Petersburg and London.

26,677. Running periodically, or only when they are wanted?—Once a week.

26,678. (*Mr. Lawson.*) This confidential man at Paris, I take it, is of the same class as the messengers in the office. He is not a gentleman?—No.

26,679. Therefore, what reason is there, if these men can be entrusted with the confidential measures to carry from Calais to Paris, why they should not be employed universally?—I should like to see it done myself. I should like to see a different class of men employed.

26,680. Are you contemplating reforming the service with that end in view?—We have the men on our hands now. We proceed slowly, perhaps, but surely. There is the service between Calais and Berlin, that is not so easily arranged as the service between Calais and Paris, which is a much shorter journey. Then comes the question, Berlin now is the centre of everything, and the private letter to which Mr. Mitford alluded to Berlin would be, I have no doubt, an exceedingly important and confidential letter, and you must take uncommonly good care that that letter is safely delivered. There can be no question about that. The point you suggest requires consideration. So long as we have the messengers on our hands we are not called upon to go into the question. It is much cheaper to employ those men that we have got than to devise a fresh scheme when we have got the men on our hands and must employ them. As I said just now we have abolished two of them, and we are going to abolish a third, and when we have abolished the third then it will be time to consider, and we no doubt shall consider, whether any further development can be effected in the way of economising the messenger service.

26,681. (*Mr. Hanbury.*) What is the salary of those messengers now?—They have a fixed salary of 400*l.* a year, and then for every night they are employed abroad they receive an allowance of 1*l.*, and under an arrangement of very old standing that is computed for the purposes of retirement at a total of 125*l.* a year. These messengers, besides the income tax upon their 400*l.*, pay income tax upon the allowance of 125*l.*, and they are pensioned off on a total income of 525*l.* a year.

26,682. How much is it your idea that you might get men for?—That would be a matter for consideration. I should myself like to see an ex non-commissioned officer who has earned a good character, and who is an army pensioner. I daresay we should find such men who can speak French, and very probably German too.

26,683. (*Mr. Lawson.*) When was your last Queen's messenger appointed?—The last date mentioned in the Foreign Office list is misleading. The messenger there, Mr. Graves, exchanged with Mr. Newton, who you will now find is a consul.

26,684. That was with your sanction, of course?—Yes. I think Mr. Graves is rather the older man of the two.

26,685. Therefore the exchange was rather an advantage to the public service?—From that point of view certainly.

26,686. When there is an entire change in the means of communication, as there was recently between Constantinople and London, is there an immediate revision of the amount paid for a journey in respect of what you call the travelling money?—Yes, undoubtedly. We go most closely into those matters.

26,687. (*Mr. Hanbury.*) I suppose he is only allowed his actual expenses?—Yes. The difficulty is in regard to such charges as cab hire and fees to guards; we make an allowance for such expenses.

26,688. (*Mr. Lawson.*) I see there have been three gentlemen besides Mr. Graves appointed since 1880, one in 1882, one in 1883, and one in 1885?—Mr. Goddard was another exchange. The last appointment was that of Mr. Taylor in 1883.

The witness withdrew.

Mr. Charles Malcolm Kennedy, C.B., called and examined.

Mr. C. M. Kennedy, C.B.

26,689. (*Chairman.*) You are, I believe, the senior clerk of the commercial department?—Yes.

26,690. We should like a little information from you about the constitution of that department and the work that you do, if you will kindly give it shortly, in your own way?—The staff of the department consists of four clerks on the establishment, one clerk attached, two lower division clerks, and we also avail ourselves of the services of a typewriter. The business is the correspondence on all commercial and sanitary questions.

26,691. When you say sanitary questions, do you mean questions of quarantine and the like?—Yes.

26,692. (*Mr. Hanbury.*) Only quarantine. I suppose there are no other sanitary questions that you deal with?—Questions bearing on quarantine and such questions as the progress of cholera and the state of health

in different countries. Reports on those subjects come to my department, and we communicate them to such offices or public bodies as may be concerned.

26,693. (*Chairman.*) You say there are four clerks on the establishment?—Yes.

26,694. Those are regular Foreign Office clerks. Do you include yourself in them?—Yes.

26,695. You are one of the senior clerks?—Yes.

26,696. Were you ever in the diplomatic service?—No, but I have been in the political departments of the Foreign Office.

26,697. How far is the clerical service of the commercial department interchangeable with that of the other working departments?—Entirely. The clerks on the establishment might be moved any day to a political department, and a clerk from a political department might be put into the commercial department. For instance, just at present the commercial work is slack; that is a sign of good times. The African department is pressed; the junior clerk on the establishment in my department wanted a change of employment and to see the work of another department in the office. I was able very willingly to let him be moved to the African department, and therefore, for the time being I am one short; but in January, when our work will increase, I hope to obtain the services of another clerk in his place.

26,698. (*Mr. Hanbury.*) Why do you say it will increase in January, because you say the slackness is a sign of prosperity?—In January the commercial reports come in; it is the special business of the clerk attached to edit these commercial reports. At the present time, that is, at the end of the year, he is able to assist in other work, and, therefore, we can get on with four men instead of five, but in January I should be obliged to ask Mr. Maycock to attend exclusively to his proper work.

26,699. (*Chairman.*) The attached clerk of whom you speak is a second-class clerk in the librarian's department, is not he?—He is borne on that staff, but he has been for the last nine years exclusively employed in the commercial department. He was appointed more particularly to edit the commercial reports. When the subject was considered in 1880 it was found that a good deal of inconvenience was felt before that date, and the Government of that day thought it expedient that it should be the duty of one particular man to attend to the preparation and the speedy publication of these reports, and Mr. Maycock was appointed for that purpose. He has continued to discharge those duties since, and he has very recently brought out a very valuable index to these reports, which has attracted a good deal of attention.

26,700. (*Mr. Hanbury.*) With regard to that index, why is that treated as work to be done outside of office hours, and not as a part of the work of the department?—The want of such an index was felt; it had not been undertaken *ab initio*, and thus it was a heavy work to put into shape. Mr. Maycock undertook the task of preparing it; but the arrears accumulated rendered the work too great to be done in the course of business.

26,701. If the index is so important, as it certainly seems to be, why is not that a regular part of the work of your department?—The difficulty hitherto was want of necessary time.

26,702. I mean, if it is such an important thing, why is it not a part of the recognised work of the Foreign Office; why is it left to a man undertaking it voluntarily?—That is a fault of organisation.

26,703. You yourself think, as I understand, that it is work which you ought always to do regularly as a part of the Foreign Office work, and not trust to a volunteer?—Certainly.

26,704. Is any step being taken to see that it is done regularly by the Foreign Office in future?—We have a system of registering and entering of reports which will greatly facilitate the preparation of such an index in the future, and I trust it may be possible to keep it up as a part of ordinary duty and work.

26,705. Does the clerk get paid extra for it?—No.

26,706. Is it purely voluntary work?—Yes.

26,707. In future do you think it will be done as a part of the office work?—I hope we may be able to do it. If not, we must probably apply to the Treasury for a grant.

26,708. Does it involve so much more work that your department could not undertake it?—It has not hitherto been possible to undertake it, but I hope it may be continued in future.

26,709. (*Chairman.*) Do you correspond in your department directly with the consuls abroad, or how is the correspondence taken?—There is a commercial series of correspondence with legations and consuls abroad, and also with foreign representatives, and with commercial bodies, and with persons interested in commercial subjects in this country.

26,710. (*Mr. Freeman-Mitford.*) But those letters and despatches, I suppose, are signed by the Under Secretary of State, or by the Secretary of State, in the same way as the letters emanating from every other department of the Foreign Office?—Yes.

26,711. (*Chairman.*) I understand that you do have some communications direct with merchants?—Yes.

26,712. And with trading associations at home also?—Yes.

26,713. What is the practice with reference to them. Is it more than a question of a personal interview, and answering questions, or is there a regular correspondence?—They generally make their applications by letter, which are entered and minuted and submitted the same as any despatch would be to the Under-Secretary and the Secretary of State.

26,714. Is the work in your department increasing much?—When the department was re-organised on its present footing in 1872, the total correspondence was 4,900; in 1882 the total correspondence was 10,900; in 1886 it had risen to 18,000; in 1887 it was rather over 17,000; and in 1888 rather under 17,000. This year I expect there will be a decrease.

26,715. (*Mr. Lawson.*) When you say re-organised in 1872, was it not practically established in 1872 as a separate department?—Not exactly. The commercial department was first established in the Foreign Office in 1866. It was the outcome of a committee of the House of Commons on foreign trade. At that time we were really the transmitters of the opinions of the Board of Trade. In 1872 the Board of Trade expressed the opinion that it would be better that the Secretary of State should conduct foreign commercial negotiations on his own responsibility, and in consequence of that recommendation, and in order to give greater effect to the recommendation of the House of Commons by a committee of 1864, the commercial department of the Foreign Office was reconstituted.

26,716. (*Mr. Freeman-Mitford.*) I believe the work, such as it was previous to that, was done in the consular department?—The department was consular and commercial.

26,717. (*Mr. Lawson.*) At the present time a distinction is drawn between the correspondence of consuls that goes to the consular department, and that which you receive at the commercial department?—In their commercial series is included all subjects relating to British trade.

26,718. Does any of that go to the consular department?—No.

26,719. Is the letter handed over to you by the Under Secretary?—Take the case of a consul's despatch. The envelope is addressed to the Secretary of State, and in the corner is marked either "Consular," or "Commercial," as the case may be; it is brought to either of those two departments.

26,720. (*Chairman.*) Do I rightly understand that the consular reports upon trade do not go to the consular department, but go straight to the commercial?—They go straight to the commercial.

26,721. So that the consul is dealing practically with your department on the subject of foreign trade?—Yes, that being a commercial subject.

26,722. I see you have got two lower division clerks?—Yes.

26,723. Are they employed upon the same sort of work as the others?—If I may put it shortly, they are employed on anything which does not require initiative. They do not compose; they register; they write for signature and make copies.

26,724. Do you think they are capable of doing higher work than that?—To some extent they might be; but I do not think they would be able to take the direction of the department.

Mr. C. M. Kennedy, C.B.

3 Nov. 1889.

26,725. (*Mr. Lawson.*) Did you yourself start in the Foreign Office on the political side?—No; when I was first appointed I served for some years in the consular department; then I was transferred to the political.

26,726. At that time there was no bar between the two, I believe?—There is no bar now.

26,727. Then, you entered as an established clerk?—Yes.

26,728. You did not enter on the supplementary lists?—No.

26,729. Might I ask whether you supervise the work of the commercial department in its ordinary daily progress, or whether that rests, as I see you state in your memorandum, with Sir James Fergusson, who is the Parliamentary Under Secretary?—All papers come to me in the first instance, and then pass to the political under secretary through me.

26,730. Then you have nothing to do in the ordinary daily course of business, with the political side of the office?—No.

26,731. Do you yourself, when you receive a complaint from any given body of traders, say a chamber of commerce, communicate directly with the consuls abroad, stating the nature of the complaint?—The course is this: the letter is received, it is docketted and registered, then it comes to me, I make a minute on it, suggesting what action seems to me required to be taken. I pass this on to Sir James Fergusson. Then, if he thinks it is a matter which he can deal with without referring to the Secretary of State, he either concurs or he modifies what I have suggested. It is returned to me, and on that minute the dispatch is written, signed by Sir James Fergusson, and goes off.

26,732. Do you yourself devise means for improving the consular reports for the convenience of traders, or do you generally take their advice?—The form in which the commercial reports used to be made is prescribed in the general consular instructions, which are revised from time to time.

26,733. How often?—They are under revision now. The last edition, I think, was issued 10 years ago. On these occasions these paragraphs of the instructions are referred to me for any suggestions as to any amendment which I think is required at the present time.

26,734. Sometimes the complaint is made that our consuls abroad are somewhat neglectful in the interests of British trade, and that they do not pay the same attention as the consuls of foreign Powers do, especially the consuls of Germany?—I do not think there is any ground for that statement.

26,735. You yourself are always trying to improve the nature of the reports when these rules come up for revision?—Certainly.

26,736. And you take means to consult traders about them?—Yes. We do not usually consult them in writing, so to say, but we take any opportunity in conversation of obtaining any suggestions which they can offer in that way.

26,737. Now you have got great bodies like the London Chamber of Commerce, for instance, do you not refer to them on any specific subject where you think their advice may be useful to you from a technical point of view?—Certainly.

26,738. Are you in communication, then, with the Chambers of Commerce?—We are in constant communication with the Chambers of Commerce.

26,739. And is that sometimes on your own initiative—not with respect to a complaint made by them, but simply in order that you may see what the wishes of the commercial community are?—Quite so.

26,740. Do you find that the clerks on the political side of the office, who entered in the same way as you did, obtain any knowledge of the work of your department?—They can only obtain it by working in the department.

26,741. Do they do that at all?—My assistant, Mr. Warburton, came to the commercial department three years ago. Before that he had been in the consular and African department, and previously in the political department. Then Mr. Farnall, who is the third in the department, had served in the Spanish department and in the Cyprus department, there being then a special department for Cyprus.

26,742. Is there now a special department for Cyprus?—It is transferred to the Colonial Office.

26,743. The ordinary clerk entering the Foreign Office on the political side does not obtain any knowledge of the routine of the commercial branch, does he?—No.

26,744. (*Mr. Freeman-Mitford.*) Not unless he is appointed to your branch?—Unless he is so appointed.

26,745. (*Mr. Lawson.*) He does not pass through it—he does not necessarily obtain any insight into commercial affairs?—Not necessarily.

26,746. Do you find that the lower division clerks do the work that you give them satisfactorily?—They do it admirably.

26,747. And do you see no reason why, excepting the post of chief, they should not rise to any rank in your department?—I would hardly go so far as that. My impression is, that for my department, the minimum establishment staff ought to be three, namely, the head of the department, the assistant, and the junior assistant.

26,748. All drawn from the political side?—All drawn from the political side. It is really necessary that men who have to initiate and to conduct the business of the commercial department should have had what might be called a broad education. Many of the questions with which we have to deal are very important, quite as important as political questions, and you must have men who can form an opinion as to the general bearing and effect of anything that may be done; personally, I should be very sorry to see any alteration made within the next few years—I anticipate heavy work in 1891 and 1892. In 1892, the series of European treaties of commerce now in force is terminable, and is likely to be terminated. That policy would necessarily involve heavy and very responsible work in the commercial department of the Foreign Office, and I should not personally like to have any diminution or alteration of staff with this work in view.

26,749. (*Mr. Hanbury.*) Is not there a fixed barrier between the supplementary clerks and the clerks on the establishment?—A man might possibly be transferred on the ground of special qualifications.

26,750. Does it often happen?—No.

26,751. (*Mr. Lawson.*) Has it ever happened within your experience?—I do not think it has ever happened in the Foreign Office.

26,752. (*Mr. Freeman-Mitford.*) Was not there an attempt made so to transfer Mr. Maycock, and did not he fail in his examination?—No, that is a mistake; he had the offer of being transferred. What he said was, that after having left school 12 years, he hardly felt inclined to go into an examination, and besides that, supposing he had passed, he would have begun at the bottom of the office, and for seven years he would have had no increase of pay.

26,753. (*Mr. Hanbury.*) And this is a valuable public servant who has been doing all this extra work, and is so important in your office?—Yes.

26,754. And yet it is believed that he is not a proper man, or that the members of the class to which he belongs, are not proper people to whom the most confidential matter could be entrusted safely?—Excuse me, there is the distinction drawn. He is in the same class as the clerks in the library who have the keeping of most confidential papers. There is a little confusion in the matter. There is an intermediate class of clerks between the establishment and the lower division, and he belongs to this intermediate class.

26,755. (*Mr. Lawson.*) But this intermediate class is not, we hear, allowed to enter the political side of the office, and that is on the ground that the men are to be trusted with the most confidential communications. In practice, I understand, from your last answer, they are in the other branches in the habit of seeing most confidential papers?—The librarians department keep confidential papers.

26,756. (*Mr. Hanbury.*) From your experience of the Foreign Office, is it your opinion that you want this broad distinction between those classes of clerks. Is there such a difference between the supplemental clerks, and the clerks on the establishment, that there ought to be such a gulf fixed between them as there is at the present moment?—No, I do not think so.

26,757. What is the supposed justification for this distinction?—That is a question rather beyond my

functions. My own impression is, that it arose out of economy, their scale of pay was lower than the pay of the establishment.

26,758. (*Mr. Lawson.*) I suppose Mr. Maycock, as a matter of practice, has seen communications as confidential as you can well imagine?—I can hardly say that, but he has seen confidential communications in the commercial department.

26,759. And you anticipate that in times such as the year 1891 or 1892 is likely to be, the clerks in your department will be employed in very confidential and responsible work?—Certainly.

26,760. Then I suppose there is no real reason why if they do it there, they should not do it elsewhere?—I would rather answer for my own department.

26,761. What communication have you with the treaty department at a time such as that?—The negotiation of a commercial treaty—to take a commercial treaty as an instance—in its earlier stages, is dealt with in the commercial department. As far as relates to the substance of the instrument, the commercial department does the business.

26,762. Does it arrange the schedules, for instance, of goods to be dealt with?—Yes, and the articles, and the stipulations. When it comes to the final form of drafting them, we refer to the treaty department.

26,763. As a matter of fact, I suppose the initial stages of a commercial treaty may be of a very important kind?—Certainly.

26,764. They are probably sketched out, and principles are laid down by the Foreign Secretary in communication with you?—Or in communication with the Cabinet, as the case may be.

26,765. I suppose the Foreign Secretary would consult the experts as a matter of practice?—The commercial department is in constant communication with experts.

26,766. So that then, at a time such as 1892, this work would be, in the first stages, of a very confidential kind?—Yes.

26,767. And you would be in constant communication later on, I suppose, with the treaty department?—Yes.

26,768. After the draft had gone up to them, and some corrections had been made, you would probably see it in its revised form?—Yes.

26,769. Would the other clerks in your department see it?—That might or might not be; it would depend on circumstances; there would be no necessity for them to see it.

26,770. But they might?—Yes.

26,771. (*Mr. Hanbury.*) Does that include lower division clerks?—No.

26,772. (*Mr. Lawson.*) But it does include supplemental clerks, of course?—We have only one supplemental clerk with very special functions.

26,773. Is that Mr. Maycock?—Yes.

26,774. (*Mr. Hanbury.*) When you say in view of the work that will come upon you in 1892 you would not like to see any alterations, do you mean that you would not like to have any change in the men who have been working in your department?—I mean both. I would rather not have any alteration; I would rather they should not be moved, but I would not put any obstacle in the way if it was for their advantage, the same as it was the other day in the case of the man who has been moved to the African department. What I meant is that I should require, if I had to deal with this business, the same staff as at present. Many of these questions, you can well understand, would take up my whole time for the whole day. I have had to visit chambers of commerce in this country, and have been employed abroad. In this work I want an assistant who is intelligent, and who knows about the subject to be in constant communication with me, and to act under my direction. That takes away one man from the current work. Then I want two men besides who can be left to transact the current business. It is for that reason, until this negotiation which we see pending has been concluded, that I should so much deprecate the reduction of the staff of the department as far as the numbers of the establishment of the office are concerned, below the present number of four.

26,775. You have got three separate classes of clerks in your own department now, have you?—Yes.

26,776. Well, tell me what is the advantage of having three separate classes?—None at all.

26,777. How many would you like to see?—Two; clerks on the diplomatic establishment, and those of the lower division.

26,778. Would you like to see a barrier drawn between the remaining two classes, the lower division and what would then be the upper division, or would you like to see the lower division clerks having an opportunity of promotion?—I should like to see them have that opportunity, within the limits indicated in my answer to a previous question.

26,779. Do you think that in some cases they would be quite fit to be promoted?—Yes, but, as I have said, those must be considered to be special cases.

26,780. You mentioned, I think, the case of one clerk who came to you from what you call the Spanish department?—Yes, that is now called the Western.

26,781. Then there has been a change in that department, has there?—Yes.

26,782. How long is it since that change took place?—There was a re-organisation of the office in 1881 and 1882; two departments were suppressed.

26,783. What two were they?—First the work of the Spanish department was added to another political department; and subsequently the work of the Slave Trade and sanitary department was divided between the commercial and consular departments, the former taking sanitary and the latter African business. The political departments are now three, American, Eastern, and Western.

26,784. When a man comes to you from the Western department, we will say, of the political branch, is he set in your department to deal with the western consular branch and the western trade particularly?—No.

26,785. Is he not supposed to have any special qualification so as to give him special work in your department?—He would take whatever was given him.

26,786. Then in your department, too, the idea is to get men who are generally fitted for any work that you may give them rather than to get men who are specially fitted for special work. What I mean is this. When you get a man, we will say, coming from the Western department, you do not set him to deal with reports of consuls in the west of Europe, but he has to go to any work you may set him to do?—Yes.

26,787. Why do all the consular reports come in in January?—Because the instruction is to send them in soon as possible after the end of the year.

26,788. In view of the fact that it is important to our merchants and people to get the information as quickly as possible, do you think it is a wise thing to have them only sent in periodically?—There are two series of reports; there are the annual trade reports, which are dependent on annual statistics—tables which are only published annually, and then there are also miscellaneous reports. It is more particularly those annual reports, which every consul is bound to send, which are expected to arrive in January. As a matter of fact, owing to the delay in the publication of statistics in foreign ports, the annual reports are often delayed in coming in, but they begin to come in in January in considerable numbers.

26,789. Then with regard to the miscellaneous reports, they come in, I suppose, at all periods of the year?—Yes.

26,790. What are the instructions to the consuls with regard to them?—To send them in whenever they can report anything likely to be of interest to British trade.

26,791. Is there any distinction between the instructions that you send out to the embassies and legations and consulates with regard to trade reports, because there are three classes of trade reports. There are the miscellaneous reports, the annual reports—both coming from consuls, and then there are reports from the different embassies and legations, are there not?—Yes.

26,792. Are they all sent in on the same principle, under the same instructions?—No, they are under what might be called similar instructions. The legation deals with the country in its entirety, the consul deals with his particular port or district.

26,793. Just as the consuls send in two sets of reports—the annual reports and those miscellaneous reports,

Mr. C. M. Kennedy, C.B.

13 Nov. 1889.

do the embassies and legations do the same thing?—Yes.

26,794. They send in both annual reports and statistics of the country as a whole, and also miscellaneous reports as to subjects that arise from month to month?—Yes.

26,795. Are you satisfied yourself with these reports at the present moment, or have you got any improvements in your mind that might be made?—No, I think as a whole they are very creditable to the writers, and that they are very well received by the commercial community in this country.

26,796. (*Mr. Lawson.*) Do not you think in these days of swift change that 10 years is too long a time to elapse before these rules are revised?—We are constantly revising them.

26,797. I thought you said there had been an interval of 10 years since the last issue?—That referred to the general instructions to consuls. We are sending out two or three circulars a year, calling attention to particular points in the commercial reports.

26,798. (*Mr. Hanbury.*) You spoke about your staff being so limited that you could not get a man to index the reports. Do you think that a fair proportion of the clerks in the Foreign Office are assigned to the commercial department, and that the commercial department is sufficiently recognised in the Foreign Office, or do you think you could do better work if you had a larger staff?—Of course with a larger staff we could do better work. It is rather a difficult question, but still I think we might with a larger staff be able to index reports better. Some time ago I asked to have another lower division clerk. I thought three lower division clerks would be quite sufficient, but this year the work has certainly diminished, and there is no advantage in any way in having men without specified work for them to do

26,799. Taking the interest in the matter that we know you do, do you think that there is work that the Foreign Office might fairly be expected to do for the trade of the country which would be better done supposing you had a larger staff?—Yes, I should like to have another lower division man.

26,800. Is that the whole extent of your requirements?—Yes.

26,801. Besides indexing, is there any other work which you think you might do, but which you do not do now?—Yes, I think, for instance, that we might take a great part of the commercial work in regard to Eastern Asia. The commercial work of Eastern Asia, by which I mean China, Japan, and Siam, is done in the China department, not in the commercial department. I think that a good deal of that work might be transferred to the Commercial department. Some of the trade questions now dealt with in the African department might also be handed over to the commercial department.

26,802. What is the reason for keeping that work in the China department?—In those countries commercial questions are very much mixed up with political questions, and it has therefore been considered better to keep the whole of the business relating to those countries in one and the same department.

26,803. But, so far as I recollect, we do get commercial reports from those countries, do not we?—Yes.

26,804. Do they come to your department or not?—They are printed under the direction of the China department, then the proof is sent to Mr. Maycock, who submits it to me, and I pass it on to the Under Secretary.

26,805. What would be the particular advantage gained by your suggestion of bringing the commercial work of Eastern Asia within your department?—I think it is better to bring all work of the same kind as far as possible within one focus.

26,806 And in view, I suppose, of the fact that they are likely to be very important countries to our trade, would you also think that that is another reason for bringing them within the commercial department?—Yes.

26,807. (*Mr. Lawson*) I suppose as things at present stand, these reports are dealt with by clerks who have not special commercial knowledge?—I would hardly say that.

26,808. By clerks who have not been in your department?—Yes, but they are fully conversant with all questions relating to those particular countries.

26,809. But those gentlemen have not so much to do with English trade as you necessarily have?—No.

26,810. (*Mr. Hanbury.*) Do the consuls in the India Office establishment, we will say along the Persian Gulf and at Bagdad, where we know questions with regard to our trade are now arising, correspond with the Foreign Office?—Yes.

26,811. Do we get reports from them?—Yes.

26,812. Do we get reports from Bussorah and Bagdad?—Yes, the consuls correspond with the commercial department—my department.

26,813. Although they are not under the Foreign Office?—Yes.

26,814. But simply for commercial purposes?—Yes.

26,815. Do they send in exactly the same kinds of reports, annual and miscellaneous?—They do not send in so many reports as the others, but they do send in reports.

26,816. Do they send them in as regularly as the Foreign Office consuls?—I think they do. I have brought with me Mr. Maycock's index in case any question of this kind arose, but after looking through it, I see that Bagdad is not there.

26,817. Do not you think it would be a good thing that just as you say the consuls in Eastern Asia should correspond with you regularly, so the consuls in other parts of Asia, whether they are under the India Office or the Foreign Office, should still send in their commercial reports to the Foreign Office and to your department?—Those under the jurisdiction of the India Office are instructed to send their reports to the commercial department.

26,818. Apparently they do not, because we have got a resident at Bagdad?—Sometimes owing to a change in the tenancy of the post, there is a delay in sending the report.

26,819. But their instructions are the same, are they not?—Yes.

26,820. (*Mr. Lawson.*) I see Pekin in Mr. Maycock's index. Do the China reports come to you?—The reports from China are printed, and then the proof is sent to the commercial department. I should say also in any matters of doubt or difficulty, the China department consult the commercial department.

26,821. Do you give them hints for the form of their reports and the subjects dealt with?—Whenever I am consulted.

26,822. But not otherwise?—No.

26,823. (*Mr. Hanbury.*) Do all consuls report without exception?—Yes.

26,824. Do they all report in English, because we have several vice-consuls, certainly, who are not English?—I believe one or two vice-consuls make their reports in French, and they are translated by the superintending consul. He sends the reports home in English.

26,825. But there are not many cases of that kind, are there?—Very few.

26,826. I think I understood you to say that the Board of Trade has nothing whatever to do with the trade abroad, and that the whole of the information as to the trade abroad comes to the English public through the Foreign Office?—We supply the Board of Trade with information on trade questions, by sending despatches and foreign publications on these subjects; and we further ask them for information which we wish to to obtain on matters dealt with by them.

26,827. How did they get their information before this new arrangement of which you have spoken took place, when you practically took over the duties of the Board of Trade with regard to Foreign trade?—The Foreign Office passed papers and documents on to them, and they advised the Foreign Office on those papers.

26,828. Advised them in what sense; simply from their own commercial knowledge?—Yes.

26,829. With regard to Foreign trade, I do not quite understand now what are the relations between the Foreign Office and the Board of Trade; what exactly does happen, and what subjects do you work together, and in what way?—Take the case of the negotiation of a commercial treaty. We act in the initiative; we con-

sult the experts in this country, the chambers of commerce, and other people concerned; we prepare the draft of the treaty and then refer it to the Board of Trade, and ask for any observations which they may have to offer.

26,830. Then is the treaty concluded?—Yes.

26,831. In old days was that done by the Board of Trade?—In old days the Board of Trade used to consult the experts in this country, and used to advise the Foreign Office simply what was to be done, which the Foreign Office did ministerially at the instance of the Board of Trade.

26,832. (*Mr. Freeman-Mitford.*) Would there be any very great difficulty, do you think, in transferring the reports on commercial matters from the China department to your department?—I do not think so.

26,833. But that work is very much mixed up, I believe, with all the general current work of the legations and consulates in China and Japan?—Yes; that is the reason why hitherto that work has been kept in the China department.

Mr. C. M. Kennedy, C.B.

13 Nov. 1889.

26,834. Do you think there would be any objection, for instance, to the Minister in China, who is Superintendent of Trade—that is one of his titles, I believe—having a commercial series as well as a political series?—No.

26,835. Which commercial series should go into your hands?—I personally do not see any objection.

26,836. You said just now that you saw no objection, I do not know whether you meant this in the fullest sense, to an absolute possibility of transfer between clerks of the lower division and clerks in the political establishment of the Foreign Office; did you mean that in the fullest sense?—No.

26,837. Then you did not mean by your answer to Mr. Hanbury just now that you considered it possible for clerks of the lower division to be promoted to the political establishment of the Foreign Office?—No.

26,838. (*Mr. Hanbury.*) In no case?—No.

26,839. You do not think you would ever find a lower division man who was fit for that work?—I should doubt it.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

SEVENTY-EIGHTH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, November 14th, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.	Mr. R. W. HANBURY, M.P.
Rt. Hon. H. H. FOWLER, M.P.	Mr. H. L. W. LAWSON, M.P.
Mr. A. B. FREEMAN-MITFORD, C.B.	Mr. J. W. MACLURE, M.P.

Mr. H. WALPOLE, C.B., *Secretary.*

Sir PHILIP W. CURRIE, K.C.B., re-called and further examined.

26,840. (*Chairman.*) I think you are prepared to give us information upon the system of admission to the French and German foreign offices?—Yes. In these papers I have a complete statement of the systems in France, Germany, Austria, and Italy (*handing in same*). As to the pay, as I expected, the French scale here, as in every branch, is very much lower than ours. I believe no judge in France gets more than 800*l.* a year, whereas our judges get 5,000*l.* A cabinet minister, I think, in France, gets 1,200*l.* a year. The total of our Foreign Office is at the minimum 29,632*l.*, at the maximum 44,362*l.*

26,841. Will you kindly have prepared for us a paper showing clearly how those figures are got at, and compare them with the figures given in the Estimates?—Yes. Here is a table showing the pay of the employés in the French Foreign Office (*handing in same*); the total appears to be 596,100 francs, that is 23,844*l.*

26,842. (*Mr. Lawson.*) Is that the total French vote for their Foreign Office?—That is the total French vote for the pay. I will also hand in a paper giving the same information for the German Foreign Office (*handing in same*). I might explain that there are in the French Foreign Office thirty attachés who only receive 1,500 francs each, that is 60*l.* a year. They work in the Foreign Office, but they are looked upon merely as a sort of aspirants—they are waiting for places.

26,843. (*Chairman.*) Is there a much larger number of them than exist in our Foreign Office?—Yes.

26,844. Because we have some attachés?—We have only one or two occasionally. At this moment we have none. The number in the French Foreign Office is a result, of course, of the Foreign Office and the Diplomatic service being all one in France.

26,845. There appears to be a more complete union in the case of Germany, Austria, and France between the Diplomatic and Foreign Office service than there is in this country?—I think there is. In France the consular service in some of its branches is also united to the Foreign Office. There are 30 attachés who are attached to what they call the "Cabinet du Minister," the "Direction politique," and the "Direction Commerciale," but the charge is only 45,000 francs for 30 men. That swells the numbers very much. The highest pay that anybody gets in the French service, I think, is 22,000 francs. The heads of departments seem to get very low pay—only 10,000 to 14,000 francs.

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

26,846. Leaving that point for the present, I think you wish to supplement your answer as to the distinction between clerks on the establishment and the supplementary clerks?—Yes; I have talked to some of the men at the heads of the departments where there are supplementary clerks employed, and they have pointed out to me that in those departments the work is principally routine—for instance, in the chief clerk's department and in the librarian's department—and that the men must be thoroughly trained to their duties. You could not transfer a man from a political department to the librarian's department or the financial department; he would be quite useless; therefore, you must have a set of clerks apart. In consequence of that, two lists of applicants are kept at the Foreign Office by the private secretary, and he notes on the second list, the supplementary list, the men who he thinks would be likely to accept such places; but he tells me that he finds rather a difficulty; he does not get the same men to accept those appointments in the supplementary division as he does for the other division. A man will accept a nomination to compete for a post on the diplomatic establishment of the Foreign Office who would not accept the other post.

26,847. I think you told us the other day, and Sir Francis Alston, I think, told us the same thing yesterday, that you would be quite willing that steps should

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

be taken to see how far the positions occupied by the supplementary clerks could be filled by lower division clerks, and that you could quite see that it would be useful that such steps should be taken?—Certainly; the system has been tried, and I think that it is quite right that it should be proceeded with. Both the chief clerk and the librarian, who are principally interested, state that they should require to have a certain number of the same clerks that they have at present to supervise; but beyond that, I think, they are quite willing to admit lower division clerks and to carry further a system which has been already adopted.

26,848. (*Mr. Lawson.*) Did they tell you whether there was any of this routine work which lower division clerks could not do?—What routine work?

26,849. You used the phrase yourself; you spoke about the work being mainly routine?—When I used the word routine I meant work that required special training, such as the keeping of accounts. The chief clerk and the librarian both state that they should require to have some men of this other class to supervise the lower division clerks.

26,850. (*Mr. Freeman-Mitford.*) Does not that resolve itself into this: that departments being manned in the usual way current in the Civil Service by an upper division and a lower division of clerks, you must have political clerks to do the confidential and diplomatic work of the Foreign Office?—As I understand the system that has been recommended for the service, it is that the departments should be carried on by lower division clerks supervised by a certain number of upper division clerks. That is laid down in the Treasury Minute, and that system, I think, we should consider quite fit to be adopted in the non-political departments of the Foreign Office. But if the question arises whether those supervising clerks are to be exactly on the same footing as the clerks in the political departments, there might be some difficulty.

26,851. (*Mr. Hanbury.*) What is there in the Foreign Office for which the ordinary upper division clerk who rises to the very highest point in all other offices, would not be qualified?—These men are specially appointed to do the work, we will say, of the financial department: they are trained in that department, in figures, and they do accountants work. If you were to make those men interchangeable with the men in the political department both would be ignorant of their work. If you took a man out of a political department and put him into the accountant's department, he would of no use; on the other hand, if you took a man out of the accountant's department and put him into a political department, he would be of no use there.

26,852. Is it not the fact that the inconvenience which you mention does not arise in other offices because men are constantly shifting from one department of the office to another, where the difference is just as great as in the departments you mention?—I am unable to answer that. I have no experience except as regards my own department. I think in the Foreign Office the inconvenience would be great.

26,853. But in the Foreign Office they are shifted from the different divisions of the confidential departments; from the Eastern and the Western and the American, are they not, but never outside those divisions?—Certainly, but the nature of the work in those divisions is the same although the countries with which they have to deal are different.

26,854. Then do I understand that it is merely a question of knowledge and experience, and not a question of the different class of men that you will get in?—Of course, if you wish to recommend that the men in the chief clerk's department should be put on the same footing exactly as regards salary as those in the political department, they would be very pleased, no doubt, to have their salaries raised, but hitherto we have looked upon it as an economy that we can get men there at a minor salary.

26,855. That is not my point exactly. My point is this: is there any special reason in the Foreign Office why the whole of the higher work of the Foreign Office should not be done by one set of clerks in exactly the same way as it is done in other offices?—I think I have explained the reason why the present system exists.

26,856. You have given me one reason, which is, acquiring special knowledge of the departments. Of course one can see that that is not a sufficient reason; are there any other reasons?—I am afraid it is difficult to give further reasons than I have already given.

26,857. (*Mr. Freeman-Mitford.*) Has not the somewhat anomalous position of the Foreign Office in regard to that very condition of things arisen from the fact that the Secretary of State has always reserved to himself the power of appointing specially confidential men to the political departments of the Foreign Office. Therefore, you had one class of men in the political departments and another class of men in the so-called routine departments; is not that the case?—Yes. This system came into existence before there was any question of lower division clerks. I think the proper answer would be that the men who are employed in the chief clerk's department and the librarian's department have occupied something of the position that will now be taken in the public service by the lower division clerks.

26,858. (*Mr. Hanbury.*) That being so, do you want three classes of clerks in future, recollecting that you had only two before?—The system has been adopted of lower division clerks with, I believe, supervision, and the question is who is to supervise them. I should suggest that a certain number of those supernumerary clerks should be retained in order to supervise them.

26,859. (*Mr. Freeman-Mitford.*) As upper division clerks, I suppose?—They are upper division clerks.

26,860. (*Mr. Lawson.*) Would you suggest that others should be introduced to take the place of these supernumerary or supplementary clerks?—I would recommend that as the supernumerary clerks die out or retire, their places should, as far as possible—if there are men fit for it—be filled by lower division clerks.

26,861. (*Mr. Hanbury.*) Are you of opinion that in future, as these men die out, the whole of the Foreign Office can be manned by two sets of clerks, or would it be necessary in future to still preserve the three?—I think it is impossible to say beforehand that the supervising clerks can always be taken from the lower division clerks. I think that must depend upon whether there are men fit for it. I think the Secretary of State must reserve the right to go outside lower division clerks for the supervising men if he considers it necessary. If there are men fit for it amongst the lower division clerks I would certainly recommend that the supervising clerks should be taken from them, because I think it very desirable that the lower division clerks should have some chances of promotion.

26,862. (*Mr. Lawson.*) In the future you can quite imagine the scheme of the Foreign Office, being a certain number of first class clerks in the diplomatic establishment, and a certain number of staff offices for the purpose of supervision, and lower division clerks for the rest?—Certainly; that is exactly what I would recommend, but the lower division clerks should be confined to the non-political departments.

26,863. (*Chairman.*) Now, we will go, if you please, to the diplomatic establishment. In the paper which has been supplied to us you state that "the constitu-" tion of the diplomatic service remains based in all " important particulars on the recommendations made " in the Report of the Select Committee on Diplomatic " and Consular Services, which was presented to Parlia-" ment in 1871." May we take it there have been no substantial changes since that time?—Certain changes have been made in accordance with that report of late, but I do not think there have been any important changes.

26,864–5. (*Mr. Freeman-Mitford.*) There have been some legations made into embassies, have there not?—Yes.

26,866. (*Chairman.*) I think you told us the other day the way in which the diplomatic service is recruited, but, perhaps, you had better make it clearer?—The diplomatic service is recruited in the same way as the Foreign Office, that is, the Secretary of State has a list of candidates for the diplomatic service. Some of them are candidates for either the Foreign Office or the diplomatic service. When a vacancy occurs in the diplomatic service the Secretary of State nominates from four to six to compete for each vacancy—not so many as in the case of the Foreign Office, because there are not generally so many men on his list. The condition is made that they must have a certain amount of means, namely 400*l.* a year. The Secretary of State will not nominate anyone who has not that

because it would be impossible for anyone without that to live at a foreign court.

26,867. I believe attachès do not receive any salary until after two years' service?—That is so.

26,868. Is it a rule that they serve for a certain period in the Foreign Office before they go abroad?—Yes, for six months.

26,869. Is that the universal rule?—That is the rule.

26,870. During that time are they attached to one of the political departments?—Yes.

26,871. (*Mr. Lawson.*) Is the rule as to means the same for all cases, namely, 400*l.* a year?—It is usual when a young man applies, or his friends apply for him, that they should be informed that he could not be appointed unless a provision of that sort could be made for him during the first few years that he is in the diplomatic service.

26,872. Does it matter to what embassy or legation he may be appointed?—No, it is on admission to the diplomatic service, because you cannot stipulate beforehand where the man will be employed, that must depend upon the requirements of the moment. When a man gets into the diplomatic service he has to go where he is told.

26,873. (*Mr. Hanbury.*) Is that the only qualification except, of course, the test of examination?—In addition to the examination, enquiries are made about him, and he would not be appointed unless he was a suitable person.

26,874. What would you define as suitable?—That is a matter rather for the Secretary of State to judge.

26,875. I want to get at that; what, as a rule, is defined as suitable?—I think it is desirable that a man should be well educated.

26,876. I will take such a case as this; any man, for instance, who has been educated at a university, and who has 400*l.* a year, would he as a rule be put down?—I think that the Secretary of State is generally very willing to put upon his list any man who is recommended as being a suitable person for the diplomatic service.

26,877. Do you know as a matter of fact whether there are many refusals?—I have never heard of a refusal to put a man on the list. I dare say there are many men who have been on the list who may not have been nominated, that is to say, the Secretary of State, is not bound to nominate all those who are on his list. When a vacancy occurs he selects those whom he thinks most suitable.

26,878. I think you said that he only selected two or three because the list was such a small one?—I said, I think the list is smaller than the list for the Foreign Office, because naturally, this requirement of fortune rather limits the number of candidates.

26,879. Is not the list large enough to allow of a greater number of nominations?—I suppose the size of the list depends on the number of people who apply.

26,880. I suppose you know, as a matter of fact, whether it is invariably limited to two or three in spite of the length of the list?—It is not usual to nominate more than four or six.

26,881. How many would be on the list do you suppose, as a rule?—This system of limited competition was only introduced a few years ago by Lord Granville. Up to that time it was the custom of the Secretary of State to nominate one man only to a vacancy. He then had to go through a pass examination before the Civil Service Commissioners, but there was no competition. Lord Granville, I should think seven or eight years ago, introduced the system of limited competition for the diplomatic service. Therefore there really has not been much experience of the system yet.

26,882. (*Mr. Freeman-Mitford.*) There is a very small number of candidates, is not there?—There is, I believe, a fairly large list. I have nothing now to do with the Secretary of State's list, and I do not see it. I could only ascertain how many there are on the list by asking the private secretary.

26,883. (*Chairman.*) I observe that the Committee of 1871 stated that "the character of the service has "altered since 1861, and that it is now more of a close "profession which is entered chiefly by those who "mean to make it the occupation of their lives, and in "which promotion ordinarily goes by seniority." Would you say that is a fair description of the service at the present time?—I think so, certainly. It was in consequence of the recommendations of the Committee of 1861 that the service was made a very much more regular one. Before that time there were a number of unpaid attachés who looked upon it more as a service they could enter for a short time and then leave. Since that time there has been a much more regular system of promotion.

26,884. That Committee recommended that the interchange of duty between the members of the diplomatic service and Foreign Office clerks should be encouraged and facilitated as much as possible. I understand that that is not carried out so completely as it is in France and Germany?—It is not a question of exchanges in France. In France the service is one and the same, and a man may be employed either in the diplomatic service or the Foreign Office.

26,885. That is to say, there is a complete interchange of duty?—You may go further than that—the service is one. A man in the French Foreign Office is a member of the diplomatic service; with us, a clerk in the Foreign Office is not a member of the diplomatic service.

26,886. I should like your opinion as to the limits which the Foreign Office have found it necessary to place upon that interchange of duty?—That is left to the discretion of the Under-Secretary generally. Of course, we do not think it desirable to let too many of our clerks go abroad at once, because that would rather disorganise the office. The men who come home from foreign legations have not quite the same habits of business as our clerks, and they are not used to the same regular hours. Subject to that we are very glad to see interchanges. We think it very useful for our clerks to go abroad, and to learn what they can of foreign countries, and we think it very good for the secretaries to come to the Foreign Office, where, of course, business is carried on on a larger scale than at the embassies abroad.

26,887. In consideration of the conditions, which you have just told us are necessarily attached to the entering of the diplomatic services, does the question of expense interfere with the clerks a good deal in our system?—The question of expense would interfere very much, and does interfere very much with our clerks going abroad. Some of them cannot afford to go.

26,888. May I take it that the Foreign Office would view with favour the interchange as much as possible?—Certainly, subject to those two things—to not disorganising the office by too constant changes, and also subject to not causing a man to go abroad whose means do not allow him to do so.

26,889. I observe in the memorandum you state that there are 132 members of the service, and you add, "There are also eight honorary attachés who receive "no pay, and are not qualified for promotion"; who are they? Is that a permanent institution?—No, those honorary attachés are young men of fortune mostly, who wish to go abroad. They entail no expense whatever on the public; they receive no pay or allowances of any sort or kind; they have no claim to pension, and of course they are at liberty to retire from the service whenever they like.

26,890. Do they begin with six months in the Foreign Office, the same as the other attachés?—Not necessarily.

26,891. Then they practically are supernumeraries?—They may be said to be rather ornamental members of the service; they are hardly expected to give the same attendance as the other members of the service.

26,892. (*Mr. Hanbury.*) Are they useful in any way as well as ornamental?—Yes; indeed some of them are extremely useful. There is one young man at Paris who, I am told, has made himself very useful. They perform social duties, and are always ready to help in the work when they are wanted.

26,893. (*Chairman.*) Of course they are not qualified for promotion?—They are not qualified for promotion, nor for any pension, nor for any sort of pay.

26,894. So that they do not interfere with the rising in the profession of those who have entered the service regularly?—Not in any way.

Sir P. W. Currie K.C.B.

14 Nov. 1889.

26,895. And they are of use to the country, as we can understand, in some of the foreign embassies?—I think it is very desirable to have them.

26,896. Has there been any change in the salaries of the diplomatic service of late years?—There have been several changes, some salaries have been raised, and some have been lowered according as the posts were thought to be more or less expensive for the time being. There has been an increase at Berlin, and a reduction at Paris.

26,897. The ambassador at Paris has been reduced, I think, from 10,000*l.* to 9,000*l.*?—Yes.

26,898. And the ambassador at Berlin, I see, receives 7,500*l.*?—Yes; I think the salary was only 7,000*l.* a short time ago.

26,899. Whenever there is an interchange of posts, a vacancy so to speak in a high position of that sort, is there a constant revision taking place according to the altering circumstances and expenses of a capital or a particular mission?—Yes; necessarily.

26,900. Now, with reference to the embassy and legation houses, is it a growing opinion of the Foreign Office that it is desirable to purchase or build houses for our representatives abroad?—Yes; we think it is desirable, particularly in the more important capitals that our representatives should have permanent houses. On the whole, I think, it is an economical arrangement. If there is no permanent house, they sometimes have very great difficulty in getting housed. It is, of course, very desirable that they should be well lodged.

26,901. (*Mr. Hanbury.*) Is it a rule in other countries to have permanent houses, or simply to hire them?—In some cases they do. Here in London the Germans have got a permanent house, the French have got a permanent house, the Italians have got a permanent house—they took one the other day—and the Spaniards have just acquired a house.

26,902. (*Chairman.*) The policy of the Foreign Office, and I think of Parliament generally, has been in the direction, has it not, that there should be a permanent residence at the seats of the chief missions for the heads of such missions?—That was the recommendation of the Committee, and we have as far as we can carried it out.

26,903. When the Foreign Office recommends that a permanent residence should be acquired it is a question, of course, for the decision of the Government, and then the Board of Works make inquiries through the officer who specially attends to that work as to what houses are obtainable?—That is the course.

26,904. The Committee of 1871 also recommended that the Secretary of State should consider whether some of the smaller German missions might not be discontinued without public injury; has there been any diminution in the number of those missions?—There has been a very great diminution. Those that remain now are Munich, Stuttgardt, Dresden, and Darmstadt, which includes Baden, and Coburg. We do not keep large establishments at those places, only a minister or chargé d'affaires, and sometimes one secretary; and the salaries at Munich, Stuttgardt, and Dresden have been much reduced. I think it is desirable to keep up those missions, as they have opportunities of getting information which cannot easily be got anywhere else.

26,905. Is there anything at Coburg and Darmstardt?—Yes.

26,906. (*Mr. Lawson.*) There is a note in the Estimates, page 426, to this effect:—"It is proposed, on "the occurrence of vacancies, to amalgamate the "missions at Munich, Darmstardt, and Stuttgardt, so "as to reduce the cost." I suppose we may take it that that could be done?—I think that probably might be done.

26,907. Dresden is not included there?—No.

26,908. (*Mr. Hanbury.*) Nor Coburg?—Mr. George Strachey is the secretary of legation at Dresden, and at Coburg there is Mr. Ralph Milbanke, who has the rank of secretary of legation.

26,909. Do you know what ministers other foreign nations keep at these small German courts?—I think more than we do.

26,910. Still?—Still; that is a question I cannot answer offhand, of course. I can procure any information of that kind the Commission desire; the Almanach de Gotha would show at once.

26,911. (*Chairman.*) Have you anything to say with reference to promotions in the diplomatic service. I see that the Committee of 1871 recommended that it is undesirable that promotion should be by seniority?—Promotion in the lower branches, up to the rank of first secretary, is generally by seniority. In promotion to the rank of first secretary of course seniority is considered, but a man would not be promoted to be a secretary of legation or a secretary of embassy unless he was thought thoroughly fit for it. The promotion to the higher independent posts is entirely a question of merit, but seniority is always more or less considered.

26,912. Then with reference to those posts, the Secretary of State would consider himself at liberty to go outside the service?—Yes, as he has recently done in several cases.

26,913. (*Lord Lingen.*) Is the examination the same for the Foreign Office clerkships and the junior posts in the diplomatic service?—Not quite the same.

26,914. Is there any material difference?—Languages are insisted upon in both cases, but more stress is laid on colloquial knowledge of French in the case of the diplomatic service. Lord Salisbury has strongly represented to the Civil Service Commissioners the great importance of a thorough colloquial knowledge of French for diplomatists.

26,915. And naturally, I suppose, for the Foreign Office proper, the colloquial knowledge of French is not so much insisted upon?—It is not so important.

26,916. But both the examinations imply a tolerably liberal education?—Certainly. The following was the regulation as to Latin for candidates for the diplomatic service before competition was introduced. Latin is now a competition subject. "Candidates who have "passed the first public examination in classics at one "of the universities in Great Britain or Ireland, or at "the Royal Academy at Woolwich, or one of the public "examinations for the Army or Navy, will be exempted "from being examined in Latin; otherwise they have "to be examined in Latin."

26,917. Are the limits of age the same for the maximum and minimum for admission into the two services?—For the Foreign Office the maximum is 24, and for the diplomatic service, 26.

26,918. What is the minimum?—The minimum is 18 for the Foreign Office, and 20 for the diplomatic service.

26,919. I suppose we may assume, generally speaking, that the same class of candidates enters both branches of the service, or is there any material difference between them?—Much the same class of candidates enters the Foreign Office and the diplomatic service.

26,920. In the Foreign Office itself, the chief clerk's department, the librarian's department, the treaty department, and the commercial department are all, I take it, little kingdoms, as one may say, taken out of the general staff of what we may call the common staff of the establishment?—Not the commercial department; the commercial department is principally manned from the diplomatic establishment of the office.

26,921. In the memorandum I see it is stated that there is only one clerk attached to the commercial department in Downing Street?—There are four clerks on the diplomatic establishment attached to the commercial department. There is one supplementary clerk in it who is kept there specially for editing the commercial reports, and then there are two lower division clerks. The commercial department is not on the same footing as the chief clerk's department, and the librarian's department, and you cannot put it in the same category as you put them. A senior clerk, Mr. Kennedy, is the head of the commercial department. Then there are three other clerks on the regular diplomatic establishment. Then there comes a supplementary clerk, who is placed there to look after the reports. Then there are two lower division clerks. Therefore it is not on the same footing as the chief clerk's department, of which no one, except the chief clerk himself, is a member of the diplomatic establishment of the Foreign Office.

26,922. When you say "diplomatic establishment," do you mean that these gentlemen are diplomatists off duty who are in England, and who are assisting the head of the commercial department?—No, that is

a name I gave for convenience to the regular clerks in the Foreign Office.

26,923. Is the head of the commercial department one of the ordinary first or second class junior clerks, or is he one of the political establishment?—He is a senior clerk on the political or diplomatic establishment.

26,924. Then the head of the commercial department and the three other men in it are ordinary Foreign Office clerks?—Yes.

26,925. Will they pass their whole existence in the commercial department, or will they probably be moved into other branches of the Foreign Office?—The juniors will be moved about into the other departments. I should try as far as possible to give all the men a turn in the commercial department so that they may learn the work of it.

26,926. Passing from the commercial department, in which that system prevails, and coming to the chief clerk's department and the librarian's department, where we get into much closer organisations, which exist in the way of work, those departments have no communication, have they, with the political part of the Foreign Office?—No, the men in them are not interchangeable.

26,927. Do you think that that on the whole is an advantage?—I think so. I think that the work in those departments is of a special kind, and requires men to be permanently attached to those departments. I do not think that the men could be made interchangeable with the men in the political department.

26,928. Among all the Treasury papers and enclosures which have been sent over from the Foreign Office to explain various matters, I have seen elaborate memoranda prepared in the librarian's department upon various subjects; how are those memoranda called into existence?—Memoranda on current subjects are prepared in the departments. Those prepared in the library relate, as a rule, to geographical, historical, international, and kindred questions.

26,929. I suppose the whole of those memoranda are not prepared by Sir Edward Hertslet himself?—No, some of them are prepared by his assistants. There is a sub-librarian, and then there are a number of clerks who are on the permanent establishment of the Foreign Office who are of the class that I call supernumerary.

26,930. That work, of course does not amount to making a decision, or even to amending a decision, but it is work of a high order rather, is it not?—It is work requiring very considerable capacity.

26,931. Would not one of the political clerks be all the better after being passed through that department for two or three years?—I was talking to the librarian on the subject yesterday, and he said men who were not thoroughly trained by himself were not of much use to him.

26,932. You would have thought, would you not, that it would be very desirable that the clerks when they rise to the rank of assistants, and have to manage the correspondence, should know, in some general manner, at any rate, what the Foreign Office could supply in the way of antecedent records?—A great many memoranda are prepared in the departments which require reference to antecedent records. In many cases the head of the department calls from the library for the previous papers, and prepares the memorandum. There is no absolute rule about it. If the question is one with which he thinks he can deal, the head of the department generally deals with it; if it is one that the librarian would be more competent to deal with, he gets him to do it.

26,933. Now, when a letter comes into a political department in the morning which requires reference, we will say to antecedent papers, there being, for instance, in the course of the letter a good deal quoted of what passed in this year and what passed in that, is not the letter sent bodily into the librarian's department, or how does it get the requisite information collected for it?—In most cases the head of the department would go to the librarian, or send one of his men to him and ask for the antecedent papers. Of course, if those papers are very voluminous and bound up in a great number of different volumes, it would be very inconvenient to bring them all into the department. If the question does not go back to any papers of remote date, the librarian would probably send him one or two volumes containing the things. When I was head of a department, I often had a file of volumes sent to me from the library. That is the way in which it is done. There is no very absolute rule. Our present librarian is a man of very special knowledge; he has an extraordinary knowledge of all the papers of the office, of treaties, and every subject of that kind; and, of course, we are very glad to utilise that knowledge.

26,934. Has he been always bred in the library?—He and his father before him.

26,935. I do not want to go into any personal question further than as it bears on general organisation. If the librarian's duty is so exceedingly special as that, his removal involves a very serious question of who is to succeed him, does not it?—Yes; that question was put to me the last time I was before the Commission, and I said that I thought the appointment so important a one, that the Secretary of State should be free to select a successor of the librarian either from within or without the office.

26,936. What in the Foreign Office is called the library would in the Treasury and in the ordinary Secretaries of State's offices be called the paper room. In those offices they rely more upon elaborate indexing, and in that way are able to hunt cases up rather than on any very high officers placed at the head of the room. Do you think that a person in the position of your librarian, and with the rank of Sir Edward Hertslet, is necessary in the office for that position?—Very much so; I would rather have Sir Edward Hertslet than all the indexes that could be made; unfortunately we are not likely to have another man of such universal knowledge; therefore, it is very necessary to have the indexes. He is an index in himself.

26,937. Indexing, though, does not require a man of quite his rank and status if it is regularly kept up?—I mean that the knowledge that he carries in his head is as good as an index.

26,938. But unfortunately his head is not immortal; what is to happen when that natural index is removed?—We must get the very best man we can, and also have very full indexes, which we are working up now with the utmost speed. The indexes had, unfortunately, fallen into arrears, owing to the staff being too small to keep them up to date.

26,939. Now I see the salary of the sub-librarian goes up to 650*l.* a year; the indexing of course requires great intelligence, great accuracy, and great method, but is it altogether out of the question that a sub-librarian at 650*l.* a year should be adequate to superintend the work in your library?—I hope we may be able to find a man among the junior men in the librarian's department who would be capable of succeeding to the post of chief librarian; but I look upon the post as a very important one, and I certainly think it ought to be filled by a very capable man, and that he ought to have a high salary.

26,940. Generally speaking, in the organisation of the service, I think some object of this kind is aimed at. After a certain number of staff appointments there should be two divisions, a first and a second, or an upper and a lower, whatever they may be called, and that those two should circulate freely among the various branches of work into which an office is divided. Do you think that as much has been done in that direction as might be done in the Foreign Office. For instance, in the commercial department you say the first-class clerks do circulate into that and come out of it again. Might not your lower division clerks to a certain extent be interchangeable between these different departments, so as to have only a single class of them, so that you would be able to raise the salaries of a certain number either by duty pay or by giving them certain peculiar offices. It is almost peculiar to the Foreign Office that they have two such departments as the librarian's department and the chief clerk's department, so entirely separate from the rest of the office?—I think our system is the best for our work. I think that a man to be of use in the librarian's department should pass his whole time there, should be trained there. I know that to be very strongly the opinion of the librarian. I may explain that the librarian has what he calls a reference room, where the whole of his establishment clerks, or nearly all, are constantly occupied in referring to volumes and looking out papers.

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

That requires a very great knowledge of the correspondence, which is bound in volumes. We expect to get our references instantaneously almost. If the Secretary of State sends down for a pressing reference to a subject, all these men can at once be put on it, and they ferret out the papers and send them up with the greatest despatch. It is of the very greatest importance to us that that should be done. If we had men who did not thoroughly know every volume in the place they would take a long time in doing it. I do not think that there is any system of indexing that would be sufficient, without having men who know the papers. The lower division clerks have nothing to do with the papers. The lower division clerks are employed entirely on keeping up the indexes. The papers that are given to them are papers that are about five years old. No paper can be indexed until it is about five years old. It is impossible, according to the system, that it could be ready for indexing before that. The lower division clerks are not employed in indexing the most confidential papers.

26,941. You have said that you think to some extent the lower division clerks might supersede the supplementary clerks; but supposing the supplementary clerks as a distinct class were got rid of as they died out, and that then the succession to their places being opened to the lower division clerks with some special allowance and pay, then you would have only one class working in an office on that sort of work, not two divisions, supplementary and lower, but lower only, with certain allowances to them when they got up in the scale; do you think that would work?—I think if a lower division clerk was promoted to be a staff officer, and thereby became a permanent officer of the Foreign Office. he would be capable of doing any work that his abilities allowed him to do. I cannot have quite the same feeling about men who are not on the establishment of the office.

26,942. I am not speaking of his succeeding to the establishment of the office in the sense of the political establishment; but would you say that a supplementary clerk was on the establishment, and that a lower division clerk was not?—Certainly. The supplementary clerk passes his whole career in the Foreign Office; he is entitled to a pension, and he is exactly as much on the establishment as I am myself.

26,943. They say at the Treasury that a lower division clerk is exactly on the same footing; he is entitled to a pension, and as a matter of fact would probably pass his whole life in the Foreign Office?—Perhaps, as a matter of fact, he may be. I have always understood that lower division clerks do not belong to the office in the same way as the supplementary clerks do. If to-morrow we found that we did not want a lower division clerk, we should write to the Treasury, I suppose, to say that we did not want him, and he would be removed and sent to some other office.

26,944. Not necessarily; that might happen, but the lower division clerk is not on the footing of a writer. He is entitled to employment. The same might be said of a supplementary clerk or any clerk whatever in the Foreign Office. If you said to the Treasury that you did not want him they would have the option before them, if he was entitled to compensation, to compensate him and get rid of him, or to find him another employment. There is no such distinction of establishment and non-establishment between a lower division clerk and other persons?—I may have spoken in ignorance. I thought that the lower division clerks were interchangeable with other offices; at any rate they do not pass any special examination on appointment to the Foreign Office.

26,945. What I particularly wanted to get at was this: whether, instead of the lower division clerks and the supplementary clerks, we could not do this work, which is below the responsibility of political work, by means of a single class, instead of two?—I do not think that you could man the library entirely with lower division clerks.

26,946. Not even with lower division clerks of experience, who had certain allowances made to them with respect to that experience?—No, I do not think they have had the training which would fit them for it.

26,947. They have not yet had the training; but supposing a lower division clerk was at once brought into the library, is not he as trainable as a supplementary clerk?—I should be very glad to see the posts of supervising clerks in the library opened to lower division clerks, if they were fit to fill them; but I do not know what the Civil Service Commissioners would say to it, because the lower division clerks have not, I suppose, passed the same examination as the supplementary clerks. I do not know what the lower division examination is, but that seems a difficulty.

26,948. What is the examination for your supplementary clerks?—It is the same in the librarian's department as the examination for the diplomatic establishment. In the other non-political departments it has hitherto been only a pass examination.

26,949. Is it the same as for your political clerks?—It is the same in the librarian's department as for the political clerks; but the competition is less severe.

26,950. For first appointments?—For first appointments in the library the examination is the same. If you refer to the Foreign Office list you will see there is only one kind of examination for the diplomatic establishment and the library.

26,951. Then I suppose that a supplementary clerk undergoes the same examination, no higher and no lower, as a young gentleman who is seeking admission into the political department?—The subjects of examination are the same; but of course the stringency of a competitive examination depends entirely upon the persons who compete for it. The subjects for examination in the Foreign Office are of a simple kind; but the examination for the political department is a very difficult one, because there are many young men competing who have been trained especially for it, and consequently I am told the examination is one of the very hardest there is. If it was a mere pass examination, it would appear easy. The obligatory subjects are arithmetic, handwriting, and orthography, English composition, précis-writing, French, German, Latin, general intelligence, and geography. The optional subjects are the history of Europe, the constitutional history of England, Italian, Spanish, and Ancient Greek. It is obvious that the difficulty of the examination depends entirely upon the men who compete; and, as a matter of fact, the men who are appointed to compete for the librarian's department have not generally such qualifications as the men who are appointed for the political departments.

26,952. Is there a different examination still for the chief clerk's department?—The examination for the chief clerk's department is only in handwriting, accuracy of punctuation, orthography, arithmetic, geography, book-keeping by double entry, and French (only translation from, and not into).

26,953. (*Mr. Freeman-Mitford.*) Going back to the diplomatic service, I want to ask you whether, in considering the question of reducing the number of legations abroad, any other countries have been taken into account besides the smaller German States; is it possible to reduce the number in other countries besides those states?—I think not.

26,954. South America, for instance?—I do not think the legations could be reduced there. I think it is necessary to keep a British representative in all the South American States.

26,955. Would it not be sufficient to have a consul there, or a consul-general?—No; I think it is important to have a minister there, because there are very great British interests involved, and a minister naturally has much more influence than a consul.

26,956. Is there any reason for keeping a British minister at Berne?—I think it is desirable to have one there. The country is much visited by British subjects, and we have had one or two troublesome cases there lately, in which diplomatic action was required. You will see that the minister at Berne is not a highly-paid man. Of course, you cannot call it a place of the very first importance, but I think it is desirable to have a diplomatic representative there; other nations have.

26,957. (*Mr. Hanbury.*) Does your remark apply to all the South American States; take a small place like Ecuador?—I think it is extremely desirable to have a representative there. You see, a consular representative does not exercise the same authority in a place of that kind that a minister would.

26,958. But what work would he have of a ministerial character at Ecuador?—He has very important cases connected with British subjects and British interests.

26,959. Then there really is work for him to do there?—Yes, indeed there is.

26,960. Work worth 1,400*l.* a year?—Yes, I think so. Those countries are very subject to revolutions, and British subjects are apt to suffer very much in these revolutions. It constantly happens that the foreign representatives in those South American courts, when crises occur, exercise very great influence, and prevent affairs taking a course that would be injurious to the interests of the countries they represent.

26,961. With regard to the list of nominations for entering the diplomatic service, I understand that there may be a large number put down on the list, but, as a matter of fact, only a few of those will, in all probability, be nominated to compete for vacancies. Is there any information given to the people who are put on the list, and who are really not likely to be further nominated, or are they kept in suspense, without knowing that they have no hope?—That is hardly a question, perhaps, for me to answer, because it is a matter which is entirely in the hands of the Secretary of State, and I have nothing whatever to do with the appointments to the diplomatic service; but, from my experience when I was private secretary, I should say that there were not many names on the list of men who seriously wished to enter the diplomatic service who did not get nominations. Of course, a number of people apply. A father thinks that diplomacy would be a desirable career for his son. Perhaps the boy is only 15 years old, but the father gets half-a-dozen people to write off to the Secretary of State, and the young man's name is put down. Before the time comes for him to get a nomination, he has, perhaps, gone into the army, or he has entered some other profession, or he does not, himself, wish to go into diplomacy. In that way there are people on the list of names who never get nominations; but I think the great majority of the men who are at all suitable for the diplomatic service get nominations. It is, however, not a service which is really very much sought after. The living abroad is a thing that many people object to, and the expense is a very great consideration. If a man has a large fortune he does not see the advantage of living abroad; if he has got no fortune at all he cannot afford to go abroad; therefore, the only people who are really suited to the diplomatic service are the people of intermediate fortunes, either the younger sons of rich men, whose fathers can afford to give them good allowances, or young men who have inherited a moderate fortune. At any rate, the service is not suitable to the first young man you meet.

26,962. (*Mr. Lawson.*) I suppose the requirement as to private means is, in itself, an objection?—Yes; that requirement is not a requirement merely because we wish to limit the service to rich men, but it is made because men without means cannot live abroad. I have seen numbers of reports on the subject from ministers, and in many capitals I find it is impossible for a young man to live on less than 600*l.* or 700*l.* a year.

26,963. (*Mr. Hanbury.*) You have given us the cost of the English Foreign Office, and, to a certain extent, the cost of other foreign offices, has any statement been prepared showing the cost in each country of their embassy or legation, as compared with the English?—I will have such a statement prepared. I have here a statement with regard to the French, from which it appears that the French pay their ambassadors on a different system to ours. They give ambassadors a comparatively small salary, and then so much for what they call the cost of house rent and receptions. In most places they have houses, therefore the allowance is for cost of receptions, what is generally called "frais de représentation." The French have nine ambassadors, who have 40,000 francs each. At Berlin the ambassador gets an allowance of 100,000 francs. At Berne he gets an allowance of 20,000 francs, and at Constantinople 90,000 francs; in London, 160,000 francs.

26,963*a*. With regard to the promotion of secretaries and attachés after they are once appointed, is there anything in the diplomatic service in the nature of the confidential reports that there are in the army? How are the men's merits known at the Foreign Office?—There are no formal reports; but we have means of knowing the qualifications of the men in the diplomatic service.

26,964. My point is this: One hears constant complaints from the diplomatic service that estimates of a man's value are sent home by his superior officer, by the minister, and he never knows in the least what is said about him. In the army every officer who has a report passed upon him has a chance of being heard and explaining anything away; but in the diplomatic service the character of a secretary may be taken away by the superior officer without his being able to say a word?—As far as my experience goes, such a thing has never happened; except in some very flagrant case I have never known a minister send home a report that would prejudice a member of his staff; he generally looks upon him more as a friend to be assisted and helped.

26,965. (*Chairman.*) Is there not this Regulation No. XV., page 231, of the Foreign Office List, "Heads "of missions will be required to report annually, on "the 1st of January in each year, to the Secretary of "State, the mode in which, during so much of the "preceding year as they shall have served in such "mission, each second and third secretary and attaché "in his mission has discharged his public duty; and "such reports will be duly considered before any pro-"motion or increase of pay is accorded the person to "whom they apply. These reports will be con-"sidered to be strictly confidential, and it will rest "with the Secretary of State to determine as to ex-"tenuating circumstances when they are unfavour-"able." Are there any periodical reports sent in in accordance with that?—I never saw any periodical formal reports. In the Foreign Office we have the means of knowing a great deal about the members of the service. When they come home we see them; and then most of them are at some time or other employed to write reports, which gives us a tolerable gauge of their capacity.

26,966. (*Mr. Freeman-Mitford.*) A man's demerits would very quickly be known, I suppose?—Yes.

26,967. (*Mr. Lawson.*) If formal reports were sent in would you know of them?—I know of no such formal reports. As a matter of fact, I think I know pretty well the qualities and capacities of every man in the diplomatic service; but I have not arrived at that knowledge through any formal report.

26,968. (*Mr. Hanbury.*) Assuming that that is the regulation, and assuming that it is carried out, do you think it would be a good thing to do in the diplomatic service what is done in the army, namely, to give an opportunity to the secretary, or whoever he may be, who is adversely reported on, to meet the charge?—If a charge were made against any man, we should at once call upon him for an explanation.

26,969. Are all those reports satisfactory?—They do not come to me. I do not know who they go to; in fact, I am afraid that that rule is not carried out.

26,970–5. I suppose those regulations were drawn up in conference between the chief clerk, the Under Secretary, and the head officials of the office?—The Regulations bear date May 1, 1886, because they were re-issued then, it having been found necessary at that time to introduce further provisions in Rule 18 with regard to the deductions to be made from salaries of heads of missions on leave of absence. Rule 15 was issued in 1872. It was not found to be of any practical utility, and has been allowed to fall into disuse

26,976. (*Mr. Hanbury.*) Can you tell me with regard to the different grades in the service, what are the special and peculiar duties of each. Has an ambassador got any duties that do not fall on a minister, for instance?—The difference between an ambassador and a minister is that the ambassador represents the person of his Sovereign, and has the right to claim an audience of the Sovereign of the country to which he is accredited; and a minister may ask for an audience, but he has no right to claim it.

26,977. (*Mr. Freeman-Mitford.*) An ambassador personally represents the Sovereign, does not he?—Yes.

26,978. (*Mr. Hanbury.*) But in all other respects are their duties the same?—Yes.

26,979. What are the special duties of the secretaries of embassies and the secretaries of legations?—Their duties are to act generally under the direction of the ambassador or the minister, and to perform such part of the business of the embassy or legation as may be entrusted to them. Also to draw up the annual reports on the commerce of the country.

26,980. How many of those reports are there? I think, as a matter of fact, three; but we had it in evidence yesterday that you had only been receiving two?—I am not able to answer that question positively.

26,981. Are any special instructions given to the ambassador or minister himself to take any interest in

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

and to try to develop English interests so far as trade is concerned in the country to which he is sent?—I am not aware of any special instructions being given to him, but that is, I should say, the most important part of his duties.

26,982. The most important part of his duties?—I look upon it as the most important part of his duties to further English interests in every way that he can, and as these interests are principally commercial interests, I should say that his principal duty was to further the commercial interests of his country.

26,983. What right has an English merchant, we will say in a foreign country, who wants to be assisted, or to gain information as to any particular trade in that country; can he go direct to the ambassador and get his information; and is the ambassador bound to take an interest in the matter?—Certainly. Any British subject has a distinct right to ask for the assistance, generally, of the ambassador or minister in the country where he lives. Of course it is not the business of the minister to press his interests as opposed to those of other British subjects, but generally to support the interests of all British subjects is his duty. A special instruction was issued by Lord Rosebery on this subject in 1886, and was laid before Parliament. Commercial, No. 16, Part 2, 1886.

26,984. (*Mr. Maclure.*) Is it not often the case that a British subject has to apply to the Foreign Office to have justice done to him, where it is not antagonistic to the interests of any other British subject?—Do you mean to have his interests supported.

26,985. To have them properly attended to?—Formerly it was understood that our representatives abroad should not support applications from British subjects to a government for contracts, and things of that sort, because it was thought better that they should keep clear of such things; but in consequence of the great pressure that has been put by other foreign governments in some Eastern countries in favour of their subjects, we did, about two years ago, issue an instruction to our representatives in those countries, saying that where they thought the interests of British subjects were suffering by the pressure put on by foreign representatives, they might also exert their influence, because we did not wish British subjects to be put on a footing of inequality with the subjects of other countries.

26,986. (*Mr. Lawson.*) Do you think that has had any practical effect?—I think it has.

26,987. (*Mr. Hanbury.*) In some cases, I think in China, and in Japan, too——?—Those are the countries I am alluding to.

26,988 The minister is also superintendent of trade?—He was so until a few years ago. The name was originally given to our agent who was stationed at Hong Kong before we had a representative at Peking. It has now been dropped.

26,989. Has the minister in Berlin, we will say, or in Paris, the same direct connexion with the trade of the country that the minister in China or Japan has?—At Paris we keep a commercial attaché specially to attend to commercial affairs in France and other European countries, Mr. Crowe. He is a man of very high attainments, and very well known. He occasionally goes to Berlin, and, certainly, Sir Edward Malet would give every attention he possibly could to all those questions.

26,990. My point is this: It is a definite part of the duties of the minister in China and Japan to take an interest in developing the trade of the country. Is the ambassador at Paris, or Berlin, or St. Petersburg, called upon to take the same interest in developing the interests of this country, so far as trade is concerned, there?—I should say that in European countries, which are more highly civilised, and where trade is much more organised, such a direct superintendence would not be required from Her Majesty's representative; but it certainly would be one of his principal duties to hear any complaints or any representations that may be made by British subjects interested in commerce, and to the utmost of his power to give them such support as he could properly afford them.

26,991. (*Mr. Maclure.*) Take the case of Berlin. Upon whom would matters connected with trade fall, upon the ambassador or upon the consul-general?—Do you mean in large or small affairs?

26,992. I mean general matters affecting commerce, *quâ* competition, restriction of imports, and all that sort of thing, would that work be consular?—No; any man who considered himself aggrieved could go to the ambassador. We are constantly receiving from the embassies reports of complaints made by British subjects who think they have been unfairly dealt with in regard to customs duties or matters of that kind.

26,993. (*Mr. Freeman-Mitford.*) Is not the only difference this: that whereas in the East our relations may be said to be entirely commercial, in Western Europe they are commercial and political as well, but that that latter fact does not absolve the minister from any commercial duties?—Certainly, but the ministers in the East have also important political duties.

26,994. (*Mr. Maclure.*) Would the commercial duties fall upon the consulate?—Not at all. The duty of protecting British subjects in their commercial interests, or in any interests that they have, falls upon the ambassador.

26,995. (*Mr. Hanbury.*) What proportion of the ambassador's duties are in any way connected with commerce or trade, judging by his despatches we will say?—An ambassador writes a great many despatches on commercial matters. I could give you an exact return of what they are.

26,996. I only want to get at it as a fact—does he take an interest in commercial matters?—He undoubtedly does. A great number of his despatches are connected with commercial affairs.

26,997. But are there no definite instructions given to him on the subject?—It is a main part of his duties. If there is a commercial treaty to be negotiated, he has to negotiate it, though probably specialists are sent to assist him. He has to pay constant attention to all commercial questions; he has to listen to all complaints; he has a regular commercial series of despatches. I do not think our ministers can be complained of for neglecting commercial affairs. For instance, we keep a political agent and consul-general in Sofia. I have seen lately a series of most interesting despatches on commercial questions from him. I think what I have said is the case in every instance, large and small.

26,998. You have given an instance of a consul-general, but I am taking the case of an ambassador who is not a consul-general, and who is not specially charged, as is the minister in China, with looking after our trade?—That really would not affect the question at all.

26,999. Whatever he may be called, whether he has the duties of a consul-general thrown on him, or whether he has the duties of an ambassador to perform, he is equally responsible for taking an interest in British trade?—I think the best way of putting it is that an ambassador or minister's duty is to look after British interests, and our commercial interests are naturally the most important.

27,000. Then what is the meaning of his having the duties of consul-general thrown on him in certain cases?—I am not prepared at the moment to put into the proper form of words the duties of a consul-general. In the few cases where our diplomatic representatives are consuls-general, the title was given for some technical reason, and does not affect their duties in regard to the protection of British interests.

27,001. (*Mr. Freeman-Mitford.*) Is it not the fact that the existing ambassadors who were not appointed from outside were secretaries of legations or secretaries of embassies since the time when the secretaries were called upon to draw up these reports on commercial matters?—Yes.

27,002. Consequently the ambassador must have attained a considerable knowledge of commercial matters?—Yes.

27,003. (*Chairman.*) I want to know the exact relation of the consul-general and the vice-consul to the embassy. Will you kindly look at page 27 of the Foreign Office list. You will see there that we have at Berlin an ambassador, a secretary, a military attaché, second secretaries, a third secretary, an honorary attaché, and then a consul-general and a vice-consul: these two are both Germans, and I presume not English subjects?—They are not English subjects. Mr. Bleichröder is the well known financier.

27,004. In Berlin what is the particular relation of the consul-general and the vice-consul to the embassy?—You see they are unpaid, except that Mr. Bleichröder

receives 35*l.* a year in lieu of fees hitherto retained by him. Their functions are, no doubt, to furnish the ambassador with information on commercial matters, also to perform certain notarial acts.

27,005. (*Mr. Fowler.*) The consul-general is not an Englishman, is he?—No, he is not.

27,006. Is not it the fact that the real interests of British trade in Germany are looked after by the embassy and not by the consulate?—Certainly.

27,007. Exclusively by the embassy?—Exclusively.

27,008. (*Mr. Freeman-Mitford.*) As to the fact that the duty of consul-general is attached to certain ministers in the East, is not that due to this, that the minister is serving in a country where the extra-territoriality clause is to be found in the treaty, and therefore the embassy or legation in that case is a kind of court of appeal as regards the consular courts which exist in those countries?—It was so before the Supreme Court for China and Japan was established.

27,009. (*Mr. Hanbury.*) How far are the consuls under the ambassador?—That is a very difficult question to answer offhand.

27,010. I want to know what the system of the hierarchy is, in what sense are these consuls—who are, of course, principally connected with trade—under the ambassador of the country in which they reside. Are they recognised as his subordinates, in any sense?—Certainly they are, they make their reports to him and they receive instructions from him.

27,011. How many commercial attachés have we got?—Two.

27,012. Where are they?—One (Mr. Crowe) is at Paris, and one is at St. Petersburg, and he is also attached to Persia and the Asiatic States of Turkey.

27,013. What are the special duties of these commercial attachés?—Their special duties are to report on commercial matters and they are generally employed by the embassy on all commercial questions.

27,014. To get information for the purposes of the report to the secretary?—That is entirely a thing apart, they have nothing at all to do with that—the secretary gets all his own information—their business is to deal with all commercial matters that come before the embassy; you see only two are kept.

27,015. That is my point, why are they only kept in those two places, and not in any others; if they are useful in Paris, why are they not useful elsewhere?—The want of them has not been so much felt. I imagine that our trade interests are very much larger in France. Mr. Law is the commercial agent in Russia. He was appointed a few years ago, because it was represented to us that he could be of very great use there. There were a great many commercial questions arising where special knowledge was required. Then, he also acts for Persia, because there also we have been pushing our commercial interests very much lately, and in the Asiatic provinces of Turkey there are very important commercial interests. The commercial attachés are also available for visiting places to collect local commercial information, or to inquire into complaints or trade disputes.

27,016. Do you know how many naval attachés we have?—We have one who is accredited to all the maritime courts.

27,017. Does he travel about from court to court?—Yes.

27,018. Have the Admiralty ever asked for an increase of naval attachés?—Not to my knowledge.

27,019. Does he send in full reports every year?—He sends in continual reports from whatever post he is visiting.

27,020. How long does his appointment last?—I cannot say that; he is appointed on the recommendation of the Admiralty.

27,021. (*Mr. Lawson.*) It has been alleged that this one gentleman is utterly unable to cope with the amount of work that he has to do, and that other Powers take more trouble in that way?—I have never heard of any complaint; certainly, if the Admiralty wish to appoint another, we should make no objection.

27,022. (*Mr. Hanbury.*) Have you had no request from the Admiralty for more naval attachés?—No, if we had we should make no objection to it, we do not pay them, and it would make no difference to us.

27,023. (*Chairman.*) What becomes of the reports?—They come to the Foreign Office, and are transmitted by us to the Admiralty.

27,024. (*Mr. Lawson.*) Are they confidential?—That depends, of course; some of them are confidential, and some of them are not.

27,025. (*Mr. Hanbury.*) I want to ask one other question as to outfits; take the case of an ambassador, for instance, what is his outfit?—It varies slightly, but, generally speaking, it is one-third of his salary on appointment and one-sixth on transfer.

27,026. Does he get paid a lump sum?—The outfit is a lump sum.

27,027. What is it supposed to be for?—That is to enable him to set up house in the new place he goes to, and to pay his travelling expenses to his new post.

27,028. By setting up house, what do you mean; does he go to a furnished house?—In places where there is a Government house the official reception rooms are furnished by the Government, but the bedrooms and living part of the house he has to furnish himself.

27,029. And the reception rooms are also furnished, I suppose, at the house that he has left. I want to know exactly what are the new circumstances that this outfit is supposed to meet?—There are very great expenses entailed on moving from one place to another, when a man has to move a large establishment with children, furniture, and everything of that sort.

27,030. (*Mr. Freeman-Mitford.*) Is not the allowance made on transfer, because it was felt that he could not sell his furniture on leaving a post except at a very great loss?—I think it is to meet the expenses entailed on removal from one post and his installation at another. It is quite evident, I think, that you could not change your house in London without being put to a very great expense, at least that is my experience, and certainly for an ambassador who has removed, say, from Rome to St. Petersburg, the expense must be very large indeed.

27,031. Does he get any other allowance besides this outfit?—No.

27,032. Nothing except the outfit?—Nothing except the outfit.

27,033. When he has a house in Paris or in Rome, what does that include; is everything paid for him, his rates and taxes, for instance?—He is exempt from rates and taxes.

27,034. What other payments are made by the State for him?—There is, I think, a small allowance for necessary repairs; if you will allow me, I will put in a paper stating the amount.

27,035. I want to know what, in addition to his salary, he really does get?—In places where there is no house he receives an allowance for house rent. In places where there is a house, he receives, I think, a small allowance for necessary repairs.

27,036. Are you now referring to the money that is borne on the Office of Works vote?—Yes.

27,037. That is only to enable him to repair a leaky pipe or a bad drain, for instance?—Yes.

27,038. (*Mr. Hanbury.*) I really want to know what other allowance, in addition to his salary, either in money or in kind, goes into the pocket of the ambassador?—Nothing from the Foreign Office.

27,039. Nothing whatever?—It must be shown in the estimates if it does.

27,040. All these things do not appear in the estimates; they appear in the appropriation account?—In any case it would be shown.

27,041. (*Chairman.*) Is not there a regular scale of outfit?—Yes.

27,042. According as to whether it is the first appointment or the second?—Yes.

27,043. I see on page 276 of the Foreign Office list that the scale of outfit on first appointment for the ambassador extraordinary and plenipotentiary for France is 4,000*l.* That appears to be a fixed sum?—That is a fixed sum.

27,044. Then on promotion 2,800*l.* What does promotion mean?—Promotion, in this connexion, would mean appointment to Paris after an ambassador has been unemployed for more than three and less than

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

eight years. Transfer would mean going to Paris from another embassy.

27,045. Therefore, the present rule appears to be that there is a fixed sum with reference to each rank in the diplomatic service under the head of scale of outfit?—That is so.

27,046. (*Mr. Freeman-Mitford.*) There is no allowance to an ambassador or to a minister for repairs to his house, is there, but there is a sum provided in the estimates every year for ordinary maintenance and repair of each house, and some of that money may be expended by the ambassador himself, but there is no allowance to him, is there?—I think there is some small sum annually provided for necessary repairs to leaky pipes, as you put it.

27,047. But it is not paid as an allowance to an ambassador?—It is not paid as an allowance to him.

27,048. (*Mr. Hanbury.*) The work is, in fact, done for him?—There are, I believe, structural repairs carried out.

27,049. (*Mr. Maclure.*) Is not this the fact that in the case of large embassies Great Britain is the freeholder of the property, and any repairs that are requisite are done by the Office of Works and charged in the appropriation account. The ambassador has not a farthing to pay himself, and there is no allowance made to him?—I think there is a limited sum for necessary repairs; the object of that being to prevent demands for repairs.

27,050. (*Mr. Hanbury.*) Is that in addition to the sum which we see in the estimates for repairs?—It is certainly shown in the estimates.

27,051. What about travelling expenses?—That is a different thing altogether.

27,052. I want to include all the money that comes into the ambassador's pocket; how far does he get his travelling expenses; or is there an allowance for those?—There are fixed rules as to travelling expenses.

27,053. Do you mean a fixed yearly sum?—This is the rule on that: "Secretaries of embassy or legation, "second and third secretaries and attachés, will, on "their first appointment, or on any subsequent removal "for promotion, or other public reason, be allowed "their actual travelling expenses by land, or the "actual amount of their passages by sea, either from "England to their post, or from one foreign post to "another (in the case of secretaries of embassy or "legation, and of second secretaries the like expenses "will be allowed to them for one servant, if they have "one); and they will further be allowed subsistence "money for themselves, but not for their servant, at "the rate of 1*l.* a day while travelling by land, and by "sea if subsistence is not included in the passage "money. In the event of a passage being afforded to "secretaries or attachés on board of one of Her Majesty's "ships of war, the allowances made will be in con-"formity with the Admiralty Regulations; but the "travelling expenses and subsistence of the families "of secretaries or attachés will not be allowed. "No allowance will be made to members of the "diplomatic service for journeys undertaken for their "own convenience, in pursuance of leave of absence."

27,054. Is any allowance ever made to an ambassador in addition to his salary, as an honorarium for special work?—No instance has ever occurred in which any allowance has been made to an ambassador in addition to his salary as an honorarium for special work.

27,055. In the report of a committee of 1850, I see it was recommended "That no diplomatic salary should "exceed 5,000*l.* per annum, exclusive of an allowance "for residence." A good many of the salaries are very much in excess of that?—Yes, they are.

27,056. What is the reason for that recommendation not being anything like adopted?—The salaries are certainly not fixed higher than the requirements of the place. There is no ambassador, I believe, who can live within his salary. They are put to very great expense, and an expensive mode of living is necessarily required of them. They are expected to entertain, and it is necessary for the public interests, to a certain extent, that they should; it is the only way in which they can see much of the inhabitants of the country, of people of position, I mean, and it is a great assistance in obtaining information; it is a great assistance to their influence. In most courts they are called upon to entertain the sovereign of the country, and that, of course, can only be done by a man who lives well and who has a good house

27,057. But all these duties fell upon them at the time that this recommendation was made?—You ask me why their salaries are fixed at so high a rate, I can only give that reason.

27,058. There are now salaries nearly double the amount that the Committee of 1850 recommended should be paid?—Well, I should say that the expenses of living had enormously increased since 1850.

27,059. Have they increased a hundred per cent.?—I should say so, certainly.

27,060. Would you justify the increased salary by the great rise in the cost of living?—Yes.

27,061. Can you tell me at the present moment what proportion the pension list of the diplomatic list bears to the cost of the active service?—The proportion the pension list of the diplomatic service bears to the salaries of the active list is as 1 to 6·718 or 14·88 per cent.

27,062–3. Can you give me some information about the pensions, as to the scale on which they are paid?—The ambassador is entitled to a pension after he has fulfilled his term of service, which is 15 years in the service, and three years with the rank of ambassador. He is then entitled to 1,700*l.* a year.

27,064. (*Mr. Lawson.*) May I interrupt you and ask whether only diplomatic service is included in the term?—Only diplomatic service.

27,065. And not necessarily continuous?—I will read the regulation. "After the commencement of this Act," that is, the Act of 1869, "the Treasury, on "the recommendation of the Secretary of State, may "grant pensions during life to persons in Her Majesty's "diplomatic service, not exceeding the salary which "the pensioner may be receiving at the time that his "active employment ceases, and not exceeding the "following amounts; namely,—

"(1.) 1,700*l.* per annum for a first-class pension.
"(2.) 1,300*l.* per annum for a second-class pension.
"(3.) 900*l.* per annum for a third-class pension.
"(4.) 700*l.* per annum for a fourth-class pension."

27,066. I see there are 34 persons in receipt of such pensions, and that the superannuation allowance for 1889–90 amounted to 23,098*l.* for the diplomatic services. The compensation allowance is 523*l.*, and the compassionate allowance is 273*l.*, making a total of 24,304*l.*, being a decrease of 710*l.* on the preceding year. I have been comparing the amount voted last year with that which appears on the report of the Committee for 1871. That Committee say that in that year the diplomatic service vote was 215,876*l.*, of which 151,000*l.* is salaries and house rent of the members of the diplomatic service, and that in 1869 the total amount had been 203,510*l.* I see the total amount is now 239,048*l.*, and that the salaries and rent allowances amount to 178,738*l.* What is, generally speaking, the reason for the increase of that vote for salaries and rent allowances. It is a considerable increase, you see it is an increase in one item of 27,000*l.* since 1871?—I am afraid I must ask you to reserve that. I will have a statement drawn up.

27,067. Is it because of the legations which have been established in South America?—No, I should say it could not have anything to do with that, if it is increase of rent allowance.

27,068. Salaries and rent allowances together?—As I have promised I will have a return put in.

27,069. Could you tell us if there has been a diminution or an increase in the numbers of resident ministers, and in that I include, of course, the ministers plenipotentiary and ambassadors for the whole service since the Committee sat in 1871?—The missions in Germany have been reduced since that date.

27,070. The Committee of 1871 in their main report said, "In the present condition of Europe, and "especially of the central part of it, your Committee "are not prepared to recommend an immediate reduc-"tion of the smaller German missions; but they are "of opinion that there is a reasonable likelihood, at no "very distant date, that there may cease to be any "good grounds for maintaining some of them, and "they recommend that the Secretary of State should "take an early opportunity of considering whether "any, and if any, which of them, may be discontinued "without public injury." And in the minority report drawn by Mr. Rylands, that is, of course, recommended in a much more empatic way. As I understand, you could not say whether anything has been done

hitherto to carry that out?—The German missions have been reduced, but diplomatic representatives have been appointed to Bucharest, Belgrade, Sofia, and Cettinje.

27,071. Is there any special date fixed when it is proposed to amalgamate?—It would depend on the retirement of the present holders of the post.

27,072. Would it depend upon that entirely?—I think so.

27,073. Have any steps been taken to reduce the establishments at those different ports?—The establishments are already, I think, at a minimum.

27,074. I have the "Almanach de Gotha" here, and I find that we have the happiness, at Wurtemburg, of being represented by two gentlemen, the minister resident and a secretary of legation, whereas France has only one and Italy has only one. I do not want to enter into questions of policy, but at first sight it does seem that there is less reason for our having a full legation there than for France. I do not know whether there is any special reason why at Wurtemberg we should be so represented?—The secretary there is a third secretary.

27,075. May we say that all those small German courts besides the minister, where there is one, there is also a secretary of legation?—There is no secretary of legation at these small courts.

27,076. At Wurtemberg there is?—Yes, a third secretary.

27,077. Has it been proposed—I do not ask you whether it is advisable or not—to amalgamate Wurtemberg with the other small German States where we have representatives?—That has been under contemplation.

27,078. In the note we have read out from the estimates, Munich, Darmstadt, and Stuttgart are referred to, but Coburg is not?—Coburg is a separate affair altogether.

27,079. Could you tell us in how many embassies and legations a chaplain is retained. I believe there is a chaplain in Austria, Denmark, Greece, Spain, and Turkey, and that these gentlemen are all paid 300*l.* a year, and that some of them have an extra 100*l.* a year for house rent?—There are chaplains at Vienna, Copenhagen, Madrid, Athens, Constantinople, and Pekin.

27,080. A chaplain is not put down for Stockholm in the estimates?—The chaplain at Stockholm is not paid. At Copenhagen, the reason given for the maintenance of the chaplain is that there are so many British sailors who frequent the place. At Madrid, it appears that in the times when Protestants had great difficulties in celebrating worship a chaplain was kept in order to give them facilities within the legation, and that has gone on. At Athens, where the chaplain only receives 100*l.*, the reason given is that there is an English church, and that if the chaplain was not paid it would fall into disuse altogether.

27,081. Without entering into the reasons for keeping them, may I ask whether it is proposed to reduce the number of chaplains or to do away with them altogether?—I do not think that there is any proposal at present for doing that.

27,082. Have these chaplains pension rights?—I imagine they have.

27,083. Are they part of the diplomatic establishment of the country?—Yes.

27,084. Under what conditions do they hold office?—To perform service, I suppose.

27,085. How are they selected?—They are appointed by the Secretary of State.

27,086. With or without examination?—I suppose the fact that a man is a clergyman of the Church of England shows that he has passed some examination. I think they are generally appointed on the recommendation of the Bishop under whose jurisdiction they come.

27,087. It is not proposed to increase the number of chaplains, is it?—Certainly not. I believe the reason why they are not maintained at Berlin and Paris is that at Berlin and Paris sufficient church accommodation is supplied without any contribution from the State.

27,088. Is there any particular system pursued in the distribution of chaplains?—Formerly chaplains were maintained at every place, they have now been reduced, except at those places where there seemed some special reason for maintaining them.

27,089. Has any step been taken to find out whether these gentlemen are really required at the different places now?—I think an opinion has been expressed several times in the House of Commons in favour of the reduction of all chaplaincies, and the greater number of them have been abolished. The few who remain have been kept up for some special reasons which I have given the Commission so far as I could. With regard to Teheran I think there is a chaplain kept up by the Church Missionary Association.

27,090. I think you will find that at Constantinople there is an English church?—There is an embassy chaplain at Constantinople. That appointment has existed since 1825, the chaplain having previously been paid by the Levant Company.

27,091. Can you tell us with respect to the physicians whether it is proposed to retain them at Constantinople as well as at Teheran; is it necessary to have one at Constantinople now?—I believe it is. I think that his services are very much wanted there in connexion with quarantine.

27,092. What relation do the dragomans at Constantinople bear to the embassy, are they part of the diplomatic service?—You will find the chief dragoman, Sir Alfred Sandison, is specially attached to the embassy, and has been for many years. Then we come to two more dragomans, one, Mr. Stavrides, specially attached to the consulate. The next one, Mr. Marinitch, is attached to the embassy. They do the translating and interpreting work of the embassy. I may mention that we have of late years instituted a system for the Levant of training young men for the consular and interpretorial services, and of the corps which has been created by that system, Mr. Block and Mr. Alvarez are attached one to the embassy and the other to the consul-general.

27,093. But there are several gentlemen, I think, there now who are receiving allowances for a knowledge of Turkish?—That is a system which was established in accordance with the recommendations of the committee. A special allowance of 100*l.* a year is given to any junior member of the diplomatic service who qualifies in Russian, Turkish, Arabic, Persian, Chinese, or Japanese.

27,094. That does not seem to have done away with the necessity of having these translators?—It was not intended to do that, I think.

27,095. (*Mr. Hanbury.*) Are there translators in other countries besides the East, in Spain, for instance?—In Spain there is a man who is consul and translator.

27,096. Are the secretaries and the staff of the embassy or of the ministry not supposed to know the language of the country?—I think the junior members of the embassy are, as a rule, well acquainted with it, but of course there are always a certain number of documents to be translated, and you will not find at European Courts any man who is a translator only, without having other duties to perform.

27,097. (*Mr. Lawson.*) In Persia you have an Oriental second secretary and an interpreter too; I should have thought that these functions were identical?—In Persia we have been obliged to increase the interpretorial staff in consequence of the great increase of business, and with a view to economy we have obtained the services of a gentleman who has retired from the Indian army, and is in receipt of an Indian pension. He has accepted a very moderate salary, and a temporary appointment, with no claim to pension. He does not appear in the present estimates; he will appear in the next ones.

27,098. Will your establishment at Teheran be increased?—It will be somewhat increased. The Oriental second secretary was the only man we had who could do what is called the dragoman business, that is, converse with the Shah and his ministers, and it was found absolutely necessary to have someone else. For that purpose we have got General Gordon.

27,099. Have you any rule laid down as to the establishments at the different capitals. Have you an ideal scheme?—No, but of course we can only increase them by the consent of the Treasury, and they very frequently are reduced. As far as possible, we adapt them to the necessities of the case. When business increases, we get constant applications from the ambassador or minister for more assistance, and then we endeavour as far as possible to meet it in the case of ordinary secretaries and attachés by taking away people from other posts where they are not so much required.

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

27,100. You pay, I believe, special allowances to secretaries in the diplomatic service for a knowledge of Arabic, Turkish, Russian, Persian, and Japanese, do not you?—Yes.

27,101. What use is that in practice when you have to retain interpreters in all those capitals for the special purpose of translation?—That is granted for an ordinary knowledge of the language, but it would not enable a man to translate documents. It is more of a colloquial knowledge (I think it is stated so), which is a very different thing from being able to draw up a paper in the foreign language, or to translate a very difficult paper.

27,102. Do you think that the recommendations of the different committees have in this respect been fully carried out, and that the examination does ensure a real knowledge of these things?—It is a strict examination of a formal kind.

27,103. It is not passed as a matter of course?—Certainly not. In Japan, for instance, the examination is carried out by the Japanese secretary; he is an Englishman, but is the secretary for that language.

27,104. As a matter of practice, these secretaries of the different legations, and very often the attachés, if there are any, do pass in the languages in the capitals of the countries where these particular tongues are spoken?—They frequently do.

27,105. I mean that it is quite an exception when they do not; is that so?—That I could not say; a number of them do. At the Foreign Office we accept the certificate that is sent home by the ambassador or minister, and that certificate is based on the report of the officer on the interpretorial staff who has held the formal examination.

27,106. Is Chinese one of the languages?—Chinese is one.

27,107. I suppose that these estimates and this category of countries are slightly imperfect, because I notice that Cairo, which is for all practical purposes a legation, is not included?—Cairo is not a legation, because Egypt is not an independent country.

27,108. I know; technically it is an agency?—In consequence of the very great increase of work at Cairo, several members of the diplomatic service are attached to the agency.

27,109. Do you not send secretaries to Cairo as regularly as to any other capital?—Only quite recently, since the work has become greater; we used not to formerly.

27,110. Where should we find the estimates for Cairo; under the head of consular service?—Under the head of Egypt; partly in the diplomatic and partly in the Consular Vote.

27,111. There is an officer in Constantinople who goes in the estimates by the name of the archivist; what is he?—Formerly there was an officer in the embassy who had special charge of the archives, Mr. Pisani, and on his retirement it was decided to abolish the post, and to give an allowance to one of the regular secretaries for having the custody of the archives.

27,112. I want to know why, in Turkey, the secretary is specially paid for taking charge of the archives, although I presume they have to do it at every other embassy without a special allowance?—Because the embassy at Constantinople is on a very much larger scale than any of the others; it is more like a Government office; there is an enormous correspondence with all the consuls, and a great deal to be done of every sort and kind, and, when the archivist was abolished, I think it was my proposal that we might economise in that direction, and a large economy was made. I think the archivist received a salary of 900*l.* a year, and in lieu of that we gave a small allowance divided between two of the second secretaries to perform his duties, which are more onerous a great deal than the duties of a similar kind at the other embassies.

27,113. Do you think there is a sufficient reason for having a physician at Constantinople, getting 300*l.* a year in addition to 400*l.* a year which he receives as delegate to the Board of Health?—I am afraid I could not offer an opinion on that.

27,114. That gentleman holds two offices, and it strikes me that 700*l.* a year is rather an excessive salary, comparing it with the salaries of other physicians at other embassies?—I will have that inquired into.

27,115. I should now like to ask you whether, from the point of view of the embassies, the system of exchange between the Foreign Office and the embassies has worked well according to their reports?—I do not think we have any formal reports from them, but from what I know of their views on the subject, and what I have gathered in conversation with them, I think they are decidedly favourable to it.

27,116. Is not it the fact, that the only way that a young diplomatist can show any special proficiency, or knowledge or intelligence, would be by selecting for himself probably some subject to report upon, and then sending it in voluntarily to the Foreign Office?—He would send it through his ambassador, and they very frequently do that. Some of the junior members of the diplomatic service are people of very remarkable ability. The ambassador may at any moment, if he wants any question reported upon in the country where he resides, send one of his secretaries to the spot, and, if he considers it of sufficient importance, that report is sent to the Foreign Office, and if it is of special interest it is very often laid before Parliament.

27,117. I believe it is true that in a great number of cases the attachés or secretaries select for themselves the matter which they investigate, and then it rests with you whether the public or Parliament shall have the benefit of the report?—We should not lay it before Parliament unless we thought it was of some public interest.

27,118. That would give you the knowledge that you have of the merits and qualifications of those members of the diplomatic service, would it not?—Yes; but I think we have other means of arriving at that. The private secretary especially is in constant correspondence with the various members of the Service. Naturally, the minister or the ambassador would write to him and say, so-and-so is a very good man, I hope you will not take him away; I hope you will leave him here. We hear in that way all about the different men.

27,119. But that is not quite direct, and your only knowledge of them springs from these reports?—If a man draws up an able report, it enables us to judge of his merits.

27,120. The Committee of 1871 recommended a rule that was passed in 1886. They said these reports should be duly considered before any promotion or increase of pay be accorded to the subject of them. Do you believe that you would obtain a better knowledge of the merits of the different members of the Service, if you got separate reports with regard to each of them?—I do not think it is necessary or desirable that there should be formal reports; but I believe they are documents on which you can place no real reliance. I think you gain very much more correct information as to the men from informal conversations and letters and from general knowledge.

27,121. As a matter of course, the different ambassadors or ministers can form a very accurate opinion as to the merits of each subordinate, as they are in daily contact with them. Why should not the ambassador or minister write an informal report?—As a matter of experience, I think, one cannot expect a minister or ambassador who is living in habits of daily intercourse with his subordinates to sit down at the beginning of the year and in cold blood write a long statement of their demerits.

27,122. (*Mr. Hanbury.*) But does not the commanding officer of a regiment do that with his subordinates?—Are they worth much? You may judge, perhaps, better of whether a man is a good officer and a good drill and things of that sort, but the merits of an attaché or of a secretary are of a less precise kind. It is his business to make himself socially agreeable and to do all the work he is told, but the qualities of an attaché are not so exact or precise as the qualities of a military man.

27,123. Surely he has got some duties besides making himself socially agreeable?—That is only one of his duties; he has to do the work of the embassy generally.

27,124. (*Mr. Lawson.*) As a matter of course, it is well known that the work of the embassies and legations has immensely decreased of late years?—I am not aware of that; I should have said it has largely increased.

27,125. I am not taking ambassador's work particularly, but I should have thought when there is so much sent by telegraph now, that there was less writing done at any particular embassy than there used to be?

—I do not think so. I should have said the contrary. I should have said that the work has increased. The telegraph does not prevent the necessity for despatches, and then the general increase of affairs all over the world has had, I think, a tendency to increase the work.

27,126. So far as you know, in most of the capitals, is the time of the different members fully taken up?—Yes, I should say very fairly taken up.

27,127. What sort of hours do they keep at the embassies? Of course, you cannot fix them exactly, as they are not quite so regular as in London?—I have not much experience to guide me, except at Paris. At Paris, I should say they were employed for about six hours a day.

27,128. Six hours?—I should think something of that kind.

27,129. Of course, you would not like to test their work by that method. You do not think that their work depends upon the number of hours during which they are occupied?—I think their business is to do what they are called upon to do. The amount of work is necessarily fluctuating. At times there is a good deal to do; at other times there is not much to do. I do not suppose that in any of the embassies regular hours are enforced as they are in public offices. I do not think it would be necessary or desirable that they should be. The embassy is no doubt kept open for a certain number of hours every day; if there is much doing all the men are there, if there is not much doing, probably the attendance of one or two at a time is sufficient.

27,130. The amount of business at a given capital would only vary from time to time, and in some places there would be a practical decrease, not owing to general causes but owing to special causes?—It varies enormously. Then there is another point that I would make with regard to the regular hours of attendance. A member of an embassy is liable to be called upon at any moment to decipher telegrams or to attend to business that comes in during the night. I have been abroad at some posts, and I have seen some of the men called out after dinner to do two or three hours work.

27,131. Anyhow, there are no particular means of reducing or increasing an establishment at a particular place from time to time?—I think it is desirable to keep the system as elastic as may be. We are constantly reducing the establishment where we find there is not much going on in order to increase it at another place where there is more work. As I said, when we receive an application from the ambassador for more assistance, we try to meet it.

27,132. Are complaints made in the diplomatic service now of any great stagnation in the way of promotion?—There has not been as much promotion, no doubt, as the members of the Service would wish.

27,133. Is it slower now than it used to be?—The abolition of the small Italian and German courts produced, for a length of time, a complete block in the Service, which lasted for many years, and I do not think the Service has ever recovered from that.

27,134. Then the appointment of outsiders to high posts would also increase the block?—The appointment of outsiders is not, of course, very agreeable to the members of the diplomatic service.

27,135. Do you think that has a prejudicial effect upon their work?—I have no reason to think it has.

27,136. It is said to be so in several establishments at home, in some cases?—Yes, but I think there are compensations to men in the diplomatic service.

27,137. I understand that you would be strongly against doing away with the requirements as to private means, which you insist upon in the case of the diplomatic service?—I think it would be impossible to do away with it, you could not send people abroad to starve.

27,138. Do you get quite the same class of candidates, from the point of view of knowledge and intelligence, for the diplomatic service that you do for the Foreign Office?—I think so.

27,139. Do you think the standard of examination is as high?—I think so.

27,140. (*Mr. Fowler.*) What reduction has taken place in the German courts in the diplomatic establishment since the creation of the German Empire?—There were full missions, formerly at Hanover, Stuttgardt, Munich, and Dresden.

27,141. (*Mr. Hanbury.*) Was that the case at Darmstadt?—I do not remember whether Darmstadt was on the same footing. Then there was Baden. I could not give the exact numbers; when I first entered the Foreign Office there were at the courts I have named full missions, an envoy extraordinary, a secretary of legation, and two or three junior secretaries; therefore, the German establishment was then a very large one. Then in Italy there was a first-class mission at Turin and first-class missions at Florence and Naples.

27,142. (*Mr. Fowler.*) But that is all done away with now?—Yes.

27,143. For all political purposes, so far as the foreign policy of this country is concerned with Germany, Berlin and Berlin only is the place that we need trouble ourselves about?—Berlin is the only place where we should, of course, carry on negotiations, but the others are centres of political interest.

27,144. Centres of political interests and also, perhaps, centres of commercial importance?—Yes.

27,145. Why is it that at any one of those other places in Germany outside Berlin the duties cannot be discharged by a consul?—I do not think that a consul could be of the same use in obtaining information—he would not have access to the same houses.

27,146. Do you mean political information or commercial information?—I mean political information primarily.

27,147. Do we want political information from Munich, say?—I think it is of very great interest, and there may be moments when it may be of very great importance.

27,148. (*Mr. Hanbury.*) Do we want it more at Munich than at Buda Pesth, for instance?—We have a gentleman at Pesth who is nominally a consul, but he is really one of the secretaries of the embassy at Vienna. In Hungary you cannot keep an independent representative, because Hungary is a part of the Austro-Hungarian Empire, and the whole of the diplomatic representation must necessarily be at Vienna, whereas Bavaria still keeps the position of an independent kingdom.

27,149. (*Mr. Fowler.*) Exactly, but by the German Constitution is not Bavaria absolutely prohibited from having any foreign policy?—She cannot have any independent foreign policy, but her right to receive diplomatic representatives is recognised.

27,150. She can receive diplomatic representatives, but Bavaria could not communicate with Whitehall on any question of foreign policy affecting the German empire?—Certainly not.

27,151. Nor affecting Bavaria?—Not on questions of external policy.

27,152-3. What political information can be needed from a centre of that sort beyond gossip? For diplomatic and military purposes Bavaria, Wurtemberg, Darmstadt, Coburg, Saxony, are all parts of the German empire, are not they?—Yes; for military purposes, and for external relations.

27,154. In their external relations and for military purposes they all form part of the German empire, do not they?—They all form part of the German empire.

27,155. Do the ministers at Bavaria and Darmstadt and Coburg, and those various smaller courts have regular diplomatic audiences of the ministers of the Sovereign, and communicate the results of those audiences in the despatches to the Foreign Office?—They communicate the conversations that they hold.

27,156. On external political questions?—Not on external political questions, but the information that they obtain they communicate.

27,157. (*Mr. Hanbury.*) Do you mean conversations as opposed to mere formal audiences?—It is not necessary that they should ask for formal audiences.

27,158. (*Mr. Fowler.*) Supposing that you had a free hand, and we were commencing *de novo*, would you propose to establish missions at these various places in Germany, or would you establish strong commercial consulates?—I should prefer to have a man with a diplomatic position.

27,159. Where do you draw the line as to places where the diplomatic position is necessary, and the consular is insufficient?—At any places where there is anything in the nature of a court, I think it is very desirable that you should have a representative of

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

diplomatic rank, in order that he may have access to the society of the place on equal terms.

27,160. Is that for purely social reasons?—It is, because, unless he has access to the court, he has not the same means of obtaining information.

27,161. (*Mr. Lawson.*) But there is no foreign minister in some of those places, no man who is called a Minister of Foreign Affairs?—Yes, they each have a Minister of Foreign Affairs.

27,162. They do not call them so, they call them Ministers d'Etat?—Well, I am subject to correction.

27,163. (*Mr. Fowler.*) Then officially you are not of opinion that any further reduction could be made?—I should regret to see those posts abolished altogether.

27,164. That is hardly an answer to my question. I have no doubt you would regret it. We regret a great many things in our life, though it may be for the public good that they should be altered. What I want to ask you is, what is your opinion officially as a public officer having regard to the interests of the public service, whether there could or could not be any further diminution in our diplomatic establishments inside the German empire?—I would say it is undesirable to abolish those posts.

27,165. (*Mr. Lawson.*) But you are proposing to amalgamate them?—I said to abolish.

27,166. You are proposing to amalgamate three of them, Munich, Darmstadt, and Stuttgart?—I should have said that was going rather far. I would not mind amalgamating Stuttgart and Darmstadt.

27,167. I see by the Almanach de Gotha that the minister to Coburg is minister to some other places as well?—He is a chargé d'affairs, and is accredited only to Coburg.

27,168. Does that apply to other States?—There is Dresden.

27,169. (*Mr. Hanbury.*) Would not your object be met by having an official of the same rank as we send to Buda-Pesth?—No, certainly not, because there are courts at all these places, that is the great difference.

27,170. I understand there is a court at Buda-Pesth?—When there is a court at Buda-Pesth it is the court of the Austro-Hungarian empire; where we are most fully represented. It is no separate court, that is the great difference there.

27,171-2. (*Mr. Lawson.*) I just take by accident Saxe-Meningen, and I see that we are represented there by Baron Tauchnitz, who is the consul-general at Leipzig?—Baron Tauchnitz's consular district includes Saxe-Meningen.

27,173. (*Mr. Fowler.*) We have but one minister and one diplomatic representative in the whole of the United States?—You could not have more than one diplomatic representative in one country.

27,174. Each State in the United States has its own separate government and its own separate governor; and in the large towns—Boston, New York, Philadelphia, and so on, you are represented by consular officers?—That is a totally different state of things.

27,175. I only want to get this perfectly clear. In America we have but one diplomatic representative, that at Washington, and all the rest of the Foreign Office work in the whole of the United States is done through consuls, is not that so?—Certainly; but then you have only one government to deal with in the United States, whereas in Germany you have many.

27,176. You have only one government in the German empire with whose external relations or military policy you can deal. In Italy, again, there is no minister except at Rome?—But the same state of things does not exist in Italy; there are no independent sovereigns.

27,177. I perfectly appreciate your point, there is no court except the court at Rome, and I do not want to put it any stronger than you yourself put it; but what I understand you to mean is this, that there are social functions and social exigencies at a court in residence where it is desirable that there should be a diplomatic representative on behalf of this country?—Certainly.

27,178. Taking the expenditure of the diplomatic establishment as a whole, do you consider that it is extravagant?—I think not. I think you must admit that the diplomatic service is, to a certain extent, a service of representation as well as of business.

27,179. Let us take the two great embassies of Berlin and Paris, why should there be so large a difference in the cost of the one as compared with the cost of the other. Why, in other words, should the ambassador at Paris receive several hundreds a year more than the ambassador at Berlin?—I think the reason for it is that living is more expensive at Paris than it is at Berlin. I imagine that anyone who tries to keep a great house in Paris will find it a very much more expensive affair than to keep a great house in Berlin.

27,180. Then may we take it that there is no official or political reason for the difference, and that it is purely a question of pecuniary equivalent?—Purely.

27,181. (*Mr. Lawson.*) But if the expense of living is the test, is not Washington about three times as expensive as Paris or Berlin?—I think not.

27,182. In regard to the living, I mean. I am not talking of anything else?—I think the necessary scale of living is probably very much less in Washington. I certainly have not heard the same complaints from there. I believe it would be more easy for a minister in Washington to live upon his salary, which, I think, is 6,000*l.* a year, than for the ambassador at Paris to live upon his salary of 9,000*l.* a year, but can only speak by report as I am not a member of the diplomatic service myself.

27,183. (*Chairman.*) When you say "live," do you include the ordinary entertainments which an ambassador is bound to give?—Certainly, everything.

27,184. (*Mr. Fowler.*) What I want to clear up is, that the discrepancy of salary between the various ambassadors has nothing whatever to do with their individual rank or with the position of the courts to whom they are accredited—it is purely a matter of economical arrangement, in order to equalise them as far as possible, having regard to the diverse cost of living at the various capitals?—Entirely.

27,185. With regard to the second class of ministers, is there not a much wider range of difference between them than there is between the ambassadors?—Yes.

27,186. Do not you think there can be more equality introduced there?—I think it is desirable not to fix too hard and fast a line; because there again there are such very great differences of expense. Sometimes, with regard to individuals the question of salary may be a difficulty; a man may have had a post worth rather a higher salary, and if he is transferred there is a difficulty.

27,187. Do you vary the salaries according to the men or according to the posts?—Each post has its salary attached to it.

27,188. Then you do not vary that salary according to the man that fills it?—Not as a rule, but they have occasionally been varied.

27,189. (*Mr. Lawson.*) Take Belgium for instance. I see the salary there is 3,230*l.*—230*l.* more than most of the other legations. Has that been varied?—It was reduced 250*l.* a year a very few years ago.

27,190. Is that a fixed salary or is that the salary that has been given to the present occupant?—It is a fixed salary—I think that Belgium is a place where the minister is put to great expense. It is a place where a great many English people are constantly visiting, and it is a place where there is a great deal of society and entertaining. I do not think that it is at all overpaid.

27,191. I only ask you because the 230*l.* appears there and in no other salary?—The present figure, I think, represents a reduction.

27,192. (*Mr. Fowler.*) Now coming to the ministers, whose salaries vary from 6,000*l.* to 1,250*l.*—that represents a much wider difference?—Most of the lowest salaries are in South America, where the ministers have less duties of representation.

27,193. I do not ask you for a general fixed rule, but I want to know whether inside a fair amount of elasticity there could not be a more levelling up or levelling down as the case might be?—I think one should only compare what are called the first-class missions. I do not think we see those anywhere separated. Take, we will say, Washington, the Hague, Brussels, Lisbon, Stockholm, and Athens—you may treat those as first-class missions, and I do not think you would find any undue divergence of salary in them. Then take Pekin, that is highly

paid, but the expenses are great there, and of course it is a very important place, but when you come to the South American States, Bucharest, Belgrade, Tangiers, and Bangkok, you get a lower scale. The salaries are adjusted, as far as possible, to meet the requirements of each case.

Sir P. W. Currie, K.C.B.

14 Nov. 1889.

The witness withdrew.

Adjourned.

SEVENTY-NINTH DAY.

7, Whitehall Place, Westminster, S.W., Wednesday, December 11th, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Rt. Hon. H. H. FOWLER, M.P.
Mr. A. B. FREEMAN-MITFORD, C.B.
Mr. J. CLEGHORN.
Mr. A. S. HARVEY.
Mr. H. W. LAWSON, M.P.
Mr. H. WALPOLE, C.B. *Secretary.*

Sir PERCY ANDERSON, K.C.M.G., called and examined.

27,194. (*Chairman.*) You are the senior clerk of the Consular Department of the Foreign Office?—Of the African and the Consular Department.

27,195. I think you yourself have seen a good deal of the diplomatic service?—Yes, I have.

27,196. Did you not commence in one of the departments of the Foreign Office, and then go into the diplomatic service, coming back to the Foreign Office afterwards?—I have been occasionally employed abroad.

27,197. The Foreign Office has sent us a memorandum on the consular service which I think very likely you have before you?—Yes, I have.

27,198. I observe that in that memorandum, reference is made to the reports of the Committees of 1858 and 1872, and then it proceeds to deal under various paragraphs with the recommendations made by those Committees?—Yes.

27,199. I should like to ask you first how consuls are appointed?—They are nominated by the Secretary of State, then as a rule they have to pass an examination, and if they pass the examination, they go to their posts.

27,200. Are those the consuls that are spoken of in paragraph 4 of your paper as being "Those who "enter the service as a career after passing an exami- "nation before the Civil Service Commissioners, and "are prohibited from trading"?—Yes; we call them consuls (we use ordinarily the French word) *de carrière*, as describing exactly what they are.

27,201. From what classes are those gentlemen generally nominated by the Secretary of State?—That is entirely at the discretion of the Secretary of State.

27,202. How many of those consuls are there?—I could not say the number. The consuls-general and consuls are, almost without exception, nominated in that way.

27,203. They are the regular consular service?—Yes.

27,204. Then members of the other class are specified there as "Those either engaged in trade, or who are permitted to do so"?—Yes, a few consuls, mostly vice-consuls. As a rule we always try to get for those posts gentlemen who are in trade at the port at which they are nominated, who are in a good position and have fair incomes, and who are ready to serve in the consular service because it suits them to do so. They give their services gratuitously.

27,205. Those gentlemen, I suppose, are usually foreigners?—Not necessarily: they are always residents at the place at which they act.

27,206. (*Mr. Freeman-Mitford.*) Not necessarily foreigners?—No; in fact we always by preference get an Englishman.

27,207. They are glad to accept it, I suppose, because it gives them a certain status at the port?—Yes.

27,208. That is their reason?—Yes, that is their reason. If we cannot get a qualified Englishman we get the best foreigner we can.

Sir P. Anderson, K.C.M.G.

11 Dec. 1889.

27,209. (*Mr. Cleghorn.*) Is there any pay attached to the office?—There is no pay, but we give office allowances to cover their outgoings, or allowances in lieu of fees.

27,210. But no fixed salaries?—No fixed salaries. There are one or two exceptions, but those we are doing away with. We are getting as far as possible into a regular rule that the trading consular officer has no salary.

27,211. (*Mr. Lawson.*) May I ask what those exceptions are. I do not want you to enumerate in what part of the world they occur, but as to their salary and position?—We have trading vice-consuls all over the world; nearly 500 of them.

27,212. You said there were some who still survive under an old system and who are being gradually got rid of?—I was alluding to consuls. Speaking from memory, without referring, I think there are one or two in South America.

27,213. That is all?—Yes; or nearly so.

27,214. (*Chairman.*) Then I observe you say in the memorandum: "This classification is found to work "well, and to ensure uniformity and good discipline"?—Yes, it works well.

27,215. With respect to the prohibition of consuls from trading, this memorandum says it has been recommended, so far as possible, that it should be carried out, but that "to make it universal as regards all consuls "and vice-consuls would entail enormous additional "expense if the present staff were retained, while "serious inconvenience would be caused to British "commerce if all consular posts were abolished, which, "though useful, have not sufficient business to justify "a salaried officer"?—Yes. I was not myself before either of the Committees that are mentioned in the memorandum, and so I cannot say exactly what was the idea that was being followed up, but I am quite sure it cannot have been present to them what an enormous expenditure would be entailed by making the whole consular service a paid service. We have 500 vice-consuls, and the great majority of them are unpaid trading officers. Supposing we were to pay them, each would represent, as nearly as possible, an expenditure of 500*l.* a year. You can see at once what the expenditure would be; 500*l.* a year to 500 men would be a quarter of a million. On the other hand, to abolish all the trading posts would be a most serious injury to our shipping, for which principally they are established. They are appointed at small ports; the ships coming there require certain services which it is necessary to have a consular officer to perform; if we did away with the posts the shipping interests would undoubtedly

Sir P. Anderson, K.C.M.G.

11 Dec. 1889.

complain, therefore it is worth while to keep them. In fact it is necessary to maintain them, but we cannot afford to pay them. It is a question of economy, but not of that alone; I should go further than that; I think it is a question of efficiency, too. Primarily, however, it is a question of economy.

27,216. (*Mr. Cleghorn.*) Do you find a sufficient number of gentlemen who are willing and able to discharge the duties without pay?—Yes, we have found it so.

27,217. (*Chairman.*) Can you roughly give us the number of paid consuls—the regular consular corps?—I do not think I have got the number of them here, but they fill two columns on pages 13 and 14 of the Foreign Office list.

27,218. Then over and above those two classes, separating them into two classes, there is the service which was organised in 1876 by Sir Philip Currie?—Yes, in the Levant.

27,219. In the Levant, Persia, Greece, and Morocco?—Yes.

27,220. (*Mr. Lawson.*) Had Sir Philip Currie made a tour of inspection?—No, but when he was at Constantinople with Lord Salisbury he looked into this question.

27,221. (*Mr. Freeman-Mitford.*) The difference between that particular service and the ordinary consular service is that, like the service in China and Japan, it is really an interpretorial service as well, is it not?—To begin with, it is.

27,222. That is what I mean?—I should say that we have been obliged now to suspend the introduction into the service, because there is not a sufficient flow of promotion, and we have got as many men as we think we can manage.

27,223. (*Mr. Lawson.*) Is there any examination for what they call the interpretorial and consular work?—The examination, when they come in, is an examination for what is called the student interpreter service. After they have been two years at Ortakeui they have a further examination, which qualifies them to be assistants; and after they have been assistants for a certain length of time, they must pass a further examination before they become vice-consuls.

27,224. I believe the head of the establishment at Ortakeui is one of the secretaries in the embassy, is he not?—Yes. he is.

27,225. Is he selected because of his fitness for undertaking that sort of work?—Yes.

27,226. On the recommendation of the ambassador at Constantinople?—In consultation with the ambassador.

27,227. (*Mr. Harvey.*) As to the general consular service to which you refer under this sub-head (*a*), that is, "Those who enter the service as a career after pass-"ing the examination before the Civil Service Com-"missioners." Is that a competitive examination?—No.

27,228. Are they nominated then by the Secretary of State for Foreign Affairs?—Yes.

27,229. When a man has passed that examination, what is his history?—He then, according to the regulation, passes three months in the Consular Department of the Foreign Office in order to get a general idea of his work, and after that he goes straight to his post.

27,230. What would his post be, any one of those posts that are in the pages of the estimates for the consular services?—It might be any one of them.

27,231. What would his position be first of all?—I can best reply to what I think is perhaps in your mind, in this way. In the consular service there is no ladder. The whole service is more or less on the same level; some posts are better paid, but the better pay does not always represent a better post. The better pay is given because the climate is worse, or the country is more expensive. All the posts are really more or less of the same value. There are no prizes in the service. The consul may eventually rise to be a consul-general, and that is the only prize that he can gain; it is not a very great one, and even when he gains that he does not rise to a salary that is a prize as a salary; the salaries are always adapted to what we think are the requirements of the post, and those we watch with the most rigid economy. Consequently when a consul is appointed to a post there is no reason why he should not stay at that post all his life. He may be changed to another; he would rarely be changed to another against his will, but there is no rule as to whether he may or may not be changed.

27,232. You say there is no ladder. Do I understand that when a man has passed this examination which is mentioned under sub-head (*a*), and which is not competitive, he would be at once appointed consul at New Orleans say, with a salary of 1,100*l.*?—Certainly he might.

27,233. He might?—Yes. For instance, the other day an Indian officer was appointed to be consul-general at Zanzibar.

27,234. Had that Indian officer passed this examination?—No. I should say that the Secretary of State has the power of dispensing with the examination; he may and in occasional cases does give a commission direct without the examination.

27,235. I should like to get first of all what is the ordinary career of a man entering the consular service, and what is the ordinary practice of the Foreign Office before we come to any exceptional cases. Given that a man has passed this examination which you have mentioned under sub-head (*a*) in this memorandum, what would it be the habit of the Foreign Office to do with him?—He would work three months in the Foreign Office, and he would then go to his post, whatever it might be.

27,236. Let us come to that post; would that be on looking at that estimate either a vice-consul or a consul?—Yes, but we have so few paid vice-consulates, out of the East, that as a rule it would be a consulate.

27,237. Is there any regulation as to the age for men entering this examination?—25 to 50 are the limits of age.

27,238. Do I understand that the rule is that a man is only nominated; that the examination is not competitive; that the age is from 25 to 50; and he may be at once appointed to the position of consul-general if the Foreign Office wishes and thinks him a fit man?—Quite so.

27,239. (*Mr. Lawson.*) Do I understand you to say that above that post there is none to which he can aspire?—Undoubtedly he can be transferred to the diplomatic service, and there are several of our ministers that have risen from the consular service.

27,240. To take a well-known example, Sir William White is one?—Yes, among others I may mention Sir Spenser St. John, the minister at Mexico, and Sir Kirby Green, the minister in Morocco.

27,241. But it is a very exceptional thing, is it not?—I do not think we should say so considering the number that we could mention.

27,242. You have only mentioned three?—There are others I could name.

27,243. (*Mr. Harvey.*) Now when this gentleman is appointed to any post that the Foreign Office may have selected him for, does he give the whole of his time to his consular duty?—The whole of his time.

27,244. He is prohibited from trading?—Yes.

27,245. Has the Foreign Office any means of knowing whether that prohibition is effective or not. Can they possibly tell whether a man out in Chili or in the Argentine Republic does or does not trade?—I think practically we have got such a hold upon them that we should know it if they did.

27,246. (*Mr. Freeman-Mitford.*) Would you not very soon find it out from the merchants out there?—Yes.

27,247. Would not the merchants out there complain immediately?—Yes, I am confident of that.

27,248. (*Mr. Lawson.*) How would the merchants know?—A great deal that they have to do is in connexion with shipping, and we have found with trading officers that a complaint which is occasionally made against them is that they use their consular position in order to get the priority in competition for trade. Therefore if a regular consular officer were to enter into competition, I think we should very soon hear of it.

27,249. Do you suppose, among the merchants we will say in the Argentine Republic it would be known that this was a regulation of the British Foreign Office in respect to that consul?—I should think so undoubtedly.

27,250. (*Mr. Harvey.*) Look at page 433 of the estimates which contains the whole of the salaries, who fixed those salaries?—Those salaries are fixed by

the Foreign Office always in correspondence with the Treasury. We propose, and the Treasury revises, and assents or objects. We are constantly revising them. We have effected frequent reforms, and we are always having our eye upon any weak spot. No augmentation can be made without the assent of the Treasury.

27,251. (*Mr. Lawson.*) I suppose that is augmentation of salary, not augmentation of numbers necessarily. I mean that you might appoint a vice-consul without pay?—If he had no pay at all.

27,252. That is without the assent of the Treasury?—If he had no pay and no allowances.

27,253. (*Mr. Harvey.*) Do I understand that every item in this very voluminous list has come under the examination of the Treasury?—Every item.

27,254. Upon what does the Foreign Office base its idea of what the salary should be; have you any returns from the men of the cost of living at a particular place, or upon what do you base the salary?—The last time that we revised the whole of them was when Mr. Childers was Chancellor of the Exchequer. We then had a Departmental Committee in which we went into every salary. Mr. Childers was extremely anxious to effect reforms in the salaries, and I think there was not a single post that we did not examine. Those are the last general reforms that we have made, and we think now that we have got the salaries at a fair level.

27,255. Are the salaries classified; for instance, in looking through this list I observe there are some at 1,000*l.*, some at 800*l.*, and some at 900*l.*; could you put us in a classification according to the amount of the salary of the whole of the paid consuls?—We could, but I do not know whether it would not be to a certain extent misleading. For instance, if you look at the salaries in Brazil you will see that the consuls there get higher pay than most of the consuls in Europe. The reason of that is that the rate of living there is high and the rate of exchange is disadvantageous, so that the man who gets 800*l.* a year at Bahia is not at all better off than the man who gets 600*l.* at Naples. We take all those points into consideration. I think I may say that economy always is our watchword in the consular service. I only know one post in which I think an officer could lay by anything out of his income, and that is a post on the West Coast of Africa, in such a pestilential climate that the unfortunate consul is at this moment lying at the point of death at Madeira.

27,256. Have you any instances of the reduction of the salaries of consuls?—Numerous.

27,257. (*Mr. Cleghorn.*) There has been no revision since Mr. Childers' time?—Not a general revision. I have a paper here which shows that within the last 10 years, the net charge for salaries and allowances, after taking credit for fees received, has been reduced from 115,761*l.* to 92,701*l.*

27,258. (*Mr. Harvey.*) Is that the total of sub-heads (*a*) and (*b*) of the Consular Vote?—It is the net total.

27,259. That has been reduced, you say?—Yes, and that has been done, notwithstanding that we have had to add over 10,000*l.* to the Consular Estimates for Africa alone.

27,260. (*Mr. Lawson.*) What are the dates of the comparison?—It is from 1879–80 to 1888–89.

27,261. (*Mr. Harvey.*) With your permission, I will ask you to look at the Estimates for this year. If we could bring your figures into connexion with the particular figures there, it would be an advantage. There is an increase of 1,102*l.* in the sub-head of salaries, and what I should like to ask you would be whether, going back through a certain number of years that head has steadily increased, or whether there are periodic or spasmodic diminutions?—It has decreased. In 1879–80 the gross estimate for salaries, exclusive of the anticipated receipts for fees, was 119,117*l.*; in 1889–90 it is 117,962*l.* These figures represent salaries only; the allowances are additional.

27,262. Those figures do not quite agree with these. I suppose what you have given is not a net figure, but is a corresponding figure?—Those are the actual figures that have been supplied me by the Finance Department.

27,263. You gave the figure for the current year as 117,962*l.*; the Estimates only show 115,462*l.*?—The figures that are supplied to me are 117,962*l.*

27,264. (*Mr. Lawson.*) Do they include incidental expenses?—On examination I see where the difference lies. It is this, the gross amount was 117,962*l.*, but there was deducted from it, on account of vacancies, 2,500*l.* That brings us to the figure of 115,462*l.*, which is the exact sum in the Estimates.

27,265. Now, as to the conduct and discipline generally of the service, are there reports upon those points every year?—No; we keep a general supervision over them, and keep touch with them. It is rather difficult to say exactly how it is done, but I, as superintendent, make it my business to study how these different gentlemen do their work, to watch, to see them, to form my own opinion of them personally whenever it may be possible, and to endeavour in every way that I can to find out how they do their work. Thus I think we have a very fairly accurate knowledge of their capabilities.

27,266. But, apart from actual complaints made by any English resident or by any person who thinks he has a grievance, have you other means of knowing how the service is performed?—We have the positive evidence as to demerits of complaints against them, as to their merits we have the general knowledge of the way in which they do their work, taking into consideration the complicated duties that they have to perform. Having regard to the number of forms that they have to return, the number of reports they have to make, and their duties in connexion with the complicated Fee Table, we should soon find out if there were any shortcomings.

27,267. As a matter of fact, have you many reports of shortcomings?—No.

27,268. In what way would they reach you?—In the detection of deficiencies. Reports of shortcomings perhaps would not be an exact description; it would be rather the detection of deficiencies upon which we should depend.

27,269. (*Mr. Harvey.*) I should like to emphasise these one or two points; first of all that anybody who is nominated by the Foreign Office for a post in the Foreign service may pass this examination if the Foreign Office insists upon it, but that it is not compulsorily necessary?—I should rather put it in this way, that the rule is that he should pass it, but that the Secretary of State may in exceptional instances dispense with it.

27,270. Now, would you tell me, in the course of last year how many times the examination has been dispensed with?—In the course of last year I do not remember a single instance. It is very rarely dispensed with.

27,271. Have there been any examinations in the course of last year?—Yes, there have been a certain number.

27,272. (*Mr. Freeman-Mitford.*) It is only dispensed with, is it, in the case of persons of distinction and approved merit?—Yes, almost the only cases in which it has been dispensed with lately, to my knowledge, have been some of the African appointments.

27,273. And those in the case of men of approved merit?—Yes, we have employed Naval Officers, men whose merits are so well known that it has been thought unnecessary to send them up for examination.

27,274. And at Zanzibar, Colonel Euan Smith, for instance, is a man of very well-known talents and qualifications?—Just so.

27,275. (*Mr. Harvey.*) What are the regulations as to nomination for those posts; is there a list kept at the Foreign Office for candidates for those posts?—This is entirely done by the private secretary; it is the patronage of the Secretary of State.

27,276. (*Mr. Lawson.*) In the same way as the Diplomatic service, speaking generally, not exactly?—Yes.

27,277. (*Mr. Harvey.*) And the limit of age is from 25 to 50?—Yes.

27,278. When once the examination is passed there is no ladder, and a man may be appointed at once to the position, if the Secretary of State choses, say, of consul to the Argentine Republic for instance?—Yes.

27,279. He would not necessarily have to go through any of the subordinate posts of vice-consul?—No.

27,280. Or pro-consul?—A pro-consul is only a notary.

27,281. Then with reference to those who are under sub-head (*b*), those consuls who are engaged in trade, who appoints them?—The Secretary of State.

Sir P. Anderson, K.C.M.G.

11 Dec. 1889.

27,282. Upon what?—If there is a vacancy we take such steps as may seem best to ascertain who is the best qualified resident who would accept it.

27,283. A resident merchant I suppose?—A resident merchant of sufficient means to be independent, and above suspicion of partiality.

27,284. (*Mr. Lawson.*) Would that apply to a post like that of consul-general at Berlin?—The posts of consul-general at Berlin and consul-general at Leipsic are in an exceptional position, and the consul-general at Vienna is in the same position. There we get merchants of high standing. Being in inland towns they have not much in the way of consular duties to perform; the heaviest consular duties being connected with shipping at sea ports. They are appointed really to assist the ambassador by their local knowledge.

27,285. (*Mr. Freeman-Mitford.*) Practically the work falls upon the embassy, does it not?—Yes. There is little consular work at Berlin.

27,286. (*Mr. Lawson.*) Was Baron Bleichröder appointed as a merchant; is he a merchant?—He is a banker.

27,287. I thought you said they were merchants?—That is a definition. I think Mr. Nathan at Vienna is a banker too.

27,288. (*Mr. Harvey.*) May I take it that at all the places in this list, the consuls under sub-heads (*a*) and (*b*), where there is no money put against the name that represents an unpaid consul?—Yes.

27,289. Have we got in the Estimates therefore a complete list of all the consuls and vice-consuls—a complete list not of the people, but of the places?—You have all in the Estimates where there is any payment.

27,290. Pardon me; in the great bulk of the instances there is no payment?—If there is not a payment for salary there is a payment for office and fee allowances.

27,291. Then we have not got a complete list in the Estimates?—Not an absolutely complete list. The Foreign Office list gives an absolutely complete list.

27,292. Do you think it would be possible to man the Consular service by open competition?—It is a question that I have studied a great deal, and I think it would be totally impossible. If I might give my reason I should put it in this way, that I consider that there is no service in which selection is so necessary. I could best explain myself by this illustration:—There is a certain number of consuls-general. Now, those consuls-general have respectively almost every class of duty to perform. The consulate-general at Zanzibar is a political appointment; the consulate-general at Salonica, again, is political; the consul-general at Tripoli has principally to look after the slave trade; the consul-general at Beyrout must have a knowledge of Oriental questions; the consul-general at Constantinople has chiefly judicial duties. Looking down the list, we come to the consul-general at Florence; he is a commercial officer. The consul-general at New York is required to combine all the qualifications; the consul-general at Antwerp, on the other hand, is purely a trading officer. This really represents the service as you go down into the lower grades. There is a separate qualification required for every separate post. Therefore it seems to me that selection is necessary. It would be almost an absurdity to talk of throwing open to public competition any given posts. Supposing the post of consul-general at Zanzibar were to become vacant, and, let us say, that of consul at Naples, and that of consul at Bahia in Brazil. To throw those three posts open by advertisement to public competition would be almost, it seems to me, preposterous, as we could not hope by this means to get the qualified man for each. The other system of open competition would be to provide what is now wanting, that is, a ladder enabling young men to come into the service as vice-consuls, and then gradually to go up. That, of course, might be done; but in the first place we should be met by the enormous increase of expenditure. We should have to create a large class of salaried vice-consuls; and if we are to make the number sufficiently large to be able to select from them we should have to make at least 50. That alone would represent 25,000*l.* a year. But even when we had got them I should not be disposed to think that they would answer. It must be remembered that they would have to fill the trading posts which are now unpaid. Now, I do not think that a paid vice-consul at those posts would be a very useful man. You would send out a young Englishman, and would put him in a foreign town with a small salary. One must look into those questions a good deal abroad to see the excessive importance that is attached to the rank of an official. A consul-general holds a high place; he has access to everybody, and is consequently in a good position to get general information for the Government. A consul also in a lesser degree; he has access to information, and if he has troublesome questions to deal with, he is able to visit high officials personally (a great deal of the work of the consulates is done personally)— he goes to the head of the Customs, or of the police, and gets questions settled, without reference home, by his personal influence. Hundreds of cases are disposed of in that way. A vice-consul, on the other hand, has comparatively little influence; if you planted a young Englishman down in a foreign town as vice-consul with a small salary, he would probably be of very little use to you. He would be able to read the newspapers; he would get a sort of general idea of what is going on; but if he were to attempt to settle knotty questions by his personal influence he would be helpless. On the other hand a trading merchant, who is well known in his town, is excessively useful in his way. So I think that, if we alter the present system, in the first place, we should have to face the enormous expenditure, and in the second place, that it is doubtful whether we should get equally useful men. Those are my reasons against throwing open the entry into the service to public competition. But I will go further. Supposing that we set aside these reasons and establish our staff of 50 vice-consuls, we should still have to go outside them occasionally; we could not be bound down to pick for all our posts from these 50 vice-consuls. Take the consulate at Zanzibar where we have been obliged to put an Indian officer. There is another case that I may mention. We have a post vacant for which we want a man who has a special knowledge of Malay, and who also has a knowledge of affairs in the East. Here we must have a field of choice. We require a specially qualified man; if we had to choose within a limited number of vice-consuls we should not be able to get the man we want. Therefore it seems to me, from every point of view that I have been able to study, that the consular service is essentially a service in which we should have selection, and I believe that we should involve ourselves in enormously increased expenditure and run the risk of diminished efficiency if we were to throw it open to public competition.

27,293. (*Mr. Fowler.*) Selection from what?—General selection from all the world, as it is at present.

27,294. (*Mr. Harvey.*) From people who, as I understand, go to the Foreign Office, and are nominated by the Secretary of State for Foreign Affairs?—Just so.

27,295. (*Mr. Lawson.*) I believe that a system of open competition for the consular officers in Turkey, the Levant, Persia, Greece, and Morocco was introduced after Sir Philip Currie's return?—Quite so, but the circumstances are exceptional, and it must be remembered that it is an expensive service. The young men come in by open competition, then go into the college at Ortakeui; there they are specially trained under the superintendence of a secretary of embassy for two years. The expense of that is considerable: I think, roughly speaking, it costs about 5,000*l.* a year. After that they are placed according to their qualifications. We never could attempt to introduce such a system as that into the general consular service.

27,296. (*Mr. Harvey.*) Looking at the system as you have explained it on page 2 of the memorandum, I should like to put this question to you. I observe that the effect of that arrangement is put down in this way, that there is a vice-consul interpreter attached to the embassy of Constantinople, one to the consulate general at Constantinople, one to the legation of Teheran, then there are two consuls, eight vice-consuls, and nine assistants. Following out the line of thought that you have just been indicating, would you say that those vice-consuls and assistant vice-consuls were set up in order that you might get a system of promotion, and that they were more than the exigencies of the service really required?—No, I certainly should not say that. We have got exactly the number of consulates and vice-consulates that we think we require in those countries, and now we have stopped the influx into the service because we feel we cannot provide for any more than the men we have there.

27,297. Before you had this special system which Sir Philip Currie set up, had you as many vice-consuls and as many assistants as you have now, or have you increased them?—We had no assistants at all. The system of assistants is a new one. As regards new vice-consulates we have placed one at Monastir, on the Albanian frontier, by Sir William White's recommendation. I think that is the only new one.

27,298. (*Mr. Freeman-Mitford.*) Was not this adopted in order to assimilate the consular services in Turkey to the consular services in China and Japan upon a principle which answered very admirably there?—It was; it was principally with the view to get a knowledge of Oriental languages.

27,299. And was not it also partly because the consuls there had certain judicial functions to perform?—They have in some places judicial functions, and have a legal training.

27,300. (*Mr. Harvey.*) What I want to get at is this, whether these assistants' posts were set up in order to make the ladder which you regard as an essential element in a system of open competition, or whether they were wanted on their own merits?—I think we may distinctly say that they are wanted, from the fact that the various posts, in which the work is steadily increasing, cannot very well get on without them.

27,301. (*Mr. Freeman-Mitford.*) And they are practically clerks in the office?—They are. Sir Evelyn Baring has one at Cairo, and he has told me again and again that he cannot get on without him. There is another at Morocco; Sir Kirby Green says the same of him. There is not a single assistant that is redundant.

27,302. (*Mr. Lawson.*) Is it the case that the consular service in China, Japan, and Siam is based on absolutely open competition?—In the same way as that in the Levant; but I have nothing to do with that service, and I cannot speak of it with authority.

27,303. (*Mr. Harvey.*) How was the work that these assistants now do performed before the assistants were appointed?—The work that the assistants now do?

27,304. These assistants, as I understand you, are altogether a new class of officers, who have been appointed in consequence of the new arrangements of Sir Philip Currie in respect to this open competition. What I want to get at clearly is this, whether or not these posts were made for the purpose as you said just now of setting up a ladder and getting a regular scheme of promotion or whether they were really required by the work of the respective consulates?—I think I can answer that question best by saying that it was a combination of both purposes; that Sir Philip Currie thought that there should be the scale from student interpreter to assistant, and from assistant to vice-consul, and so to consul; but that he also thought that such a post as that of assistant was much required. As a matter of fact, if we look at the places where they are now employed—at Constantinople, Salonica, Beyrout, Cairo, Sophia, and Tangier—at every one of those places the assistant is thoroughly worked; and if assistants had not been appointed, no doubt applications would have been made by this time for some other form of assistance.

27,305. I understand your position to be that if you had a system of open competition applied to the whole of the consular service, and were not able to select men as you do now, you would be obliged to have some such system as this of assistants to vice-consuls, with, of course, an enormously increased expenditure?—Yes, and with this further difficulty. In the Levant service we have an efficient control. We have this particular service under one grip; the minor appointments are all distinctly connected with the embassy of Constantinople. But if the same system were extended to the whole consular service we should have no such grip.

27,306. But why have you a greater grip over the Turkey service than over any other?—Because it is a handy service in which there is constant inter-communication; the greater part of the posts are immediately under the embassy.

27,307. Then would you say that this system of open competition has been distinctly costly to the State?—It is a costly service.

27,308. Would you think it is more costly than if it had not been adopted; that the service costs more now than it would if you had not had open competition?—Yes.

27,309. (*Mr. Lawson.*) Surely that does not depend upon the open competition, but upon the conditions of service quite distinct from entrance?—The men appointed by open competition must be put under special care and special training, and it is that special care and special training that is costly.

27,310. Is that in order that they may learn these Oriental languages?—That they may learn the Oriental languages, and legal knowledge, and also that they may get thoroughly under control.

27,311. Under control?—Yes. These are not ordinary consular appointments. If you look at the posts where the assistants are employed, you will see that none of them are common consular appointments. In fact, I often have it said to me by the gentlemen of this class, "I know nothing about shipping; I know nothing "about ordinary consular work." My answer to that is, "But this is exactly what you have got to learn; "if you do not know it you must learn it." But they do not like it, as in the East, their general work is not the ordinary consular work.

27,312. Do you believe it is seriously true that these gentlemen at such important places as Salonica or Beyrout know nothing of the consular work that has to do with trade?—I should not like to specify any particular places.

27,313. I am not talking about those places for any special reason; I am merely taking them as they happen to catch my eye?—I have often had it said to me by men in this branch of the service.

27,314. (*Mr. Harvey.*) What type of man has said that to you; one of the open-competition men?—Yes, one of the open-competition men.

27,315. Are you quite sure that the Foreign Office always ensures that a man who is appointed to the ordinary service does understand shipping?—He has to learn it; it is one of the first things he has to learn; he cannot be very long at his post without doing so, or else he would get into trouble. If you read the instructions that he has to master on going to his post, you will see that by the time he has been there a year he must understand shipping or else he cannot properly do his duty.

27,316. Still he, equally with the open-competition men, has to learn after he is appointed?—No doubt.

27,317. (*Mr. Lawson.*) I believe that in several of these Turkish towns the consuls used to be retired military officers. I know one or two cases?—I do not think there are any now.

27,318. Are there no retired military officers in these places?—The last one I remember was the consul-general at Philipopolis, Captain Jones; he had been in the army at the time of the Crimean war, but he left it soon afterwards.

27,319. (*Mr. Harvey.*) What determines the Foreign Office to appoint either a paid consul or an unpaid consul?—Economy principally. I think, however, I should say that at ports we should not have any unpaid full consuls if the Treasury would give us the money. We prefer the salaried servant, but we consider that it is not fair to employ a salaried officer unless he has sufficient to live upon. We have at ports now very few unpaid trading consuls, and I think it would be better if we could get rid of them. There is one in Europe at Amsterdam; he is a most excellent man, but that is an exception. I do not approve the appointment, though he happens to be an exceptionally good man. We have also one or two in South America.

27,320. Do you mark the merits of these men; do you select the meritorious men for promotion to a better paid post, or do you leave a man where he is?—As I said before, the better paid post is not always the better post. The highly paid post in Brazil is not as coveted as the much less paid post in Europe, but we do try most earnestly to know the qualifications of the men, and if a post is vacant to give it to the man best qualified for that particular post.

27,321. What is the most highly paid post in the service?—I should think New York.

27,322. When was the present consul-general at New York appointed there?—He went there from San Francisco.

27,323. (*Mr. Lawson.*) Which is also a highly paid place?—Yes, but living in the United States is expensive. He went to New York in 1883.

27,324. (*Mr. Harvey.*) Was he appointed on account of merit to the post?—Yes, distinctly so.

Sir P. Anderson, K.C.M.G.

11 Dec. 1889.

27,325. (*Mr. Lawson.*) Take the consul at New York as an example, how did he enter the service?—He was employed for several years in the consulate at San Francisco.

27,326. Was that the beginning of his career?—That was the beginning of his career. He was acting consul there in 1856, and in 1857 he was appointed consul. He served there till 1883, so that the whole of his service has been in America.

27,327. (*Mr. Harvey.*) Have you had occasion to compare our consular service with that of any other country?—I have done so, but it is very difficult. Our consular service is different from the others, in consequence of the heavy requirements of our shipping. The French consular service is on an entirely different basis, as they appoint political consuls, a class of officer that we rather avoid.

27,328. (*Mr. Lawson.*) But are not our consuls in Turkey political consuls?—We do not call them so, and we do not wish them to be so.

27,329. I know we do not call them so?—They can be used for political purposes, but we discourage them from meddling too much in politics. We keep the centre in Constantinople.

27,330. (*Mr. Fowler.*) I think you have not answered Mr. Harvey's question, which is, have you ever compared the consular service of any other European government with ours. You give us reasons why the comparison failed, what we want to know is the fact, have you ever made a comparison of the consular service of Great Britain with the consular service of France or Germany or of the United States?—I should like to know upon what points you would make the comparison.

27,331. (*Mr. Harvey.*) First, certainly as to mode of appointment, and next as to status and salary?—The mode of appointment is the same in Germany and the United States, but not in France. It is difficult to compare the salary for the reason that it is almost the invariable custom abroad to supplement salaries by allowances, and those allowances we cannot get at. We put everything of ours in the estimates which can be referred to at once. We may know that a French consul has 15,000 fr. a year as salary, but we have no clue to what he gets for house allowance, entertaining, and other allowances.

27,332. (*Mr. Fowler.*) But there would be no difficulty if you give a man so much a year for salary, and then you give him house rent and entertaining allowances, it is but adding them together and saying his appointment is worth so much?—We cannot get at what the allowances are.

27,333. They do not let you know?—No.

27,334. But you do know when a man has house rent and has other allowances?—We know what his salary is, but we do not know what his allowances are.

27,335. Take China and Japan, their interests and ours are very similar; have you ever compared the cost of the service in China and Japan and the United States with the cost in Great Britain?—The service in China and Japan is a point I have no special information upon. I have nothing to do with the consular service in those countries. We could, of course, put in a comparative statement, but I should not like without reference to say what it is.

27,336-7. You rather misunderstand; the point is not as to putting it in for us to see, but in considering the organisation, appointment, and cost of your services—that is what I understood Mr. Harvey to mean—have you ever endeavoured to see whether we are adoptiug the same or a different principle, or paying the same or a larger amount of money than other governments were doing?—No; we look to our own requirements; we think we know these pretty well; we have studied carefully our consular service, which is now on a clearly defined system, and we base our expenditure upon our own requirements without reference to those of other countries.

27,338. You say our own requirements; are you aware that there is a very general feeling in the mercantile classes of this country that the consular service of Germany, so far as the trading interest is concerned, is superior to the consular service of Great Britain?—I think if we adopt the same system that the Germans do we could compete with them without the slightest fear; but there, again, we come to the question of economy. Economy is impressed upon us by the Treasury at every turn. I should, myself, be quite inclined to adopt a system under which we should have in the different countries of Europe, and possibly in the United States, a consul-general whose business it should be to collect information upon commercial subjects, and to assist our commercial world generally. But we cannot adopt that system, because we dare not face the expenditure.

27,339. Is Germany spending more than we are spending?—I should think not.

27,340. Take our consular service for the last year, it is nearly 300,000*l.*?—It is nothing like that.

27,341. I am not talking of the net but the gross cost. According to the Estimates, the gross cost is 273,424*l.* I should be very much surprised to hear that Germany is spending that amount of money on her consular service, or half of it?—Where do you get that figure of 273,000*l.*?

27,342. (*Chairman.*) That is in the Estimates, page 432. The figure you give in your return is 262,328*l.*?—Yes.

27,343. (*Mr. Fowler.*) The gross total is 273,424*l.*, and the appropriations in aid, which, I presume, are consul's fees, are 97,330*l.*, and the net total is 176,094*l.* That is the sum which Parliament devotes out of the taxes, but that is not the cost of the consular service. The cost of the consular service is gross cost?—Then you decline to set the fees against it?

27,344. As to whether the consular service costs us 176,000*l.* after deducting fees, that is another question. It really costs us 273,000*l.* a year?—Esee you are adding the cost of the service in China and Japan, which makes the discrepancy between these and my original figures. I think my answer would be that, if our consuls are too many, we ought to reduce them, but that we cannot neglect the shipping interest. The bulk of our consular service—I am putting aside China altogether—is at ports, and if we reduce those consuls we should soon hear from our shipping interest; we should have grievous complaints. No other country in the world finds its necessary to keep up so large a consular service for its shipping interests.

27,345. (*Mr. Harvey.*) Conceding that for a moment, let us come to their duties. Take all these various consuls at 1,000*l.* a year, do they make reports on commercial matters in connexion with their respective posts?—Indeed they do; it is part of a consul's duty to make a regular commercial report once every year, and to make special reports upon every occasion on anything of interest in connexion with his consulate.

27,346. (*Mr. Fowler.*) When these reports come to the Foreign Office, what happens?—They are printed and published.

27,347. (*Mr. Lawson.*) Have not you missed out the report in finance. You see two reports are mentioned in the regulation which says that in addition to reports on special questions, two regular and special reports are required to be sent home every year from each of Her Majesty's missions in foreign countries, would that be the transmission of the consular reports?—This is the regulation: "The annual report shall reach "the Foreign Office not later than the 31st March "of the year following that with which it deals." The consul has very elaborate instructions as to what his report should be upon—trade, commerce, shipping, navigation, population, industries, public works, and general remarks. In addition, he has to furnish independent reports upon questions affecting agriculture and cattle, with statistical tables; he has to furnish sanitary reports and reports on disease in cattle. There is also this regulation: "Consular officers "should, in addition to their annual trade report, send "home special reports from time to time on subjects "of commercial and general interest." These reports, if thought to possess sufficient importance, are either published in the miscellaneous series, issued by the Foreign Office, or forwarded to the Board of Trade for insertion in the journal published in that department.

27,348. Yes; but the consul has nothing to do, as I understand, with the financial report that comes from the missions?—No, he has nothing to do with that.

27,349. But he has to do with the trade reports that come from them?—With the statistical report.

27,350. Are not the commercial reports that come from the missions practically the consuls reports

coming through the missions?—No; the commercial report is a separate report altogether. In addition to the consular reports the legation has to send a commercial report.

27,351. It is not the same thing?—It is not.

27,352. (*Mr. Fowler.*) But I suppose, take the comparison of Germay, for instance, and France, that the individual consul receives a much larger salary out of our Vote, than the representative of either Germany or France receives, allowing, for the difficulty there may be in having house rent, special allowances, and so on. There is no doubt that the English consular service is a very much better paid service, is there?—I should not like to say that, I should not like to give a definite opinion, because they vary very much. There is in France and Germany a special class of consuls, who are paid highly.

27,353. (*Mr. Lawson.*) What sort of salary?—We hear of 20,000 francs, that is 800*l.* a year, with additions and allowances beside.

27,354. Making up to about 1,000*l.* would you say?—They would make it up to over that. I dare say some of them would get nearer 1,500*l.* with their allowances, but the political consuls are such a different class of men from ours that we cannot very well compare them.

27,355. We give most of our consuls 1,000*l.* a year, do not we?—No.

27,356. Well, not most, but a good many of these consul-generals are in receipt of 1,000*l.* a year, and I suppose they would correspond with the political consuls. You can understand a comparison being drawn between those?—We give the consul-general in New York 2,000*l.*, but he is a very highly paid officer.

27,357. I was thinking of Buenos Ayres and Buda Pesth?—Buda Pesth is a semi-political appointment.

27,358. Take Rio Janeiro and Panama?—Panama is a place where we have had the greatest difficulty in getting anybody to go because of the climate.

27,359. (*Mr. Fowler.*) As a matter of fact, would it be possible for a young man of 25 to be appointed at once to a salary of 1,000*l.* a year?—It would be possible.

27,360. What is the ordinary practice; you admit that such a thing might happen, but I imagine that you imply that it does not happen, as a matter of fact, the appointment, say, of a young man of 25, who has just passed his examination, at once to the office of consul-general, say, at Rio, with 1,000*l.* a year?—No, as a rule, if a consul-generalship, like the post at Rio, were vacant, we should look for a consul who would be high up in the list and qualified by his knowledge of Portuguese, and such other qualities as we think were required for the special post.

27,361. (*Mr. Lawson.*) Yes, but in the example you gave us of the consul-general at New York: you told us that he commenced at San Francisco, where the salary is 1,200*l.* a year?—He commenced with a high salary.

27,362. (*Mr. Harvey.*) What age was he when he had 1,200*l.* a year?—I see he was appointed in 1857, that is 32 years ago. I should think he is a man of about 60, or perhaps he might be a little over; you must remember that San Francisco is very expensive.

27,363. (*Mr. Lawson.*) Not so expensive as New York?—I could not say.

27,364. (*Mr. Harvey.*) Still it is not the practice of the Foreign Office to insist that every candidate who has passed this examination should have some training as a paid vice-consul before he assumes the superior duties of a consul?—No, it is not.

27,365. In fact it all depends, does it not, upon patronage?—It depends upon patronage. We have not got a large number of paid vice-consuls, and without the immense expenditure which I have indicated we could not get them.

27,366. I should like to get on record what this examination is that has to be passed. What subjects is it in?—First, a correct knowledge of the English language; secondly, writing and speaking French correctly and fluently; thirdly, a sufficient knowledge of the current language, as far as commerce is concerned, at the port at which they are appointed to reside, to enable them to communicate directly with the authorities and natives of the place; fourthly, a sufficient knowledge of British mercantile and commercial law to enable them to deal with questions arising between British shipowners, shipmasters, and seamen; fifthly, a sufficient knowledge of arithmetic.

27,367. (*Mr. Lawson.*) Who, may I ask, are the examiners?—The Civil Service Commissioners.

27,368. (*Mr. Harvey.*) Have you looked at the examination papers yourself?—The papers that are put or the answers?

27,369. The papers that are put?—No, we leave that entirely to the Civil Service Commissioners.

27,370. Have you formed any opinion yourself as to whether the present examination is of a kind that you would be satisfied with if you were sending a man abroad to look after your own commercial interests?—I think it gives us well-qualified men.

27,371. (*Mr. Lawson.*) But it is only a qualifying or pass examination?—That is all.

27,372. I daresay the average capacity of the candidates varies a good deal from year to year, and that sometimes a man might get in with very few marks—just above the necessary total?—That I do not know, because the Civil Service Commissioners only tell us that the man has passed.

27,373. (*Mr. Harvey.*) Do you know the regulations for the diplomatic service?—Yes.

27,374. There is an element of competition enters there?—There is a limited competition.

27,375. Would you not think it better, having regard to the great interests that are at stake which the consular service has to look after, to adopt the diplomatic service plan for the consular service?—My only objection to it would be what I have already stated, that I think the consular service is essentially one for selection. If we take the two special cases that I mentioned: that of the Consul-General at Zanzibar, and that of the consulate in the East, where a knowledge of Malay is required, I do not see how you could throw those posts open to limited competition. I think you must give absolute powers to the Secretary of State to select his men.

27,376. (*Mr. Lawson.*) That surely does not apply to the Consul-General at Antwerp?—No.

27,377. The same considerations would not apply as to Zanzibar and Siam?—There are certain posts at which it might be done.

27,378. (*Mr. Harvey.*) Suppose we had a system of this sort: that the rule should be open competition, but that there might be certain posts which the Secretary of State might think essential to exclude from the purview of open competition, and which he should lay on the table of the House of Commons, for instance; do not you think that would be more generally satisfactory than the present system?—The system for the diplomatic service is not open but limited competition.

27,379. I am adhering to the limited competition, but I want to know your point as to the necessity for selection everywhere. Suppose the Zanzibar post, and one or two others that are admitted to be exceptional, were left out, do not you think that for the service as a whole you might extend the system now in force in the Diplomatic service?—Would you mean in this way: that if two or three consulates fell vacant, you would put them up to limited competition? I should object to that. In the diplomatic service the system is entirely different; there is the regular ladder; there are so many vacancies, and they are thrown open to young men. They come in as attachés, go through their time as attachés, become third secretaries, go on till they become second secretaries, and so on. Here there is no difficulty; but it seems to me with the consulates that the requirements are entirely different. At one, for instance, you might be perfectly satisfied with a young man of general acquirements, whom you might pick up anywhere; at another you would want what we should call an old consular stager, who knows his consular work thoroughly well. Each post has its individual requirements; and, therefore, as there is no regular chain—no ladder, as I call it,—I do not quite see how you could apply the system. In principle I am not at all personally opposed to it; but having watched the consular service so closely as I have, I cannot say that I see how in practice it could very well be applied.

27,380. (*Mr. Lawson.*) But in practice, when you go outside the consular service in the selection for a particular post, do you know anything of the man's qualification?—Yes, undoubtedly.

Sir P. Anderson, K.C.M.G.

11 Dec. 1889.

27,381. Why? He is appointed by the Secretary of State, is he not?—I do not say that I know it; but I presume the Secretary of State does. We will take the case of Colonel Euan Smith, who has been lately appointed at Zanzibar, or we may take the case of naval officers whom we have been appointing in Africa. Undoubtedly their special qualifications were known before the Secretary of State appointed them, but their appointment is in his discretion.

27,382. I am rather thinking of other continents than Africa, where there are not such special qualifications needed. I want to know whether you, as a matter of fact, would be consulted when a new man is introduced into the service, or whether you would have any opportunity of seeing what kind of man you had to deal with?—No, I should not. After the man is once in the service it is a different thing; then it is my business to keep a watch on him, and keep the Secretary of State informed as to whether he is qualified and does his work properly.

27,383. (*Mr. Harvey.*) Given that there is a vacancy to-morrow in a highly-paid consulate, who actually appoints? Tell me, what is the progress of the papers in the Foreign Office?—Do you mean supposing that an outsider was to be appointed to it?

27,384. No; assume that to-morrow it is reported to you that a lucrative consulate is vacant, I want to know exactly what would happen in the Foreign Office?—It would be notified to the Secretary of State that that post is vacant. The Secretary of State would then consider; there is no routine of minuting papers or anything of that sort; but as a matter of fact, according to my personal experience, the Secretary of State takes every means that he can by reference to those whom he thinks best qualified to judge as to who in the service, if he decides to promote in the service, is the man best qualified for the appointment.

27,385. Then I suppose influence is brought to bear upon the Secretary of State on behalf of a particular candidate, and yet you, as the responsible head of the service, may think that a very meritorious officer would be the better man, but would it be your duty to represent to the Secretary of State that so-and-so in your opinion was a man eminently qualified to fill the post?—I think that would be rather an unjustifiable interference—that would be going too far.

27,386. Then, to put it plainly, it is, is it not, an absolute act of patronage on the part of the Foreign Secretary?—Undoubtedly it is an absolute act of patronage; that is to say, the appointment is made by the Secretary of State. I should not put it as an arbitrary act of patronage, but it certainly is an absolute act of patronage.

27,387. True, but then would you say that the routine was of a character that ensured that all was done that should be done to get a meritorious officer for the well paid post?—I think that, so far my experience goes, it has been the practice of the Secretaries of State under whom I have served to select after consulting their private secretaries, and the superintendent of the consular service.

27,388. Let me put it in this way: given that a consulate is vacant—a very important post—have you, as a matter of fact, had the private secretary come to you, and say, "Now, here is a post vacant; it is of very "great importance; what man does your experience "lead you to suggest would be the best man to fill "it?" Has that ever happened?—Not only ever happened, but I may say that it invariably happens that whenever there is a post vacant the private secretary talks it over with me; the system of selection is practically that which exists in the diplomatic service.

27,389. (*Mr. Lawson.*) To follow up that last question which has been asked. With regard to the new man, that course of procedure would not be followed, I suppose?—No.

27,390. I should like to ask you whether the transition from the consular to the diplomatic service has been made any easier since the Committee of 1872 sat—the Committee of the House of Commons which recommended that it should be?—I think since I have been connected with the Foreign Office it has always been about the same.

27,391. That is to say that it is a very exceptional occurrence?—I think we can hardly call it very exceptional considering the proportion that we have now.

27,392. You say in the Foreign Office memorandum upon the consular service that "it has not been found "practicable to give effect to the proposal to consoli- "date still further the functions of diplomatic and "consular officers"?—Yes.

27,393. Does that hang with the other, do you think?—It has not been found practicable to go any further.

27,394. At the present time a consular officer could not in any case look forward to any sort of right of promotion to the diplomatic service?—No, not as a right.

27,395. In what way have those promotions been effected: by the personal act of the Secretary of State, I suppose?—Yes.

27,396. Do you believe that it is possible at the present time to make any sort of bridge between the two services?—No, I do not see how we could, because, as I have said, we discourage the political consul; we wish the ordinary consul to be a thorough practical sound man of business, and we do not require anything more of him; therefore he has not the qualification, as a rule, of the trained diplomatist.

27,397. Yet of course, you occasionally get such a man in the consular service; you have had such a man as Sir William White?—Yes, and Sir Kirby Green and others.

27,398. I notice that the Committee of 1872 quotes with approval an opinion expressed by Mr. Brackenbury, "That the more nearly our consular service is "assimilated to that of France the better. The French "system is simply that of making the service a pro- "fession. The career is begun first in the Foreign "Office as a supernumerary; then as a paid clerk "From this, the consular student may rise either in "the office, the consular service, or in diplomacy." He further advocates "an advancement in social rank "and position, and a free issue of honorary rewards "and marks of distinction." Has that been at all carried out since that time?—Yes.

27,399. It is a small matter, but, as a matter of fact, have honorary rewards been more freely distributed in the consular service as marks of distinction?—I have not exactly the materials for comparison, but I should say they have; there are several consuls now who have obtained those distinctions.

27,400. You have tried, I understand, to carry out the recommendations of that Committee as fully as possible?—Yes; that is so.

27,401. And you consider that you have done all you can to carry out their recommendation in the reduction of redundant posts?—Certainly.

27,402. You do not believe at the present moment that it would be possible to do more in that way?—I do not think we could without detriment to the service.

27,403. Are you continually looking out to see where an important trade centre rises up, we will say, in the United States of America?—Yes; we have lately remodelled the service in the United States on the advice of the Secretary of the Legation, reduced several posts in the south, which the trade had left, and transferred them to the west where the trade is growing.

27,404. In fact, you keep your eye as open as possible to the movements of trade?—Yes; that is our endeavour.

27,405. Turning to the estimates, I should like you to look at Italy, and to see whether you consider it is necessary to have all the paid consuls that we have there at the present time under the circumstances of our trade connection. There are, you will see, in Italy, one consul-general paid, and four consuls paid, and two vice-consuls paid?—The consul-general is the consul-general at Florence. He is an excellent man, who devotes his time a great deal to the studying of the commercial requirements of this country with great success. The consul at Genoa gets 600*l.* a year salary, and 400*l.* a year office allowances, the whole of which is almost covered by the amount of fees he receives. According to the latest return I have got, he received 925*l.* in fees. The consul at Leghorn receives 500*l.* and 150*l.*—650*l.* altogether. His latest return was 475*l.* in fees. At Naples, the consul gets 600*l.*, and 250*l.* for his allowance. He, I see, has received over 600*l.* a year in fees. Palermo is the other; it has 600*l.* salary, and 250*l.* for allowance. The consul there has received nearly 400*l.* a year in fees.

27,406. Then there are two paid vice-consuls: one at Messina, for instance. He is put down at 400*l.* a year?—I cannot deal with those at the moment. The figures that I have given show that the actual amount of fees, which represent solid work, leaves a very small balance of expenditure. That shows the requirements.

27,407. I believe that in 1882 and 1885 there were important memoranda issued to the consuls in respect to the commercial information which they were supposed to send in?—Yes.

27,408. Do you believe that those recommendations have been fully carried out?—I think so, but I believe you are going to examine the head of the commercial department.

27,409. Does not that concern you?—Only indirectly; his opinion would be more valuable than mine. As a general matter of discipline I know that the consuls have done their best to carry out the instruction, but as to the value of the reports I would rather that Mr. Kennedy should speak.

27,410. I have read a paper of Mr. Law's, the commercial attaché to the embassies of St. Petersburg, Constantinople, and Teheran, in which he says that he does not believe that the consular reports can ever take the place of detailed information on special subjects which the traveller of a particular firm can supply. Do I understand that to be your opinion?—Undoubtedly it is; and I think, though I say so with some deference, that the danger is that some of our commercial firms are leaning too much upon the consuls.

27,411. Does not that show an improvement in the consular service—that more attention is devoted to English business?—It is an improvement in the consular service, and the consular officers are doing their utmost. It is only a personal opinion, but it seems to me that there is a distinct danger that commercial firms, instead of pushing through their own agents, are apt to trust to what can only be the general information supplied by the consul.

27,412. Is it the case that the consular service of England is somewhat inferior to that of Germany in respect to commercial information?—I should say that if you take the mass of information supplied by our consular service and by that of Germany, the balance would be enormously on our side. I think rather what is in the minds of those who speak of what has been done by the Germans, is that the Germans at certain places, principally in the East, have had a free hand to push commercial interests by any means in their power; whereas our officials have been kept more within bounds. I do not think that applies to Europe, and if you ask me whether, in Europe, our consular officers or the Germans do the most for commerce, I think ours far and far away.

27,413. Is that the opinion, do you think, of the commercial community?—That I would rather not speak to.

27,414. I daresay you have had opportunities of knowing from communications addressed to you?—I should say that certainly from all that I see it is as I have said. I may instance what the consul-general at Odessa told me. I take a great personal interest in this subject, and question consuls when I see them. He was talking to me about his district, and he said. "The difference that I find is that every commercial "town here is flooded with German commercial "travellers and English circulars; those circulars "are sent in hundreds to me and to the other consular "officers in the district. We are apparently expected "to work upon them, which of course we cannot do, "but by the side of the post which brings the English "circulars is the train that brings the German com-"mercial agent." That is the opinion, I find, of many of our best consuls, and it answers your question to a certain extent, by showing that it is not the German consul, but the German commercial agent that is at work in Europe. From South America I have heard precisely the same thing.

27,415. Take this point of commercial circulars; supposing they were sent to our consul at Odessa, would they be allowed to lie in his office?—What could he do with them?

27,416. What would he do with them, as a matter of fact; that is exactly what I want to know?—He could do nothing with them. The magic of the circular is one of those puzzles which our people cannot understand. They tell me that there is a vast amount of time, which is increasing, spent in giving gratuitous information, to the best of their ability, to commercial firms who apply to them, although it is almost more than can be expected of them.

27,417. Is not the effect of these regulations that were issued in 1882 and 1885 to make them do that work?—It is to make them collect every sort of information and statistics, and that is, I think, really as much as they can very well do. That they do. It is our business here to circulate that information with the greatest promptitude and as efficiently as possible. I do not know of any similar system that they have in Germany.

27,418. Then you believe at the present moment that they are in thorough touch with English trade, and that they do as much as they can be expected to do to advance its interests; that is your belief?—Yes, that is my view, though, as I said before, I am not sure that if we were prepared to spend 10,000*l.* a year more, we might not extend the system by having a certain number of consuls or consuls-general specially devoted to collect commercial information in different countries; that possibly might be done with advantage.

27,419. (*Mr. Harvey.*) Supposing a mercantile firm wrote to the consul at any place, and asked him whether, in his opinion, there would be a fair market for a particular commodity, would it be the business of the consul to inquire and to reply to that letter?—It would not be the consul's business, but from what the consuls tell me I believe that a great part of their time is now taken up in replying to these inquiries.

27,420. But if the consul declined to take any notice of the letter would he be within the letter of his instructions?—Yes; we could not give him general instructions to correspond with people of whom we know nothing; his correspondent might be a substantial firm or might be an adventurer who was trying to feel his way. It would be almost more than any one man could do; he must use discretion.

27,421. (*Mr. Lawson.*) You object, I understand, to give any official recommendation to particular firms by allowing the consuls to act for them in any way?—Yes, we do not allow that.

27,422. That is not true, is it, of Germany?—I believe that what has been said and published about Germany in that respect has applied really almost entirely to the East.

27,423. I should like to ask you a question now with regard to consular fees. The table was last revised, I see, in 1887; has that been by way of increase. I see the total has increased, but have the charges?—There has been an enormous increase; that was a matter which we took a great deal of trouble about, and it has been a great success. The fees that we received this year, I understand from the Financial Department, will be very nearly 80,000*l.* in consequence of the increase.

27,424. You say in your memorandum the fees, &c. have risen from 69,578*l.* in 1884–85 to 101,567*l.* in 1887–88?—That is including China and Japan. I am speaking without reference to China and Japan. Without China and Japan they are as nearly as possible 80,000*l.*

27,425. I see that you do include China and Japan in this memorandum for all purposes, it seems to be included in this comparison, on the first page, of 1869–70 and 1887–88?—Yes; it has been included.

27,426. Is that the reason why your figures do not quite tally with those in the memorandum?—That is the reason why the figures did not at first tally.

27,427. Are the fees a growing item?—They are increasing steadily.

27,428. That is an increase, both in point of number of payments and also on the scale?—These are payments on the revised scale.

27,429. I know; but is there an increase of number of payments of fees as well as the fact that the scale is higher?—I may take it so, certainly. The increasing amounts paid on the fee table would represent an increased number of payments.

27,430. Are further circular visits contemplated?—From the Foreign Office?

27,431. From the Foreign Office, that is, such visits as those made by Mr. Wylde and Mr. Kennedy?—No; I think not. I think that since the telegraphic corre-

Sir P. Anderson, K.C.M.G.

11 Dec. 1889

spondence has been perfected, we keep touch with them without the expense of these visits.

27,432. In the memorandum you say, "recently "Sir C. Hill visited and reported fully upon the consular establishments in the West Indies and other "parts of the Spanish Main"?—It is quite true we sent him to some out-of-the-way places that we could not get at.

27,433. But there are no more contemplated?—We sent him to certain places in South America that we had not been able to get at, to examine and report upon them.

27,434. You do not think there is any part of the world where the consular service has not been fully overhauled, and you do not believe there is any further necessity for these circular tours of inspection?—What we rather have done is this: instead of having the inspection from home by occasional visits when probably the consul has his house swept and garnished in order to receive the visitor, we have occasional visits from the legations. We get secretaries of legations to go round and look at them and give us a report; we find this preferable.

27,435. May I ask you whether the scale of pensions to the consular service is the same as that of the rest of the Civil Service?—It is.

27,436. (*Mr. Fowler.*) I want to go back again to this question of the German consuls; is it not their habit at various commercial centres and ports to watch the development of trade, and to send home to Germany patterns of new manufactures and new articles that are introduced especially by this country?—From all parts of the world?

27,437. I cannot say from all parts of the world, because, of course, that might not apply, but I mean from any prominent part?—They may do so. As regards the sending of patterns I could not say. I do not know that there is such a system in Germany I have never at Berlin come across any general system of diffusing commercial information such as we have here.

27,438. I should like to be quite clear upon this point because, of course, both you and ourselves want to get at the actual facts of the case. I had better put the grievance to you first. I do not think the grievance is as you have said, that our mercantile community rely upon the consuls to push their goods. The grievance is this: that the consuls of Germany in particular have in charge the commercial interests of Germany at all the places to which they are sent; that they advise home all descriptions of articles of manufacture which are sent, we will say, chiefly from England or the United States, and that the German manufacturer knows through his Foreign Office at once what article is in demand, and what are the latest improvements made in that article by the competing markets. Our manufacturers say that nothing of that sort is done in the English consular service. Take a certain description of lock, for instance, sent out to Eastern markets, if you like. We may have a bad lock. Very well; Germany suggests certain improvements, and they send out certain improvements which push our lock out of the market. We have no information from our Foreign Office or our consular service as to what is being done. Now, that is a grievance, not the grievance you were thinking about?—I quite see that; it depends upon what the German consuls really do, and how it is done. I certainly know this, from my personal experience of the Berlin Foreign Office, that a certain number of merchants are in the habit of walking in and out of it. They are a limited number, of course; it is by no means all, but a limited and more or less favoured number of merchants. It is possible that our manufacturers may be alluding to this mode of obtaining information; but if there is a general system of diffusing information at Berlin it has not come to my knowledge. I should not like to say more than that, because I do not think I am competent to do so; but I believe you will have before you to-morrow Mr. Kennedy, the head of the commercial department, who will be able to speak more accurately upon the point. I only speak from general knowledge on a subject in which I take a special interest.

27,439. Very well, we will wait for him. I will now take first the general principle which I understood you to lay down, that the policy of the Foreign Office is not to encourage political consuls, but to encourage commercial consuls?—That is our policy.

27,440. Is not it the first condition of carrying out that policy successfully that the men to be appointed consuls should have commercial and not political qualifications?—That is precisely what we think they have. I think that our men so far——

27,441. I want us first to agree upon the theory before we come to the concrete illustration. I want to see whether you accept the theory first that the consulate should be more commercial than political, and secondly, that the education for the consulate should be more commercial than political?—There, again, I think I must go back to what I said at the beginning, when I specified the extremely varied character of our consular service, I pointed to some where the commercial interests are not the strongest; I referred to Zanzibar and Salonica, I do not know whether I mentioned Alexandria; there are in fact several such posts. Still, I am prepared to admit that, as a rule, taking the consular service generally, we require sound, practical men of business, with commercial qualifications.

27,442. I have taken down those words when you used them earlier: "sound practical men of business"?—Yes; those are the men we want.

27,443. That being so, I understand you to say that you consider the appointment by a great political officer of State, who naturally consults the interests of his party, is the best mode of providing that class of candidate?—It is always a difficult thing to say which is the best, because there always may be a better. I have been rather comparing it with the system which I thought would be less good, which is the system of open competition.

27,444. For my questions I want you for a moment to reject from consideration any question of open competition. I want to deal with the question as to whether a political appointment, actuated by political influence, is the best mode of filling up a service of this description?—I should like again to say that I would rather not enter into what is the best.

27,445. I will alter the word "best" into "desirable"?—Every system, no doubt, is capable of improvement, but I think that is a more speculative question than a departmental officer should give an opinion on. I would rather say that, in my opinion, the large number of consular officers with whom I have to deal are, however they have been appointed, good, sound, practical men of business, who do their work well. Whether they might have been appointed under a better system or not is a wider question, into which I had better not enter.

27,446. Perhaps you may be aware as a matter of history—at all events I will ask you, as a matter of history, whether the defence that you are now giving, that they are competent qualified officers, was not the defence which was given for retaining the political appointment of every other branch of the Civil Service prior to Parliament abolishing it?—It may have been so.

27,447. Was not the uniform defence of the political influence that you got such capital men of business appointed, that it was a pity to discuss the thing speculatively as to whether they could not be appointed better?—That is a very wide question again; it goes into one of the great controversial questions of past days. I am only discussing the particular service with which I am connected. I say—and I think it is all I can be called on to say—that I consider the service is well manned, efficient, and practical; and that as to the system under which it is manned I can give my objection to the application to this particular service of the system of open competition which has been applied to others, and the grounds upon which I formed that opinion. I have no doubt that it is perfectly true, as you say, that there have been similar reasons given for the retention of other close services. I give my reasons for the retention of this.

27,448. You have not yet—I do not say whether you could do so—told the Commission that these gentlemen—I am not talking now of great appointments, I am talking of initial appointments in the ordinary service—are appointed on any other ground except purely the personal will or wish of a political agent?—The Secretary of State for Foreign Affairs may be called a political chief, but the Secretaries of State for Foreign Affairs under whom I have served have not, so far as I know, used the consular service for what may be called political appointments.

27,449. Will you say that, in your opinion, no political influence has ever been used in an appointment in the Foreign Office?—I should be sorry to say that.

27,450. No parliamentary influence either?—Recommendations are undoubtedly made, and those recommendations may be made by political friends or by personal friends.

27,451. But the Secretary of State is not hampered or fettered with any consideration of competence; he may appoint whom he likes?—The Secretary of State can appoint whom he likes.

27,452. He can appoint whom he likes, and therefore this memorandum which has been sent to us by the Foreign Office wants a little modification. I refer to paragraph 4, on page 3, which says: "As to classifying the service, the general consular service is "now distinctly classified, being divided into two "branches: (A) Those who enter the service as a "career, after passing an examination before the Civil "Service Commissioners, and are prohibited from "trading"?—That is correct.

27,453. That means that the nominees of the Secretary of State have to pass a preliminary examination before the Civil Service Commissioners?—Have to pass a qualifying examination.

27,454. (*Mr. Harvey.*) But that is not a compulsory examination, I think you said?—Perhaps I did not clearly explain myself. The Secretary of State may give a commission direct, dispensing with an examination, but it is done in extremely rare cases, and only in my recollection in cases in which the men have been so palpably well qualified that it would have been almost an absurdity to send them up for an examination of the description that consular officers have to pass; take, for instance, the case we have already mentioned of Colonel Euan Smith.

27,455. (*Mr. Fowler.*) I think we may put it also the other way; it would almost be an absurdity for a Secretary of State to nominate any man, almost for any post in Her Majesty's service, who could not pass that examination?—Who cannot pass the examination?

27,456. I mean to say that almost any boy at any ordinary school in Great Britain could pass that examination, which you call a qualifying examination?—It is not a difficult examination certainly, except as regards the languages; Englishmen are by no means good linguists, as a rule.

27,457. Is there any restriction as to age?—From 25 to 50.

27,458. The Secretary of State has arranged from 25 to 50 as to the age of a man on his initial appointment?—Yes, from 25 to 50.

27,459. (*Chairman.*) I want to be clear about the relation of the consular and diplomatic services as regards the responsibility abroad, the proposals that were made, and the recommendations of the Committee about consolidating still further the functions of the diplomatic and consular officers. I see you state in a memorandum that "it has not been found practicable "to give effect to the proposal to consolidate still "further the functions of the diplomatic and consular "officers." That having been recommended, I should like you to tell the Commission what efforts have been made in that direction, and why you think it cannot be taken further?—The principal difficulty is the difference in the training—that consular officers do not receive a diplomatic training. Their ordinary work is not political; they are confined to trade and commercial work, and as a rule they are not qualified for the higher and more general duties of a diplomatic officer. There is also of course the consideration that, in most cases, consular officers are men of small means, mostly living upon their pay; for these reasons a large number of them are not qualified for a diplomatic post; but I think, on the whole, that the number of consuls who have been promoted is a very fair proportion of the entire number of missions.

27,460. (*Mr. Lawson.*) What proportion would you say?—Out of seven ambassadors we have one ex-consul; out of 25 ministers we have six.

27,461. (*Chairman.*) There are places, I presume, where there is a consul-general—I am not talking of Berlin now, but of some other places where there is a consul, or consul-general, and a legation or embassy. What is the relation there of the consul to our diplomatic head; does he communicate through the embassy?—No; I can give you an illustration by referring to the Argentine Confederation. There is a legation there, and there is a consul, the two being entirely distinct, though the consul is subordinate to the legation, and has to consult the minister and keep him thoroughly informed of everything that goes on. In South America, the conditions are rather peculiar. The governments, though republican governments, are excessively punctilious, and the foreign minister will absolutely refuse to hold any relations with the consular officer; this is the case in more than one country. It has happened to us that where we have put a consular officer in charge in the absence of a minister, they have treated it as an insult. In Venezuela and Colombia, for instance, they positively refused to have anything to say to him. The same thing has happened elsewhere. There is this peculiar punctiliousness; we cannot get rid of it; they absolutely refuse to see the consul; therefore, if we are to maintain relations with the Governments, it is necessary to have a legation to deal with them. On the other hand, an immense deal is done in these places by the personal work of the consul. If a troublesome shipping case arises, the consul, in preference to a long correspondence, goes to see the head of the customs, the head of the police, or whoever the right person may be. The consul at Buenos Ayres has told me he has often to be on his legs the whole day, going backwards and forwards among the officials. The minister cannot approach this class, that would be out of his sphere; he must go to the minister for foreign affairs. The consul, on the other hand, taps this other stratum, and in that way he does a vast amount of business, but working upon different lines to the minister; each in his separate position has useful and well-marked lines to follow.

27,462. Taking that as an instance, is the consul of the Argentine Republic in any way under the control of or in any way responsible to our minister?—Yes. The rule is this: "The consular service is subordinate "to the diplomatic service. Her Majesty's diplomatic "representative is, subject to the control of the Secre-"tary of State, invested with full authority over "consular officers, consequently in doubtful cases they "should refer to the diplomatic representative for "advice and direction. The consul must execute at "once instructions received from the diplomatic "representative" on commercial or political subjects, and must keep him informed upon all matters of commercial or political importance.

27,463. I think your memorandum deals with all the recommendations of the last Committee of 1872, does it not?—I imagine that it does.

27,464. I am not quite clear about the appointments to the consular service in China and Japan: how are those made? Are they upon the same footing as in the Levant; are they open competition?—Those are made upon the same lines as in the Levant service.

27,465. Was the Levant system, that is, the system inaugurated by Sir Philip Currie, started in consequence of the consular service in Japan?—I believe it was partly so, and partly from his studying at Constantinople the special requirements of the consular service in the East.

27,466. Were there students appointed then to the consular service of China and Japan?—Yes, there is a student interpreter service there.

27,467. Where are those men educated? Where do they get that special knowledge in those languages?—That service is not under me, and therefore I do not exactly know the details of it. I know it is on the same lines as the Levant service, but I cannot say precisely what are the details of it.

27,468. (*Mr. Lawson.*) You say in the paper handed in upon the consular service, "the consul receives "his instructions on all important matters direct from "the Secretary of State. On ordinary current business, "he is guided by instructions from the diplomatic "representative." Is that the ordinary practice, or is that only the theory of the department?—I should say that it is a rule for emergencies, because, according to the ordinary consular practice, the consuls generally are so well versed in their duties that they do not require such instructions. The rule that I have given you just now is the more exact one, that in doubtful cases the consul refers to the diplomatic representative for advice or assistance.

27,469. Yes; but you are the head of the consular department. If you were communicating with the consul, would you do it through the legation?—No, direct.

Sir P. Anderson, K.C.M.G.

11 Dec. 1889.

27,470. Direct always?—Direct, as a rule. There are special cases where, if we think it necessary, we put the diplomatic representative in motion.

27,471. (*Chairman.*) Is it understood that the consul in a place where there is a minister is at the disposal for any particular purpose of the minister?—If the minister wanted to use him he would have to follow any instructions that the minister gave him.

27,472. In the case of the Argentine Republic which you quoted, supposing there was a difficulty with a merchant, such as you mentioned, and that that is represented through other channels to our minister, can he send a consul to deal with it?—Yes.

27,473. Or once reported to him, is he obliged to take official notice in another way?—The consul would appeal to the minister, and the minister would take it in hand if it is necessary to make it a question of representation to the Minister of Foreign Affairs. I will quote the case of Brazil: the Brazilian Government decided that no consul should be allowed to correspond even with the head officers of the respective provinces; they insisted that everything should be sent to Rio and done through the minister there; it was extremely inconvenient, but it had to be done. There, consequently, the consuls reported to the minister.

27,474. (*Mr. Lawson.*) Is not it the case that if a return or report is moved for in Parliament it is sent from the Foreign Office to the legation, and that the legation gets the information from various consuls, if it is necessary, and then it filters through them back to Parliament?—It would entirely depend upon the character of the report. I should not do that myself unless it was a report that I think could be more advantageously collected in that manner. If it was a report that, in our opinion, the legation could collect and sift better than we could at home, we should ask the legation to do it; but if it was a report that the consuls could perfectly well send direct, I should certainly send it to them direct, so as to get it more quickly.

27,475. Say it was a report as to the position of English trade in a particular part of the world, a special report?—That would go direct to the consuls.

27,476. But on the other hand, if it was a report on the conditions of industry, would they go through the Ministry?—If it was a general report, yes.

27,477. (*Mr. Fowler.*) What is the relationship between the diplomatic and the consular bodies in force in the great European capitals?—In the great European capitals we have not got, as a rule, a consular service; we have only the more or less ornamental unpaid consuls-general. I am far from saying however, that those officials are not really useful. We will take the case that has been mentioned, that of Baron Bleichröder, of Berlin. Baron Bleichröder is an honorary consular officer, and does not receive any pay. The consular work is light, but he does good service to the ambassador, who can get through him a great deal of commercial knowledge, and has a right to claim from him information which he could not get very well elsewhere. It is in that way that the consuls-general in the large capitals are of use.

27,478. (*Mr. Lawson.*) Do you say, of your own knowledge, that the ambassador at Berlin does get commercial information from Baron Bleichröder?—I think I may answer that I, from my personal knowledge, can say so.

27,479. (*Mr. Harvey.*) I should like to ask you one further question about the mode of appointment. It would be open, would it not, to the Secretary of State for Foreign Affairs to appoint a man who had failed to pass his examination?—To appoint him?

27,480. Suppose the candidate, having been nominated, failed to pass, would it still be open to the Secretary of State to appoint him?—I suppose it would, but I have never known an instance.

27,481. You have not known an instance of it?—Never.

27,482. Have you ever known anybody fail to pass?—Yes, that I have known.

27,483. (*Mr. Fowler.*) Not many?—I know an instance of a gentleman who failed to pass quite recently, and is not now qualified.

27,484. (*Mr. Lawson.*) Do you believe, at the present time, that the relations between the diplomatic and consular services are as cordial as you would wish them to be?—I should say they are extremely cordial.

27,485. There is not too much formality in their intercourse?—Certainly not.

27,486. (*Chairman.*) Do you ever receive communications from the Board of Trade upon commercial questions?—We are in constant communication with the Board of Trade, but I, personally, am more in communication with them upon consular than commercial questions. The commercial questions go from the commercial department, but there are many consular questions as consuls have a heavy amount of work to do for the Board of Trade. I have here the book of instructions from the Board of Trade, which every consul has to study. This work for the Board of Trade is most important.

27,487. (*Mr. Fowler.*) They are not responsible, are they, to the Board of Trade?—They report directly on many questions connected with shipping to the Board of Trade.

27,488. Without going through you?—No, they send their reports through us; they address them to the Board of Trade and send them through us.

27,489. Do they get instructions or orders direct from the Board of Trade?—Yes, they do, on many routine points connected with shipping.

27,490. On routine points, yes; but, with reference to any particular current business, would it all pass through you?—It does not all pass through us. There may be questions of discipline; if the Board of Trade, for instance, finds that a consul neglects his work, they set us in motion, but, in ordinary cases, in order to save a great deal of roundabout work, they, on certain points, instruct the consuls direct.

27,491. (*Mr. Fowler.*) Have you ever known a consul removed for incompetency?—Undoubtedly.

27,492. You have?—Yes; we keep a strict watch, and, if a consul does not do his work, we are sharply down on him.

27,493. How do you get rid of him; supposing he were a thoroughly incompetent man, how would you get rid of him?—Well, he is simply told he must go.

27,494. You dismiss him from the service?—Yes.

27,495. Does he gets his pension?—We should not bear too hardly on such a man; but, if he goes for misconduct, he goes without his pension.

27,496. I do not mean for misconduct, but from average incompetency?—It would be rather difficult, because he is not entitled to a pension if he goes for incompetency.

27,497. Is that so?—Yes, that is so. In the first place, he is not entitled to a pension at all before he is 60, unless he can prove that his health is shattered, and under no circumstances is he entitled to pension unless the Secretary of State certifies that he has done his work properly.

27,498. Then the rules are not quite the same as in the other branch of the service. I understood you to say to Mr. Lawson, a short time ago, that the rules for pension are the same as in the other branches of the civil service; now, as I understand you, they are not quite the same?—I think Mr. Lawson's question referred to the amount of the pensions.

27,499. The amount, I suppose, is the same—a sixtieth for every year?—The pensions are calculated in the same way.

27,500. (*Mr. Lawson.*) The statutory scale?—Yes.

27,501. (*Mr. Fowler.*) Evidently, there are separate Foreign Office rules for these pensions, which are not the same as those applying elsewhere?—This is the rule made by the Commissioners of the Treasury: "The Commissioners of the Treasury require that the "application of an officer, when forwarded to them by "the Foreign Office for a superannuation allowance, "shall be accompanied by a certificate of the Secre- "tary of State that he has served, to his satisfaction, "with diligence and fidelity."

27,502. That is the same with everyone else?—Therefore, an incompetent officer would lay himself open to not getting that certificate.

27,503. (*Mr. Lawson.*) Has he ever succeeded in earning a disqualification?—As a rule, if he is going, we should be very glad to say "Good-bye" to him, if he is not over-competent, without pressing too hardly on him.

27,504. Do you have anything of the abolition terms which we have heard so much of in the Civil Service?—They are the same.

27,505. Do you often apply them in the case of incompetent officers?—Incompetent officers?

27,506. I will not say incompetent officers—officers that you are not quite satisfied with?—The rule we always try to adhere to in the consular service, and I have tried to adhere to it most rigidly, is, never to deal with a question according to the merits of the man, but according to the merits of the post; therefore, we would not abolish a post for an incompetent officer.

27,507. You would not change a post, nor abolish it for a time, nor make some reorganisation of the consular service in that country in order to get rid of an incompetent man?—No, that is not our way.

27,508. In Turkey, they are not always the same places, for instance, for consular posts; the places vary?—You must vary them occasionally, but that is done according to the requirements of the service. I can say,—very fairly say,—that that is not our practice.

27,509. (*Chairman.*) Have you any recommendations or suggestions that you can make to the Commission, whereby you think that the consular service can be improved?—The only suggestion I could make is, I am afraid, a suggestion which would not be very palatable to the Commission—it would be to give us a little more money.

27,510. And to have a few more paid consuls?—I think the consuls are amply paid.

27,511. A few more paid places?—I should not be inclined to alter the present posts. I think, on the whole, the consular system is properly paid and fully manned. I do not think I could lay my hands on any particular post which is either overpaid or underpaid; but I think that we might, if we had a little more money, establish the posts that I have spoken of,—the special commercial posts,—to obtain special commercial information for the benefit of our merchants. I think we might do that with advantage, but undoubtedly it would cost, as far as I can judge, to do it properly, about 10,000*l.* a year.

27,512. (*Mr. Fowler.*) And the fees are gradually increasing?—The fees are steadily increasing. That is a most valuable earning. We have to set 80,000*l.* a year now against the outlay.

27,513. (*Mr. Lawson.*) In his evidence before the Committee of 1872 Mr. Kennedy said, "Our fees were rather lower than those of other countries." Is that true now?—I should think now it is not the case. The table of fees has been thoroughly revised since then.

27,514. (*Chairman.*) I do not think I quite understand what your view is as to this 10,000*l.* a year which you think might be usefully spent. Do you mean in new places?—I have not thought that question quite out, because I have always felt that it would not be obtained. I think if we had such officers, perhaps, in Russia, in Germany, in Austria, in Italy (we have got an excellent commercial attaché in France, who does the work), also in Spain and Portugal, and in the United States, I think I should apply the system to these countries. If we had in each a consul-general to whom we could assign specially the task of keeping himself in touch with all commercial centres, of obtaining such information as could be useful to our commercial world by constantly applying himself to that work and nothing else, having no ordinary consular routine work to do, it is my impression that we should get a great deal of very valuable information of the nature that has been indicated as being got by the German consular service. But I should make these appointments, if they were made, rather the prizes of the service. I think they should be given to the best men. They must be well paid, because it would be necessary that the officer who held them should be able to mix with the best commercial men in the country. He should be able to entertain a little, and to live so as to keep himself thoroughly in contact with financial and commercial circles; and he would have to travel about a good deal; so that I think, in one way and another, the probability is that each of those posts would cost about 1,500*l.* a year. If we take six of them, we arrive approximately at the amount that I mentioned.

27,515. (*Mr. Fowler.*) Have you said where you will put those posts?—I am speaking quite generally, because I have looked at it as so utterly impracticable to get the money that I have not made out a regular scheme; but I should say one in Russia, one in Germany, one perhaps might do for Spain and Portugal, one for Italy, one for the United States, and one perhaps for Austria-Hungary.

27,516. (*Chairman.*) I see that there is a commercial attaché in St. Petersburg now?—There is; but notwithstanding that, I should have a consul-general, who might be placed at Moscow, and who might work in concert with him.

27,517. (*Mr. Lawson.*) The commercial attaché is also accredited to Constantinople and to Teheran?—Yes.

27,518. (*Mr. Fowler.*) You say that it is so hopeless to get the money, but as the head of the Foreign Office is the head of the Treasury, it is only for the head of the Foreign Office to be convinced that it is necessary and the money is there?—There is something more than a head to the Treasury.

27,519. (*Chairman.*) These men that you propose would be something like commercial attachés, as I understand?—They would not be exactly commercial attachés. The difficulty would be, if they were attachés, that an attaché is, properly, a diplomatist. I think I said earlier, that we hardly understand in England the extreme importance that is attached to official positions abroad. Here and in the United States we do not attach any importance to official positions, but elsewhere they do; consequently you must apportion the rank of your man according to the work that you want him to do. A consul can go into places and get at people hardly accessible to a diplomat: therefore, I would rather have him not absolutely attached to the legation; I should prefer that he should have consular rank, as he would be more useful in that position.

27,520. (*Mr. Lawson.*) Then is it the case that our commercial attachés cannot get hold of the requisite information?—Mr. Crowe, who is commercial attaché at Paris, is a consular officer.

27,521. What about the other, Mr. Law?—His services are mostly in the East, and they are more of a special character.

27,522. (*Mr. Fowler.*) They would not be required in China, for that is already provided for?—I imagine so, but I have no special knowledge of China.

27,523. Who will give us evidence about the Chinese and Japanese service?—I do not think anybody knows that better than Sir Philip Currie does.

27,524. (*Mr. Harvey.*) You mentioned Russia, I suppose, because of the notable difficulty of getting any commercial facts about the interior of Russia?—I believe it is extremely difficult. I know it is Sir Robert Morier's opinion that a good consular officer stationed at Moscow, and able to move about, would get a good deal of information.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock

EIGHTIETH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, December 12th, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

Lord LINGEN, K.C.B.
Rt. Hon. H. H. FOWLER, M.P.
Mr. A. B. FREEMAN-MITFORD, C.B.
Mr. J. CLEGHORN.
Mr. A. S. HARVEY.
Mr. H. W. LAWSON, M.P.

Mr. H. WALPOLE, C.B., *Secretary.*

Sir EDWARD HERTSLET, C.B., called and examined.

Sir E. Hertslet, C.B.

12 Dec. 1889.

27,526. (*Chairman.*) You are, as we know, the librarian of the Foreign Office?—Yes.

27,527. What is your proper title?—My title is librarian and keeper of the papers.

27,528. You have been a very long time in that position and have had a very long service, I believe?—I am now in my 50th year of service.

27,529. We are anxious to have from you a brief explanation of what the special work at the library of the Foreign Office is. The Foreign Office, being the only Department which has a sub-department, such as yours, in it; perhaps you would give us shortly what the work is that is done by the library?—I should like to say at the outset that it has been admitted on many occasions that the title of librarian is an entire misnomer, that is to say, the librarian, so called, has far more important duties to perform than those of an ordinary librarian. Those important duties consist in preparing memoranda for the information of the Secretary of State, and in making précis of papers that are required for the different departments. I should like to say a few words with regard to these memoranda later on, but if you will allow me I will proceed to enumerate the other duties of the department.

27,530. Please take it in your own way.—In addition to preparing memoranda and abstracts of papers, the librarian's department is also the reference room in which all sorts of questions are asked daily. On any despatch or paper coming into the Foreign Office involving any historical question or geographical question, or, I may say, any doubtful point in a political or international law question, a reference is made to the librarian for information; and it is the duty of the librarian or his immediate assistants to supply the information upon those subjects. That is as to the reference room. The next important department is the manuscript library. There is in the library a very large collection of manuscript papers extending over 41 years, and every year a large number of volumes is added to that manuscript library; that is to say, this very month of December 1889, all the correspondence and the diaries of all the different departments in the Foreign Office, the political, the commercial, the slave trade, the consular, and the treaty—all the papers are disgorged from the different departments, and they are sent down to the library with the registers; each department merely retaining for its own use the correspondence for the year, that is to say, they will retain in their departments the correspondence of 1889, but all the papers down to 1888 will be sent to the library. The aggregate of those papers for the year amounts to 75,000 odd; but that probably would be under the mark on an average, as, two years ago the number was 83,960. These papers have to be arranged by some clerks in the library; they are immediately transferred from the pigeon holes in the different departments to pigeon holes in the library, so that if any question arises they may be immediately available. To go back to the reference room, the questions which are asked there increase every year, so that the duties of the department are added to year by year in consequence of this annual accession of papers. Then there comes the printed library, of which we have now 85,000 volumes, including the Board of Trade library, which consists of 25,000. A few years ago the Board of Trade were in a difficulty as to what to do with their library; they were about to remove from Whitehall to Whitehall Gardens, and they did not want to take their library with them; it was a question whether it should be scattered to the four winds or whether it should be continued in another department. I was examined before a committee of the Treasury, and I recommended that it should be handed over bodily to the Foreign Office. I stated that I should be delighted to take charge of it, as I knew what valuable books were contained in it; and so our library is increased to that extent, and we have now 85,000 volumes. That library is looked after by one of the clerks in the librarian's department, who is specially told off for that purpose. He does not move up in the department when a vacancy occurs, but he gives the whole of his attention to that library, giving out books when they are wanted, and making the index. In 1886 he produced a very valuable analytical catalogue of about 1,200 pages, and that catalogue is kept up daily, so that at any moment you can refer to any book on any subject when it is in the printed library.

27,531. What books are regularly added to the Foreign Office printed library?—I do not know the exact number, but we restrict our additions wholly to historical, geographical, and treaty works and travels. We have no light literature—it is all heavy reading—such as is useful for the Foreign Office, but not for other departments. It is only when works have been published which we think contain information likely to be useful to the Office that we take fresh books in. I should think it would be within the mark to say that 200 volumes are added to the library every year. The next department is the registration department, where the arrangement is this: so long as the despatches and letters are in the different departments of the Office they are entered in what we call the departmental diaries, in which are recorded the despatches and letters received and sent daily, together with a short analysis of their contents, but there is no index to any of the registers in any one of the departments. When the manuscripts come to us they are bound, after which they are re-registered in greater detail, and most carefully indexed. The manuscripts alone form between 700 and 800 volumes a year.

27,532. Do you bind in permanent form every single manuscript paper that comes into the Foreign Office?—Everything. I know that a suggestion has been made with regard to the destruction of papers, but I candidly admit that I have never seen my way to recommending that papers should be destroyed. I have always thought that papers should not be destroyed in the library, even if it is admitted that certain papers are valueless, such as Trade Reports, after they have been laid before Parliament. Those manuscripts very often contain information which is not laid before Parliament, and the consul may introduce diplomatic matter which is not thought advisable to lay before Parliament, and on that account the manuscripts are retained; but if it be thought advisable to destroy those papers or any paper of that description, returns of fees, returns of leave of absence, and such like, my idea is that they should be destroyed before they come to the library, because they would form such a mass of papers that it would require a very careful examination in the library to decide which papers should

be destroyed and which should not. I think it would be very undesirable to entrust a junior clerk with the duty of saying whether a paper should be destroyed or not, and the librarian and his assistants have so much to do, that I do not believe they would ever have time to look over all this mass of papers and pick out which were valuable documents and which were not. When they come to the library every paper is bound. Now, every consul and every ambassador is told to number his despatches. No. 1 may relate to an important matter. No. 2, perhaps, to a life certificate. No. 3 to an unimportant subject; if we were to destroy 2 and 3, and then enter 1, 4, 5, 6, and 7 in our register, and a question was afterwards to arise as to whether certain information ever reached the office in such-and-such a year, I am sure that a suspicion would occur to some people that in all probability that information was contained in that particular despatch of the contents of which no record was kept except in the daily registers, and which paper had been destroyed.

27,533. (*Mr. Freeman-Mitford.*) Would not the register show whether it was a mere life certificate, or something of that sort?—If they were to be destroyed you would really have to leave discretionary power to some junior to destroy such and such papers. My own opinion is, that if papers are to be destroyed they should be destroyed by the department which receives them rather than by the librarian to whom they are afterwards sent, or the department sending them on ought to stamp them "May be destroyed." I do not think it ought to rest with a junior clerk in the department to say, "I was of opinion that such and such "papers were useless, and I have destroyed them." I am sure that some very valuable papers would be destroyed, and I know for a fact that some very valuable papers have been destroyed by thousands and tens of thousands in the India Office, which they would give their ears to get back; they were left in charge of certain persons at the India Office, and they were destroyed as useless documents.

27,534. (*Chairman.*) Do I understand that the various departments of the Foreign Office retain in their own hands—in their own pigeon-holes, as you have used that word—all the documents for one year?—For one or two years. They will have next year the documents of 1889 and 1890.

27,535. Do they keep sending in these papers at intervals according to their own judgment, or at the winding-up of the year, so to speak?—The transmission is made to us at the expiration of each year, so that at the beginning of 1890 the whole of the papers of 1888 will be sent to our library, the departments reserving the papers of 1889 and the current year in their own rooms. Therefore, on the 1st of January the departments will only have the correspondence of 1889, but during 1890 they will have the correspondence for that year also, so that at the end of the year they will have two year's correspondence, whereas at the beginning of the year they will only have one year's correspondence.

27,536. Have you anything further to say about the registration department? — In the registration department, in consequence of my not receiving sufficient help, the register fell very greatly in arrear. I might explain that that arrear was in consequence, in a very great measure, of the clerks who are employed upon the register being taken off to search for information to enable the librarian to prepare memoranda. Sometimes there are half-a-dozen important questions referred to the librarian at the same time, and with his sub-librarian and the two assistants which he then had, he was perfectly unable to answer these inquiries, and therefore the register clerks were perpetually being taken off in order to look for information through these departmental diaries to which there were no indexes. To this day, although the Treasury have now been good enough to give me ten additional clerks to work up the arrear which has existed, and although they have also given me four lower division clerks to prevent the register from falling into arrear, my own registering clerks—the permanent clerks in the department—still have to be taken off occasionally to look through these long departmental diaries, to search for information because they have no indexes. When my own register is once worked up all that will be obviated, because there will then be a register to the bound volumes, and those registers will be indexed. Then, in addition to the registration, there has lately been thrown on the librarian's department the compilation of the Law Officers' reports. All the most important legal questions which arise are referred to the Law Officers of the Crown, especially international cases, and it was found very inconvenient not to be able to turn readily to these reports. The consequence was that a suggestion was made that in future, beginning from the year 1861, all the Law Officers' reports should be collected together, bound, and carefully registered and indexed. It was decided also that the most convenient department to make such a compilation was the librarian's department. So, up to this day, every Law Officer's report as it comes in is now printed and bound, and a careful register made of every legal point involved, and an index made. That is done by one of the clerks in my department in addition to his other duties.

27,537. (*Chairman.*) Is that index up to date?—Yes.

27,538. With reference to the old index that you told us was in arrear upon the general register, how far is that in arrear now; how much remains to be overtaken?—The arrears may be said to be from 1872 to 1882—ten years. Ten clerks have been appointed for five years to bring up that. During the first year they have been employed they have done considerably more than they were called upon to do; they have registered about 117,000 papers in one year. So that at the expiration of five years I am satisfied that the whole of the arrear will be brought up. They work for seven hours a day instead of six.

27,539. With the provision now made by the Treasury, I understand you that the index will be complete within five years?—The index up to 1882 will certainly be complete in five years. Then, in addition to that, we have now a staff of three regular clerks belonging to the department, and four lower division clerks employed in working up what we call the modern register, that is to say, from 1882 up to the present date. They register and index about 79,000 papers a year; so that by the end of five years we shall have everything registered up to say 1887. There are always two years which must be in arrear, for the simple reason that as the volumes are not bound then, the indexes cannot be made. It generally takes two years to bind these 700 volumes, for the reason that they are bound in the Office, and that our bookbinder has a limited staff; they are not bound roughly as ordinary papers are, but every paper is carefully examined by our binder, so that nothing of any importance is cut off; he does it under his own superintendence; in fact, I believe he does it himself. That is done in the Foreign Office; he has only a limited staff, as I say, and a limited space, and it takes time to do the work. I said 700 or 800 volumes, but he told me a day or two ago that he had bound during the last year, including registers and what we call "cases," 1,000 volumes. In consequence of this the correspondence of 1888, for instance, will not be fit to be registered until the end of 1890 at the earliest.

27,540. Is it not a fact that if you were called upon to prepare a memorandum probably the correspondence of 1888 would be the very correspondence that you would want to refer to?—Certainly. I quite admit that I should be only too delighted if the registers, when they come to me, were accompanied by an index, but unfortunately they are not, and, therefore, if any information was required about the correspondence of 1888 the register of that year would have to be examined. That entails a great deal of labour, but as it is now the correspondence not for one year only, but for 10 years or more will have to be looked through until the arrears are worked up.

27,541. I suppose you would not say that that was a satisfactory state of things?—I should be very glad to see it removed if it could possibly be done without incurring great expense. As far as my knowledge of the different departments goes, I do not think there is any junior in the political department or in the consular department or in the commercial department who could be detached for the special purpose of indexing the registers. It would be a great expense to appoint men in each department for that purpose. There are five or six distinct departments, and they each keep their own registers divided into countries, so that there would have to be an index to the registers of each country. I should be very glad if it could be worked, but I have never been able to see my way to it being carried out.

Sir E. Herstlet, C.B.

12 Dec. 1889.

27,542. (*Mr. Freeman-Mitford.*) Practically there has never been any very great difficulty, has there, in getting at the papers of a given year, or bearing on a given subject?—No, for this reason: of late years they have adopted a very excellent system of keeping papers together in "cases" more than they used to do, and that has been of very great assistance to the Office.

27,543. That was always done, was not it?—Not to the extent that it is now. It has been found to work so well that it is enlarged upon. I think there were about 200 volumes of cases in this last year.

27,544. (*Chairman.*) Is there any reason why there should not be one general register for the whole Foreign Office, and each paper indexed as it is registered daily?—Then you would have to establish a registration department similar to that which, I believe, exists in other offices.

27,545. What would be the objection to that?—The papers would go to the register department, would they not, before they came to the political department, or is it suggested that the political department themselves should have the index done?

27,546. I am not making any suggestion. I am merely asking you as a man who has had experience of the present system and seeing the difficulties of it, whether there is any reason why the papers should be dealt with in the way in which they are dealt in the Foreign Office, and why there should be this extreme delay, and this great labour, or whether it is not possible for the papers to be indexed and registered at once?—I do not think it can be done without bringing about a complete revolution of the whole system of the management of the Foreign Office.

27,547. (*Mr. Freeman-Mitford.*) Is there any difficulty in the present system?—None whatever.

27,548. (*Mr. Fowler.*) You say there is no difficulty in the present system. You admit that you are more than 10 years in arrear, and that Parliament is called upon to provide 10 clerks for five years. Surely you would call that a difficulty?—I look upon that as remedied.

27,549. Would you not call it a remedy for a very flagrant disease?—I think if the staff of the Department had been increased some years ago this great arrear of register would not have occurred. Although the correspondence increased from, say, 24,000 to 80,000, the Treasury never gave one addition to the staff of the librarian's department for 40 years, not one. In consequence of that, after all these years, instead of giving me one they give 14 registrars in one day, 10 temporary register clerks to work up the arrears, and four lower division clerks to prevent it falling into arrear again. Arrangements were at the same time made by which an additional hand was made permanently available for the reference room.

27,550. (*Chairman.*) I think you have told us that it is your duty and that of your assistants to prepare memoranda in the library?—Yes, when we have the papers in our possession.

27,551. I think you used the words upon historical subjects?—Yes.

27,552. Could you give us a more definite idea as to what that means; does it mean when it involves a reference to papers beyond a certain date?—I will put it in this way: A question arises, say, about the recognition of Corea; they send to the library and ask, can we treat with Corea as an independent State. They send the paper to me, and I look through all available printed information to see whether Russia, for instance, has recognised Corea as an independent State. I look to see what view France has taken; I then look to see what China claims, whether she claims Corea as a tributary State; and what Japan thinks of it. Having collected all the information together from printed works, I then look over our manuscript correspondence to see whether we have ever remonstrated, say, with Russia as to what her action has been with regard to Corea. I then look through the French manuscript correspondence, and see what the French have done; so with the Chinese, so with the Japanese, and so with the American. Having collected all this information together I proceed to draw up a memorandum, and I give an historical account of all that has happened for a century with regard to Corea. To that memorandum I attach a map, to show how far Russia is interested, how far Japan is interested, and how far China is interested. That is put into print, and partly upon that information the Secretary of State acts and decides whether he will treat with Corea as an independent State or not. I merely mention that as one of the instances that I could produce, but there are numerous other instances.

27,553. Of course that would be an important memorandum?—That is what I call a memorandum of an historical nature.

27,554. Could you give us any idea how often questions of that sort, on an average, come to you to be dealt with?—Between 1875 and 1889 the memoranda prepared in my department amounted to 2,800.

27,555. Are all these memoranda printed?—Over 300 of them have been printed. Some of them were of great length, some of them were 150 pages or more in length. Many of them have a carefully prepared index or a table of contents, forming an historical preface arranged chronologically.

27,556. (*Mr. Lawson.*) How long would it take you to prepare such memoranda as you have mentioned with regard to Corea?—It would take three or four weeks. I may say that it would be impossible to do this always in office hours, and therefore I do a great deal of my work at home before office hours. As you may suppose, these papers, when they are put into print, are standing records, and therefore form the documents for the guidance of not only one Secretary of State, but of future Secretaries of State, so that if any question were to arise hereafter about Corea, that would be given out as the document upon which the Government had partly acted.

27,557. (*Mr. Cleghorn.*) When done it is done for all time?—It is done for all time.

27,558. (*Mr. Freeman-Mitford.*) I suppose that memoranda of that excessively important nature do not very often turn up, do they?—They are increasing every day. I have got three or four most pressing memoranda of that kind on my table at the present moment. Only last year I prepared a memorandum relating to marriages abroad. Marriages have been solemnised abroad under the Ministers and under the Consular Act; irregularities are being committed very frequently under those Acts owing to the consul, say, not quite interpreting the meaning of the Act or to some other informality. We have promised the injured parties over and over again to pass an Act of Parliament to legalise their marriages. I was asked to prepare a memorandum showing where those irregularities had occurred, and I produced a paper about 150 pages long, giving an account of every irregularity which had occurred in every part of the world, whether in Mahomedan countries, or in France, or Germany, or elsewhere, and classifying them under the heading of the irregularity. For instance, if the marriage had been declared irregular in consequence of its having been solemnised by an acting vice-consul, it would be classified under the heading of acting vice-consul, and then there would be a reference to the Law Officers' opinion, stating whether such marriages were valid or not. That paper now is referred to every day. These irregular marriages are taking place still, and we hope to pass a Bill next session to declare valid, marriages which have been irregularly solemnised.

27,559. (*Chairman.*) Are there any memoranda of a more current nature that you have to prepare on which frequent references are made to you in the course of your ordinary day's work, or do you deal generally with large questions such as those you have mentioned?—Yes; I may say daily—hourly—references are made to me, I am afraid one must be a little egotistical in these matters, but important questions are more directly referred to myself, especially if they are treaty questions, because I have made questions of treaties my study, and therefore they would refer that matter to me. Still, I am very ably assisted by two gentlemen in my department.

27,560. You have told us that it is one of your duties to prepare memoranda, and you have given as illustrations two large subjects which you have dealt with to the length of 150 pages apiece. What I want to know now is, whether some of the ordinary current memoranda, which in other offices are done by the various heads of the departments for the Secretary of State, are the kind of memoranda that you draw up?—The departments draw up the memoranda on the papers which they have got in their own possession.

27,561. Each department would come to you for further information, if anything was of an historical character, as to which they required further infor-

mation; is that so?—They would draw up the memorandum upon the papers in their custody, but if the subject involved a memorandum relating to previous years it would, as a rule, come to me.

27,562. Therefore the department, as I understand it, when it became necessary to prepare a memorandum upon any particular current subject, would only do so themselves if it referred to one year back, because then, according to the system of the Foreign Office, they would have all the papers in their possession?—Yes, but they also keep "cases"; and, for some years until the case is actually settled, those cases would be kept in a pigeon-hole; and if a question were to arise upon any case, they would write a memorandum to the Secretary of State to show how that particular question stood Say, for instance, a Revolution occurred in Hayti; they would keep the papers relating to that Revolution in the pigeon-hole until the question was settled.

27,563. Such a paper as that dealing with a Revolution in Hayti would be an exception to the rule which, I understand from your answer, really prevails, namely, that all the papers of 1888 come, at the end of 1889, to you?—There are exceptions.

27,564. Exceptions of all current business, is not that so?—Yes.
